Mr. MOORE of Pennsylvania. Will the gentleman tell us how many submarines we would be likely to get under this appropriation during the next five years?

Mr. ROBERTS of Massachusetts. Oh, if you authorized 20 we should have those 20, in the ordinary course of things, in the neighborhood of 30 months.

Mr. MOORE of Pennsylvania. How many would we get in one year? That is an easier question.

Mr. ROBERTS of Massachusetts. Unless we provide for speeding up, you will get none in one year.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. ROBERTS of Massachusetts. Yes.

Mr. SMITH of Michigan. Can the gentleman tell us how many German submarines the English Navy has destroyed up to date?

Mr. ROBERTS of Massachusetts. I can not tell, and I do not think anybody outside of the navy authorities in England can tell; but I have seen it stated that England up to the present has captured or destroyed between 130 and 140 German submarines, and I want to say right here that if Germany at the outbreak of this war had had on hand the number of submarines she now has, I predict the pinch of hunger would have been felt in England long ago, as it is now being felt in Germany.

Mr. BRITTEN. Does the present administration show any signs of being able to build a little submarine now inside of three years from the date of authorization?

Mr. ROBERTS of Massachusetts. In answer to my colleague I will say I have not seen any such signs. They have not yet been shown.

Mr. MANN. What difference does it make what the present administration will do in three years; it will not be here then.

Mr. ROBERTS of Massachusetts. It makes no difference to me; but as a Member of this House and as a patriotic American citizen I think we should provide and compel by law a provision for a suitable defense for this country and make it certain that this or any other administration shall build quickly what this Congress authorizes. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Mr. Chairman, I yield two minutes to the gentleman from Texas [Mr. SLAYDEN].

Mr. SLAYDEN. Mr. Chairman, the gentleman from Massachusetts [Mr. ROBERTS] made an exceedingly interesting 10-minute speech in which he made some important admissions and at least one valuable suggestion. He said that if we would only cut off the cost of one of these cruisers, which he estimates at $20,000,000, and substitute for it the number of submarines that $20,000,000 would procure, that it would be a wise thing, and I asked if he would support an amendment of that kind, and he gratified and surprised me by saying that he would. Now, a year ago——

Mr. ROBERTS of Massachusetts. I did not understand the gentleman. Did the gentleman say "report"?

Mr. SLAYDEN. "Support."

Mr. ROBERTS of Massachusetts. That is all right; I will.

Mr. SLAYDEN. Mr. Chairman, a year ago——

Mr. PADGETT. May I ask the gentleman a question in that connection?

Mr. SLAYDEN. I have only two minutes.

Mr. PADGETT. I will yield the gentleman one.

Mr. SLAYDEN. Very well; thank you.

Mr. PADGETT. Did the gentleman explain how it was then that he brought in a minority report for six battle cruisers instead of five; and now he wants to cut off one——

Mr. ROBERTS of Massachusetts. Will the gentleman give me some time? If so, I would be very glad to explain fully.

Mr. HOWARD. It shows the gentleman's consistency.

Mr. SLAYDEN. Mr. Chairman, I suggested a year ago, or a little more than a year ago, when this bill was under consideration, that it would be wise to reduce the large-ship program provided and substitute for it submarines. I have been subjected to epithets and anathema and the denunciation of being a small-navy man, and I am compared with some of my wild friends over here, but I have been an advocate of an increase of submarines for this country because the efficiency of those weapons was established. [Applause.] Fifteen years ago I was invited to go on board one of these vessels, and I went down under the water on it, and I came away with the impression then that the newest and most efficient weapon that had ever been devised by the wit of man was provided. And when the gentleman from Massachusetts admitted that we could give our country complete protection by the employment of these smaller and cheaper vessels, vessels which can be more rapidly constructed, which our mechanics, who have no superiors anywhere in the world, and that our workshops, which now perhaps parallel the efficiency of the best in the world, can more quickly provide us than thus far they have been able to do, I realized, and I believe the House will realize, we have it in our power to give the country complete protection at a much less cost than that proposed. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SLAYDEN. The second yielding?

The CHAIRMAN. Yes.

Mr. BUTLER. Mr. Chairman, will the Chairman be kind enough to inform me how much time we have on this side?

The CHAIRMAN. Six minutes.

Mr. BUTLER. Mr. Chairman, I yield two minutes to the gentleman from Kansas [Mr. TAGGART].

Mr. TAGGART. Mr. Chairman, I have just voted against an addition of two battleships because I believe that the battleship is an obsolete weapon of defense or offense. It is demonstrated, as was stated here not only by the gentleman from Massachusetts but the gentleman from Texas, that the greatest defensive weapon the world has ever known is the submarine. I have a man in my district who will pay $1,000 for any brick that has been knocked off another brick on the soil of the German Empire by any navy in this war that has lasted nearly two years, and he says he is not a curio hunter, but a speculator, because he could sell that brick for $5,000. Now, what has the battleship done in this great war? It has carried the crew with it down to the bottom of the sea. It has demonstrated that it is more dangerous to the crew than it is to the enemy. What is a battle cruiser? It is a battleship that travels faster than the ordinary ship. The idea is to break the outer defense of a great invading fleet with it and run amuck among the transports that may be carrying an invading army, regardless of what may happen to it by submarines or what a dozen submarines might do that would accompany the transports. The submarine today has absolutely nullified the greatest navy in the world. [Applause.] I shall vote for the amendment. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Will the gentleman from Tennessee consume some of his time?

Mr. PADGETT. I have only one on this side.

Mr. BUTLER. Mr. Chairman, I do not find anyone here who desires to speak further—— [Cries of "Vote!"]

Mr. Chairman, I yield two minutes to the gentleman from New York [Mr. PLATT].

Mr. PLATT. Mr. Chairman, I simply want to take two minutes to say that while I intend to vote for this amendment I do not quite subscribe to everything the gentleman from Massachusetts [Mr. ROBERTS] and others have said about the submarine. I do not think for a minute that the English submarine is what has kept the German fleet in the Kiel Canal. The fleet is in that canal because that is where it is of the greatest service to Germany. By remaining there it keeps open the Baltic for trade between German ports and the ports of Sweden, Norway, and Denmark—a very vital matter to Germany. If England had been able to blockade completely the German Baltic ports, the war would have been ended long ago.

In order to get into the Baltic Sea England has got to use twice as many ships as the Germans have there, for the German ships can go out at either end. My personal opinion is that the submarine has been more or less a failure in this war. They use it more against merchant ships than against battleships, and it appears to be entirely possible to protect battleships against it; but it is a very effective weapon of defense, and we should have many more of them. Therefore I am for the amendment.

Mr. PADGETT. Mr. Chairman, I shall detain the House but a few moments. I want to ask the committee in all seriousness not to be swept off of its feet by the sentimentality for submarines. Every naval officer who appeared before the committee stated that the submarine could not of itself under any circumstances be a defense of our shores unless it was under the protection of big guns, either on the shores, in our fortifications, or on our ships; that they could not under any condition afford protection to our shores alone. Every officer, without exception, so testified, and the Naval General Board in their report said that nothing in the war has occurred to justify the exaggerated public opinion with reference to submarines. We have authorized 20 submarines. There is not one that has a satisfactory motor. They are not working satisfactorily. They are not doing so abroad. There they do not publish, as we do here, their shortcomings. They publish only their successes.

Mr. COOPER of Wisconsin. Will the gentleman permit a question?

Mr. PADGETT. If the gentleman is right quick about it.

Mr. COOPER of Wisconsin. Did not one German submarine sink three British cruisers, the *Aboukir*, the *Cressy*, and the *La Hogue* in 20 minutes?

Mr. PADGETT. They were old ships. The first one was sunk, and the other two very foolishly, as every naval officer said, went to their rescue to try to save the crew and allowed themselves to be sunk, without taking any precautions.

Mr. COOPER of Wisconsin. How many of the first-class battleships did they sink in the Dardanelles after that?

Mr. PADGETT. I think there was only one ship sunk there.

Mr. COOPER of Wisconsin. Three.

Mr. PADGETT. Not of the big ones.

Mr. COOPER of Wisconsin. Well, of fair size. They went down with their crews.

Mr. PADGETT. We have authorized 20 submarines.

Mr. ROBERTS of Massachusetts. The gentleman does not challenge my statement that six battleships have been sunk by submarines in the war?

Mr. PADGETT. Not altogether. I think some of them were sunk by mines—either by submarines or mines. But the increase of 30 submarines would increase the appropriation $21,929,000. This is not advised by any naval authority that appeared before the committee. We have a number building. We have 70 and odd submarines now, and 20 more would run us up to between 90 and 100. And in the meantime all the energy in the country, the different manufacturers of engines, and the Government, all are working to develop a motor that will answer the purpose and be satisfactory. Why do we want to build up an excessive number of submarines that could be built in a shorter time, and have defective submarines, instead of waiting and have efficient and effective ones?

Mr. HENSLEY. Will the gentleman yield?

Mr. PADGETT. I will.

Mr. HENSLEY. Is it not a fact that at the beginning of the European war this country had more submarines than Germany?

Mr. PADGETT. Oh, yes; much more, and, as far as we know, more now.

Mr. WHEELER. If we should build 50 additional submarines, together with what we already have, would it not be much in excess of what they have in either Germany or England to-day?

Mr. PADGETT. I think so; yes. I ask for a vote, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania [Mr. BUTLER].

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. BUTLER. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 112, noes 105.

Mr. PADGETT. Mr. Chairman, I ask for tellers.

Tellers were ordered; and Mr. PADGETT and Mr. BUTLER took their places as tellers.

The committee again divided; and the tellers reported—ayes 114, noes 104.

So the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I want to ask unanimous consent that the figures showing the change in the amount of appropriation be passed over until morning, necessitated by the change in this number of submarines.

Mr. KITCHIN. How much of an increase in appropriation will this probably make?

Mr. PADGETT. I can not give it to you at this minute. It increases it about $20,900,000.

The CHAIRMAN. The question is upon agreeing to the other amendments that are now pending.

The question was taken, and the amendments were rejected.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FITZGERALD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. GREGG, indefinitely, on account of wife's illness.

To Mr. DAVENPORT, for two weeks, on account of important business.

To Mr. MILLER of Pennsylvania, from June 1 to June 20, on account of the sickness of a near relative in the family.

EXTENSION OF REMARKS.

Mr. RUSSELL of Missouri. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by printing a speech delivered by the Hon. FRANK E. DOREMUS, chairman of the Michigan Democratic State convention.

The SPEAKER. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD by printing

a speech delivered by the Hon. FRANK E. DOREMUS, chairman of the Michigan Democratic State convention. Is there objection?

There was no objection.

SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 3929. An act validating certain applications for and entries of public lands; to the Committee on the Public Lands.

ARMY REORGANIZATION BILL.

Mr. HAY. Mr. Speaker, I ask unanimous consent that when the Army reorganization bill becomes a law there shall be printed for the use of the House 15,000 copies.

The SPEAKER. The gentleman from Virginia [Mr. HAY] asks unanimous consent that when the Army reorganization bill is signed by the President 15,000 copies shall be printed to be distributed through the folding room. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, I would like to suggest to the gentleman that if we are to print a large number of copies of the bill a considerable number should be placed in the document room. Many people write for copies to the Clerk of the House, and while they ought to write to the Members of Congress there still ought to be several thousand copies in the document room.

Mr. HAY. Then I ask that 20,000 copies be printed, and that 15,000 copies be distributed through the folding room and 5,000 through the document room.

The SPEAKER. The gentleman from Virginia modifies his request, and asks that 20,000 copies be printed, of which 15,000 shall be distributed through the folding room and 5,000 through the document room. Is there objection?

There was no objection.

ADJOURNMENT—DECORATION DAY.

Mr. PADGETT. Mr. Speaker, to-day is a national holiday, the National Decoration Day. I move as a mark of respect that the House do now adjourn.

The SPEAKER. The gentleman from Tennessee moves that out of respect for Decoration Day the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 13 minutes p. m.) the House adjourned until to-morrow, Wednesday, May 31, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Edward D. Alexander, son and sole heir of Dixon Alexander, deceased, *v.* The United States (H. Doc. No. 1170); to the Committee on War Claims and ordered to be printed.

2. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Laura McGowan and Lizzie Ishmael, daughters of Joseph M. Hukel, deceased, *v.* The United States (H. Doc. No. 1171); to the Committee on War Claims and ordered to be printed.

3. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Anton Phillipson *v.* The United States (H. Doc. No. 1172); to the Committee on War Claims and ordered to be printed.

4. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of George S. Smith *v.* The United States (H. Doc. No. 1173); to the Committee on War Claims and ordered to be printed.

5. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John B. Todd, brother of Orrin D. Todd, deceased, *v.* The United States (H. Doc. No. 1174); to the Committee on War Claims and ordered to be printed.

6. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Louis W. Williams *v.* The United States (H. Doc. No. 1175); to the Committee on War Claims and ordered to be printed.

7. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Rosalvo B. Brazelton *v.* The United States (H. Doc. No. 1176); to the Committee on War Claims and ordered to be printed.

8. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Rebecca Eversole, widow of Henderson Eversole, deceased, *v.* The United States (H. Doc. No. 1177); to the Committee on War Claims and ordered to be printed.

9. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of William B. Gehr *v.* The United States (H. Doc. No. 1178); to the Committee on War Claims and ordered to be printed.

10. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Frank A. Kelly, son of John H. Kelly, deceased, *v.* The United States (H. Doc. No. 1179); to the Committee on War Claims and ordered to be printed.

11. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Caroline O. Meglemry, widow of William H. Meglemry, deceased, *v.* The United States (H. Doc. No. 1180); to the Committee on War Claims and ordered to be printed.

12. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John McNaughton *v.* The United States (H. Doc. No. 1181); to the Committee on War Claims and ordered to be printed.

13. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of S. Agnes Young, widow of Thomas L. Young, deceased, *v.* The United States (H. Doc. No. 1182); to the Committee on War Claims and ordered to be printed.

14. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Marguerite E. Fontaine, widow of Juste Fontaine, deceased, *v.* The United States (H. Doc. No. 1183); to the Committee on War Claims and ordered to be printed.

15. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Richard B. Fulke *v.* The United States (H. Doc. No. 1184); to the Committee on War Claims and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. OGLESBY, from the Committee on the Territories, to which was referred the bill (H. R. 15777) to authorize and provide for the manufacture, maintenance, distribution, and supply of gas in the district of South Hilo, county of Hawaii, Territory of Hawaii, reported the same with amendment, accompanied by a report (No. 781), which said bill and report were referred to the House Calendar.

Mr. ALLEN, from the Committee on Ways and Means, to which was referred the bill (H. R. 10749) amending section 3285 of the Revised Statutes, reported the same without amendment, accompanied by a report (No. 782), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. KITCHIN, from the Committee on Ways and Means, to which was referred the bill (H. R. 15347) to amend existing laws relating to the use of alcohol, free of tax, by scientific institutions or colleges of learning, reported the same without amendment, accompanied by a report (No. 783), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII,

Mr. BUCHANAN of Texas introduced a bill (H. R. 16129) to standardize the barrel of lime, which was referred to the Committee on Coinage, Weights, and Measures.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. HARDY: A bill (H. R. 16130) granting a pension to William J. McDonald; to the Committee on Pensions.

By Mr. HASTINGS: A bill (H. R. 16131) granting an increase of pension to Neppie Downing; to the Committee on Invalid Pensions.

By Mr. LAFEAN: A bill (H. R. 16132) granting an increase of pension to Ellen Krone; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16133) granting an increase of pension to Sarah Zimmerman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16134) granting an increase of pension to Joanna Small; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16135) granting an increase of pension to Rebecca Hess; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16136) granting an increase of pension to Maria A. Beitzel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16137) granting an increase of pension to Rebecca Kraft; to the Committee on Invalid Pensions.

By Mr. McGILLICUDDY: A bill (H. R. 16138) for the relief of Francis G. French, alias Frank Jones; to the Committee on Naval Affairs.

By Mr. MATTHEWS: A bill (H. R. 16139) for the relief of John S. Conkright; to the Committee on Military Affairs.

By Mr. MOORE of Pennsylvania: A bill (H. R. 16140) granting an increase of pension to William H. G. Murray, alias Henry Gordon; to the Committee on Invalid Pensions.

By Mr. SMITH of New York: A bill (H. R. 16141) for the relief of John Rooney; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ALLEN: Memorial of Motion Picture League of the Chamber of Commerce, favoring Federal regulation of motion pictures; to the Committee on Education.

Also, memorial of Cincinnati Chamber of Commerce, with reference to cable rates to the Philippine Islands; to the Committee on Insular Affairs.

By Mr. BAILEY: Memorial of Congressional Union for Woman Suffrage, favoring reporting the Susan B. Anthony suffrage amendment to the House from the Judiciary Committee; to the Committee on the Judiciary.

By Mr. CAREW: Petition of National Automobile Chamber of Commerce, to provide for collection of reliable data regarding production of petroleum and manufacture of petroleum products; to the Committee on Agriculture.

By Mr. CHARLES: Communication from the Trades Assembly of Schenectady, N. Y., favoring the enactment of House bill 10318, relative to workmen's compensation in the District of Columbia; to the Committee on the District of Columbia.

By Mr. DALE of New York: Petition of Mrs. Verne L. Capron, deputy clerk juvenile court, Denver, Colo., urging adoption of the Susan B. Anthony suffrage amendment; to the Committee on the Judiciary.

By Mr. DOOLING: Memorial of board of directors of the Washington Chamber of Commerce, in re half-and-half plan of taxation; to the Committee on the District of Columbia.

By Mr. DILL: Petition of Mr. Chris Foss and other residents of Mica, Freeman, and Rockford, Wash., protesting against the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of George B. Hurd and other residents of Rockford, Freeman, and Mica, Wash., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of W. R. Miliken and other residents of Greenacres, Wash., protesting against the passage of House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

Also, petition of W. R. Miliken and other residents of Greenacres, Wash., protesting against the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of Mrs. A. Anderson and other residents of Spokane, Wash., protesting against the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of W. E. Reed and other residents of Spokane, Wash., protesting against the passage of House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. ESCH: Petition of citizens of Warren, Wis., opposing all bills detrimental to free press; to the Committee on the Post Office and Post Roads.

Also, petition of Thomas G. Johnston, of North Freedom, Wis., and 40 others, protesting against House bills 6468 and 491, authorizing the Postmaster General to exclude certain publications from the mails; to the Committee on the Post Office and Post Roads.

Also, petition of Mrs. C. C. Dryhle, of North Freedom, Wis., and 24 others, protesting against House bill 13048, to establish a juvenile court in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Thomas G. Johnston, of North Freedom, Wis., and 41 others, protesting against appropriations for sectarian purposes; to the Committee on Indian Affairs.

By Mr. ELSTON: Memorial of Forty-ninth Encampment of the Grand Army of the Republic, at Bakersfield, Cal., May 12, 1916, favoring the placing of the remaining Volunteer officers of the Civil War on the retired list with pay of officers of like grade in the Regular Army; to the Committee on Military Affairs.

By Mr. GARDNER: Petitions of 16 citizens of Haverhill and Christian Endeavor Society of Haverhill, Mass., for passage of House joint resolutions 84 and 85; to the Committee on the Judiciary.

By Mr. LINTHICUM: Petition of Howard M. S. Immler, of Baltimore, Md., opposing Senate bill 5677; to the Committee on the District of Columbia.

Also, petition of Howard M. S. Immler, of Baltimore, Md., opposing House bill 13778; to the Committee on the Post Office and Post Roads.

By Mr. MOORE of Pennsylvania: Memorial of Pennsylvania Branch of Congressional Union for Woman Suffrage, protesting against delay on woman-suffrage amendment by Judiciary Committee; to the Committee on the Judiciary.

Also, memorial of Philadelphia Board of Trade, of Philadelphia, Pa., suggesting an amendment to Senate bill 19, relating to bills of lading, etc.; to the Committee on Interstate and Foreign Commerce.

By Mr. NEELY: Petition of 53 citizens of Brooks County, W. Va., asking that prohibition be estalished in the District of Columbia; to the Committee on the Judiciary.

By Mr. NOLAN: Resolutions of the Grand Army of the Republic, Departments of California and Nevada, passed at the Forty-ninth Annual Encampment, favoring the passage of legislation to place Volunteer officers on the retired list; to the Committee on Military Affairs.

By Mr. OAKEY (by request): Memorial of executive committee of the Society of the Chagres, in favor of Senate bill 3457 and House bill 8828, relative to civilian employees on the Canal Zone; to the Committee on Insular Affairs.

By Mr. STEPHENS of California: Petition of Calistoga Grape Growers' Association, protesting against the Kent bill; to the Committee on Ways and Means.

Also, petition of Trinity Lutheran Congregation, of Los Angeles, Cal., opposing war with Germany; to the Committee on Foreign Affairs.

Also, petition of Oscar Kerner and 10 other citizens of Los Angeles, Cal., protesting against sale of munitions of war to Europe; to the Committee on Foreign Affairs.

Also, petitions of Friends' Monthly Meeting and others, of Pasadena; and from M. Chamberlain and 46 others, of Los Angeles; also the Woman's Christian Temperance Union of Los Angeles, all in the State of California, opposing parts of the Chamberlain bill; to the Committee on Military Affairs.

Also, petition of S. E. Williams and 27 other citizens of Los Angeles, Cal., favoring the Warren bill; to the Committee on Military Affairs.

Also, petition of the Grand Army of the Republic of California, favoring the Volunteer officers' retirement bill; to the Committee on Military Affairs.

Also, petition of Wilshire Presbyterian Church, of Los Angeles, Cal., favoring prohibition in Porto Rico; to the Committee on Insular Affairs.

Also, petition of C. P. English and 9 other citizens of Los Angeles, Cal., favoring House bill 9162; to the Committee on Interstate and Foreign Commerce.

Also, communications from Whiting-Mead Commercial Co., of Los Angeles, Cal., opposing stamp taxes on checks; to the Committee on Ways and Means.

Also, petition from Warren A. Scott and 24 others, protesting against delivery of mail by automobile; to the Committee on the Post Office and Post Roads.

Also, resolutions of Bakery and Confectionery Workers of Los Angeles, Cal., favoring Crosser employers' liability bill; to the Committee on the District of Columbia.

Also, petition of Merchants, Manufacturers, and Employers' Association, of Stockton, Cal., protesting against legislation to stifle efficiency; to the Committee on Labor.

Also, petition of L. D. Biddle and 23 other citizens of Los Angeles, Cal., favoring House bill 8665, prohibiting stop-watch or other time study; to the Committee on Labor.

Also, petition of Chamber of Commerce, Venice, Cal., favoring naval base on Santa Monica Bay; to the Committee on Naval Affairs.

By Mr. STINESS: Petition of Master Printers' Association of Rhode Island, protesting against the passage of the Tavenner bill to discontinue the Taylor system in Government establishments; to the Committee on Labor.

Also, papers to accompany House bill 16120, for relief of Harriet N. Sanders; to the Committee on Invalid Pensions.

By Mr. TILLMAN: Petition of citizens of Springdale, Ark., opposing passage of House bill 13778; to the Committee on the Post Office and Post Roads.

By Mr. TOWNER: Petition of May Frederick, C. P.; Mary Russell, S. V.; Virginia E. Belding, I. V.; Olive Parker, secretary; Laoma Kurtz, treasurer; and other members of Llewellen Relief Corps, No. 104, praying for the passage of the Ashbrook bill to increase widows' pensions; to the Committee on Invalid Pensions.

SENATE.

WEDNESDAY, *May 31, 1916.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we come before Thee still abiding under the inspiration of our National Memorial Day. We come with memories following us from the place of death into the place of life and power. We come chastened by the memories of conflicts past, we trust inspired with the vision that opens before us in the call of the new day and of the larger life. We bless Thee that Thou hast always given us men whose names will always be cherished, whose memories we will never let die. Thou hast taken many of the noble and great from us, but Thou hast not taken from us their memory nor the inspiration of their deeds of heroism.

We pray to-day, as we are called into the larger service of our time, that we may have among us leaders whose names will never die and whose devotion to duty and the high cause of patriotism and consecration to the Father's will may help on the cause of human liberty and the establishment of right and justice among men. We ask for Christ's sake. Amen.

The Secretary proceeded to read the Journal of the proceedings of the legislative day of Thursday, May 18, 1916, when, on request of Mr. CHAMBERLAIN and by unanimous consent, the further reading was dispensed with and the Journal was approved.

AUTOMATIC TRAIN-CONTROL SYSTEM.

The VICE PRESIDENT laid before the Senate a communication from the Interstate Commerce Commission, transmitting a report of the Chief of the Division of Safety concerning a test of the automatic train-control system of the Gollos Railway Signal Co. of America, Chicago, Ill., which, with the accompanying papers, was referred to the Committee on Interstate Commerce.

CONFEREES ON RIVER AND HARBOR BILL.

The VICE PRESIDENT. The Chair appoints the Senator from Arkansas [Mr. CLARKE], the Senator from Louisiana [Mr. RANSDELL], and the Senator from Minnesota [Mr. NELSON] conferees on the part of the Senate on the river and harbor bill.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented a petition of the Indiana District of the Evangelical Synod of North America, praying that the United States remain at peace, which was referred to the Committee on Foreign Relations.

He also presented a petition of the Board of Supervisors of the City and County of Honolulu, Hawaii, praying for the construction of a military road around the Island of Oahu, Territory of Hawaii, which was referred to the Committee on Pacific Islands and Porto Rico.

He also presented a petition of the American Supply & Manufacturers' Association, of New York City, N. Y., praying for the creation of a permanent tariff commission, which was referred to the Committee on Finance.

He also presented the petition of John M. Coulter, of the Botanical Gazette of the University of Chicago, Ill., relative to an appropriation of $20,000 for the botanical exploration of Central and South America, which was referred to the Committee on Appropriations.

He also presented a petition of sundry citizens of Bath, N. Y., praying for an increase in armaments, which was ordered to lie on the table.

He also presented a petition of the Fourteenth Street Business Men's Association, of Washington, D. C., praying for the retention of the half-and-half system of taxation in the District of Columbia, which was referred to the Committee on Appropriations.

He also presented a petition of the General Conference of the Methodist Episcopal Church, of Washington, D. C., praying for the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented the petition of Rafael Arthur Capo, of Ponce, P. R., praying for the redistricting of the Territory of Porto Rico, which was referred to the Committee on Pacific Islands and Porto Rico.

Mr. LANE presented petitions of sundry citizens of Oregon, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented petitions of sundry citizens of Oregon, praying for Federal censorship of motion pictures, which were referred to the Committee on Education and Labor.

Mr. LODGE presented petitions of sundry citizens of Massachusetts, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented the memorial of Robert L. Lamb and sundry other citizens of Pittsfield, Mass., remonstrating against appropriations for sectarian purposes, which was ordered to lie on the table.

He also presented a petition of sundry citizens of Lynn, Mass., praying for the enactment of legislation to found the Government on Christianity, which was referred to the Committee on the Judiciary.

Mr. TOWNSEND presented memorials of Local Grange No. 1511, Patrons of Husbandry, of Richland, and Pomona Grange, No. 82, Patrons of Husbandry, of Kalamazoo County, in the State of Michigan, remonstrating against the enactment of legislation to prohibit interstate commerce in convict-made goods, which were ordered to lie on the table.

He also presented a memorial of sundry citizens of Detroit, Mich., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

Mr. BRADY presented a memorial of Local Grange No. 85, Patrons of Husbandry, of Wendell, Idaho, remonstrating against any change in the parcel-post law, which was ordered to lie on the table.

Mr. SAULSBURY presented petitions of sundry citizens of Delaware, praying for prohibition in the District of Columbia, which were ordered to lie on the table.

Mr. McLEAN presented a petition of Local Lodge No. 899, Benevolent and Protective Order of Elks, of Stamford, Conn., praying for the enactment of legislation to grant pensions to certain postal employees, which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of sundry citizens of Waterbury, Conn., remonstrating against the persecution of Syrians by the Turkish Government, which was referred to the Committee on Foreign Relations.

He also presented a memorial of the Connecticut Merchants' Association, remonstrating against the enactment of legislation to fix standard prices for patented and trade-marked articles, which was referred to the Committee on Education and Labor.

Mr. RANSDELL. I present a resolution adopted by the Senate of the Legislature of the State of Louisiana, signed by the lieutenant governor and president of the senate, which I ask may be printed in the RECORD.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Senate resolution No. 10. (By Mr. Haas.)

To Hon. JOSEPH E. RANSDELL:

Whereas under the leadership of the President of the United States, Woodrow Wilson, and of other patriotic citizens, the people all over our country are being awakened to the necessity for adequate national preparedness, in order that we may continue to enjoy the blessings of peace in full security, and that there may be no possible question of the maintenance of the dignity and honor of this great Nation; and

Whereas with this end in view parades and demonstrations are being planned and held in every section of the country, and that in our own city of New Orleans such a parade is to be held June 3: Therefore be it

Resolved, That this senate go on record as approving the policy of adequate national preparedness, and as being in entire sympathy with the movement and sentiments which prompt the patriotic thousands of men and women who participate in these parades. Be it further

Resolved, That the secretary of the senate be instructed to forward a copy of this resolution to the President of the United States, to each Senator and Representative from Louisiana in the National Congress, and to the mayor of the city of New Orleans.

FERNAND MOUTON,
Lieutenant Governor and President of the Senate.

Attest:

O. H. SIMPSON,
Secretary of the Senate.

REPORTS OF COMMITTEES.

Mr. SHEPPARD, from the Committee on Commerce, to which was referred the bill (S. 4058) making an appropriation for the construction of a bridge at Nogales, Ariz., reported it without amendment and submitted a report (No. 500) thereon.

Mr. MYERS, from the Committee on Public Lands, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

S. 5899. A bill to punish persons who make false representations to settlers and others pertaining to the public lands of the United States (Rept. No. 501);

H. R. 10668. An act to repeal section 4 of the act of Congress, approved June 11, 1906, known as the forest homestead act, and for other purposes (Rept. No. 503); and

H. R. 10791. An act for the relief of the occupants of the Tuttle town site (Rept. No. 502).

Mr. DU PONT, from the Committee on Military Affairs, to which was referred the bill (S. 5504) for the relief of Louis Blanchette, alias Lewis Blanchard, alias Louis White, reported it with an amendment and submitted a report (No. 504) thereon.

He also, from the same committee, to which was referred the bill (S. 698) to correct the military record of John L. O'Mara, and grant him an honorable discharge, reported it with amendments and submitted a report (No. 505) thereon.

Mr. LEA of Tennessee, from the Committee on Military Affairs, to which was referred the bill (S. 545) to correct the military record of Charles Bowen, submitted an adverse report (No. 499) thereon, which was agreed to, and the bill was postponed indefinitely.

OIL AND GAS LANDS.

Mr. HUSTING. Mr. President, I desire to submit the views of the minority (Rept. No. 319, pt. 2) of the Committee on Public Lands, signed by the Senator from Kansas [Mr. THOMPSON] and myself on the bill (H. R. 406) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium.

STANDARD LIME BARRELS.

Mr. JONES. Mr. President, a few days ago the Senator from Minnesota [Mr. CLAPP] reported from the Committee on Standards, Weights, and Measures the bill (S. 5425) to standardize lime barrels, and I objected to its consideration. The bill was recommitted to the committee. The Senator from Minnesota had to go away, and he asked me to report the bill this morning and request its present consideration.

Mr. SMITH of Michigan. It is a unanimous report.

Mr. JONES. With some amendments that are suggested. The committee think the bill ought to be passed.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendments were, on page 1, line 2, to strike out "words 'large barrel, 280 pounds,' or 'small barrel, 180 pounds,'" and insert "figures '180 lbs.' for the small barrel and '280 lbs.' for the large barrel"; on page 1, line 13, after the word "sold," to insert "and if imported the name of the country from which it is imported"; on page 2, line 20, after the word "any," to insert "more or"; on page 3, line 2, after the word "in," to insert "the discretion of"; on page 3, line 8, after the word "measures," to insert "*Provided*, That the penal provisions of this act shall not take effect until January 1, 1917"; and in line 10, after the word "after," to strike out "the 1st day of July, nineteen hundred and," and insert "its passage," so as to make the bill read:

Be it enacted, etc., That there is hereby established a large and a small barrel of lime, the large barrel to consist of 280 pounds and the small barrel to consist of 180 pounds, net weight.

SEC. 2. That when lime is sold in barrels the figures "180 lbs." for the small barrel and "280 lbs." for the large barrel shall be stenciled or otherwise clearly and permanently marked upon one or both heads, and in addition the name of the manufacturer of the lime and the name of the brand, if any, under which it is sold, and if imported the name of the country from which it is imported: *Provided, however*, That when a jobber or local dealer in lime sells lime in quantities of more than one barrel and delivers it in barrels which are not headed and are used merely as containers, then nothing in this act shall be deemed to require that the barrels be marked as provided in this section or that each individual barrel contain either of the standard weights established in section 1, but he shall nevertheless deliver a total weight equivalent to the total weight of the number of large or small barrels represented, sold, or charged for by him, or purported to be delivered by him pursuant to an order.

SEC. 3. That rules and regulations for the enforcement of this act, not inconsistent with the provisions of the act, shall be made by the Director of the Bureau of Standards and approved by the Secretary of Commerce, *and that* such rules and regulations shall include reasonable variations or tolerances which may be allowed.

SEC. 4. That it shall be unlawful to pack or to sell, offer, or expose for sale any other barrels of lime than those established in section 1; or to pack or to sell, offer, or expose for sale any barrels of lime which are not marked as provided in section 2; or to represent, sell, charge for, or purport to deliver as a large or small barrel of lime any more or less weight of lime than is established in section 1 for a large or a small barrel, respectively; and any person guilty of a violation of any of the provisions of this act shall be deemed guilty of a misdemeanor and be liable to a fine not to exceed $500, or imprisonment not to exceed six months, in the discretion of the court of the United States having jurisdiction.

SEC. 5. That prosecutions for offenses under this act may be begun upon complaint of local sealers of weights and measures or other officers of the several States and Territories appointed to enforce the laws of the several States or Territories, respectively, relating to weights and measures: *Provided*, That the penal provisions of this act shall not take effect until January 1, 1917.

SEC. 6. That this act shall be in force and effect from and after its passage.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

COURTS IN COLORADO.

Mr. WALSH. From the Committee on the Judiciary I report back favorably with an amendment the bill (H. R. 13765) to amend section 73 of the act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, and for other purposes, and I submit a report (No. 509) thereon. I call the attention of the Senator from Colorado [Mr. THOMAS] to the report.

Mr. THOMAS. I ask unanimous consent for the immediate consideration of the bill.

Mr. CLARKE of Arkansas. What is the bill about?

Mr. THOMAS. The purpose is to provide for the establishment of a term of the United States district court at Durango and Grand Junction and the urgency due to the fact that one of the buildings is now in process of construction and provisions for the court will have to be made at once.

Mr. CLARKE of Arkansas. I assume that there is no objection to the bill, but the title is somewhat misleading.

Mr. THOMAS. The title needs explanation. There would be no hurry except for the building operations at Grand Junction.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole.

The amendment was, after the word "April," in line 7, page 1, to strike out the remainder of the bill and insert:

At Grand Junction on the second Tuesday in September; at Montrose on the third Tuesday in September; and at Durango on the fourth Tuesday in September.

That the Secretary of the Treasury, in constructing the public buildings heretofore authorized to be constructed at the cities of Grand Junction and Durango, be, and he is hereby, authorized and empowered to provide accommodations in each of said buildings for post office, United States court, and other governmental offices, and the existing authorization for said buildings be, and the same are hereby, respectively amended accordingly; and the unexpended balance of all appropriations heretofore made for the construction of said buildings and all appropriations which may be provided in any pending legislation, or that hereafter may be made for the construction of said buildings, are hereby made available for the purpose stated in this paragraph: *Provided*, That if at the time the holding of the terms of said court in any year in either of said cities of Grand Junction and Durango there is no business to be transacted by said court the term may be adjourned or continued by order of the judge of said court in chambers at Denver, Colo.: *And provided further*, That the marshal and clerk of said court shall each, respectively, appoint at least one deputy to reside at and who shall maintain an office at each of the four said places where said court is to be held by the terms of this act.

So as to make the bill read:

Be it enacted, etc., That section 73 of an act entitled "An act to codify, revise, and amend the laws relating to the judiciary," approved March 3, 1911, be, and the same is hereby, amended to read as follows:

"SEC. 73. That the State of Colorado shall constitute one judicial district, to be known as the district of Colorado. Terms of the district court shall be held at Denver on the first Tuesday in May and November; at Pueblo on the first Tuesday in April; at Grand Junction on the second Tuesday in September; at Montrose on the third Tuesday in September; and at Durango on the fourth Tuesday in September.

"That the Secretary of the Treasury, in constructing the public buildings heretofore authorized to be constructed at the cities of Grand Junction and Durango, be, and he is hereby, authorized and empowered to provide accommodations in each of said buildings for post office, United States court, and other governmental offices, and the existing authorization for said buildings be, and the same are hereby, respectively amended accordingly; and the unexpended balance of all appropriations heretofore made for the construction of said buildings and all appropriations which may be provided in any pending legislation, or that hereafter may be made for the construction of said buildings, are hereby made available for the purpose stated in this paragraph: *Provided*, That if at the time the holding of the terms of said court in any year in either of said cities of Grand Junction and Durango there is no business to be transacted by said court the term may be adjourned or continued by order of the judge of said court in chambers at Denver, Colo.: *And provided further*, That the marshal and the clerk of said court shall each, respectively, appoint at least one deputy to reside at and who shall maintain an office at each of the four said places where said court is to be held by the terms of this act."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act to amend section 73 of an act entitled 'An act to codify, revise, and amend the laws relating to the judiciary,' approved March 3, 1911, and for other purposes."

NATURALIZATION CASES IN MONTANA.

Mr. WALSH. From the Committee on the Judiciary I report back favorably without amendment the bill (S. 4594) to validate certain declarations of intention to become citizens of the United States, and I submit a report (No. 508) thereon. I call the attention of my colleague to the bill.

Mr. MYERS. I ask unanimous consent for the immediate consideration of the bill. It covers an emergency that exists in Montana and will lead to no debate.

There being no objection, the bill was considered as in Committee of the Whole. It provides that declarations of intention to become citizens of the United States filed prior to the passage of this act in the counties of Cascade, Chouteau, Teton, Hill, Blaine, and Valley, State of Montana, under the act approved June 29, 1906, entitled "An act to establish a Bureau of Immigration and Naturalization and to provide for a uniform rule for the naturalization of aliens throughout the United States," as amended by the acts of March 4, 1909, June 25, 1910, and March 4, 1913, are hereby declared to be as legal and valid as if such declarations of intention had been filed in the judicial district in which the declarants resided, as required by section 4 of said act of June 29, 1906: *Provided*, That such declarations of intention shall not be by this act further validated or legalized.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BOY SCOUTS OF AMERICA.

Mr. SHIELDS. From the Committee on the Judiciary I report back favorably with amendments the bill (H. R. 755) to incorporate the Boy Scouts of America, and for other purposes, and I submit a report (No. 506) thereon.

A bill similar to this passed the Senate at the last session, but failed on account of the late hour when it reached the other House. This bill has been passed by the House and is now favorably recommended by the Committee on the Judiciary, with some slight formal amendments. I ask unanimous consent for its immediate consideration.

There being no objection, the bill was considered as in Committee of the Whole.

The amendments were, on page 1, line 9, to strike out the words following the semicolon down to but not including the word "Jeremiah" and insert in lieu thereof the words "Franklin C. Hoyt"; in line 11, strike out the words following the word "Schiff" down to but not including the word "and," in the same line; on page 2, line 1, after the semicolon, insert the words "John H. Nicholson, of Pittsburgh, Pa."; and, in line 24, after the word "organization," insert a comma, so as to make the bill read:

Be it enacted, etc., That Colin H. Livingstone and Ernest P. Bicknell, of Washington, D. C.; Benjamin L. Dulaney, of Bristol, Tenn.; Milton A. McRae, of Detroit, Mich.; David Starr Jordan, of Berkeley, Cal.; F. L. Seely, of Asheville, N. C.; A. Stamford White, of Chicago, Ill.; Daniel Carter Beard, of Flushing, N. Y.; George D. Pratt, of Brooklyn, N. Y.; Franklin C. Hoyt, Jeremiah W. Jenks, Charles P. Neill, Frank Presbrey, Edgar M. Robinson, Mortimer L. Schiff, and James E. West, of New York, N. Y.; G. Barrett Rich, jr., of Buffalo, N. Y.; Robert Garrett of Baltimore, Md.; John Sherman Hoyt, of Norwalk, Conn.; Charles C. Jackson, of Boston, Mass.; John H. Nicholson, of Pittsburgh, Pa.; William D. Murray of Plainfield, N J.; and George D. Porter, of Philadelphia, Pa., their associates and successors, are hereby created a body corporate and politic of the District of Columbia, where its domicile shall be.

SEC. 2. That the name of this corporation shall be "Boy Scouts of America," and by that name it shall have perpetual succession, with power to sue and be sued in courts of law and equity within the jurisdiction of the United States; to hold such real and personal estate as shall be necessary for corporate purposes, and to receive real and personal property by gift, devise, or bequest; to adopt a seal, and the same to alter and destroy at pleasure; to have offices and conduct its business and affairs within and without the District of Columbia and in the several States and Territories of the United States; to make and adopt by-laws, rules, and regulations not inconsistent with the laws of the United States of America or any State thereof, and generally to do all such acts and things (including the establishment of regulations for the election of associates and successors) as may be necessary to carry into effect the provisions of this act and promote the purposes of said corporation.

SEC. 3. That the purpose of this corporation shall be to promote, through organization, and cooperation with other agencies, the ability of boys to do things for themselves and others, to train them in scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues, using the methods which are now in common use by boy scouts.

SEC. 4. That said corporation may acquire, by way of gift, all the assets of the existing national organization of Boy Scouts, a corporation under the laws of the District of Columbia, and defray and provide for any debts or liabilities to the discharge of which said assets shall be applicable; but said corporation shall have no power to issue certificates of stock or to declare or pay dividends, its object and purposes being solely of a benevolent character and not for pecuniary profit to its members.

SEC. 5. That the governing body of the said Boy Scouts of America shall consist of an executive board composed of citizens of the United States. The number, qualifications, and terms of office of members of the executive board shall be prescribed by the by-laws. The persons mentioned in the first section of this act shall constitute the first executive board and shall serve until their successors are elected and have qualified. Vacancies in the executive board shall be filled by a majority vote of the remaining members thereof. The by-laws may prescribe the number of members of the executive board necessary to constitute a quorum of the board, which number may be less than a majority of the whole number of the board. The executive board shall have power to make and to amend the by-laws, and, by a two-thirds vote of the whole board at a meeting called for this purpose, may authorize and cause to be executed mortgages and liens upon the property of the corporation. The executive board may, by resolution passed by a majority of the whole board, designate three or more of their number to constitute an executive or governing committee, of which a majority shall constitute a quorum, which committee, to the extent provided in said resolution or in the by-laws of the corporation, shall have and exercise the powers of the executive board in the management of the business affairs of the corporation, and may have power to authorize the seal of the corporation to be affixed to all papers which may require it. The executive board, by the affirmative vote of a majority of the whole board, may appoint any other standing committees, and such standing committees shall have and may exercise such powers as shall be conferred or authorized by the by-laws. With the consent in writing and pursuant to an affirmative vote of a majority of the members of said corporation, the executive board shall have authority to dispose in any manner of the whole property of the corporation.

SEC. 6. That an annual meeting of the incorporators, their associates and successors, shall be held once in every year after the year of incorporation, at such time and place as shall be prescribed in the by-laws, when the annual reports of the officers and executive board shall be presented and members of the executive board elected for the ensuing year. Special meetings of the corporation may be called upon such notice as may be prescribed in the by-laws. The number of members which shall constitute a quorum at any annual or special meeting shall be prescribed in the by-laws. The members and executive board shall have power to hold their meetings and keep the seal, books, documents, and papers of the corporation within or without the District of Columbia.

SEC. 7. That said corporation shall have the sole and exclusive right to have and to use, in carrying out its purposes, all emblems and badges, descriptive or designating marks, and words or phrases now or heretofore used by the Boy Scouts of America in carrying out its program, it being distinctly and definitely understood, however, that nothing in this act shall interfere or conflict with established or vested rights.

SEC. 8. That on or before the 1st day of April of each year the said Boy Scouts of America shall make and transmit to Congress a report of its proceedings for the year ending December 31, preceding, including a full, complete, and itemized report of receipts and expenditures of whatever kind.

SEC. 9. That Congress shall have the right to repeal, alter, or amend this act at any time.

The amendments were agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

FOX RIVER BRIDGE, ILLINOIS.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (S. 6073) granting the consent of Congress to George Fabyan to construct a bridge across the Fox River, and submit a report (No. 507) thereon. I ask unanimous consent for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

ELIZABETH RIVER BRIDGE, VIRGINIA.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably with an amendment the bill (S. 5851) granting the consent of Congress to the Norfolk-Berkley Bridge Corporation, of Virginia, to construct a bridge across the Eastern Branch of the Elizabeth River in Virginia, and I submit a report (No. 511) thereon. I ask for the immediate consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The amendment of the committee was to strike out section 1 of the bill and insert:

That the time for commencing and completing the bridge authorized by act of Congress approved January 2, 1915, to be built across the Eastern Branch of the Elizabeth River, in the city of Norfolk, Va., by the Norfolk-Berkley Bridge Corporation, of Virginia, is hereby extended one year and three years, respectively, from date of approval hereof.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill to extend the time for constructing a bridge across the Eastern Branch of the Elizabeth River in Virginia."

YELLOWSTONE RIVER BRIDGE, MONTANA.

Mr. SHEPPARD. From the Committee on Commerce I report back favorably without amendment the bill (S. 5805) permitting the Riverview Ferry Co. to construct, maintain, and operate a bridge across the Yellowstone River in the State of Montana, and I submit a report (No. 510) thereon. I ask for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

PANAMA-PACIFIC INTERNATIONAL EXPOSITION.

Mr. STONE. From the Committee on Foreign Relations I report back favorably without amendment the joint resolution (S. J. Res. 133) to authorize the President of the United States to convey the acknowledgments of the Government and people of the United States to various foreign Governments of the world who have participated in the Panama-Pacific International Exposition, to celebrate the completion and opening of the Panama Canal and also the four hundredth anniversary of the discovery of the Pacific Ocean, and I submit a report (No. 512) thereon.

The joint resolution is brief, and it is important that it should be acted upon at this time if it is to be acted upon at all. I ask for its immediate consideration.

There being no objection, the joint resolution was considered as in Committee of the Whole. It provides that it is the sense of the Congress that the acknowledgments of the Government and people of the United States be tendered to the various foreign Governments of the world who have so generously and effectively cooperated in the Panama-Pacific International Exposition held in San Francisco, Cal., during the year A. D. 1915, to celebrate the completion and opening of the Panama Canal and also the four hundredth anniversary of the discovery of the Pacific Ocean.

SEC. 2. That the President of the United States be requested to communicate to each foreign Government participating in the said exposition the appreciative acknowledgment of the Government of the United States for its contribution.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BUREAU OF ENGRAVING AND PRINTING.

Mr. MARTIN of Virginia. From the Committee on Appropriations I report back favorably without amendment the joint resolution (H. J. Res. 214) increasing the number of sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing during the fiscal year 1916, and I ask unanimous consent for its present consideration.

There being no objection, the joint resolution was considered as in Committee of the Whole. It provides that the limitation in the sundry civil appropriation act for the fiscal year 1916 as to the number of delivered sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing is increased from 239,000 and 1,600,500 to 289,000 and 2,101,000, respectively.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

NATIONAL GUARD OF GEORGIA.

Mr. SMITH of Georgia. On Monday the chairman of the Committee on Military Affairs reported back favorably the bill (S. 708) to make immediately available for the use of the State of Georgia in paying expenses incurred by said State in connection with the joint encampment held at Augusta, Ga., July 22 to 31, 1914, certain sums appropriated for arming and equipping the militia of said State.

It is a purely local bill, connected with a matter in Georgia and it grows out of this state of facts.

In 1914 the department urged the adjutant general of the State to get as large a number of troops as possible, sending letters to all the inhabitants. They brought out a very much larger number than was expected and they exceeded their expenses $14,000. Thereupon they set apart that sum from the appropriation of 1915–16 and drew on it, but the Comptroller of the Treasury held that it could not be so used. The money is still set apart. The bill is simply to authorize the payment of the liability for 1914 out of the appropriation already made for 1915 and 1916. It involves no additional expenditure and no additional appropriation. I ask unanimous consent for the present consideration of the bill.

Mr. CUMMINS. I was unable to hear the number of the bill. What is the bill?

Mr. SMITH of Georgia. It is a local bill relating to the National Guard of the State of Georgia.

Mr. CUMMINS. I have no objection to its consideration.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in Committee of the Whole. It provides that of the sum appropriated by section 1661, Revised Statutes, for arming and equipping the whole body of the militia, the sum of $14,409.98, proportioned to the State of Georgia for the years 1915 and 1916, be made immediately available for the purpose of paying the expenses incurred by said State over and above the allotments made by the Secretary of War to the State of Georgia from all appropriations therefor in connection with the joint encampment held at Augusta, Ga., July 22 to 31, 1914; and the Secretary of the Treasury is hereby authorized and instructed to pay over the amount to the governor of the State of Georgia for that purpose.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SAULSBURY:

A bill (S. 6223) granting an increase of pension to Mary E. Conwell (with accompanying papers); to the Committee on Pensions.

By Mr. SHEPPARD:

A bill (S. 6224) to increase the utility of the postal savings bank, to encourage savings among the people, to secure the largest returns for such savings consistent with adequate security, to provide for the loans of such savings for the promotion of agriculture and other useful, productive industries, and for the promotion of home building and home improvement in the rural districts and elsewhere; to the Committee on Post Offices and Post Roads.

By Mr. PITTMAN:

A bill (S. 6225) to regulate the interstate use of automobiles and all self-propelled vehicles which use the public highways in interstate commerce; to the Committee on Interstate Commerce.

By Mr. HUGHES:

A bill (S. 6226) to amend section 18 of the act approved March 3, 1911, entitled "An act to codify, revise, and amend the laws relating to the judiciary"; to the Committee on the Judiciary.

By Mr. GALLINGER:

A bill (S. 6227) to increase the area of the United States Botanic Garden in the city of Washington, D. C. (with accompanying papers); to the Committee on the Library.

By Mr. HARDING:

A bill (S. 6228) for the relief of the Industrial Savings and Loan Association, of Bellevue, Ohio; and

A bill (S. 6229) for the relief of the People's Building and Savings Association, of Troy, Ohio; to the Committee on Claims.

Mr. CHAMBERLAIN. At the request of the Secretary of War I introduce a bill and ask that it be referred to the Committee on Military Affairs:

The bill (S. 6230) to provide for the creation of a Council of Executive Information for the Coordination of Industries and Resources for the National Security and Welfare, and for other purposes, was referred to the Committee on Military Affairs.

By Mr. OWEN:

A bill (S. 6231) for the erection of a public building at Ponca City, Okla.; to the Committee on Public Buildings and Grounds.

A bill (S. 6232) to provide for public education upon political questions and for the dissemination of information upon political issues and matters of a political nature of public interest; to the Committee on Privileges and Elections.

By Mr. BRADY:

A bill (S. 6233) granting an increase of pension to D. L. Badley (with accompanying papers); to the Committee on Pensions.

By Mr. TAGGART:

A bill (S. 6234) granting an increase of pension to Sylvanus Moore;

A bill (S. 6235) granting an increase of pension to Alma E. Nichols;

A bill (S. 6236) granting a pension to Ruth Wilson (with accompanying papers); and

A bill (S. 6237) granting an increase of pension to Joseph N. Clements (with accompanying papers); to the Committee on Pensions.

By Mr. TOWNSEND:

A bill (S. 6238) granting a pension to John Walker (with accompanying papers); to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 6239) authorizing the Commissioner of Navigation to document as vessels of the United States two dredges built of American material and owned by James Stewart & Co. (Inc.), a citizen of the United States; to the Committee on Commerce.

By Mr. CHAMBERLAIN:

A bill (S. 6240) granting a pension to Richard Trombley (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN (by request):

A bill (S. 6241) to carry out the provisions of an act approved July 1, 1902, known as "An act to accept, ratify, and confirm a proposed agreement submitted by the Kansas or Kaw Indians of Oklahoma, and for other purposes," and to provide for a settlement to Addie May Auld and Archie William Auld, who were enrolled as members of the said tribe after the lands and moneys of said tribe had been divided; to the Committee on Indian Affairs.

TRANSMISSION OF SECOND-CLASS MAIL MATTER.

Mr. ASHURST. I submit an amendment intended to be proposed by me to the Post Office appropriation bill (H. R. 10484), which I ask may be read.

The amendment was read and ordered to lie on the table, as follows:

On page 38 strike out all of section 7 of the Post Office appropriation bill, as follows:

SEC. 7. That so much of section 1 of the "Act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1913, and for other purposes," approved August 24, 1912, which provides that the Post Office Department shall not extend or enlarge its present policy of sending second-class matter by freight trains, is hereby repealed.

LOUISVILLE & NASHVILLE RAILROAD CO.

Mr. LEA of Tennessee submitted the following resolution (S. Res. 207), which was referred to the Committee on Printing:

Resolved, That the manuscript submitted by the Senator from Tennessee [Mr. LEA] entitled "Hearings before Interstate Commerce Commission relative to financial relations, rates, and practices of the Louisville & Nashville Railroad Co., the Nashville, Chattanooga & St. Louis Railway, and other carriers" be printed as a Senate document.

NATIONAL GUARD OF ARIZONA.

Mr. ASHURST. Mr. President, there have been some statements made to the effect that the National Guard of Arizona was called into the service and did not respond with alacrity. I wish to say that the showing that was made was most creditable. I ask unanimous consent to have read at the desk a letter from the governor of the State of Arizona.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The Secretary read as follows:

PHOENIX, ARIZ., *May 26, 1916.*

Hon. HENRY F. ASHURST,
United States Senate, Washington, D. C.:

Answering your wire of May 24, I am at a loss to account for the absurd reports relative to Arizona's National Guard which have recently found their way into press dispatches. The adjutant general received an order to call the guardsmen into Federal service about 10 o'clock on the morning of May 9, and at 10 o'clock on the morning of May 12 the train left Phoenix for Douglas, with all the militia property, including wagon train. Col. Tuthill, commanding National Guard, reported 46 officers and 613 men on his arrival at the camp. At time when regiment was ordered out one company had been refused recognition by division militia affairs and another company was being reorganized. The peace strength for 10 companies and sanitary corps was 50 officers and 685 men. Many of the guardsmen at the time of the call were long distances from their home stations but have since been reporting daily. The State now has in camp her full quota of 816 men, this being the size of the guard at peace strength. Taking 400,000 as the total strength of the National Guard in this country, Arizona's quota in proportion to population would be 890 men. Many additional recruits are being received daily at recruiting stations established in several different parts of the State. It should be remembered that the guardsmen and many of the recruits are leaving families without adequate means of support, and are giving up positions yielding from $3 to $6 per day in wages. Almost without exception they appear eager to serve their country if actually needed for defense, but some of them naturally do not look with favor upon being incorporated in the Regular Army in time of peace. In my judgment, Arizona has made a showing in the recent emergency which will compare favorably with that which would be made by any of the other States if they were subject to a similar call.

GEO. W. P. HUNT, *Governor.*

ARTICLE BY WALTER CLARK (S. DOC. NO. 449).

Mr. OWEN. I ask to have printed as a public document an article by Walter Clark, chief justice of the Supreme Court of the State of North Carolina, taken from the Michigan Law Review of November, 1914, on some myths of the law.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

FRENCH SPOLIATION CLAIMS (S. DOC. NO. 451).

Mr. LODGE. I ask to have printed as a Senate document a statement by George A. King relating to the French spoliation claims, containing a few additions that bring the claims down to date. There is quite a demand for the full statement.

The VICE PRESIDENT. Without objection, it is so ordered.

ARTICLE BY KEMP P. BATTLE.

Mr. OVERMAN. I ask to have printed in the RECORD a short article by Kemp P. Battle, former president of the University of North Carolina, on the power of the Supreme Court to declare an act of Congress unconstitutional.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

SUPREME COURT AND CONSTITUTION—POWER OF THE COURT TO DECLARE AN ACT OF CONGRESS UNCONSTITUTIONAL.

[By Kemp P. Battle.]

A friend sent me a copy of a speech by Mr. Hinebaugh, a Representative from Illinois, in which he affirms that "nowhere in the Constitution of the United States is the Supreme Court expressly authorized to declare an act of Congress unconstitutional." He accuses the court of being guilty of usurpation.

This is strange doctrine. If true, we live under a Government which may become a lawless despotism. Let us see where it leads.

If this new and startling doctrine be true, a majority of Congress, with the President, or two-thirds majority with the President opposed, can pass any act in violation of the Constitution, which will bind the Nation at least for two years. They can take property without paying for it, authorize arrests without law, abolish trial by jury—in fact, be more despotic than the Czar of Russia or the Sultan of Turkey. Their acts can not be annulled except after another election, but in the meantime what mischief may be done? Many of our ablest southern lawyers thought the two-thirds majority in reconstruction days exercised unlawful authority on the plea that post arma, as well as inter arma, silent leges.

But it is said that the English Parliament can not be checked by the court, and Congress ought to have the same superiority. There is no analogy between the two. In the first place, it is altogether unlikely that the framers of our Constitution imitated a body which had waged a long war against their people. And secondly, their task was to make a Government, not for the British Isles, or a country like them, but for a large number of sovereign States, proud of their independence. They gave to the General Government powers of a general nature, leaving to the States the management of their local affairs. This could not possibly be done without a written Constitution, or compact, specifying the legislative, executive, and judicial powers, duties, and limitations. Great Britain has no written constitution. Ours is the fundamental law, the people's law.

This great code prescribes what the lawmaking body, or Congress, may do and what they may not do, and special provision is made to check them if they exceed their powers. Notwithstanding what Mr. Hinebaugh and other critics may say, these provisions are in the Constitution perfectly plain.

In the first place, a Supreme Court is established. What is a court? The definition of Judge Coley is satisfactory: "The business of courts is to apply the law of the land in such controversies as may be brought before them. Their authority is coordinate with that of the legislative and executive, neither superior nor inferior, but each with equal dignity must move in its appointed sphere."

Now, what is the "law of the land?" The Constitution, Article VI, paragraph 2, is explicit: "The Constitution and the laws, which shall be made in pursuance thereof, and all treaties made or which shall be made, under the authority of the United States, shall be the supreme law of the land." That is, first of all, the Constitution; secondly, the acts of Congress passed "in pursuance of the Constitution." Acts not in pursuance of the Constitution are not laws. An unconstitutional act is no law at all.

The Constitution provides that the judicial power shall vest in a Supreme Court and in such inferior courts as Congress may establish. The classes of cases are enumerated. The Supreme Court shall have original jurisdiction affecting ambassadors, etc., and where a State is a party. In all other cases it shall have appellate jurisdiction.

Now, suppose a case goes up to the Supreme Court, wherein plaintiff claims under an act of Congress, and defendant claims that Congress had no right to pass the act, that it is not "in pursuance of the Constitution." How can the court avoid deciding it? It is their "business to apply the law of the land." Suppose the court is of opinion that the defendant is right, that the act is not "in pursuance of the Constitution." They are confronted by the supreme law, the people's law, the Constitution, on the one hand, and a pretended act of Congress, which is no law. It is too plain for argument. They are sworn to support the Constitution. They are sworn to support acts of Congress in pursuance of the Constitution. The act is not in pursuance of the Constitution. They are sworn to declare it null and void.

The case of Marbury *v.* Madison seems to be misunderstood. There were two decisions, first, that Madison, Jefferson's Secretary of State, ought to have delivered to Marbury his commission as justice of the peace; that he was entitled to it; but, second, that the act of Congress allowing Marbury to bring suit was unconstitutional. He was put out of court. The first decision was resented by Jefferson and Madison as a needless slap in the face. The second decision, as Dana, in his work on the Constitution, says, has been generally acquiesced in. Great judges, eminent statesmen, in the General Government and in the States; Presidents, governors, lawyers, and writers agree that the Supreme Court, as a matter of course, when there is a conflict between the Constitution and an act of Congress, must stand by the Constitution. The great commentators Story, Chancellor Kent, Wharton, Duer, Coley, De Tocquville, and Bryce all accept the doctrine as not only a power but a necessity.

Yes; and the people have indorsed it. When it was decided that a State could be sued an amendment to the Constitution was speedily adopted prohibiting such suits. Other amendments—in all, 15—have been made. But none prohibiting the courts from nullifying unconstitutional acts of Congress has been made or even authoritatively proposed. This is equivalent to indorsement by the people.

President Jackson's reputed unofficial remark, "John Marshall has made his decision (in Worcester *v.* Georgia); now let him enforce it," is quoted as evidence that he was opposed to the power of the court over unconstitutional acts. He was talking of enforcing the decision after it was made, not of the decision itself. Congress was maturing a plan to remove the Cherokees to the Indian Territory, a measure of vital interest to Georgia, necessary to her development. Jackson meant that he would not use the Executive power against that State when a peaceable settlement was in sight. Indeed, it seems to be an open question of extreme importance whether the court has power to coerce a State. Is not a decision against a State only advisory, of a moral nature?

I add that the courts of all the States have never, out of respect for the legislative body, refrained from declaring their acts unconstitutional when clearly so. The excellent book of Connor and Cheshire on the constitution of North Carolina shows numerous cases of this purport decided by the courts presided over by Chief Justices Taylor, Henderson, Ruffin, Nash, Pearson, Smith, Merrimon, Faircloth, and Clark. Were all these guilty of usurpation in protecting the people's constitution, the supreme law of our State?

The critics of the Supreme Court go on to say that the tremendous power of annulling acts of Congress is dangerous to our Government; elevates them above the law. This is not true. By the process of amendment to the Constitution their decisions may be nullified. In McArdle's case the right of appeal was taken away from him by Congress. In President Grant's time the decision that Congress has no power to make greenback legal tender was nullified by reducing the number of judges until two of the old number died, then increasing the number to nine and elevating to the bench two greenback judges. The decision of the court as to taxation of incomes was nullified by constitutional amendment. After the present judges give way the salaries may be reduced so that the able lawyers will not accept the office.

On the whole, the Supreme Court has the highest position in the esteem of good men everywhere. The judges are appointed by the people's President, on whom the eyes of the Nation are fixed. They then undergo the scrutiny of the people's Senate, composed of the best men from every State in the Union. Their salaries can not be reduced. They hold during good behavior. They have an exceedingly able bar. They have been and are one of the most august tribunals in the world.

CHAPEL HILL, N. C.

NATIONAL BANKS (S. DOC. NO. 450).

Mr. OWEN. Mr. President, I present a statement from the Comptroller of the Currency with reference to the national banks and the results under the Federal reserve act. I ask that it be printed in the RECORD, without reading, and also printed as a Senate document.

The VICE PRESIDENT. Without objection, it is so ordered.

The statement referred to is as follows:

COMPTROLLER OF THE CURRENCY,
Washington, May 26, 1916.

MY DEAR SENATOR: Thinking that they may be of interest to you, I inclose with this copy of a statement just prepared in this office showing the number of new national banks organized and national banks increasing their capital as compared with national banks liquidating and reducing their capital for the following periods: First, November 14, 1914 (date of the inauguration of the Federal Reserve System), to December 31, 1915; second, January 1, 1915, to May 22, 1916.

You will note a very gratifying increase both in the number of national banks and increase in capital for both periods.

I also inclose a memorandum marked "E" showing how the increase in circulation in this country from January 1, 1915, to April 1, 1916, is explained, due wholly to the increase in gold, paper money showing an actual reduction of $100,000,000.

I also hand you herewith an article from the current issue of the Outlook and call your special attention to the answers to questions 6 and 7, showing the universal approval which is being given to the Federal reserve act by business men throughout the country.

The preface to this article, by Theodore H. Price, explains how these questions and answers were gotten together.

It certainly is significant when out of 1,401 replies, 1,244 of the leading business men in every State in the Union declare that "business men are satisfied with the operation of the Federal reserve law."

Sincerely, yours,

JOHN SKELTON WILLIAMS.

Hon. ROBERT L. OWEN,
United States Senate.

The Comptroller of the Currency reports the following increases and reductions in the number of national banks and the capital of national banks during the period from November 16, 1914, to December 31, 1915:

New charters issued to 155 banks with capital of	$9,974,500
Increase of capital approved for 104 banks with new capital of	14,797,700
Aggregate number of new charters and banks increasing capital, 259, with aggregate of new capital authorized	24,772,200
Number of banks liquidating (other than those consolidating with other national banks), 56; capital of same banks	$5,125,000
Number of banks reducing capital, 20; reduction of capital	2,070,000
Total number of banks going into liquidation or reducing capital (other than those consolidating with other national banks), 76; aggregate capital reduction	7,195,000
The foregoing statement shows the aggregate of increased capital for the period was	24,772,200
Against a reduction of capital owing to liquidations (other than for consolidation with other national banks) and reductions of capital of	7,195,000

During this period there were 21 national banks, with an aggregate capital of $2,210,000, placed in the hands of receivers, and 6 national banks, with an aggregate capital of $450,000, were restored to solvency and reopened.

The Comptroller of the Currency reports the following increases and reductions in the number of national banks and the capital of national banks during the period from January 1, 1916, to May 22, 1916:

New charters issued to 47 banks with capital of	$2,480,000
Increase of capital approved for 49 banks with new capital of	3,647,500
Aggregate number of new charters and banks increasing capital, 96, with aggregate of new capital authorized	6,127,500
Number of banks liquidating (other than those consolidating with other national banks), 43; capital of same banks	3,773,000
Number of banks reducing capital, 7; reduction of capital	262,500
Total number of banks going into liquidation or reducing capital (other than those consolidating with other national banks), 50; aggregate capital reduction	4,035,500
The foregoing statement shows the aggregate of increased capital for the period was	$6,127,500
Against a reduction of capital owing to liquidations (other than for consolidation with other national banks) and reductions of capital of	4,035,500

During this period there were five national banks, with an aggregate capital of $400,000, placed in the hands of receivers, and two national banks, with an aggregate capital of $80,000, were restored to solvency and reopened.

E.

MEMORANDUM SHOWING THAT THE INCREASE IN OUR PRESENT MONEY SUPPLY ARISES WHOLLY FROM THE GAIN IN GOLD, ACCOMPANIED BY AN ACTUAL REDUCTION OF PAPER CURRENCY.

In answer to the statement, which has been frequently repeated of late, that the operations of the Federal reserve banks have brought about inflation in our paper currency and an increase in the outstanding amount of Federal reserve notes and national-bank notes, permit me to submit the following official figures:

The official Treasury statements show that the total stock of money in the United States on Apr. 1, 1916, was	$4,373,000,000
On Jan. 1, 1915, the amount was reported at	3,972,000,000
Being an increase in our stock of money of	401,000,000

But this increase was more than accounted for by an increase in the amount of gold and gold certificates, as the following figures will show:

Gold coin, including bullion and gold certificates, Apr. 1, 1916	$2,317,000,000
Gold coin, including bullion and gold certificates, Jan. 1, 1915	1,816,000,000
Actual increase in general stock of gold coin, bullion, and gold certificates in the United States since Jan. 1, 1915	501,000,000
On Jan. 1, 1915, the amount of national-bank notes and Federal reserve notes outstanding was (there were no Federal reserve bank notes outstanding as of that date)	1,057,000,000
On Apr. 1, 1916, the amount of national-bank notes, Federal reserve notes, and Federal reserve bank notes outstanding was	952,000,000
So that there was an actual reduction between Jan. 1, 1915, and Apr. 1, 1916, in national-bank notes and Federal reserve notes and Federal reserve bank notes of	105,000,000

The amount of silver and silver certificates in circulation on January 1, 1915, was $750,000,000, and on April 1, 1916, the amount was reported as having increased approximately $5,000,000, the difference being inconsiderable.

United States notes outstanding January 1, 1915, $346,000,000, were reported on April 1, 1916, as also unchanged.

The increase in our stock or money on April 1, 1916, of $401,000,000, is thus shown to be accounted for by—

An increase in our gold supply of	$501,000,000
An increase in our stock of silver of	5,000,000
Total increase	506,000,000
And a reduction in our paper currency (national-bank notes and Federal reserve notes) of	105,000,000
Making the net increase in the money supply	401,000,000

From all information obtainable, this country's supply of gold at this time exceeds by many hundreds of millions of dollars the gold stock of any other nation.

The above statement shows that the increase in our money supply since January 1, 1915, is wholly accounted for by the increase in gold, and the increase in the gold supply is explained by more than $500,000,000 of foreign gold sent to this country in exchange for American products since the outbreak of the European war.

AMERICAN BUSINESS AS AFFECTED BY PEACE AND PREPAREDNESS.

THE COMPOSITE OPINION OF 1,629 AMERICAN BUSINESS MEN.

[By Theodore H. Price.]

Instead of writing an original article for this issue of the Outlook, I have asked the editors to allow me to publish something that seems to me far more important and informing than anything that I could say.

It is the composite opinion of 1,629 American business men in regard to American business as affected by the political and economic conditions by which we are now, or may shortly be, confronted at home and abroad.

It is derived from an elaborate investigation made for their own and their clients' guidance by Harris, Winthrop & Co., a well-known firm of investment bankers having offices in both New York and Chicago.

The complete report and the letters which accompany it comprise a pamphlet of some 60 pages, advance proofs of which I have been permitted to read and which will probably be published about the same time as this issue of the Outlook.

As such documents do not generally circulate outside the comparatively limited circle of those to whom they are sent for financial reasons, and as this one seems to have exceptional public interest just now, I feel that I am doing a real service to the readers of the Outlook in putting it at their disposal. As it is difficult, if not impossible, to improve upon the bankers' summary of their own report and the conclusions to which it points, I quote it in full. I hope those who read it will agree with me as to its practical value to business men in the present somewhat perplexing situation. This is the report:

In January, 1915, we made an investigation into business conditions in the United States, the result of which we published in a pamphlet dealing with the Present and Future of American Business.

This pamphlet came to have a wide circulation, and many of our friends have been good enough to say that it was at the time an important influence in reestablishing the confidence of the people of this country in themselves and the commercial future of the Nation.

Our previous inquiry was addressed to about 2,000 men of affairs throughout the United States, and was sent out January 21, 1915. At

that time many were in doubt whether this country could prosper while Europe was involved in a war which had then been in progress only five months.

The replies which we received and the letters that we were permitted to publish indicated the general individuality of confidence in the future of each respondent's business that has since been fused in the widespread commercial prosperity that we are now enjoying.

Such service as we may have rendered was in making faith infectious and encouraging a justifiable optimism which most people felt but hesitated to express.

We are now again confronted by a situation that engenders doubt. There are many who fear that we shall have a business recession in the United States with the advent of peace in Europe.

This fear is due to the belief that our present prosperity is artificial and abnormal in that it is the result of the war-induced demand for our products and the protection to our industry which the present military preoccupation of Europe provides.

With the object of ascertaining whether this apprehension was justified by the intrinsic facts, we submitted some 17 questions to about 4,500 men of affairs throughout the United States, including all those who had answered our previous inquiry. Our investigation included every State, the number of business men addressed in each State being proportioned to its population.

(The questions referred to will be found on the accompanying double-page table.)

Those replying were asked to cross out the answers least accurately describing the conditions inquired about, and to amplify their views by writing us at greater length if convenient.

In the selection of those whose opinions we have thus sought to obtain we have included but few bankers and have omitted altogether the business men of Greater New York.

We are particular to explain our action in this respect lest it be regarded as invidious. Our purpose has been to obtain a reading of the business mind of the United States at first hand rather than through the eyes of bankers who must view events in the light of their financial trusteeship, or men of large affairs who live in New York and are precluded by the very isolation of their metropolitan residence from anything more than a vicarious knowledge of conditions outside this great city.

It is only proper to say that we approached this investigation with the feeling that the dependence of the country upon the foreign demand for our goods had been exaggerated, and in submitting the questionnaire to our correspondents we so informed them, closing our letter of transmittal with the following statement:

"The aggregate of our foreign trade, including both imports and exports, is about five and one-half billions. Our domestic commerce is competently estimated at about one hundred billions. The purchasing power of our population is greater than that of any other people in the world. Economically, we are self-contained. If the balance between domestic production and consumption is fairly well preserved, and we do not unnecessarily alarm ourselves over conditions that affect us but remotely, our progress ought to be undisturbed."

We have received in all some 1,629 replies, which we have summarized in tabular form, according to geographical districts.

(This summary will be found on pages 226 and 227 of the Outlook.)

The summary speaks for itself and requires but little explanatory comment. Of those answering the first question, about one-half feel that their business will be directly affected by peace in Europe, while the other half look for undiminished activity.

It is only proper to explain that those who feel apprehensive as to the effect of peace in Europe upon American business activity are engaged, for the most part, in the metal or munition industries or in the manufacture of articles that were imported before the war. Thus, a Connecticut manufacturer of clocks says that he fears that he will not be able to compete with German-made clocks when the war is over; and those who are interested in the manufacture and production of sugar in Louisiana, Utah, and Colorado express a reasonable apprehension of lower prices once the European supply of beet sugar is again available. Many who anticipate a slackening in the war-stimulated demand for specialties are undisturbed thereby and admit that they are gradually and successfully preparing themselves for such a contingency.

We can not, therefore, regard the evenly balanced opinion as to the effect of peace upon American business as indicative of a lack of confidence in the country's ability to readjust itself promptly to the conditions which shall develop with the ending of the war.

The answers to question 2, in regard to the effect of higher prices upon the consumption of goods, are most reassuring. Nearly everyone agrees that the purchasing power of the country has been greatly increased, that people are able to buy more and better goods, and there is but little, if any, complaint as to the effect of high prices upon consumption. In fact, one New England manufacturer goes so far as to say that instead of buying a poorer quality of goods at the same prices the demand is running constantly in the direction of better goods even at higher prices.

The answers to question 3, with regard to the unemployment of labor, are most reassuring. The unemployment reported is, for the most part, localized either on the Pacific coast or in the Southern States, where, as many of our correspondents state, the higher wages paid have really had the effect of diminishing the industry of the Negro.

The answers to question 4 indicate a somewhat widespread desire for higher wages, but most of our correspondents express themselves philosophically with regard to the situation, and realize that it is entirely natural that the wage earner should desire to share in the widespread prosperity of which he hears so much.

The response to question 5 is a corollary of that made to question 4, and is, if anything, more reassuring. The labor unrest is apparently confined to a few classes, including the railroad men and the workers in some highly specialized staple industries.

The unanimity of opinion with regard to the operation of the Federal reserve law is remarkable, and about the only dissatisfaction expressed comes from the Rocky Mountain States and the Pacific Northwest, in which sections loans running for longer periods than the Federal reserve law permits are required to satisfy the financial needs of most of the population. Doubtless the Federal reserve law will pass into history as the most beneficent piece of economic legislation that has ever been enacted in this country.

The response to question 7 negatives much of the newspaper talk with regard to the inflation of currency and credit in the United States. If there is any inflation, but few business men are conscious of it, and it is, we think, reasonable to assume that until there is an inflation of which people are conscious there will be no attempt at contraction.

The answers to question 8, in regard to the constructive activity of the country, reveal the basis upon which the present prosperity rests. Constructive activity means the creation of productive wealth, and it is encouragingly significant that about 80 per cent of our replies indicate that the people are building new houses, enlarging their plants, and making permanent improvements that bespeak their confidence in the future.

The answers to question 9 report an almost unanimous willingness that the tariff question shall be taken out of politics by the creation of a tariff commission. In view of the fact that a very large proportion of our replies come from manufacturers and States which on account of their industrial activities are generally reckoned as "protectionist," this unanimity of opinion may be said to make something of a revolution in American political feeling with regard to the tariff. We commend it to the special attention of the platform committees of both the Democratic and Republican Parties, and are delighted to feel that we are nearing the time when the political energies of each successive Congress may be employed more profitably than in the revision of tariff schedules. One correspondent qualifies his acceptance of the tariff commission plan with the proviso that it shall be made operative "before the end of time." With this we are in hearty agreement.

The answers to question 10, in regard to the market for real estate, drive another rivet in the structure of prosperity that is visualized by this investigation. If the rural credits bill which the Senate has already passed shall become a law, the effect will probably be to increase greatly the availability of farm lands as a basis for loans, thus stabilizing their value and a prosperity that is buttressed by higher wages, increased consumption, and stable values for land would seem to be, for a time at least, immune from any serious reaction.

We regard the answers to question 11, in regard to the abatement of the antagonism toward the railroads, as providing what is, in a financial sense, the most important information in our report. That over 90 per cent of our correspondents should report that the disposition to harass the railroads is vanishing is extremely encouraging. The railroads of the United States employ more labor and disburse a larger sum in wages than any other single industry. Their purchases constitute a very large proportion of our total commerce; and if their development in the future shall be unrestricted by the unwise legislation and regulation of which they have hitherto been the victims, it will be well for the future prosperity of the country.

The negative answers to question 12, with regard to a possible advance of 5 per cent in railway freight rates, are, for the most part, qualified by statements of which the following from a southern correspondent is typical:

"We have already accepted one advance of 5 per cent in railway rates without complaint, and would not be willing to submit to a further advance unless it is equitably distributed throughout the entire country."

The answers to question 13, in regard to the saving and extravagance, are also qualified. Most of our correspondents admit that the savings banks, insurance companies, and other repositories of thrift show increased resources which bespeak a reasonable provision for the future. One informant says that he "sees no increase in extravagance except in the matter of automobiles." His allusion to the automobile expenditure of the Nation is the only comment made upon it, from which we infer that there is a noteworthy change in the attitude of thinking men toward the American investment in this form of transportation.

The answers to questions 14, 15, and 16, which deal with preparedness, the sense of civic responsibility, American nationalism, and the protection of American citizens resident or having property interests outside of the United States, will, we think, be a surprise to the pacifists. If they could read the remarks and letters with which our replies to these questions have been accompanied, they would abandon the theory that the United States has become a spineless Nation. There is naturally a widespread disagreement as to the degree of preparedness to which we should commit ourselves. Some of our correspondents in the rural communities say that "the feeling in favor of preparedness is cooled by the fear that it is inspired by the Wall Street hope of large profits," but a willingness is generally expressed to support Congress and the administration in any reasonable measure that shall be adopted for the defense of the Nation, and it is apparent that the war in Europe has quickened the spirit of nationalism and increased the individual consciousness of civic responsibility throughout the country.

In regard to the protection to be afforded by our Government to American citizens resident or having property interests outside the United States there is a somewhat wide divergence of opinion. One correspondent, in regard to whose Americanism there can be no doubt, writes that "we ought to protect our trade in foreign countries, but there is no reason why we should follow and protect the people who leave the United States to live and invest in foreign lands." He adds: "I believe that this country is good enough for anyone and its guardianship should not follow expatriates. They should know what they are doing and assume the consequences."

Not a few feel that the Nation should avoid taking a position that would plunge 100,000,000 people into war for the protection of those who take unnecessary risks in belligerent countries or on belligerent vessels. For the most part, however, our replies indicate that the people of this country are jealous of the honor of our flag and the rights of our Nation and entirely willing to support any measures that may be necessary for their protection.

Upon the question of military intervention in Mexico there is a great division of opinion, and the correspondence that we have received provides a symposium that would greatly interest many Congressmen. A Baltimore friend says that "weeping prevents a reply to this question," meaning presumably that he is ashamed of the policy which the Government has thus far pursued. Another correspondent writes us that "while the young men of the country may be in favor of Mexican intervention, the older people, who know the horrors of war, will continue to oppose it to the end."

We are somewhat surprised by the number of answers that advocate the solution of the Mexican problem by the purchase of the northern half of Mexico, and there are a good many who seem to favor the forcible annexation of sufficient Mexican territory to indemnify us for the damages inflicted upon American life and property in that Republic. The division of public opinion in regard to the Mexican problem seems to be greater than that disclosed in regard to any other question submitted. It is evident that the issue is one in regard to which there is not as yet any great unanimity of feeling.

Speaking generally, we may say that a careful examination of the replies received leads us to feel great satisfaction in the economic condition of the country and increased confidence in the political common

sense of the people. If we were mapping American prosperity, we should paint New England, Pennsylvania, and Michigan in the most rosente colors. In fact, one correspondent in Detroit says that "the boom is dangerous." The Pacific States of the Northwest and northern California are the only sections in which the use of even a light shade of blue would be justifiable.

In the southern portion of California the absence of war-induced prosperity has been to some extent offset by the winter influx of tourists from the East and the demand for the petroleum production of that locality. The clouds have almost disappeared from the cotton States as a result of the higher price of cotton and cotton seed and the increase in cattle production.

In the Middle West the remunerative figures obtained for the grain crops for the past two years have made the people contented and happy, although there is some complaint that the high ocean freight rates are interfering with the export movement.

Dealing with what we may describe as the politico-economic situation disclosed by our report, it may be said that there is evidenced a much keener appreciation of the essential relation between good government and good times, and, while there is but little disposition to disparage the constructive achievements of the present administration, there is a widespread dissatisfaction with the selfish political individualism of the present Congress and a disposition to hold the one that shall succeed it to a rigid accountability.

Our confidence in the permanent prosperity of the country and our optimism in regard to the benefits and sanity of representative government have been increased and to some extent rehabilitated by this investigation.

Questions.	Answer.	Total.	New England States.[1]	Middle Atlantic States.[2]	Central States.[3]	Southern States.[4]	Southwestern States.[5]	Northwestern States.[6]	Rocky Mountain States.[7]	Pacific States.[8]
1. Will your business be directly affected by peace in Europe.	Yes	728	70	163	175	98	65	48	31	78
	No	750	51	189	233	69	45	62	30	71
2. Is the consumption of the goods you distribute or manufacture appreciably reduced by the relatively higher prices now prevailing.	Yes	299	16	61	83	45	31	19	12	32
	No	1,088	99	280	306	106	70	81	43	103
3. Is there any unemployment of labor in your section	Yes	225	11	30	38	42	27	9	13	55
	No	1,332	117	346	388	136	77	108	49	101
4. Is labor in your neighborhood contented with the wages that are now being paid?	Yes	887	51	146	236	138	82	73	47	114
	No	598	73	205	167	35	21	43	16	38
5. If to the former question you answer "No," do you think there is any serious probability of important strikes during the coming summer?	Yes	309	35	118	102	9	4	16	7	18
	No	900	68	183	240	120	82	71	40	96
6. Are the business men with whom you come in contact satisfied with the operation of the Federal reserve law?	Yes	1,244	102	271	348	143	102	104	51	123
	No	157	12	43	50	17	7	5	3	20
7. Do the business men with whom you come in contact feel that there is any inflation of currency or credit in this country?	Yes	307	37	87	87	34	13	16	14	19
	No	1,149	84	246	314	134	102	91	47	131
8. Are the people in your section constructively active? That is, are they building new houses; enlarging their plants, or making permanent improvements that bespeak their confidence in the future?	Yes	1,228	105	298	357	129	80	105	55	99
	No	301	20	70	68	45	32	12	7	47
9. Are the business men in your section content that the tariff question shall be taken out of politics by the creation of a tariff commission?	Yes	1,416	117	315	407	160	103	111	56	147
	No	65	8	29	9	8	2	1	4	4
10. It is said and generally believed that the market for real estate is the last thing to reflect prosperity. Is it becoming more active in your section?	Yes	985	66	220	315	100	72	86	48	78
	No	500	48	129	89	71	46	24	16	77
11. Is the feeling of antagonism toward the railroads in your section abating or persistent?	Abating	1,380	120	331	380	145	98	105	52	149
	Persistent	123	4	23	28	34	7	10	11	6
12. Would and advance of, say, 5 per cent in railway freight rates be generally paid without serious protest by the shippers or consignees in your community?	Yes	912	97	251	245	87	63	66	24	79
	No	561	24	95	167	81	44	47	36	67
13. Are the wage earners in your section disposed to save or is greater extravagance the result of better times?	They are saving	761	68	174	196	83	54	60	31	95
	Increased earnings have led to greater extravagance.	520	34	137	153	60	39	30	25	42
14. Is public sentiment in your section opposed to or in favor of liberal provision and expenditure for "preparedness" by the National Government?	Opposed to	78	2	11	29	9	6	12	4	5
	In favor of	1,396	123	341	365	162	103	99	56	147
15. Has the war in Europe increased the sense of civic responsibility and American nationalism among the people of your section?	Yes	1,310	113	312	355	141	100	96	55	138
	No	185	9	36	70	26	14	13	4	13
16. Assuming that you believe in an extension of our foreign trade, is such extension, in your opinion, possible unless adequate protection is afforded by our Government to American citizens resident or having property interests outside of the United States?	Yes	181	13	41	51	23	18	12	6	17
	No	1,155	104	294	346	143	89	96	53	130
17. Are the people in your section generally in favor of military intervention by the United States in Mexico?	Yes	696	47	165	189	74	61	41	37	82
	No	653	60	162	173	77	47	58	19	57
Number of replies [9]		1,629	137	389	453	187	118	119	64	162

[8] California, Nevada, Oregon, and Washington.
[9] This is the total number of persons replying to one or more questions. Few of those answering made replies to all questions, which explains the discrepancy between the totals of the answers to each question and the number of persons answering at least one question.

TABLE OF IMPORTS.

Mr. GALLINGER. Mr. President, on the 1st day of May I presented tables showing the increase of imports under the Underwood-Simmons tariff law in war times as compared with the imports under the Payne-Aldrich tariff law in times of peace. The last table in that compilation shows the imports for January, 1915, and January, 1916, under the Underwood law as compared with January, 1913, under the Payne law, and I now beg to present similar tables for the month of February of those years.

Import comparison for the month of February, 1916 and 1915, under the Underwood law with 1913 under the Payne law, covering 39 strong competitive products, makes a remarkable showing, which should be of great interest to manufacturers and farmers, who have reason to be alarmed at the rapidly increasing imports, indicating what will probably happen at the close of the war.

It will be observed that 20 products, namely, aluminum scrap, automobiles and parts, breadstuffs, cotton cloths, films and plates, fish, fruits and nuts, handkerchiefs, laths, lace and lace articles, leather and tanned skins, meat and dairy products, nets and netting, paper and manufactures, perfumery, seeds, silk manufactures, vegetables, wool and linen yarns, show an increase from $20,750,958 in 1915 to $43,429,609 in February, 1916; and it is a most notable fact that the increase in imports between these two years is more than $3,000,000 larger than the total imports of the same products in February, 1913, under the Payne law. Note, also, the increase of over 100 per cent in the value of imports between February, 1913, under the Payne law, and February, 1916, under the Underwood law.

It also seems important to call attention to another comparison, which is that in February, 1915, but six of these same products showed an increase; and, furthermore, at no time since

the foreign war began, or, in fact, since the Underwood law became operative, have more than half of the number of these products shown an increase over the previous year.

Nineteen products, to wit, aluminum manufactures, clocks, cutlery, eggs, embroideries, enameled ware, glassware, plate glass, leather gloves, hides and skins, cotton knit goods, linoleum and oilcloth, shingles, artificial silk, cotton stockings, tinplate, watches, wood pulp, wool manufactures, reveal a small decrease of $2,193,716 from $17,461,862 in February, 1915, to $15,268,146 in February, 1916; the imports of the last-named products in February, 1916, being practically the same as they were in February, 1913, under the Payne law.

The total imports of the entire 39 products were in February, 1916, valued at $58,697,755; in February, 1915, $38,212,820; and in February, 1913, $34,977,736, the increase between February, 1915, and February, 1916, being $20,484,935, and the increase in February, 1916, over February, 1913, under the Payne law, being $23,720,019.

The fact can not be denied that, beginning with October, 1915, imports of the above-named products have nearly doubled as compared with the imports of similar products in months previous to the beginning of the foreign war, and if such a volume of merchandise can be sent to this country during the war, American producers are not to be blamed for demanding some form of legislation which will protect home industry now as well as after the close of the war. The figures are as follows, which I ask to have inserted without reading.

The VICE PRESIDENT. In the absence of objection, it is so ordered.

The table referred to is as follows:

Imports of merchandise and agricultural products in February, 1916–1915, under the Underwood law, and February, 1913, under the Payne law, using for comparison products having the most severe foreign competition.

Products.	1916 value.	1915 value.	Difference.	1913 Payne law.
			Increase.	
Aluminum scrap	$134,412	$96,016	$38,396	$291,776
Automobiles and parts	76,289	39,019	37,270	99,602

FEDERAL RESERVE ACT.

Mr. OWEN. Mr. President, I desire to give notice that tomorrow, after the morning business, I shall ask to call up for consideration the bill (H. R. 13391) to amend an act approved December 23, 1913, known as the Federal reserve act, by adding a new section.

FLOOD CONTROL.

Mr. CLARKE of Arkansas. Mr. President, I have a matter to present that I think comes under the head of morning business; that is, the reference of a House bill, which was laid upon the table to await the convenience of the Senator from Nevada [Mr. NEWLANDS]. We are now ready to take up that matter, and I move that House bill 14777, known as the flood-control bill, be laid before the Senate, and that it be referred to the Committee on Commerce.

The VICE PRESIDENT. The Chair lays before the Senate the bill referred to by the Senator from Arkansas.

H. R. 14777. An act to provide for the control of floods in the Mississippi and Sacramento Rivers was read twice by its title.

Mr. CLARKE of Arkansas. I move that the bill be referred to the Committee on Commerce.

Mr. NEWLANDS. Mr. President, as a substitute for that motion, I move that the bill be referred to the Committee on Interstate Commerce.

The VICE PRESIDENT. Is this matter to be discussed by unanimous consent?

Mr. CLARKE of Arkansas. I ask unanimous consent that the Senator from Nevada may be allowed to occupy a reasonable time in the discussion of the motion. I am sure he will not take a great while on the issue involved in the motion.

The VICE PRESIDENT. The Chair is of opinion that this is one of the questions that should not be debated during the morning hour. Otherwise the morning hour, of course, could be entirely consumed with a discussion of a question of reference.

Mr. CLARKE of Arkansas. I am satisfied with that; but I ask that the Senator from Nevada be allowed to occupy a few moments.

Mr. JONES. I should not have any objection if the matter might be considered after morning business has been finished. There is morning business to be presented, and if we begin a discussion of this matter before that business has been presented, the discussion will probably run until 2 o'clock.

Mr. VARDAMAN. I object, Mr. President.

The VICE PRESIDENT. Objection is made. The motion of the Senator from Arkansas [Mr. CLARKE] is to refer the bill to the Committee on Commerce, and that is——

Mr. NEWLANDS. Do I understand that that motion is not debatable, Mr. President?

The VICE PRESIDENT. It is not debatable before 2 o'clock.

Mr. NEWLANDS. Then I ask the Senator from Arkansas to allow it to be postponed until 2 o'clock.

Mr. CLARKE of Arkansas. The Post Office appropriation bill being the unfinished business, we shall gain nothing by that.

Mr. NEWLANDS. All I wish is to occupy 25 or 30 minutes in order to present this matter. Indeed, I shall take a shorter time.

Mr. CLARKE of Arkansas. I ask unanimous consent that the Senator from Nevada be allowed 15 minutes in which to discuss the motion. I trust that certainly no friend of the Mississippi River will object to that.

The VICE PRESIDENT. Is there objection to the request of the Senator from Arkansas? The Chair hears none, and the Senator from Nevada is allowed 15 minutes.

Mr. NEWLANDS. Mr. President, as a matter of precedent, it, of course, must be admitted that it has been the custom to refer bills of this kind to the Commerce Committee. I submit, however, that the Interstate Commerce Committee was organized for an object, and that was to promote and to regulate interstate commerce; that included in that is interstate transportation; and that that regulation extends not only over the question of freights and fares, but the jurisdiction extends to the instrumentalities themselves through which transportation is conducted.

I assume that it will also be admitted that a river is an instrumentality of commerce, just as is a railway; that a river must be in a measure artificialized in order to make it a perfect instrumentality of commerce; and that the committee which has jurisdiction over interstate railways should also have jurisdiction over interstate rivers.

Mr. BRANDEGEE. Mr. President——

Mr. NEWLANDS. I will state to the Senator from Connecticut that I have only 15 minutes.

Mr. BRANDEGEE. I do not ask to take half a minute. I wish to ask the Senator only one question.

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Connecticut?

Mr. NEWLANDS. I do.

Mr. BRANDEGEE. The Senator from Nevada is aware that Rule XVI of the Senate specifically provides that river and harbor bills shall be referred to the Committee on Commerce, is he not? The amendment to that rule was passed in 1899. So that when the Senator says that by the creation of the Com-

mittee on Interstate Commerce the Senate intended that river and harbor appropriations should be referred to the Interstate Commerce Committee, I do not think he can be correct, because the rule specifically provides otherwise.

Mr. NEWLANDS. Well, Mr. President, when the rule refers to river and harbor bills, I assume that it refers to the customary appropriation bill, known as the river and harbor bill, and that it does not refer to general legislation with a view to perfecting the rivers as instrumentalities of commerce.

Mr. President, why is it that our rivers have not been perfected as instrumentalities of commerce? Why is it that for a hundred years or more we have been engaged in the so-called work of improving our rivers, and that as yet we have hardly a single perfected waterway? Certainly the task is not an impossible one, because other countries have demonstrated its possibilities. They have perfected waterways in Germany, in France, in Austria, and in Russia, artificialized to the highest degree, with a view to maintaining, as far as practicable, a standard flow, so that vessels of standard draft can navigate them at all seasons of the year, with perfected terminals, with perfected transfer facilities, with perfected coordination between rail carriers and water carriers. Not only are these waterways themselves artificialized, but they are so connected by artificial canals as to create a network of waterways resembling the network of railways and almost as extensive, and they work in cooperation with railways in the transportation of bulky and cheap products in such a way as to diminish the cost of transportation, and, above all, to diminish the capital expense of building railways in order to meet the demands of cheap and bulky commodities.

Why is it, then, that we have not as yet entered upon the threshold of river development? My answer is that we have connected them in the same bill with harbor development thus far, and that harbor improvement is a matter upon which not only the people have been united but railroads have operated in cooperation with the people, for every harbor is a railway terminal, and this development is absolutely essential in order to promote railway business; while the river has thus far been regarded not as the terminal of the railway, but a rival of the railway, and thus all legislation tending to its perfection and development has been discouraged by the railways.

This influence has worked secretly. There has been no manifestation of it except upon occasions; but we know that it exists; we know that wherever river transportation has been started it has been waylaid and sandbagged by the rail carriers, and that they have been absolutely unfriendly thus far to any policy which would enable the water carrier to work in cooperation with the rail carrier. I do not mean to say that that feeling is as strong and pronounced now as it was some years ago, for then railways, built in advance of the requirements of commerce, were so eager to get business that they were desirous of monopolizing the cheap and bulky transportation as well as the valuable transportation. They needed volume, and the only way to get volume was to invade the domain of the water carrier; but, with the increase of population and the increase of commerce, we have found that gradually the valuable transportation is meeting all the capacity of our railroads, and that the railroads are becoming congested, and in many cases are absolutely unable to carry the bulky products, heavy in weight and large in size, which require cheap rates. So the railroads' opposition has gradually diminished; but it remains as a tradition that in some way water transportation means injury to rail transportation; and we know how difficult it is to fight against a tradition; how it will hold men in its grasp, even though reason should say it is an entire absurdity, and we have not as yet gotten away from the traditions of the past.

It is my hope that the railroad men of this country, the big men in transportation, will realize that water transportation can be so conducted as to aid railway transportation and to save them the enormous expenditure that will otherwise be necessary in the future in the capitalization of railways in order to meet the demands of the country for the transportation of cheap and bulky commodities.

Mr. President, tradition has also held in its grasp the Commerce Committee of the Senate. It has been so accustomed to treating our rivers in almost a contemptuous fashion that it is hard for it to get out of the habit. Look over our legislation regarding rivers and harbors and you will find that almost all of the appropriations have gone to the harbors—and I have no doubt that for the most part the money has been very wisely expended there—that there has been with reference to our harbors a fixed and continuous policy which has resulted in their highest development; but with reference to rivers we find that our legislation has been halting, spasmodic, and changeable.

We had an illustration only the other day, when a new engineer officer upon the Missouri River proposed the entire abandonment of the scheme of development of that river, and his action was only beaten by an appeal to the Board of Review. That action would have simply duplicated the action of 5 or 10 or 15 years previous when, after conducting the development of that river, the revetment of its banks for a considerable period, the United States abandoned that development upon the ground of economy. I have no doubt that Congress was conscientious in that view, but I have no doubt that the four railways, two on each side of the Missouri River, had a great deal to do with creating the public sentiment that called attention to the so-called extravagance of that expenditure.

What did that work involve? It involved revetting those banks with willow tapestry, or mats, in such a way as to prevent the banks from dissolving, the soil being almost like sugar and dissolving against the impact of the water; and we have to-day 30 or 40 miles of that revetment, constructed many years ago, which is as perfect to-day as when it was made, whereas the rest of the banks is subject to its caprice, the river making its way according to its whim, destroying whole farms and plantations to-day, and so shifting their position that the farm that is on the right bank to-day is on the left bank to-morrow.

The Interstate Commerce Committee is interested in the development of interstate transportation. Gradually the Senate has enlarged the area of its operations. Its name indicates its jurisdiction, but that jurisdiction has only been gradually assumed. In the first instance, that committee took charge of only the question of the regulation of rates, but it has now assumed jurisdiction over telegraph companies, over express companies, over oil carriers, and thus its assumption is approaching the full boundaries of its jurisdiction. It seems to me that this bill relating to the control of floods, presumably in the interest of interstate commerce and with a view of developing a stable stream, ought to go to that committee by reason of its jurisdiction. Such action would leave the Commerce Committee, the jurisdiction over all other commerce outside of interstate commerce. Foreign commerce would remain as the subject belonging to the jurisdiction of the Commerce Committee and the harbors as instrumentalities of foreign commerce would belong to its jurisdiction.

Mr. President, I assume that this power is being exercised under the interstate commerce power. I assume, though it is not stated in the bill, that the purpose is to promote commerce between the States, and I assume that it is not a mere scheme to reclaim private lands. If it is a scheme to reclaim private lands, then the jurisdiction belongs to the Conservation Committee, which was organized for the purpose of conserving the national resources of the country—a committee which thus far has not assumed much jurisdiction, but which was organized as a live committee, with a view to protecting and saving the national resources of the country. If the Senate should come to the conclusion that this jurisdiction does not belong to the Interstate Commerce Committee because it is a mere reclamation scheme for private lands, then I contend that the jurisdiction belongs to the Conservation Committee.

The VICE PRESIDENT. The motion of the Senator from Arkansas is in order.

Mr. WALSH. Mr. President, a parliamentary inquiry. I understood the Chair to intimate that the motion before us is not debatable, and I rose to inquire of the Chair whether that is correct? I invite his attention to subdivision 3 of Rule XIV, as follows:

> No bill or joint resolution shall be committed or amended until it shall have been twice read, after which it may be referred to a committee; bills and joint resolutions introduced on leave, and bills and joint resolutions from the House of Representatives, shall be read once, and may be read twice, on the same day, if not objected to, for reference, but shall not be considered on that day as in Committee of the Whole, nor debated, except for reference, unless by unanimous consent.

Accordingly it would appear from the plain reading of this rule that the question of reference may be debated, but that the bill itself can not be debated except by unanimous consent; and I notice that that was the construction given to the rule by the Presiding Officer on March 28, 1914. I refer to a precedent found in the last volume of Gilfry, at page 134, as follows:

> The VICE PRESIDENT. In this connection the Chair desires to make a statement. The Chair was in error in ruling that the question of the reference of a bill to a committee is not debatable. The Chair was under the impression that the question was one of those questions which, under Rule XXII, are not debatable; but the Chair finds that the question is debatable. Therefore the ruling of the Chair heretofore made in reference to the matter will not stand as a precedent.

The VICE PRESIDENT. On what page is that?

Mr. WALSH. On page 134.

I recall very distinctly, Mr. President, that this matter was the subject of some extensive consideration by the Senate in

connection with the question as to whether a motion to refer a petition was debatable. The occasion was the presentation of a vast number of petitions dealing with the subject of an embargo upon the export of munitions of war.

The VICE PRESIDENT. Was that during the morning hour?

Mr. WALSH. It was during the morning hour. On that occasion I recall that the Chair held that the rule of the Senate is that everything is debatable, and that when the contention is made that a particular matter is not debatable reference must be made to a specific rule so holding; and my recollection is that the Chair on that occasion ruled that the subject of the reference of petitions to the Foreign Relations Committee, or to some other committee to which reference was made, was a proper subject for debate.

It does seem to me, Mr. President, that if the rule were otherwise as to a bill which has passed the House of Representatives and has come here for consideration by the Senate, it ought not to apply to a measure in that parliamentary stage; and it seems to me that the language of the rule clearly implies that the question of reference is debatable. If it is so, I should like to say just a few words upon the matter of the reference of this bill.

The VICE PRESIDENT. The Senator may proceed while the Chair gets the RECORD of that time. The Chair was under the impression that until the morning business was concluded, at least, these motions were not debatable, as otherwise they would deprive the Senate of the morning hour; but the Senator from Montana may proceed. The Chair would like to verify the time in the proceedings when the ruling was made.

Mr. WALSH. I desire to say, in the nature of a suggestion in the inquiry the Chair is prosecuting, that the handing down of communications from the House of Representatives, and particularly of bills coming from the House of Representatives, is not one of the things contemplated to be done during the morning hour.

The VICE PRESIDENT. The general rule is that they are always in order.

Mr. WALSH. They are always in order. What I mean to say is that it is not a part of the business of the morning hour; and it would seem to me, accordingly, that that part of the business of the Senate would not be governed by the rules relating to the transaction of morning business. It seems to me quite obvious that if a bill happens to be handed down by the Chair after 2 o'clock, it should have exactly the same status as if it were handed down by the Chair before the hour of 2 o'clock. In other words, it ought not to be, and I think the rules did not intend to put it, in the power of the Chair to make a reference debatable or not debatable as the communication was handed down before or after the hour of 2 o'clock.

The VICE PRESIDENT. The rules do put it in the power of the Chair, because the Chair is not under any compulsion to hand down a bill at any particular time; and this particular bill has been held up by the Chair on the request of the chairmen of the Committee on Commerce and of the Committee on Interstate Commerce upon the theory that they would agree as to where it should go. The Chair would not have interrupted the morning business and handed it down at this time if the Chair had believed it was going to cut out the morning business and lead to this discussion. But the bill is now before the Senate for its consideration as to reference.

Mr. WALSH. Then, I desire to say that in my judgment this bill ought to go to the Committee on Interstate Commerce. The reasons which have been presented to the Senate by the distinguished Senator from Nevada, it seems to me, are entirely unanswerable. The only jurisdiction that Congress has to deal with this subject at all, as a matter of course, rests upon the provision of the Constitution which gives to Congress the power to regulate commerce between the several States. Power is also granted to the Congress to regulate commerce with foreign countries, and that is something that is an entirely separate and distinct grant of power. But obviously, Mr. President, the right to control floods in our rivers beyond question is referable to the power to regulate commerce between the several States; and in that view of the matter it seems to me that it is eminently proper that a measure of this kind should go to the committee that deals with that particular subject.

But quite separate and apart from that, Mr. President, there is a reason which it seems to me ought to appeal to the Members of the Senate—a reason that the distinguished Senator from Nevada quite obviously felt some delicacy in advancing. That is that, as we know, he has for years advanced the idea, which appeals to the imagination and to the larger vision of every representative upon this floor, that the only proper way, or at least the advisable way, of taking care of this situation is to take care of floods at their source, and that in addition to the construction of levees and other works of like character, in order to confine the floods within the banks of the rivers and prevent the inundation of the adjacent country and the destruction of property of illimitable value some effort ought to be made to capture the excess waters at their source and utilize them there for some valuable purpose contributing to the development of industry and to the general advancement of the public interest, rather than to allow them to come down where they do their work of destruction.

I hope that some day or other—and now is the accepted time, in my humble judgment—that idea will have consideration by a friendly committee. The Interstate Commerce Committee, it seems to me, is by all means the proper committee for the consideration of this measure, in view of the foundation of the only jurisdiction which we have in the premises. I hope very sincerely, indeed, that the Senate will take that view of it, and allow the bill to go to the committee of which the distinguished Senator from the State of Nevada is the chairman, in order that the ideas that he has so often and so forcibly and, as it seems to me, so persuasively urged upon this body may be developed and presented in some proper form to the Senate.

Mr. CLARKE of Arkansas. Mr. President, may I have unanimous consent to occupy five minutes?

The VICE PRESIDENT. The Chair finds it will be compelled to reverse its ruling that this matter is not debatable, in order to maintain consistency.

Mr. CLARKE of Arkansas. While I should not care to be diverted on to a discussion of that point, I think the Chair's original ruling was right. I do not think the incident which occurred in connection with the reference of a petition has any application here.

The VICE PRESIDENT. By the argument heretofore made, the Chair finds it was once before compelled to back down on that proposition.

Mr. CLARKE of Arkansas. The rule expressly says that motions made before 2 o'clock to proceed to the consideration of anything shall not be debatable.

Mr. GALLINGER. Mr. President, I simply call attention to the second paragraph of Rule VIII. I will not argue that it directly applies to this matter, but it seems to me it does:

> All motions made before 2 o'clock to proceed to the consideration of any matter shall be determined without debate.

The VICE PRESIDENT. That was the rule upon which the Chair based the ruling this morning; but the Chair ruled that way once before, and then, on a pretty full discussion, the Chair was compelled to take it back. This is not a motion to proceed to the consideration of a bill or a resolution. It is a question of reference of a House bill the Chair has handed down during the morning hour, and for reasons already stated.

Mr. CLARKE of Arkansas. No; that was a motion to refer a wagonload of petitions on the preparedness question, that had taken a different turn, and came under a different provision. But if I may be permitted to occupy the floor for five minutes, I can say all I have to say about this matter in that time.

It is an embarrassing thing for me to be insisting that a committee with which I am connected should be selected in preference to any other committee to consider any matter that must ultimately be disposed of here; but I do not see any reason why the committee should be deprived of its traditional jurisdiction simply because some one can say that in tracing the matter back to its origin the commerce clause of the Constitution is the foundation for its consideration at all. If that were true, the whole river and harbor bill would go to that committee. The fact of the business is that the Committee on Interstate Commerce is a law committee. It prepares laws. It is a kind of a judiciary committee for the preparation of the laws and regulations regulating interstate commerce.

The bill that is now under consideration—and that is all I intend to say—is an improvement bill. It is a river and harbor bill, and what is done is to be done under the direction of the Mississippi River Commission. I do not know how to distinguish it from the same matter appearing in the text of the river and harbor bill; and there is nothing in the way of an idea in this bill that is not repeatedly contained in the river and harbor bill. It simply isolates two particular projects and adopts them, and directs their continuous development and improvement. If there is any argument in the fact that the interstate-commerce provision of the Constitution is the foundation for jurisdiction, then there is not any reason why the Commerce Committee should exist at all. Besides that——

Mr. WALSH. Mr. President, if the Senator will pardon me, I intended to make the distinction. Of course, we have rivers and harbors. Every harbor on the coast is developed in view of the foreign commerce, and that gives the jurisdiction to the Commerce Committee; and inasmuch as the work is of the same character, it all goes to that committee. But here is a case that

refers to the improvement of rivers alone, and has not any reference to foreign commerce at all.

Mr. CLARKE of Arkansas. This bill relates to the improvement of two specific rivers. It has not got the word "transportation" in it.

I believe I will submit the matter.

Mr. NEWLANDS. I ask for the yeas and nays.

Mr. RANSDELL. Mr. President, I should like to say just a word, if there is no objection. For many, many years all questions relating to the Mississippi River and to the Sacramento River, and all questions relating to floods, have been referred to the Committee on Commerce. There has been no deviation from that rule. This is a question of the control of Mississippi River floods; and not a single measure relating in any way, shape, or form to the floods of the Mississippi River has been referred to any other committee than to the Committee on Commerce.

A number of petitions, memorials, and other matters relating to the Sacramento River were referred to the Committee on Commerce in the Sixty-first Congress. The Committee on Commerce reported in favor of the passage of laws requiring an examination, survey, and report of the Sacramento River. Those reports were made and they are now being acted on in the pending bill.

Everything that the Mississippi River Commission has had to do with since its creation in 1879 has been referred to the Committee on Commerce. This is simply an extension of the powers of that commission. It would be a most unusual proceeding to take out of the hands of the Committee on Commerce the jurisdiction which it has had for certainly more than a third of a century, for everything, let me repeat, in connection with the Mississippi River Commisson has been handled by that committee for more than a third of a century.

I can see no reason in the world for differentiating this from the ordinary river and harbor matters. As the chairman of the committee has so well said, if we are going to differentiate it because of commerce, then you must take away from the Commerce Committee all river matters, for surely they are purely commercial matters. They relate to commerce and to nothing else but commerce.

I sincerely hope that the Senate will not, by its vote, take away from a committee a jurisdiction which it has enjoyed for more than a third of a century.

Mr. NEWLANDS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Hardwick	Overman	Sutherland
Borah	Hughes	Owen	Taggart
Brandegee	Husting	Page	Thomas
Chamberlain	Jones	Pittman	Thompson
Chilton	La Follette	Poindexter	Tillman
Clark, Wyo.	Lane	Ransdell	Townsend
Clarke, Ark.	Lea, Tenn.	Reed	Underwood
Culberson	Lodge	Saulsbury	Vardaman
Cummins	McLean	Sheppard	Wadsworth
Curtis	Martin, Va.	Simmons	Walsh
du Pont	Myers	Smith, Ariz.	Warren
Fall	Nelson	Smith, Ga.	Williams
Gallinger	Newlands	Smith, Md.	
Harding	Norris	Sterling	

Mr. SUTHERLAND. I desire to announce that my colleague [Mr. SMOOT] is unavoidably absent from the Senate. I will let this announcement stand for all subsequent roll calls during the day.

Mr. GALLINGER. I rise to announce the enforced absence of the Senator from Maine [Mr. BURLEIGH] on account of illness. I will let this announcement stand for the day.

The VICE PRESIDENT. Fifty-four Senators have answered to their names. There is a quorum present. The question is on the motion of the Senator from Arkansas to refer the bill to the Committee on Commerce.

Mr. NEWLANDS. Is not the question on my substitute?

The VICE PRESIDENT. There can be no substitute for a motion of this kind.

Mr. WILLIAMS. Mr. President, before the Senate votes on this matter I want to read a part of Rule XVI, on page 17, in which it undertakes to tell specifically to what committees bills shall be referred. After saying that appropriation bills shall be referred to the Committee on Appropriations, it says:

> Except the following bills, which shall be severally referred as herein indicated, namely: The bill making appropriations for rivers and harbors, to the Committee on Commerce.

You can not refer any bill making an appropriation for any river or harbor to any committee except the Committee on Commerce without first changing that rule. All sorts of general arguments founded upon general ideas reaching conclusions by inference are as nothing compared with the specific designation in the rule of the jurisdiction of a committee. When the rule states that appropriation bills shall be referred to the Committee on Appropriations, except certain measures, and then says river and harbor appropriation bills shall be referred to the Committee on Commerce, and then goes on afterwards and says the Agricultural appropriation bill to the Committee on Agriculture, the Indian appropriation bill to the Committee on Indian Affairs, and so on, that settles it. It is like a man getting up and arguing an important point from some principle of common law and then finding himself faced with a statute.

Mr. NEWLANDS. Mr. President, I insist that it is perfectly clear from this rule that the bill does not go to the Committee on Commerce by a reason of the rule. What does the rule refer to?

> All general appropriation bills shall be referred to the Committee on Appropriations, except the following bills, which shall be severally referred as herein indicated, namely: The bill making appropriations for rivers and harbors, to the Committee on Commerce; the Agricultural bill, to the Committee on Agriculture and Forestry.

Reference is made to one of those particular bills.

Mr. WILLIAMS. Will the Senator pardon an interruption there?

Mr. NEWLANDS. Certainly.

Mr. WILLIAMS. Does the Senator contend that if the Senate chose to bring in three bills covering the general subject matter of appropriations for rivers and harbors instead of bringing in one, each one of them would not be a bill making appropriations for rivers and harbors? Does the Senator contend that this particular bill is not a bill making appropriations for rivers and harbors?

Mr. NEWLANDS. I do contend that it is not a bill making appropriations. It is a bill authorizing appropriations to be made. It is a bill laying the foundation for appropriations hereafter to be made in the river and harbor bill.

Mr. WALSH. Will the Senator from Nevada allow me?

Mr. NEWLANDS. Yes.

Mr. WALSH. I will answer that in that event it will not be a general appropriation bill. This is not a general appropriation bill at all, neither is the bill making appropriations for rivers or harbors. There are no harbors in it.

Mr. NEWLANDS. Mr. President, it is perfectly clear that the rule refers only to all general appropriation bills and provides that they shall all be referred to the Committee on Appropriations except certain general appropriation bills, and what are they? First, the bill making appropriations for rivers and harbors.

Mr. TOWNSEND. Mr. President, I rise to a question of order.

The VICE PRESIDENT. The Senator will state it.

Mr. TOWNSEND. I understand we have granted 15 minutes for the discussion of this question by the Senator from Nevada, and everybody has been discussing it. If it is in order, I wish to make the point of order that further debate is out of order, and that we proceed to vote on the question. There are a lot of things we want to take up, and we do not want to spend all the morning out of order in discussing a question of this kind.

Mr. NEWLANDS. I understood that the Chair declared debate to be in order.

The VICE PRESIDENT. The Chair stated that the motion is debatable, and the Chair also stated that he would not have handed the bill down had the Chair known that the entire morning was to be taken up in the discussion as to what is a general appropriation bill.

Mr. NEWLANDS. I will bring my remarks to a conclusion within two minutes because I understand, of course, that the Senate is eager to get to other business.

The rule has been invoked, but I say that rule has no application whatever to this bill, first, because it refers only to a general appropriation bill and distinguishes that bill as the bill, the bill making appropriations for rivers and harbors, the nature and character of which we all understood, and, second, because this is not an appropriation bill, but simply a bill authorizing work to be done for which appropriations can hereafter be made. I pause there.

Mr. BRANDEGEE. Mr. President, I wish to state briefly why I shall vote as I feel compelled to vote on the Senator's motion. In the first place, I think the motion to refer the bill is debatable under Rule XIV, that portion of it which says that motions when a bill is introduced shall not be debated except a motion to refer. I think that clearly——

The VICE PRESIDENT. The Chair has already regretfully conceded that point.

Mr. BRANDEGEE. Irrespective of the regret of the Chair I wanted to express that opinion.

As to the other claim of the Senator from Nevada, that this matter of river control and the regulation of commerce upon

rivers should be referred to the Committee on Interstate Commerce because it deals with the commerce clause of the Constitution or is authorized by it, I do not think that that argument is well taken. If it is, it would result in all the bills which refer to the development of any river that ran from one State into another being taken away from the Committee on Commerce and sent to the Committee on Interstate Commerce. If they have jurisdiction over all questions that affect interstate commerce, even to the bridging of rivers, and so forth, it is entirely, I think, in direct contradiction to the universal practice of the Senate.

I am not debating whether the Senate ought to change its rule or its custom in that respect, but if the contention of the Senator from Nevada is correct it seems to me it would leave the jurisdiction of the Committee on Commerce confined solely to harbors and to such rivers as are not interstate.

Mr. NEWLANDS. I will ask the Senator whether he does not think that ought to be the case. Does not the Senator realize that almost all the Senators on that committee come from the seacoast, where they have harbors, and that the interior of the country has very little representation upon the committee?

Mr. BRANDEGEE. I think the subject is a very large one. If the mere creation of the Interstate Commerce Committee by the Senate, without any definition of its jurisdiction, ipso facto gives it jurisdiction over every subject in relation to interstate and foreign commerce, it would also include harbors if they were used for foreign commerce, and you would have the Committee on Commerce with no jurisdiction at all.

Mr. NEWLANDS. But the Senator must bear in mind that the committee——

Mr. BRANDEGEE. The Senator never asked me to yield and he never addresses the Chair when he interjects a speech into mine. I will yield if the Senator will ask me to yield.

Mr. NEWLANDS. The Senator will recall that this is not a Committee on Interstate and Foreign Commerce, but it is simply confined to interstate commerce.

Mr. BRANDEGEE. It is interstate commerce, but the harbors along both the Atlantic coast and the Pacific coast are used in the cosatwise trade, of course, from State to State. The Interstate Commerce Committee is a pretty busy committee. It has now, by the custom of the Senate, if for no other reason, jurisdiction over all matters relating to interstate railways, safety appliances, and all such matters as that, and legislation concerning interstate commerce. It is a pretty busy committee, and it has a tremendously important jurisdiction now. If it is the desire of the Senate to confer the jurisdiction of the Committee on Commerce upon the Committee on Interstate Commerce, in addition to what it now has, it is a large subject, and I would not want, on what debate has now been had, to reverse the policy of the Senate and change the custom of the Senate. Therefore I shall vote for the motion of the Senator from Arkansas to send the bill to the Committee on Commerce.

The VICE PRESIDENT. The question is on the motion of the Senator from Arkansas to refer the bill to the Committee on Commerce.

Mr. NEWLANDS. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. JONES. I wish to suggest that there are seven members of the Commerce Committee who can be strictly said to be river members.

The VICE PRESIDENT. The Secretary will call the roll on agreeing to the motion of the Senator from Arkansas.

The Secretary proceeded to call the roll.

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I withhold my vote.

Mr. DU PONT (when his name was called). I inquire whether or not the junior Senator from Kentucky [Mr. BECKHAM] has voted?

The VICE PRESIDENT. He has not.

Mr. DU PONT. As I have a general pair with that Senator, I withhold my vote.

Mr. HARDWICK (when his name was called). I transfer my pair with the Senator from Kansas [Mr. CURTIS] to the Senator from Indiana [Mr. KERN] and vote "yea."

Mr. OVERMAN (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. WARREN]. Not seeing him in his seat, I withhold my vote.

Mr. THOMPSON (when Mr. SAULSBURY'S name was called). I desire to announce that the junior Senator from Delaware [Mr. SAULSBURY] is absent from the Chamber and that he is paired with the junior Senator from Rhode Island [Mr. COLT].

Mr. SIMMONS (when his name was called). I transfer my pair with the junior Senator from Minnesota [Mr. CLAPP] to the junior Senator from California [Mr. PHELAN] and vote "yea."

Mr. SMITH of Maryland (when his name was called). I am paired with the Senator from Vermont [Mr. DILLINGHAM]. I transfer that pair to the Senator from Illinois [Mr. LEWIS] and vote "yea."

Mr. THOMPSON (when his name was called). I am paired with the Senator from Illinois [Mr. SHERMAN]. In his absence I withhold my vote.

Mr. TILLMAN (when his name was called). Transferring my pair with the Senator from West Virginia [Mr. GOFF] to my colleague [Mr. SMITH of South Carolina], I vote "yea."

Mr. TOWNSEND (when his name was called). I have a pair with the junior Senator from Florida [Mr. BRYAN], but under the terms of that pair I feel at liberty to vote. I vote "yea."

Mr. WILLIAMS (when his name was called). I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the Senator from New York [Mr. O'GORMAN] and vote "yea."

The roll call was concluded.

Mr. LODGE. Mr. President, my colleague [Mr. WEEKS] is absent from the city. He has a general pair with the Senator from Kentucky [Mr. JAMES].

Mr. GALLINGER. Mr. President, I have been requested to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON]; and

The Senator from North Dakota [Mr. MCCUMBER] with the Senator from Colorado [Mr. THOMAS].

Mr. THOMPSON. I transfer my pair with the senior Senator from Illinois [Mr. SHERMAN] to the junior Senator from South Dakota [Mr. JOHNSON] and vote "nay."

Mr. OWEN. I transfer my pair with the Senator from New Mexico [Mr. CATRON] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. LODGE (after having voted in the affirmative). Mr. President, I have learned that the Senator from Georgia [Mr. SMITH], with whom I am paired, has not voted. I transfer that pair to the Senator from Utah [Mr. SMOOT] and will allow my vote to stand.

The result was announced—yeas 41, nays 16, as follows:

YEAS—41.

Bankhead	Hollis	Reed	Taggart
Brandegee	Hughes	Shafroth	Tillman
Broussard	Jones	Sheppard	Townsend
Chilton	Lippitt	Shields	Underwood
Clarke, Ark.	Lodge	Simmons	Vardaman
Culberson	McLean	Smith, Ariz.	Wadsworth
Fall	Martin, Va.	Smith, Md.	Williams
Fletcher	Nelson	Smith, Mich.	Works
Gallinger	Owen	Sterling	
Harding	Page	Sutherland	
Hardwick	Ransdell	Swanson	

NAYS—16.

Borah	Husting	Myers	Poindexter
Clark, Wyo.	La Follette	Newlands	Stone
Cummins	Lane	Norris	Thompson
Gore	Lea, Tenn.	Pittman	Walsh

NOT VOTING—39.

Ashurst	Dillingham	Lee, Md.	Robinson
Beckham	du Pont	Lewis	Saulsbury
Brady	Goff	McCumber	Sherman
Bryan	Gronna	Martine, N. J.	Smith, Ga.
Burleigh	Hitchcock	O'Gorman	Smith, S. C.
Catron	James	Oliver	Smoot
Chamberlain	Johnson, Me.	Overman	Thomas
Clapp	Johnson, S. Dak.	Penrose	Warren
Colt	Kenyon	Phelan	Weeks
Curtis	Kern	Pomerene	

So the motion of Mr. CLARKE of Arkansas was agreed to; and the bill was referred to the Committee on Commerce.

Mr. NEWLANDS. Mr. President, I ask that the bill (S. 5736) to promote interstate commerce, agriculture, and the general welfare by providing for the development and control of waterways and water resources, for water conservation, for flood control, prevention, and protection; for the application of flood waters to beneficial uses; and for cooperation in such work with States and other agencies, and for other purposes, on the same subject be taken from the table and referred to the Committee on Commerce.

The VICE PRESIDENT. The bill will be referred to the Committee on Commerce.

CONCENTRATION AND MANEUVER CAMP, WASHINGTON.

Mr. JONES. Mr. President, there is a resolution on the table which went over the other day at the request of the Senator from New Hampshire [Mr. HOLLIS]. I have talked with that Senator, and he has stated to me that he has no objection to the resolution. I ask, therefore, that it may be considered at this time.

The VICE PRESIDENT. Is there objection to the request of the Senator from Washington?

There being no objection, the resolution (S. Res. 203) submitted by Mr. JONES on May 18 (calendar day May 26), 1916, was considered by unanimous consent and agreed to, as follows:

Resolved, That the Secretary of War be directed to transmit to the Senate, as soon as possible, copies of the following reports and memoranda with reference to the American Lake concentration and maneuver camp in the State of Washington, to wit:

Report of Gen. Funston for the year 1903.
Report of Capt. S. A. Cloman in 1907.
Report of Col. Woodbury in 1907, about April 4.
Report of Lieut. A. M. Ferguson of August 1, 1907.
Reports from the Secretary of the Interior and the Acting Commissioner of Indian Affairs under date of May 27, 1907.
Report of the board of Army officers composed of Gen. Murray, Gen. Maus, and Capt. Craig, March 4, 1912.
Memoranda submitted by Gen. Duvall May 10, June 8, and September 26, 1907.
Report of Gen. Randall.

OREGON & CALIFORNIA RAILROAD LAND GRANTS.

The VICE PRESIDENT. If there be no further resolutions, morning business is closed.

Mr. CHAMBERLAIN. Mr. President, I move that the Senate proceed to the consideration of House bill 14864, relative to the land grants to the Central Pacific Railroad.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes, which had been reported from the Committee on Public Lands with amendments.

Mr. CHAMBERLAIN. Mr. President, I ask that the formal reading of the bill be dispensed with, that the bill be read for amendment, the committee amendments to be first considered.

The VICE PRESIDENT. Is there objection?

Mr. BORAH. Mr. President, just a moment, before that is agreed to. I desire to ask the Senator from Oregon if this is the bill which has to do with the disposition of the lands which were in litigation and which were known as the railroad lands of Oregon?

Mr. CHAMBERLAIN. This is the bill, I will say to the Senator.

Mr. BORAH. The Senator does not expect to dispose of this bill by 2 o'clock, does he?

Mr. CHAMBERLAIN. I understand that when the Post Office appropriation bill, which is the unfinished business, comes up the chairman of the Post Office Committee will ask to have it laid aside for the continuation of the discussion of this bill.

Mr. BORAH. Well, Mr. President, I do not desire to delay this bill; but there are some features of it which have been brought to my attention within the last day or two that I should like to know more about before I vote on the bill.

Mr. CHAMBERLAIN rose.

Mr. BORAH. Is the Senator from Oregon going to discuss the bill?

Mr. CHAMBERLAIN. Yes.

Mr. BORAH. Very well. I may learn from the Senator what I desire to know.

Mr. CHAMBERLAIN. I may defeat the bill by discussion, as is sometimes done.

Mr. BORAH. That is not ordinarily the effect of the Senator's speeches.

The VICE PRESIDENT. Is there objection to the request of the Senator from Oregon that the formal reading of the bill be dispensed with and that the bill be read first for committee amendments? The Chair hears none.

Mr. CHAMBERLAIN. Mr. President, possibly before the bill is read for committee amendments, I had better make a general statement in reference to the legislation and the condition of the land grant which is involved in the legislation.

Mr. President, as preliminary to the discussion of the measure, I ask permission to have printed in the RECORD a letter from the Attorney General to me under date of March 7, 1916, and an inclosure which that letter brought to me, being a report to the Attorney General by Mr. S. W. Williams, who was appointed as the agent of the Department of Justice to visit Oregon some time last September to examine into the condition of the lands included within this grant and to make a report thereon to the Department of Justice.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Nebraska?

Mr. CHAMBERLAIN. I do.

Mr. NORRIS. I have no desire to delay the bill more than would be involved by a legitimate discussion; but I notice that the Senator has asked that the matter to which he refers be printed in the RECORD. If he expects to dispose of the bill to-day, it seems to me it ought to be read.

Mr. CHAMBERLAIN. I should be very glad, indeed, to have the letter and the report read, and if the Senator so requests I will ask that they be read.

Mr. NORRIS. So far as I am concerned, I should like to hear read the letter and the report to which the Senator refers, because it seems to me that there are some very important matters in this bill to which the Senate ought to give its attention, and Senators would get no benefit from the information contained in the letter and report if they could not read them in the RECORD until after the bill had been passed.

Mr. CHAMBERLAIN. I will say to the Senator that I intended to cover in what I had to say about the bill practically what is contained in the letters and report; but I agree with the Senator that, in view of the importance of this legislation, it might be well to read the communications to the Senate, and thus save very much that I might have to say in the discussion of the measure. The report is full and complete and is by quite a distinguished lawyer in the Department of Justice, a man who is entirely disinterested, who himself went over the ground, and from actual contact with individuals in the State, commercial associations, and other bodies, and from an inspection of the lands reported to his chief on this whole subject.

Mr. NORRIS. May I ask the Senator, further, does it refer to or does it have a bearing upon the bill which passed the House, or has it particular reference to the Senate committee amendments which have been proposed?

Mr. CHAMBERLAIN. It is a general report on the condition of the Oregon railroad grant before any bill was prepared or introduced in either the House or the Senate.

Mr. NORRIS. I hope the Senator will have it read, then.

Mr. CHAMBERLAIN. I will be glad to have it read, Mr. President, because, as I have said, it is a full report on the whole subject.

Mr. BORAH. Mr. President, before the reading commences, may I ask the Senator from Oregon if that feature of this bill in which the port districts in Oregon are interested have been taken care of satisfactorily to them?

Mr. CHAMBERLAIN. They have, I will state to the Senator. That is a Senate committee amendment.

Mr. BORAH. And it is satisfactory to those who represent the port districts?

Mr. CHAMBERLAIN. We had a hearing, Mr. President, at which a representative of the port districts was heard, and it is satisfactory to him, I believe.

Mr. BORAH. Do the amendments which the committee have reported to the bill cover the situation satisfactorily?

Mr. CHAMBERLAIN. Yes, sir. I will say that the Senate has made very few amendments, and that that is one of the principal amendments.

Mr. President, I ask that the letter from the Attorney General and the report of Mr. S. W. Williams be read to the Senate.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read as follows:

DEPARTMENT OF JUSTICE,
Washington, D. C., March 7, 1916.

Hon. GEORGE E. CHAMBERLAIN,
United States Senate.

MY DEAR SENATOR: In accordance with the request contained in your letter of the 4th, I am inclosing herewith a copy of the report of Mr. S. W. Williams on the Oregon & California Railroad land grant.

Mr. Williams was sent to Oregon for the purpose of securing all available information in regard to the matter for the use of this department in such action as it might be called upon to take in the litigation which, as you know, is still pending, or in regard to any legislation that might be considered looking to a disposition of the case. His report, therefore, contains not only such facts as he could ascertain in regard to the character of the lands, the views of the people living in that section of the country, etc., but also his recommendations as to the manner of settling the litigation and the disposition which should be made of the lands involved. I must, therefore, ask you to regard this report as the work of Mr. Williams and not as expressive of the views of the department, because, as stated in my report to Senator MYERS on Senate bill No. 30 in regard to this matter, I do not consider it within the province of this department to express views as to the policy to be pursued by Congress in regard to the disposition of the public lands.

Should you have occasion to refer to the report, or publish any part of it, I rely upon you to make it very plain that the views expressed are the views of Mr. Williams and not necessarily the views of this department.

Faithfully, yours,

T. W. GREGORY,
Attorney General

REPORT OF S. W. WILLIAMS, ATTORNEY, DEPARTMENT OF JUSTICE, ON THE OREGON & CALIFORNIA RAILROAD LAND GRANT.

NOVEMBER 30, 1915.

The ATTORNEY GENERAL.

SIR: I have the honor to submit herewith the report of my investigation of the situation resulting from the Government's litigation involving the Oregon & California Railroad land grant.

HISTORY OF THE LAND GRANT AND THE LITIGATION ARISING THEREFROM.

For convenience I shall, as an introduction to this report, summarize very briefly the history of the land grant and the litigation growing out of it.

By the act of July 25, 1866 (14 Stat., 239), Congress authorized such company organized under the laws of Oregon as the legislature of that State might designate, to construct and maintain a railroad and telegraph line beginning at the city of Portland, in Oregon, and running southerly through Willamette, Umpqua, and Rogue River Valleys to the southern boundary of Oregon; and to aid in the construction of the railroad and telegraph line, and to secure the safe and speedy transportation of the mails, troops, munitions of war, and public stores over the line of road, the act granted every odd-numbered section of public land, not mineral, lying within 20 miles on each side of the railroad line—there being a provision for securing indemnity within an additional belt of 10 miles on each side, for such odd-numbered sections, within the 20 miles or granted limits, as had been previously disposed of, reserved, or occupied by settlers.

The act of Congress further provided that the company seeking to avail itself of the grant should file its assent to the terms of the act in the Department of the Interior within one year from the date of the act, and should complete the first section—or 20 miles of road—within two years, and upon failure to do either, the grant should be void. For reasons not necessary to state here, no properly organized and designated company accepted the terms imposed by Congress within the time allowed, and by the act of April 10, 1869 (16 Stat., 47), Congress renewed the grant, but in so doing provided that the lands granted should "be sold to actual settlers only, in quantities not greater than 1 quarter section to each purchaser and at prices not to exceed $2.50 per acre."

The grant as thus amended was accepted by the Oregon & California Railroad Co., and in the course of time the railroad was constructed from Portland to the California line.

By the act of May 4, 1870 (16 Stat., 94), Congress made a like grant to the Oregon Central Railroad Co. (a predecessor of the Oregon & California Railroad Co.) for the construction of a railroad and telegraph line from Portland to Astoria and from a point near Forest Grove to the Yamhill River, near McMinnville. It is sufficient to say that the terms of this grant were also accepted by the railroad company, and 47 miles of road were constructed; and that under both grants the total quantity of land accruing to the Oregon & California Railroad Co. was approximately 3,300,000 acres.

At first and for a number of years there were substantially no demands for the granted lands except for the purpose of settlement by persons of limited means able to purchase only in small quantities, and until about the year 1894 nearly all of the sales made by the company were of that character. However, when the value of timber lands became known, the demand rapidly increased and the railroad company in making sales did not observe the conditions imposed by the granting acts, but, on the contrary, sold to whom it saw fit, in such quantities as the purchasers would buy and at the highest prices obtainable until about the year 1903, when the company practically refused to make any further sales whatever. At that time the company had sold more than 740,000 acres and had contracted for the sale of more than 80,000 acres in addition.

While there seems to have been no concealment of its action by the railroad company in disposing of the lands contrary to the terms of the grant, so far as I have been able to ascertain the matter was first called to public notice by Mr. W. B. Sherman, of Grants Pass, Oreg., when, on September 11, 1906, he made a public address at a State fair at Salem before a meeting of the Oregon Development League. In this address he referred to the contract between the Government and the railroad company and commented upon the conditions under which the lands were granted. This address was given wide publicity by the Oregon newspapers. I am also informed that even prior to that time the matter was discussed more or less in litigation in the State courts, involving certain of the granted lands.

In February, 1907, the Legislature of Oregon, responding to repeated demands of the people, adopted and communicated to the Federal Government a memorial pointing out the violations of the granting acts, and on April 30, 1908 (35 Stat., 571), Congress adopted a joint resolution authorizing and directing the Attorney General of the United States to institute and prosecute such suits in equity and actions at law as he might deem adequate and appropriate to inforce all the rights and remedies in any manner arising or growing out of the matter.

Pursuant to that authority and direction the Attorney General caused a bill in equity to be filed in the United States district court for the district of Oregon to have it judicially determined whether the railroad company had not forfeited its unsold lands (approximately 2,300,000 acres) by reason of having violated the terms under which it had received them from Congress. In the bill thus filed the Government contended that the terms of sale imposed by the granting acts constituted a condition subsequent, breach of which on the part of the grantee operated to forfeit the grant; and the bill accordingly contained a prayer that the lands described therein (all the unsold lands, whether patented or unpatented) be declared forfeited to the United States. The bill also contained in the alternative prayers to the effect that a receiver be appointed to sell the lands and account for the proceeds as the court should direct; or that a mandatory injunction be issued directing the railroad company to sell the lands in conformity with the terms by which they were granted.

The railroad company demurred to the bill of complaint. The case was exhaustively argued and briefed, and in a lengthy opinion District Judge Wolverton overruled the demurrer on April 24, 1911. (186 Fed. Rep., 861.) Upon this the railroad company filed an answer and a vast deal of testimony was taken, most of which, however, consisted of conflicting testimony regarding the character, adaptability, and value of the lands. The case was then heard on the merits and a decree entered July 1, 1913, declaring the lands forfeited to the United States.

The railroad company appealed to the circuit court of appeals, and that court, after argument, certified certain questions to the Supreme Court. Upon motion of the Government, in which all parties concurred, the Supreme Court ordered up the entire record and, therefore, had the whole case before it when its decision was rendered on June 21, 1915. (238 U. S., 393.)

The Supreme Court held that the provisions of the acts of 1869 and 1870 declaring that the granted lands should be sold to actual settlers only in limited quantities and at a price not exceeding $2.50 per acre, did not constitute a condition subsequent and that a violation thereof did not work a forfeiture of the grant, but that they were enforceable covenants. The Supreme Court therefore reversed the action of the district court and remanded the case for the entry of a decree enjoining the railroad company from making further sales in violation of the law. The Supreme Court further decided that, in view of the present value of the lands for their timber, any attempt to sell them now in accordance with the terms of the granting acts would invite more to speculation than to settlement, and for that reason the court ordered a further injunction against any sale or disposition whatever either of the lands or the timber for a period of not less than six months from the entry of the decree "until Congress shall have a reasonable opportunity to provide by legislation for their disposition in accordance with such policy as it may deem fitting under the circumstances and at the same time secure to the defendants all the value the granting acts conferred upon the railroads."

It should be stated here that from the time it received patents for the lands the railroad company paid taxes thereon to the State and counties—at first on the basis of a low valuation, but later on a greater value—in most instances far above $2.50 per acre; and when the decree of forfeiture was entered the company had paid taxes to the amount of nearly $2,000,000. Upon the entry of the forfeiture decree by the district court in 1913 the railroad company paid no further taxes on the lands, by reason of which the counties affected suffered material loss in revenue. The situation became so acute during the past summer that the governor of the State called a conference to be held at Salem on September 16 for the purpose of considering the matter and formulating a definite policy regarding the lands and the manner in which they should be disposed of. This conference was attended by public men of the State, by delegates appointed by the county courts, and others who appeared in an advisory capacity, among them the Commissioner of the General Land Office of the United States and Mr. F. P. Dunne, attorney for the Southern Pacific Railway Co., which corporation now controls the Oregon & California Railroad Co.

After a session of two days the conference adopted the following resolution:

"Whereas the people of the State of Oregon by their representatives, duly assembled at Salem, Oreg., September 16 and 17, 1915, have been brought together by a common inspiration to consider the material welfare of Oregon, made imperative by the rendition of the opinion of the Supreme Court of the United States in the case of the Oregon-California Railroad Co. et al. v. The United States, popularly known as the land-grant case; and

"Whereas in said case the Supreme Court has construed the acts of Congress of the United States, approved July 25, 1866, as amended by the act approved June 25, 1868, and April 10, 1869, and the act of May 4, 1870, to be not only laws but enforceable and continuing covenants; and

"Whereas said acts contain conditions for the sale of the lands granted thereunder, requiring the said lands to be sold to actual settlers in quantities not greater than 160 acres and for sums not exceeding $2.50 per acre; and

"Whereas the said conditions plainly imply an obligation upon the grantee in said grant to sell said lands to actual settlers who comply with the conditions of said grant, and bring themselves within the conditions of said grant as actual settlers; and

"Whereas it is apparent that the grantees in said grant, by the acceptance of said grant, plainly agreed to convey the said lands according to the terms of said grant to such settlers upon the payment of the amount specified in said grant, and to make such conveyance upon the full performance of the terms of said grant by said actual settlers; and

"Whereas the Supreme Court in its opinion of June 25 [21], 1915, held that Congress should have a reasonable opportunity to provide by legislation for the disposition of said lands in accordance with such policy as it might deem fitting under the circumstances, and at the same time to secure to the defendants in said cause all the value the granting acts conferred upon the said defendants, at all times keeping in view the policy which will insure actual settlement of the lands rather than speculation; and

"Whereas the United States Government has heretofore created national forests within the State of Oregon, occupying approximately one-third of the area of the State of Oregon, and thereby militating greatly against the growth and development of the State of Oregon: Therefore be it

"*Resolved*, That it is the sense of this conference that the Congress of the United States should enact laws defining and settling who shall be considered an actual settler under the terms of said acts, and what shall be considered an actual settlement, and requiring the grantees under said act to perform the terms and conditions of said act, and sell and dispose of said lands according to the true intent and purpose of said acts to such actual settlers; and be it further

"*Resolved*, That we are unalterably opposed to any further increase of forest reserves in the State of Oregon; and lastly, be it

"*Resolved*, That we urge upon Congress the enactment of legislation which shall provide for the immediate sale of said grant lands in quantities of not greater than 160 acres to any one person, and to actual settlers, at a price not in excess of $2.50 per acre, and to provide against all fraud in the settlement and disposition of said lands."

Such was the situation when I was ordered by the department, on September 21, 1915, to proceed to Oregon and investigate the matter as fully as might be.

CHARACTER AND EXTENT OF THE INVESTIGATION AND FACTS ASCERTAINED.

Leaving Washington on September 24 I proceeded directly to Portland, where I remained several days conferring with the United States attorney, Chief of Field Division of the General Land Office located there, United States Senator CHAMBERLAIN, ex-Governor West, of Oregon, and others. Mr. Louis L. Sharp, Chief of Field Division of the General Land Office, furnished me valuable information respecting the character of the lands, etc., and to enable me to make all possible use of the limited time at my disposal he detailed Special Agent Leonard Underwood to accompany me on the various trips I proposed to make over the land grant. Owing to Mr. Underwood's general information in regard to the lands, his acquaintance with the country and the people, I succeeded in seeing more of the lands and in interviewing more people having personal, intimate knowledge of the situation than I could have otherwise done under the circumstances.

From Portland I went to Oregon City where I met and interviewed a number of the county officials of Clackamas County, and where later a meeting of the Commercial Club was called to discuss the matter.

I should state here that in those towns of Oregon that I visited, the Commercial Club is an important factor. It is an organization combining the functions of a social club with those of a business men's association. Usually most of the prominent or well-known men in the town belong to it, and frequent meetings are held for the purpose of considering public matters and all questions of local interest.

The people of Oregon City seemed to be of the opinion that the grant lands should be sold for their actual value and that the railroad company should receive not more than $2.50 per acre, while the difference between that sum and the selling price should be given to the State. They made it plain beyond all question that they desired that none of the lands be included in a forest or other reservation for national purposes.

From Oregon City I drove out into the grant lands in Tps. 5 and 6 S., R. 2 E., in the western slope of the Cascade Mountains. The land here is fairly well timbered, but rough and steep in most places. The soil seemed to be excellent, and I saw land similar in topography that was cleared and in use as pasture. I also inspected portions of the grant lands in the vicinity of Wilhoit Springs in secs. 5 and 15, T. 6 S., R. 2 E. Here I had a conversation with the postmaster, W. F. McLaren, who said that he thought the Government should insist upon the railroad company selling the land in accordance with the terms of the grant, but that if Congress should act and dispose of the lands they should be sold for their actual value; that he would be glad to buy the tract adjoining his place at $40 per acre, as it was worth that much for its timber alone.

After spending two days at Oregon City and on the grant lands in that vicinity on the east side of the Willamette River, I went to Willamina, on the other side of the river, and from there drove out to the grant lands in T. 4 S., R. 7 W., using an automobile as far as it could conveniently proceed up the mountains. Mr. Underwood and I then walked several miles higher up the mountains. The land here was burnt over some 50 years before and practically all the timber has been destroyed, there being only small second growth in places, with some scattering large trees. The land for the greater part is steep, but not so much so as to be unfit for use. Substantially all of it is good for grazing and a large part can be cultivated. This is shown by the fact that practically on the very top of one of the mountains I found an extensive field. Mr. Underwood took several photographs of the lands here and elsewhere, which I shall submit with this report.

While I saw only a small part of the grant lands in this vicinity, I was informed by Mr. Underwood, who had been over most of the lands there, that what I had seen was a fair sample of all.

From Willamina I went to Salem, the State capital, where I met and interviewed both county and State officials, and where I also had an opportunity of meeting members of the Commercial Club. I had the pleasure of a conference with the governor, who freely expressed his views on the situation. He said that the principal consideration was the early settlement of the lands, and to that end he thought it best to first classify them and dispose of the nontimbered lands at $2.50 per acre to actual settlers in tracts not exceeding 160 acres, while the timber should be sold for its market value; that the timber was largely inaccessible and until railroads or roads were built it could not be used. He seemed to think that the railroad company should received $2.50 per acre for the land and possibly a portion of the surplus derived from the sale of timber, the other part to go to the State and to be placed in some irreducible fund to be available to men who might enter the land at a low rate of interest on long terms. In conclusion, the governor expressed himself as unalterably opposed to the lands going into any sort of a reserve.

From Salem, with B. B. Herrick, jr., county surveyor, I visited the grant lands in Tps. 7 and 8 S., R. 1 E., where I interviewed an old settler, Samuel T. Arnold, who had been living there for 28 years. He stated that most of the railroad land in that vicinity was rough, containing little timber; that nearly all of it was good for grazing and some, perhaps, for cultivation, while portions were too steep for any use whatever. For example, he said that less than 10 per cent of section 11 in that township had any value at all except, possibly, for power purposes, as the Silver Creek here falls abruptly over a bluff 186 feet to a pool below. I found people risiding on the very tops of some of the mountains in T. 8 S., R. 1 E., among them H. J. Winter, who has been living on a homestead there for 24 years, the land having been entered by his father. The soil here seemed to be fertile and produced fine fruit trees and vegetables. Winter informed me that most of the land could be used, and in that vicinity all of it was worth $2.50 an acre, much of it a great deal more.

While in Salem, I had an interview with a timber cruiser for the Hammond Lumber Co., which company is now operating timber in that part of the country. This man informed me that much of the timber was so overripe as to be worthless, and he estimated that in places the loss was as great as 50 per cent. Those attending the meeting at the Commercial Club, in Salem, were unanimous only on one question, namely, that they did not desire the lands to be included in a forest reserve. There was a variety of opinion expressed as to the disposition that should be made of the lands, some suggesting that the lands be sold for the highest prices obtainable and the railroad company paid $2.50 per acre, while the balance should go to the State. The chief concern of the people here, as elsewhere, is that the lands remain on the tax rolls, so as to return their due proportion of revenue to the State and counties in which they are located.

Among those interviewed at the State capital and who furnished me much valuable information was Mr. F. A. Elliott, the State forester, who at one time was employed by the Southern Pacific Railroad Co., and who has been practically over all of the grant lands. In his opinion there are some 400,000 acres of these lands that are hardly worth the taxes at the present time, and the balance is valuable chiefly for the timber. Mr. Elliott exhibited to me statistics showing that of the owners of timberlands in the State less than 25 per cent live upon the lands so owned, and he said that while the railroad lands would be taken up by alleged settlers if they were afforded the opportunity, in his judgment, less than 5 per cent would remain after making proof. Mr. Elliott also corroborated what was told me by the cruiser for the Hammond Lumber Co., that a large part of the timber was past maturity and should have been cut long ago, much of it being now worth little or nothing. At Salem I saw several men of more or less prominence who did not hesitate to say that the railroad company had earned the grant by constructing the road, and that it would not be inequitable for Congress to grant the land to the company outright. Such men, however, constitute a small minority of those whom I saw.

From Salem I went to Albany, the county seat of Linn County, where I talked with a number of attorneys, business men, and several of the county officials, including the sheriff, county commissioner, justices of the peace, county clerk, county attorney, and circuit judge. The majority of those I saw were opposed to the railroad company's receiving more than $2.50 per acre for the lands. They seemed to be willing, however, to waive the requirement of actual settlement and have the lands sold for their value, the proceeds in excess of $2.50 an acre to be given to the State. Here, as elsewhere, the people were particularly anxious to see the lands opened to settlement and be made subject to taxation.

I arrived at Eugene, the county seat of Lane County, on October 11, and remained there and in the vicinity for three days. A meeting was held at the Commercial Club, where I had an opportunity of conferring with a number of prominent men of the town in all walks of life. Here, too, I found strong sentiment favorable to the disposition of the lands at their actual value; also, a disposition to be just to the railroad company, and here, also, I found unanimous opposition to the inclusion of any of the lands in a forest reservation.

From Eugene I visited the grant lands in T. 16 S., R. 2 W., on the western slope of the Cascade Mountains and found them rough and steep, with a fair growth of timber. While these lands are rough, they could be devoted to agricultural purposes, chiefly for grazing, when cleared. I saw where two homestead entries had been made on intervening even-numbered sections and abandoned after proof. I ascertained here that the ownership of the Oregon & California Railroad Co., of the alternate odd-numbered sections and the refusal of the company to dispose of such lands seriously interferes with the operation of adjacent lands owned by other parties, rendering it necessary for those owning the even-numbered sections to make long detours in order to operate their timber.

From Eugene I also inspected the grant lands on the west side of the Willamette Valley and on the east slope of the Coast Range Mountains, in township 19 south, range 6 west, walking through sections 2, 3, 9, 10, and 17 of the township. Here I found some excellent timber; and while generally speaking the land is rough and steep, there are comparatively level areas which can be cultivated to advantage when the timber is removed. I saw improved places in section 10 which had been acquired under the homestead laws. I was informed by men who had lived in the neighborhood for years that a large part of the land is suitable for settlement and cultivation.

Leaving Eugene I crossed entirely over the Coast Range Mountains, going even to the coast, stopping for a day at Noti, a small station on a new line of road which is being constructed from Eugene across the Coast Range Mountains, thence down the coast to Marshfield. At Noti I personally inspected the settlement claims of five men who are actually residing upon the grant lands and received definite information as to some six or eight others in that vicinity but whose places I did not have time to inspect personally. Some of these men have several acres in cultivation, and additional lands are now being cleared. They have resided there for periods of from five years to five months. The greater part of the land here is rough and well timbered, though the settlers whom I saw insisted that it is suitable for cultivation. These men are actually residing on the lands with their families, hoping to acquire title in some way and anxiously awaiting a definite determination of the matter by the proper authority, believing that in the end they will be protected.

I made somewhat copious notes of the improvements I found upon these claims and the circumstances of the people, but do not embody them herein because to do so would add to the length of this report, which I fear will be too long even without the recital of such matters.

I reached the coast at Florence, a small town at the mouth of the Siuslaw River, and from there was taken by boat and stage line to Marshfield, the largest town on Coos Bay. While Marshfield is not within the limits of the Oregon & California land grant, it is not far from the terminus of the old Coos Bay wagon road, running from Roseburg to Coos Bay; and inasmuch as I was instructed to ascertain all I could concerning that grant, which is also in litigation, I considered it advisable to visit Marshfield.

At this place is located the mill of the C. A. Smith Lumber Co., which has a capacity of 450,000 feet daily. The company also has another mill of 250,000 capacity, which was not running at the time of my visit on account of the depressed lumber market. I was shown through the mill by officials of the company, who advised me that while several years ago the average lumber was selling for $17 per thousand, it is now worth only $9, there not being a great demand even at that price. I was informed that this company has $33,000,000 invested in mills, logging equipment, lands, etc., a large part of the land having been purchased from the Oregon & California Railroad Co. I was further informed by officials of the company that there are a number of isolated tracts belonging to the Oregon & California Railroad Co. interspersed with private holdings which are now being operated, and that if the timber on those tracts is not cut at the present time, while the companies are operating in that vicinity, it will be practically lost, as there is not sufficient timber to justify a separate operation.

From Marshfield I reached Coquille, the county seat of Coos County, by rail. Here I called at the courthouse and met a number of county officials, and later in the day interviewed others having an interest in the matter. Most of those whom I saw had no well-defined plan to offer as to the disposition of the land, except ex-County Judge John H. Hall, who said that the railroad company should be paid the price of $2.50 per acre and a reasonable sum for the taxes it had paid to the State and counties; that the agricultural lands should be given to the settlers and the Federal Government to sell the timber on the remaining portion of the lands for its full value. Here I learned that for a number of years after the grant was made the lands could not be sold for as much as $2.50 per acre, as they were chiefly timberlands, and nobody seemed to want timber. The people here were chiefly interested in seeing that the county should receive the taxes that it had been accustomed to receive from the railroad company before the decree of forfeiture was entered In the early days the lands were taxed on a low assessment—$1 per acre—but afterwards this was greatly increased. In 1905 some sections were assessed at from $4 to $6 per acre, while in 1914 the same lands were assessed as high as $40 an acre. As stated earlier in this report, the railroad company has not paid taxes for the past three years. The taxes due Coos County amount to considerably more than $100,000, and the county has found it necessary to draw warrants to meet its expenses.

From Coquille I traveled by automobile to Roseburg, most of the distance being over the old Coos Bay wagon road where it crosses the Coast Range Mountains in Coos and Douglas Counties. I found very

few settlements along this line of road. The land is exceedingly rough and steep, though very heavily timbered in places.

From my talks with those I met I concluded that, while many alleged settlers seem anxious to establish homes on the land, their chief object is to secure the lands for their timber value. It is not unusual to find quarter sections in this vicinity that contain more than 10,000,000 feet of timber, which, at a dollar a thousand, is worth $10,000.

I spent two days at Roseburg, the county seat of Douglas County, and the location of the local land office for that district. Here I met the register and receiver, who gave me valuable information concerning the character of the grant lands in that district and the views of the people in regard to their disposition. I also interviewed a number of the county officials and attended a meeting held at the Commercial Club, where the matter was discussed at length. There are some 650,000 acres of grant lands in this county, having the assessed valuation of nearly $6,000,000, or an average of more than $9 an acre. In the year 1902 the railroad company paid taxes amounting to a little more than $19,000 on its holdings in this county. In 1904 it paid a little less than $23,000, while in 1913 the company's taxes amounted to more than $97,000. For the three past years the county has received no taxes on the unsold grant lands, and its present claim against the company is therefore approximately $300,000.

At the meeting held in the Commercial Club most bitter opposition was voiced to the inclusion of any of the unsold grant lands in a forest reserve, and it was because of the latent fear that if the Government should take over the lands it would place them in a forest reserve that many of those present urged that the railroad company be forced to comply with the conditions of the grant; and they did not hesitate to say that they preferred a repeal of the proviso which restricts the railroad company in its disposition of the lands to any action that might result in the inclusion of the lands in a national forest.

Roseburg is the home of Mr. Binger Hermann, former Commissioner of the General Land Office and at one time a Representative in Congress from that district. I called upon him and had a pleasant interview, but while he seemed greatly interested in the matter and possessed a clear understanding of the question he was not disposed to commit himself definitely to any of the several plans that were suggested for the solution of the situation. He did admit, however, that he belonged to the old school of men who believed that upon the construction of the railroad the company acquired complete title to the lands granted, and that no suit would ever be brought to forfeit the grant or to enforce the provisions of the act. By this I do not desire to convey the impression that since the decision of the Supreme Court construing the grant Mr. Hermann still feels that the railroad company should be granted the lands free of restraint as to sale, because, as indicated above, he did not definitely commit himself.

From Roseburg I returned to Portland October 22 and remained several days, having conferences with men interested in the disposition of the lands, including Mr. Glenn E. Husted, formerly a special assistant to the Attorney General engaged in the litigation, United States Senator LANE, the officials of the local land office, the United States attorney, and others.

On October 25 I visited the logging operations of the Nehalem Timber & Logging Co. in T. 4 N., Rs. 2 and 3 W. That company was then engaged in cutting and removing timber that it had purchased by order of the court on certain of the lands involved in the suit. Here are situated the improvements of certain alleged settlers represented by former Representative A. W. Lafferty. I inspected the improvements on four of the claims, but found none of the parties residing there, and I was reliably informed by the men engaged in the logging operations that none of the alleged settlers in that immediate vicinity were then residing upon their claims. At only one place did I see any evidence of cultivation, and the area was quite small. Most of the houses, however, were well constructed and entirely habitable. To convey an idea as to the value of the timber on some of these lands it might be well to state that the timber on one quarter section claimed as a settlement claim was purchased by the Nehalem Timber & Logging Co. under the order of the court mentioned for the sum of $17,000 or thereabouts. The land here is very steep and rough in places. There are few settlers on the intervening even-numbered sections, and along the logging road running out to the lane from Scappoose I saw very little being done in the way of clearing the cut-over land. I was told that such land was sold by the logging companies after they had removed the timber for about $7 per acre to real estate men, who were charging their purchasers a great deal more, in some instances as high as $75 per acre.

On the occasion of this trip I was accompanied by Mr. John Pearson, of Portland, a director of the Nehalem Timber & Logging Co., and Supt. James Redey, who extended me every possible courtesy, and thus enabled me to see a great deal in a very short time.

On returning to Portland from my visit to the grant lands near Scappoose, in Columbia County, I had further interviews with men interested in the situation, including ex-Gov. West, former United States Attorney John M. Court, and the local officials of the Forest Service and General Land Office, after which I proceeded to Grants Pass, the county seat of Josephine County, in the southern part of the grant.

I found the people of Grants Pass greatly concerned over the situation. Only a little more than 25 per cent of the land in this county is subject to taxation, and until the railroad company ceased paying taxes in 1913 the taxes paid by it constituted about 13 per cent of the county's revenues.

As soon as my purpose was made known, some of the gentlemen whom I met, including county officials, secured automobiles and we drove through the grant lands in T. 36 S., R. 6 W.; T. 37 S., Rs. 7 and 8 W.; and Ts. 38, 39, and 40 S., R. 8 W., proceeding as far as the so-called Logan Gold Mine, located on an old donation claim in sec. 27, T. 40 S., R. 8 W. The lands through which I passed are only fairly well timbered. The soil is not so fertile as that in the northern part of the grant, and I saw few settlements except in the valleys, much of the land being steep, rocky, and barren. I learned that there were a number of squatters or settlers residing on the grant lands in this vicinity, but the improvements that I saw were not extensive. I also ascertained that considerable interest is being manifested in copper and gold mining in that section. I was told that the Logan mine produced $50,000 in gold the year before. All industry here, however, is seriously hampered for want of transportation facilities.

In the evening a public meeting was held at the courthouse, attended by some 30 or 40 men. The subject was discussed at length, and at the conclusion a resolution adopted indorsing the resolution adopted by the land-grant conference at Salem in September. I was convinced, however, from the remarks made by a number of those present that what the people really desire is to see the lands opened to settlement and development in the most expeditious manner possible, and they will be satisfied if the lands are sold by the Government, reasonable compensation given the railroad company, and the surplus used to develop the counties in which the lands are situated.

From Grants Pass I went to Medford, the largest town in Jackson County, and also visited Jacksonville, a very old town and the present county seat. At Medford I had an interview with Mr. W. I. Vawter, who was president of the conference held at Salem in September. He confirmed the impression which I had received soon after reaching Oregon and which had been growing stronger from day to day, that the people in that section of the State were chiefly concerned in seeing that the lands yield their due proportion of revenue to the State and counties; that they be developed as rapidly as possible; that they be disposed of for something like their real value, and that in the settlement of the matter the railroad company be treated justly and equitably.

At Jacksonville, the county seat, I met several of the county officials and procured statistics as to the grant lands, the taxes due, and unpaid thereon. Jackson County is on the southern border of the State, and this completed my examination of the lands.

STATISTICS.

Before making such recommendations as the circumstances seem to warrant, I desire to invite attention to the following statistics, a presentation of which I feel is necessary to make this report readily intelligible or in anywise complete.

The unsold grant lands are situated in 18 counties in the State of Oregon, apportioned among the different counties, as shown by the following table, which also shows the assessed valuation of the lands reported by the Oregon State Tax Commission for the year 1915. In addition to the lands shown by the table there are some 200 acres in the State of Washington:

Acreage and assessed valuation, by counties, for 1915 taxes.

County.	Acres.	Valuation.	Average per acre.
Benton	54,110.05	$815,725	$15.08
Clackamas	94,601.29	1,101,520	11.64
Columbia	18,037.90	726,040	40.25
Coos	121,053.00	1,442,445	11.92
Curry	11,885.00	128,600	10.82
Douglas	640,569.00	5,916,600	9.24
Jackson	446,389.91	4,297,620	9.63
Josephine	187,080.00	1,754,770	9.38
Klamath	42,984.00	423,490	9.85
Lane	301,997.03	3,356,955	11.12
Lincoln	15,946.00	103,120	6.47
Linn	63,032.48	752,485	11.94
Marion	32,051.00	390,775	12.19
Multnomah	9,287.00	205,050	22.08
Polk	37,458.00	621,160	16.58
Tillamook	29,781.00	164,045	5.51
Washington	19,212.18	169,590	8.83
Yamhill	29,974.42	194,280	6.48
Total	2,155,449.26	22,564,270	10.47

The foregoing table shows that the lowest valuation per acre is in Tillamook County, where the lands have an average value of $5.51 per acre, while the highest is in Columbia, where the assessed value exceeds $40 per acre. It will be observed that the total number of acres shown in the table, together with the area in the State of Washington, will not equal 2,300,000 acres. This is due to the fact that a considerable area of land has not been patented by the United States—possibly two or three hundred thousand acres, some of which is in dispute. I am informed that the grant has not been finally adjusted in the General Land Office, and for that reason no exact statement can be now made on this feature of the case. The figures given, however, are approximately correct.

The following table will show the taxes levied against the unsold land of the several counties for the years 1913, 1914, and 1915, the figures for the first two years being taken from a letter written to the State tax commission on August 7 of the present year by William M. Colvig, tax and right-of-way agent for the Southern Pacific Co., while the figures for the year 1915 are taken from the Oregon Voter of September 11, 1915, furnished, as I understand, by the State tax commission.

County.	1913 tax.	1914 tax.	1915 tax.
Benton	$19,986.12	$21,080.21	$21,133.08
Clackamas	29,513.40	29,396.62	29,133.08
Columbia	15,042.62	16,815.96	16,815.96
Coos	49,367.23	39,341.44	39,560.95
Curry	2,230.15	2,314.38	2,023.05
Douglas	96,230.35	(1)	96,230.35
Jackson	71,097.95	65,760.27	65,784.27
Josephine	34,477.89	37,540.40	37,540.40
Klamath	10,359.50	10,698.78	10,698.78
Lane	80,413.07	73,060.78	72,925.97
Lincoln	2,146.82	2,440.41	2,440.41
Linn	13,854.09	11,550.56	11,550.56
Marion	7,827.77	7,532.79	7,532.79
Multnomah	2,279.52	3,194.38	3,207.32
Polk	13,528.44	15,103.39	15,099.77
Tillamook	3,444.95	3,064.52	3,064.52
Washington	4,570.53	3,861.72	3,861.72
Yamhill	4,363.25	4,128.95	4,128.95
Total	459,733.65	346,885.56	442,731.93

[1] Not assessed.

At the time of filing its answer to the Government's bill, the railroad company had sold, in round numbers, 820,000 acres of land and had received from sales of land and other sources the sum of $5,506,870.97, as follows:

From sales of land	$4,338,822.53
From sales of timber on lands	18,850.25
From forfeited contracts	88,205.06

From lease of lands	$5,532.07
From timber used by railroad company	18,850.25
From timber depredations	10,687.92
From interest on contracts	1,025,922.89
Total	5,506,870.97

The company also claimed to have made disbursements as follows:

To advertising	$34,784.85
To law expenses	218,415.25
To grading lands	142,651.40
To United States surveys	145,977.26
To salaries and office expenses	624,344.19
To stationery and printing	18,369.89
To taxes on lands	1,827,776.94
	3,011,776.94
Total receipts	5,506,870.97
Total disbursements	3,011,776.94
Credit balance	2,495,094.03

The figures given above are taken from the railroad company's answer and exhibits filed therewith, as shown by the record in the case in the Supreme Court at the following pages: 6836, 1583, and 915. In its answer the railroad company also claimed that it was entitled to a credit of $1,000,000 in consideration of the free use of the railroad by the Government in the transportation of troops and munitions of war (R., 935). If we deduct this sum of $1,000,000 from the credit balance shown above, it will leave a net surplus of $1,495,094.03, received from the sale of lands, etc. I am informed that since the Supreme Court's decision was rendered, the railroad company has made a further estimate of the value of the transportation afforded to the Government for troops, munitions, etc., fixing the same in excess of $2,000,000, or a million dollars greater than was estimated at the time its answer was filed, and that it also claims to have paid taxes aggregating $2,757,647.84.

From the information contained in reports submitted by a timber cruiser of the General Land Office, based upon a fair, if not low, estimate, the unsold grant lands contain more than 44,000,000,000 feet of timber, which at an average price of 50 cents per thousand, which is also low, would amount to more than $22,000,000. Judging from the prices at which cut-over lands in that part of Oregon are now being held, I feel safe in saying that such portions of the lands as are now chiefly valuable for the timber—and by that I mean having more than 1,000,000 feet to the quarter section—can be sold after the timber is cut and removed for at least $5 per acre. There are probably more than a million acres of such lands.

VARIOUS PLANS SUGGESTED FOR THE SOLUTION OF THE SITUATION.

I shall not attempt to discuss or even present all the plans suggested but shall content myself with a brief discussion of the resolution adopted by the land-grant conference, after which I shall propose a line of action which I feel will best meet the situation and which, if adopted, will, in my judgment, be eventually approved by a majority of those most vitally concerned.

I do not hesitate to say that little or no weight should be given to the resolution adopted by the land-grant conference at Salem last September. In the first place, from what I could ascertain, the conference was not a representative body. By this I mean that if the delegates had been elected by all the people interested the conference would probably have been controlled by other men; in saying which I intend no reflection whatever either upon the men who attended the conference as delegates or upon those who appointed them. I am also informed that the resolution adopted was opposed by some who voted for it simply because they realized that the conference would not agree upon anything else, and they felt that any action was better than no action.

In the next place, a very large portion of the lands involved are at the present time so greatly valuable for their timber that it would be mere folly to dispose of them at $2.50 per acre. While I know that such lands would be promptly entered by alleged settlers for the avowed purpose of settlement and cultivation, I also know that such persons would be moved by the present timber value of the lands rather than by their future possibilities for agricultural purposes. Many men would willingly live a few years in almost any part of the country merely for the sake of acquiring title to timber worth from five to ten thousand dollars, and while such men might make a pretense of compliance with the requirements of the homestead law, their chief object would be the acquisition of the timber.

Then, again, these lands are worth a great deal more now than they were when the grant was made or even 15 or 20 years after the grant was made. This enhancement of the value is due to the development of the country, and, in my judgment, rightfully belongs to those responsible for that development. Should the lands be opened to entry at the nominal sum of $2.50 per acre under any of the methods heretofore adopted for the opening of lands, there is no assurance that the men directly responsible for the present value of these lands would be able to reap any direct benefit. On the contrary, it is not unlikely that strangers or those residing in other parts of the country would be the fortunate ones, and thus be given something which has been produced by others.

Moreover, in a sense this land grant is in debt. For a period of years it has been contributing its share of the revenue received by the State and counties in which it is situated. For the past three years it has contributed nothing to the support of the State or counties. The accumulated taxes amount approximately to $1,000,000 for that period of time. It may be that the State and counties can compel the payment of these taxes, though based on a valuation far in excess of $2.50 per acre. Upon that question I do not venture any opinion further than to say that whatever may be the legal rights of the parties, it does not seem entirely equitable to demand the payment of a tax which in two or three years at most will amount to the owner's entire interest in the subject matter. Should these lands be disposed of at $2.50 per acre, as suggested by the land-grant conference, it will be impossible for the railroad company to receive an average of $2.50 per acre for the entire quantity of unsold lands, because a large part of the lands, probably three or four hundred thousand acres, is not worth anything like that sum, and it may be years before they could be sold for any price at all. Having this in mind and realizing that it has for years paid a tax based on a value far in excess of $2.50 per acre, the railroad company might refuse to pay the taxes which have accumulated for the past three years and thus bring on extended and expensive litigation, which would defeat the object most desired, namely, a prompt and early settlement of the entire matter.

Finally, I am convinced that a majority of the people concerned do not desire that these valuable timberlands be disposed of at a nominal sum. This plan is favored either by those who desire to get something for nothing or those who by reason of their supposed familiarity with the subject matter hope to reap a profit from locating others upon the lands. I have little sympathy with either class, and, as already indicated, I do not believe that a majority of the people in that part of the country want this plan adopted. We know from the decision of the Supreme Court in this case that the so-called actual settler, much less the mere paper applicant, has no legal rights whatever, while the previous operations of locating agents in connection with this land grant are to be condemned rather than rewarded, for they merely induced men to incur unnecessary and useless expense. Others of them have "located" numbers of different people on the same tract of land and have received fees for services that were worth absolutely nothing. Of such it would be difficult to say too much in the way of condemnation.

RECOMMENDATIONS.

The litigation over these lands has been pending since May, 1908, or more than seven years; and for several years before that the lands were withdrawn from sale. Inasmuch as these lands constitute a great part of certain of the counties, it will be seen at once that their withdrawal from the market necessarily retarded the development of the counties affected. The failure of the lands to return any revenue whatever for the past three years has seriously added to the embarrassment of the situation. In certain of the counties the taxpayers say that the burden has become so great that they can not bear it much longer.

The people, therefore, are more interested in securing a prompt and definite settlement of the situation than they are in any particular plan or method. Because of the lack of revenues, for which they hold the litigation entirely responsible, many of them feel that their condition would have been better if the Federal Government had never interfered in the matter.

Whether Congress may now, without consulting the railroad company, provide for a disposition of the lands contrary to the terms of the granting acts I am not prepared to say. It would seem, however, from what was said by the Supreme Court in its decision that such legislation might be upheld, provided only it secured to the railroad company all the rights conferred by the granting acts, apparently $2.50 per acre for the lands granted. Be that as it may, I feel that the Government and the railroad company should reach terms of settlement by which the former should be revested with title to the lands and the latter paid such a sum of money as may be agreed upon. I can conceive of no legal objection to such a plan if authorized or ratified by Congress.

In my opinion, the railroad company should be paid a sum equal to $2.50 per acre for the unsold lands, irrespective of their present market value. This is more than it can receive if forced to sell the land in accordance with the terms of the granting acts. Still, it is only a small part of the present value of such lands. Under such an arrangement the railroad company would receive something like $5,750,000, while the lands and timber together are worth five times that sum.

Such an agreement as I have suggested should, of course, provide for the settlement of all matters involved; credits claimed by the railroad company for payment of taxes, the furnishing of transportation to the Government, and the expenses of administration, on the one hand, and those claimed by the Government, on the other, consisting chiefly of the money received by the railroad company under sales made for a greater price than that authorized by the statute. For a portion of the taxes paid by the railroad company it is entitled to no credit whatever, because it was but just and proper that it should pay taxes at least on a valuation of $2.50 per acre. Neither is the company entitled to any consideration for the transportation it afforded the Government, because it agreed to do that when it accepted the lands on that condition. However, the settlement of a question so large and important as this should not be endangered by minor considerations, and I think, therefore, that the claim of the Government, on the one hand, and that of the railroad company, on the other, on account of past transactions should be set off against and balance each other without considering whether the one is greater or less than the other. Provision should also be made for the early payment of the taxes which have been allowed to accumulate for the past three years, and, inasmuch as the railroad company has for years paid taxes on a valuation greatly in excess of $2.50 per acre, it would seem to be only fair that the taxes now due should be paid from proceeds derived from the sale of the lands.

Such a plan should at once appeal to the railroad company, because it would enable the company to secure considerably more than it could receive from a sale made under the provisions of the granting acts, and at the same time would relieve the company of any further costs on account of the administration and sale of the lands. It would also put at rest for all time the question of the payment of the accumulated taxes.

Assuming, therefore, that such settlement as that suggested can be effected with the railroad company, I think that Congress should approve it, and at the same time provide for the disposition of the lands and timber substantially as follows:

Under a division of the lands into three classes, namely, mineral, timber, and agricultural lands, they will practically classify themselves, and the prolonged delay and great expense (probably $500,000) incident to classification will thus be avoided.

Mineral lands should include all lands chiefly valuable for minerals. Timberlands should include all nonmineral lands which contain 1,000,000 feet board measure of timber to the quarter section, or 160 acres. Agricultural lands should include all lands not within either of the two other classes.

Under such an arrangement close inspection of the land will be necessary only where the quarter section contains a little more or a little less than 1,000,000 feet of timber, because where land is well timbered, or where it contains little or no timber, the class to which it belongs can be determined upon the most casual observation.

The mineral lands should be disposed of under the existing mineral-land laws.

Timberlands should not be disposed of until after the timber has been removed, when they should ipso facto become agricultural lands, and be disposed of as such. Timber on these lands should be sold at public auction or under sealed bids to the highest bidder for cash, any person or corporation being allowed to purchase as many acres as it may see fit. Purchasers should have an indefinite time in which to cut and remove the timber at their pleasure, and in the meantime the land upon which the timber is standing should be subject to the possession and control of the person purchasing the timber. By this means I

believe that the timber alone can be sold for a sum as great as could be secured under a sale of the land and timber, especially if the sale of land and timber together is made in limited quantities. A measure such as this should, of course, be safeguarded by provisions authorizing the officers making the sales to reject bids where the prices offered are grossly inadequate. It will be years before much of this timber is cut, but when it is cut the land will still belong to the Government and will afford homes for thousands of people.

I have limited timberlands to such as contain more than a million feet of timber to the quarter section, for the reason that a quarter section of land in that part of the country that does not contain more than that quantity of timber is not regarded as good timberland. At the present price of timber it is worth about $500, which it will be seen is but $100 more than the payment which the entryman is required to make in paying $2.50 per acre for the land. In such a case a man will not enter the land for its timber value alone, because even under favorable circumstances he can only receive a small increase over the money he pays for the land, and, in addition thereto, he must reside upon it for five or six years, as the law may require.

The agricultural lands should be disposed of to actual settlers under laws somewhat similar to the present homestead laws, but persons entering such lands should be required to pay $2.50 per acre therefor. The term of residence and cultivation should not be shortened, but if any change is made, it should be lengthened and entrymen should not be required to cultivate any given area of the land entered, but the area to be cultivated should be determined by the circumstances of each particular case.

Some protection should be afforded those who are actually residing upon the lands. By this I mean such as are now living there with their families, which is not intended to include persons who may have at one time constructed some sort of habitation upon the land and thereafter abandoned it. Actual residents, however, should be required to pay $2.50 per acre for the lands entered, and they should not be allowed to acquire lands that are highly valuable for their timber. Where the lands occupied are timberlands within the definition given above the settlers should be confined to the smallest legal subdivision upon which their improvements are located, or it may be that they should also be allowed to purchase the timber in excess of a million feet to the quarter section at its appraised price. The chief objection to this, however, is that most of the settlers will not be able to secure the money necessary to pay for any considerable quantity of timber. A provision that will protect the settler in the possession of the 40-acre tract that he is actually occupying is all that he can equitably claim and more than he has any legal right to demand.

I realize that the method suggested herein for the disposal of the timber will meet with criticism upon the ground that it will enable individuals and corporations to acquire large holdings of timber. The answer to that is that it is wholly impossible to operate to advantage a small body of timber in country as rough as this. The timber, consisting chiefly of fir, is heavy, some of it measuring as much as 10 feet in diameter and growing 200 to 300 feet in height. It stands upon steep mountain sides and in the bottom of deep canyons. It can be handled only by expensive machinery, and transported only by specially constructed logging roads. A small quantity can be handled by no one with a profit, even though the stumpage should cost nothing, and it is only the well-equipped individual or corporation that can afford to undertake operations on a large scale.

Therefore it is immaterial whether the timber be sold originally in large or small quantities, because it must inevitably be owned or controlled in large quantities before it can be successfully operated. Again, it is altogether impracticable to operate in any given section of the country unless the operator owns or controls practically all the timber in the area involved; the growth is such that it is impossible to cut only the matured trees of a certain size and leave the younger timber standing, because the greater part of it would be destroyed by the cutting and logging operations.

True, the timberlands may be sold, more or less advantageously, under the timber-and-stone laws now in force; but if that should be done, the purchaser from the Government will be limited to 160 acres, and in almost every instance, the land will be entered for speculative purposes, because, as stated, a small area can not be profitably operated, and the person buying only 160 acres from the Government will necessarily hope to dispose of the land to a lumber company at an advanced price—otherwise, he would not make the purchase.

Feeling that these lands should be sold for their real value, as nearly as may be, in the first instance, and intermediate profits thus avoided, I can not recommend that they be disposed of under the timber and stone act.

DISPOSITION OF THE PROCEEDS.

The money derived from the sale of the lands and timber should be used first to pay the railroad company the sum agreed upon. This, at $2.50 per acre, will amount to something like $5,750,000.

The taxes due the State and counties for the past three years should next be paid. These accumulated taxes amount to approximately $1,000,000, which, when added to the sum to be paid the railroad company, will make nearly $7,000,000.

The greater part of the proceeds arising after making payments as above should be divided between the State and the several counties in which the lands are situated, to be used for public purposes, such as schools, construction of roads (of which most of the counties involved are badly in need). I would suggest that 35 per cent be given to the State and 40 per cent to the respective counties. This leaves a balance of 25 per cent, which should be retained by the United States to cover expenses of administration, etc.

By the adoption of the plan I have suggested, the lands and timber will bring something like their real value. Alleged settlers will not be permitted to acquire valuable timber tracts under the pretense of seeking homes; the proceeds will go where they rightfully belong—to those whose efforts have developed the country in which these lands are situated and have thus given the lands their present high value—and the railroad company will receive more than it could possibly receive if compelled to comply with the terms of the granting acts.

I fully realize that the course outlined by me will not meet with the approval of all concerned, but that will be true of any plan within the range of human ingenuity. Objections will come from various sources; from the railroad company, which pretends to believe that it is entitled to the full value of the timber; from applicants, would-be applicants, and alleged settlers who desire much, giving little or nothing in return; from speculators and locators, who will be denied the opportunity of enriching themselves at the expense of others less well informed; and finally from those who, in the utmost good faith, feel that some other method of disposing of the lands and proceeds would better serve the public interests. All these, save the last, should be dismissed with a word, while as to those who differ from proper motives, it may be said that very few of them can be found who will agree among themselves upon any well-defined plan.

My conclusions have been reached after an earnest and unprejudiced inquiry, the sole purpose of which was to ascertain the best possible solution of the situation. In going through the country and talking with the people in all walks of life, I was brought face to face with conditions, and the deep interest manifested by practically every man I met impressed me greatly. I was made to realize how much a wise and just settlement of the matter means to the people of western Oregon, who have suffered from the improper administration of this land grant and the litigation resulting therefrom; and, in my judgment, theirs is the interest most deserving of consideration. My recommendations are intended chiefly to serve that interest, and I firmly believe that an early settlement along the lines indicated will not only relieve the present business depression for which this litigation is in a large measure responsible, but it will restore the confidence of the people and go far toward inducing a lasting prosperity.

Respectfully submitted.

S. W. WILLIAMS.

During the reading of the foregoing report,

The PRESIDING OFFICER (Mr. WORKS in the chair). The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A bill (H. R. 10484) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1917, and for other purposes.

Mr. BANKHEAD. I ask unanimous consent that the unfinished business be temporarily laid aside.

The PRESIDING OFFICER. The Senator from Alabama asks unanimous consent that the unfinished business be temporarily laid aside. Is there objection? The Chair hears none, and it is so ordered.

Mr. CHAMBERLAIN. I ask that the Senate may resume consideration of House bill 14864.

The PRESIDING OFFICER. The Chair lays the bill before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes.

The PRESIDING OFFICER. The Secretary will resume the reading of the report.

After the reading had been concluded,

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Nebraska?

Mr. CHAMBERLAIN. I yield.

Mr. NORRIS. I realize that this matter ought to be disposed of without delay, but I am impressed with the importance of it. The report of Mr. Williams read by the Secretary indicates that the measure ought to have very careful consideration.

I wish to ask the Senator from Oregon if he is willing to let the bill go over until to-morrow until Senators have had an opportunity to look into it somewhat? During the reading of the report there were very few Senators in the Chamber, and those of us who were here and listened to it I think feel as though we ought to look into it even beyond what the report would indicate. There are many million dollars involved and the rights of a great many people are involved. While I know the bill ought to be disposed of without delay, I do not believe that we ought to be precipitate about it. I do not believe that Senators as a rule are posted on the details of the transaction. I am a member of the committee that reported this bill, and I have never heard of it being considered in the committee. I suppose it may have been considered at some time when I was not present. I have, however, talked with a great many Senators, and none of them seem to be ready now to express an opinion as to the merits of the proposition involved.

Mr. CHAMBERLAIN. I will ask the Senator from Nebraska, in all frankness, if he thinks the Senators who are absent will look into the bill between now and to-morrow morning?

Mr. NORRIS. I think some of them will. I have talked with some Senators who have mentioned the matter to me who are not now in the Chamber who have expressed an interest in the bill and a desire to examine it.

Mr. CHAMBERLAIN. Mr. President, I will say to the Senator from Nebraska that I am never disposed to rush anything through the Senate; but the bill which formed the basis of this legislation was introduced in the Senate by me in December last. It was Senate bill No. 30. There were a number of bills

on the same subject introduced in the other House at about the same time, but none of them seemed to appeal to the House Committee on the Public Lands. The result was that, at the request of the committee, the chairman of the committee in the House introduced a bill which I had introduced here with certain amendments recommended by the Department of Justice, and that was the basis of the bill now before the Senate.

The House hearings covered a period of weeks. The committee, I am informed, sat in consultation with officers of the Government in the preparation of the bill. The Senator will find that all of the departments had practically agreed upon this bill as it now is. The report will show not only that they have agreed in writing about it but that they sat in consultation with the members of the subcommittee when the bill was finally prepared.

Mr. NORRIS. The Senator means, does he not, that the representatives of the Government and of the various departments agreed with the provisions of the bill as it passed the other House? There are, however, some very important amendments which have been reported by the committee, which will change the bill very materially. That is the reason, or it is one of the principal reasons, why I should like to have the bill go over until we can get a little more information regarding it.

Mr. CHAMBERLAIN. Of course, I do not want to appear insistent about this; but this matter has been agitated for years. It is a matter about which people are pretty generally advised; and the decision of the Supreme Court leaves in doubt how soon Congress must act in the matter. It is contended by some who have read that decision with a great deal of care that this Congress must act on that bill before the 9th of June.

Mr. NELSON. Mr. President, will the Senator from Oregon yield to me a moment?

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Minnesota?

Mr. CHAMBERLAIN. I yield to the Senator.

Mr. NELSON. The decision of the Supreme Court of the United States in this case was rendered on June 21, 1915, and the concluding part of the opinion reads as follows:

> If Congress does not make such provision, the defendants may apply to the district court within a reasonable time, not less than six months, from the entry of the decree herein, for a modification of so much of the injunction herein ordered as enjoins any disposition of the lands and timber until Congress shall act, and the court, in its discretion, may modify the decree accordingly.

To my mind, that makes it clear that we ought promptly to act in this case if we intend to do anything.

Mr. CHAMBERLAIN. I will say to the Senator that the decision of the Supreme Court was not entered of record in the lower court until the 9th of December, in order that this very question might be avoided. Having been entered on the 9th of December, in the view of many—I am not prepared to say that I am in entire accord with that view—Congress must act before the 9th of June. We are going to adjourn here——

Mr. NORRIS. I do not want the Senator to get the idea that I am trying to delay action on this matter, but the very position of the Senator is one of the reasons why I now ask delay. The Senator is going to contend, I presume, for these amendments. I may be wrong, but, as I understand, the Senator himself has said that the representatives of the Government, perhaps from the Department of Justice and the Department of the Interior, sat with the House committee and helped to frame the bill, and I presume approved the bill as it passed the House. If the Senator from Oregon wanted to have the bill passed through the Senate as it passed the other House, without these amendments, I would be willing to take the judgment of the House, of the House committee, and of the representatives of the Government—they all having agreed on the House bill; but the Senator from Oregon is not going to do that, as I understand.

Mr. CHAMBERLAIN. Mr. President, there are very few amendments proposed by the Senate committee, and I think a discussion of them will develop just what the Senate committee had in view when those amendments were proposed. If the Senate feels, after a discussion of the amendments, that they ought not to be embodied in the bill, there will be time enough to vote them down.

Mr. NORRIS. Oh, yes.

Mr. CHAMBERLAIN. I am frank to say to the Senator that this is a most complicated proposition. Not only has it puzzled the Public Lands Committee of the other House, but it has puzzled lawyers for and against this legislation.

Mr. NORRIS. That is one reason why I should like to put it over one day.

Mr. CHAMBERLAIN. I know that, Mr. President, but the matter will not be any better understood after delay than it will be after a discussion here.

Mr. NORRIS. Let me say to the Senator from Oregon that several Senators have expressed to me a wish that the bill go over in order that they may look into it. I feel that way myself. I do not want anybody to charge—I do not think anybody will charge—that there is any attempt on the part of anyone to delay the bill; but here we have a proposition which the Senator from Oregon himself says is very complicated, one in which representatives of the Government, perhaps of the Agricultural Department, of the Interior Department, and of the Department of Justice, sat for days and weeks with the members of the House committee in framing a bill. They framed a bill and passed it through the House. Now, the bill comes to the Senate; some very material amendments are put on; and the bill is brought up here to-day, without, I presume, more than one or two Senators in the body having read the bill as proposed to be amended.

Mr. CHAMBERLAIN. Well, I call the Senator's attention to this fact, Mr. President: The Senator stated awhile ago that, if the matter came here in exactly the same shape as it passed the other House, he would not object to it. Practically the only material change in the bill is the change of the section of the House bill which requires a sale on time, to one which we propose shall be made for cash. That is practically the serious change in the bill. That can be discussed without——

Mr. NORRIS. Will the Senator from Oregon be in favor of rejecting all other amendments except that one?

Mr. CHAMBERLAIN. No, Mr. President, I am not going to agree to that.

Mr. NORRIS. Well, I do not ask the Senator to do that; but he says that is the only material change which has been made.

Mr. CHAMBERLAIN. If the Senator from Nebraska will just be patient and content himself for one moment I will try to explain what the other proposition is.

Mr. NORRIS. Oh, well, I was afraid I was going to delay the bill by being too impatient, so I will content myself and listen to the Senator.

Mr. CHAMBERLAIN. Mr. President, as I have said to the Senator from Nebraska, the only material and essential change is the one requiring the sale of these lands for cash. That is the essential change. On that proposition the Secretary of the Interior at first advised that that was the best way to make the sale, but later acceded to the terms contained in the House bill.

The only further change that amounts to anything is the one changing the way in which these funds shall be divided. Those are the two essential changes.

I am insisting that because of the fact that so much of the public land in Oregon has been withdrawn from settlement and sale and included in the reserves for so many years, she ought to be very liberally treated in regard to this, and particularly in view of the fact that the railroad company has not complied with the terms of any of these granting acts and has withheld this land from settlement and sale. The only question on that amendment is whether the Senate is willing to be liberal to the State of Oregon or not. It does not involve any essential changes, and the committee made just as few changes in the bill as it was possible to make.

Mr. NORRIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield further to the Senator from Nebraska?

Mr. CHAMBERLAIN. I yield.

Mr. NORRIS. I did not want to ask the Senator a question. I understood the Senator was through. If he is not, I shall wait until he has concluded.

Mr. CHAMBERLAIN. I thought the Senator only desired to ask a question. If the Senator wants to go on with the discussion, I am prepared to discuss it.

Mr. NORRIS. I am not anxious to go on with it; but the Senator and myself have been discussing the proposition of putting the bill over until to-morrow. I want to call attention to what I believe to be some very material changes that have been made by some of these amendments, but I have not had time even to satisfy myself that in all respects I am ready to do so now.

Mr. CHAMBERLAIN. I am not usually unreasonable, Mr. President, but I do think it is hardly fair for the Senator from Nebraska to ask that the bill go over, in view of the discussions which have been had in reference to the matter. The Senator knows how this bill was taken up through the courtesy of the Committee on Post Offices and Post Roads; that the Post Office appropriation bill was laid aside in order that action might be hastened on this bill and the bill passed within the time required by a decree of the Supreme Court.

Mr. NORRIS. Mr. President, that brings me to the proposition that, because the Post Office bill was laid aside, probably

it is going to be contended that we ought to pass this bill without any discussion, and that we should adopt these amendments without giving them any consideration, because otherwise we would have to take some time, and we would be trespassing, it would be said, upon the courtesy of those Senators who have charge of the Post Office appropriation bill.

Mr. President, I now assert, again, that I am just as anxious to give speedy consideration to this bill as is any other Senator; but I am not going to be compelled to subside and to say nothing simply because the Post Office Committee has courteously extended to the Senate the right to consider this bill for a few moments. As to such a bill as this, involving several million acres of land, the interest of a great many citizens in Oregon, and several million dollars in money, it does not seem to me that it is an unreasonable request that a proposition involving all these things should at least lie over one day so as to give Senators an opportunity to investigate it. I do not believe I am unreasonable in asking that the bill be now postponed. I have only asked, as a matter of fact, a courtesy; and it seems to me it ought to be granted.

I am not going to be offended if the Senator insists on going ahead; I do not imagine that my request is necessarily law, but as I caught the purport of the bill from its reading, the House bill disposes of the proceeds in a different manner from what the Senate bill does. After the railroad company has been paid $2.50 an acre, after Oregon has been paid the taxes which are still unpaid against portions of this land, and all the other necessary expenses, the net proceeds will be divided, if the House bill should prevail, by giving to the State of Oregon 20 per cent for its schools; then giving 30 per cent to the counties in which the land is located for roads and bridges; then giving 40 per cent to the Reclamation Service and 10 per cent to the Government of the United States. If I am not wrong, that is what would happen if the House bill were enacted into law; but if the amendment of the Senate committee is adopted, Uncle Sam will get 10 per cent, the Reclamation Service will get 10 per cent, and the remainder will go either to the State of Oregon or to the counties where the land is located. It strikes me that is a very important proposition. Perhaps it is right to do as the Senate committee amendment provides, but it ought not to be done hastily; it ought not to be done without the Senate knowing just what it is doing.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Montana?

Mr. NORRIS. I yield to the Senator.

Mr. WALSH. I rise to inquire of the Senator from Nebraska, who is a member of the Public Lands Committee, if the different distribution proposed by the amendment was the subject of special discussion and consideration by that committee?

Mr. NORRIS. As I stated awhile ago, I never heard the bill discussed in the committee. I presume it was taken up at some time when I was not present. However, I am informed by the Senator from South Dakota [Mr. STERLING]—and since he reminds me of it, I think I was present when that was done—that the bill was referred to a subcommittee. I do not remember anything about it since then. If anything happened except that in the committee when I was present, I do not know what it was.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Oregon?

Mr. NORRIS. I yield the floor.

Mr. CHAMBERLAIN. Mr. President, I do not feel, under the circumstances, that the bill ought to be laid aside. Of course, the Senator can consume the time if he wants to do so, but I feel it is my duty, as representing in part the State of Oregon, to insist, so far as I can, that the Senate proceed with this matter.

Mr. President, the reading of the report of Mr. Williams, who was the representative of the Department of Justice, avoids the necessity of any lengthy address to the Senate as to the conditions in Oregon, and I shall attempt to be as brief as it is possible to be in giving those Senators who may care to listen to me my views of the subject.

The essential thing in these land grants was the condition imposed upon the railroad company to sell the land to actual settlers at a price not to exceed $2.50 an acre and in amounts not in excess of 160 acres. As has been stated in the report of Mr. Williams, that condition was contained in all the granting acts, except the first. The conditions of the first act, the act of 1866, were not complied with, and in the act of 1868, when an extension of time was asked, this provision was first inserted in the granting act by way of addition to it. The same provision was inserted in the act of 1869 and also in the act of 1870. So, Mr. President, it was the purpose of Congress that these lands should be granted to the railroad company on condition that the company would utilize them for the purpose of the development of the State while, at the same time assisting the company in the performance of a great quasi public work.

The terms and conditions of this grant on the part of the railroad company were practically observed until 1894. Very few, if any, sales were made from 1868 until 1894, which violated the terms of the grant. The lands were sold to actual settlers at $2.50 an acre, in amounts not in excess of 160 acres.

About that time timberlands commenced to go up in price, and then opportunities offered to the railroad companies to sell in larger amounts and for higher prices, and they began to sell without any regard to the conditions of the grant. They violated all the terms thereof, not only as to the price of $2.50 an acre, but as to the limit of the number of acres that might be sold to one purchaser. Furthermore, the lands were not sold to actual settlers, because most of the purchasers were men who did not even live in the State. Those practices were continued up until about 1903.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Montana?

Mr. CHAMBERLAIN. I yield.

Mr. WALSH. I should like to ask the Senator from Oregon whether the amount which would otherwise be due to the railroads on new sales is to be withheld until the equilibrium is restored, which was disturbed by the extra prices for which they sold the land which they did dispose of?

Mr. CHAMBERLAIN. The Senator will find that section 7 provides for the institution of suits to bring about an accounting for the extra amount the railroad company had received where they have made illegal sales. That is a matter to be accounted for between the Government and the railroad company under the terms of the bill itself.

In 1903, while Mr. Harriman was in control of the Southern Pacific system, he absolutely withheld these lands from sale and settlement and positively refused to make any disposition of them under the terms of the grant. The people of Oregon became indignant at the treatment they were receiving at the hands of the railroad company after the Government of the United States had been so generous to it in aiding in the construction of the railroad. It retarded the development of the State.

It must be remembered, Mr. President, that the railroad company was granted every alternate odd section for 20 miles on each side of the line of railway under the terms of the granting act. I call the attention of the Senate to the map on the wall. The line of the railroad company runs down the center of the white part of the map between the two green sections. The lands which were granted to the railroad company, and which are the lands involved in this matter—not all of the lands of the original grant, but the lands that are undisposed of—are checked in red on that map. Not only was the railroad company granted the odd sections within the limits of 40 miles along the line of the railroad, but if any of those lands had been taken up by homesteaders, or if they had been lost to the railroad company for any reason at all, the company had a right to select alternate odd sections 10 miles farther along the exterior limits of the primary grant. The result was, Mr. President, that the company finally had the cream of the land within the primary grant of 20 miles on each side of the railroad track and also the right of indemnity selection for 10 miles on the outside of the primary grant and on each side thereof.

It was my good fortune to be governor of my State from 1902 until 1908, during the time this agitation commenced. I had something to do with the agitation, Mr. President—a good deal to do with it. I did not hesitate to talk about it before chambers of commerce and before audiences of our people, endeavoring to show that the railroad company because of the violation of the terms of the grant ought to be brought to task in some way or other, and that the power either rested with Congress itself or with the courts.

Mr. Williams in his report—which has been read at the desk—calls attention to the fact that when the matter first began to be discussed in the papers of Oregon some time in 1907 the question became a very serious one. The withdrawal of these lands from taxation in the State threatened the county governments. They did not have area enough on which to levy taxes to support the county governments.

In 1907 I happened to be president of the National Irrigation Congress which met in Sacramento, I took occasion to address an immense audience on the subject of the grant of lands in California and Oregon and talked of the manner in which the railroad was ignoring its duty to the public. I suggested

then that the lands ought either to be forfeited by an act of Congress or by some proceeding in the courts, but advised the people of California and Oregon at that meeting that if that could not be done, if the Congress was unwilling to do its duty, and the courts were not appealed to to do their duty, the people of Oregon and California ought to get together in assemblies and mass meetings and formulate some sort of an amendment to their constitutions, under the terms of which the New Zealand system of taxation might be put in vogue in the States, and lands assessed in an ascending ratio; that is, the more land a man owned the more taxes he would have to pay; so that when it came to holding one or two or five million acres of land as did the railroad company, no corporation and no individual could afford to hold it. The suggestion was thought of enough importance by the railroad company to induce it to bring Mr. Harriman to Sacramento to reply to the suggestions which I had made. He came and was invited to address the Irrigation Congress on that subject, and in his usual philanthropic way—de mortuis nil nisi bonum—I shall be as mild as I can—he served notice on the convention that he did not intend to sell any of that land. It did not make any difference to him what the terms of the grant were. He was holding the land in reserve for philanthropic purposes, for the benefit of future generations; and he said he was going to buy timber while it was cheap on lands which were in the hands of private owners and utilize it for railway construction and other public purposes, and was going to sell the lands within this grant when he got ready to sell them.

Then what happened? The people of Oregon were determined that something should be done, and ought to be done, to compel the observance on the part of this great railway corporation of the terms and conditions under which they held the grant. The Legislature of Oregon soon after memorialized Congress on the subject, and a joint resolution was adopted by Congress in 1908 authorizing the Department of Justice to institute proceedings in the courts for the purpose of forfeiting the grant because of the continued violation of its terms. Pursuant to the authority granted by that joint resolution, which is set out in the report of both the House and the Senate Committee on Public Lands in connection with the pending bill, a suit was instituted by the Attorney General of the United States against the Southern Pacific Railroad Co. and others for the purpose of forfeiting the grant because of the violation of its terms. It was tried in the District Court of the United States for Oregon, and the reports of that trial, Mr. President, cover 20 bound volumes, copies of which are accessible to Senators. Every phase of the subject, from the time the grant was first made up to the time the suit was instituted, was gone into. There is absolutely nothing that was not discussed, not only from the individual viewpoint of the citizens of the State and of the officials of Government, but from the viewpoint of the railroad company as well; and the distinguished judge who heard the case and saw the witnesses face to face determined that the railroad company had violated the terms of the grant, and that the conditions contained in it were conditions subsequent, the violation of which entitled the Government to a forfeiture of these lands. While I do not propose to criticize the Supreme Court of the United States, I say that there is more reason and more sense and more logic in the decision of the distinguished judge of the lower court than there is in the decision of the Supreme Court of the United States.

The case went to the court of appeals, and, without any trial before that court, was certified up to the Supreme Court of the United States. That court reversed the decision of the distinguished judge of the District Court of Oregon, and held that these conditions in the grant were not conditions subsequent, that entitled the Government to a forfeiture upon the violation thereof, but they were enforceable covenants. But realizing the injustice that had been perpetrated on the people of the State of Oregon by the continued violation of the terms of this grant, Mr. President, the Supreme Court held in effect that in view of the fact that this violation of the terms of the grant had been persisted in for 40 years, Congress had the jurisdiction and power to deal with the subject as it pleased, saving to the company, however, the value of the undisposed portion of the grant. In other words, while holding in effect that the terms of the grant were violated, the railroad company, nevertheless, was entitled to $2.50 an acre.

This bill has been formulated along the lines of the decision of the Supreme Court of the United States. I will say to the Senator from Nebraska that I am not entirely satisfied with this bill. If I had the sole say in penning a statute on the subject, the railroad company would get very much less out of these lands than it will get under the terms of this bill. But the bill is here after a thorough hearing and discussion by the distinguished members of the Public Lands Committee of the House as the best thing that can be done with a complicated subject, and with some slight amendments I think it ought to be enacted by Congress.

Mr. President, I am not going to call attention to the terms of the decision of the court. It is set out at length in the report of the committee and I hope the Senators have all read it. I say that I am not satisfied with the bill as it passed the House, for it is not generous enough to the State of Oregon. The bill introduced by me—S. 30—provided for a distribution of the fund on the basis of 40 per cent to the school fund of the State, 40 per cent to the counties for roads and highways, and 20 per cent to the United States. The House changed that distribution. I think that all of the proceeds except the expense of administration ought to go to the State of Oregon, and I am going to give my reasons for this opinion.

The green area on that map [referring to a map on the wall] represents the lands of Oregon that are held in reserve and absolutely withdrawn from taxation. Those are within forest reserves in the Cascade range of mountains and along the Pacific coast. Those are the only reserves I have had extended on the map, because they are in close proximity to the railroad lands, in order to show the Senate at a glance the small amount of land left to the people of Oregon for the purpose of taxation in the western part of the State. Off to the right, Mr. President, is another map—I will say that it is an official map, too—which shows other reserves in Oregon which are withdrawn from settlement as well as from taxation.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Idaho?

Mr. CHAMBERLAIN. I do.

Mr. BORAH. Do I understand that the green on that map represents the lands withdrawn from taxation, aside from any lands which are involved in controversy under this bill?

Mr. CHAMBERLAIN. Those green portions are simply lands in the Federal reserve.

Mr. BORAH. They have nothing to do with the lands involved in this bill?

Mr. CHAMBERLAIN. Nothing at all.

Mr. BORAH. How much acreage does that green portion cover?

Mr. CHAMBERLAIN. I have not made any estimate of it.

Mr. BORAH. It is a very large tract?

Mr. CHAMBERLAIN. A very large tract. It is practically the whole Cascade range of mountains, from the northern boundary of the State to the California line.

Mr. BORAH. Are those all timber lands?

Mr. CHAMBERLAIN. Most of it, I will say, is timber.

Mr. President, there [pointing to the map] is a county in the southwest part of the State, the very southwestern county in the State. The Senators will notice a little white strip along the Pacific coast. There is a county that carries on its municipal functions on a strip of land 6 miles wide and about 100 miles long.

Mr. BORAH. Where is the rest of it?

Mr. CHAMBERLAIN. In the Federal reserve. I am not kicking about that, Mr. President.

Mr. BORAH. I should like to kick for the Senator.

Mr. CHAMBERLAIN. I am just calling attention to facts which, in my opinion, entitle Oregon to a little more consideration than the House gave her.

Mr. BORAH. What county is that?

Mr. CHAMBERLAIN. That is Curry County.

Mr. BORAH. Is that green land in Curry County land which could be reduced to cultivation?

Mr. CHAMBERLAIN. I think much of it could. It probably could not be reduced to cultivation under some of the rules that the Forestry Service has adopted, saying that land which had a slope of 26 per cent was not fit for agricultural land. Why, Mr. President, I know of lands in Oregon that slope 45°, and have splendid orchards on them, and the land is worth $250 an acre; and yet, if you should apply that rule to some of those lands, they would not be agricultural lands.

Mr. BORAH. If the rules of the department had been in effect in the days of the "fathers," the original thirteen Colonies could not have been settled.

Mr. CHAMBERLAIN. I doubt if they could have been.

Mr. BRANDEGEE. What is the red color on the map?

Mr. CHAMBERLAIN. The red color is the land involved in this bill. Was the Senator here when I began my remarks?

Mr. BRANDEGEE. No; I was not.

Mr. CHAMBERLAIN. The original granting act gave to the railroad company every alternate odd section of 640 acres for 20 miles on each side of the railroad from the California line to the Washington line; and then the grant provided that if

there was any loss in these lands, if some unfortunate settler had happened to go in there and had taken up a piece of the land under the homestead law, or if there was a loss through any other cause whatsoever, the railroad company could go 10 miles farther on each side of the primary limits of the grant and select indemnity lands for those lost. So the Senator will see that it was possible for the railroads to go a distance of 30 miles on each side of the track and acquire lands through the heart of the richest country under the sun. The road runs through the Rogue and Willamette River Valleys from the California line to Portland, Oreg., the richest part of the State.

Mr. CLARK of Wyoming. Mr. President, will the Senator yield for a question?

Mr. CHAMBERLAIN. Certainly.

Mr. CLARK of Wyoming. What is the Senator's idea of the value of these lands at the present time?

Mr. CHAMBERLAIN. These grant lands?

Mr. CLARK of Wyoming. Yes; that is, those that are proposed to be restored by this bill.

Mr. CHAMBERLAIN. Of course, there is a great diversity of opinion about that. There is some of it that is not worth a cent, but the timberlands are very valuable, and it was stipulated at the trial that these lands and the timber on them were worth approximately $35,000,000.

Mr. CLARK of Wyoming. I have read the bill only hastily. In the case of the timberlands, the timber is to be taken off by the Government, as I understand, and sold?

Mr. CHAMBERLAIN. Yes, sir; to be sold by the Government.

Mr. CLARK of Wyoming. Does the State secure anything from the sale of that timber, or does the State receive the amount which the Senator has spoken of by the sale of the land after it is denuded of timber and made agricultural in quality?

Mr. CHAMBERLAIN. The bill provides for the distribution of the funds arising from the sale of the timber, and it is proposed that the State shall share in the distribution. After the timber has been cut, the land is subject to entry by homesteaders.

Mr. CLARK of Wyoming. They do not have to pay the $2.50 an acre?

Mr. CHAMBERLAIN. No, sir; but the Senator will notice that the last section of the bill provides how this fund is to be divided. The State does get something under that, and I will call the Senator's attention to it in a little while.

Mr. President, there is one county, to which I have called your attention, in the southwestern portion of the State which, by reason of these forest reserves, finds it almost impossible to carry on its government, and yet the people there are industrious and enterprising. They are developing the country, and they only want an opportunity to do better for the State and for the country.

Going farther north, Mr. President, you will see some counties on the map still farther up, along the coast, that have a very small area subject to taxation. Taking the reserves and the railroad lands together, it is almost impossible for the county governments to exist. In addition to the usual taxes the people have, under legislative authority, formed themselves into port districts and annually impose taxes upon the properties in the districts for the purposes of river and harbor improvement. They have contributed dollar for dollar with the Government for these purposes in order to assist in the development of the State. There was no provision made in the House bill for those port districts, although under its terms much of the area within these districts is to be withdrawn from the taxable area.

Mr. SMITH of Michigan. In developing what—the ports?

Mr. CHAMBERLAIN. In developing the rivers and harbors. I will call the Senator's attention to the port of Coos Bay. The people within it have taxed themselves $600,000 for the purpose of deepening the harbor so that seagoing vessels might come in and take away their lumber and other products. The Government of the United States has appropriated a like sum. I simply call attention to the fact that the people there are entitled to some consideration in this legislation, for the reason that a part of the taxable area is to be withdrawn.

Mr. BORAH. Mr. President, am I correct in assuming that this bill withdraws all this Government land from taxation? It does not restore it to taxation, does it?

Mr. CHAMBERLAIN. That brings up the question that I will discuss in a few moments. That is one of the changes the committee has made in the House bill. Under the House bill all of the timber which is to be sold on a 10-year credit might be withdrawn from taxation for a period of 10 years; and the change that the Senate committee has made in the House bill is to bring the timber when sold under the taxation laws of the State by requiring the sales to be made for cash.

Mr. SMITH of Michigan. If those lands are withdrawn in accordance with the terms of the House bill, then all the expense and the bonded debt that has been incurred by these municipalities in the improvement of their harbors is lost, is it not?

Mr. CHAMBERLAIN. Yes, sir.

Mr. SMITH of Michigan. How does the Senator propose to care for those communities?

Mr. CHAMBERLAIN. I will say to the Senator that in the amendment that we propose here, on page 16, the percentages are specified, and I will ask the Senator kindly to look at that.

Mr. BORAH. The bill provides that—

> Of the remainder, 10 per cent shall be paid into, reserved, and appropriated as a part of the fund created by the act of Congress approved June 17, 1902, known as the reclamation act, to be expended on approved projects within the State of Oregon; 10 per cent of such remainder shall become a part of the general fund in the Treasury of the United States.

What was the necessity of turning over 10 per cent to the United States?

Mr. CHAMBERLAIN. I do not think they ought to have anything.

Mr. BORAH. As I understand, the Nation recovers about a million dollars, anyway.

Mr. SMITH of Michigan. It is possible that the condition of the Federal Treasury might justify some contribution of that kind.

Mr. BORAH. Whatever may be the justification with reference to the condition of the Treasury, I do not think that was the moving animus of retaining this 10 per cent. It was for another reason, I presume.

Mr. CHAMBERLAIN. Oh, it was for administrative expenses, Mr. President.

Mr. BORAH. I do not want to take the Senator out of the line of his discussion; but, with reference to this taxation, why was it thought necessary to restore the old five-year law with reference to homesteads?

Mr. CHAMBERLAIN. It is because of the difficulties of living on that land.

Mr. BORAH. Is it because they could not make sufficient cultivation to satisfy the three-year homestead law?

Mr. CHAMBERLAIN. This bill not only extends the time but it relieves them of the amount of work that they have to do.

Mr. BORAH. But what I do not understand is why, at this advanced age and rapid rate of living, you should require men to remain upon a homestead for a term of five years before giving them a title. We have passed beyond that, and have passed a law which permitted them to have title in three years.

Mr. CHAMBERLAIN. The Senator remembers that the three-year homestead law requires quite an extended cultivation.

Mr. BORAH. I know it does; but——

Mr. CHAMBERLAIN. There is not any of this land in the case of which the settlers could comply with that provision of the law.

Mr. BORAH. Exactly; but there has been a bill pending before Congress, passed by the Senate, and lodged somewhere else for the last three years, providing that in lieu of this cultivation a certain amount of improvement could be done, and should be estimated at so much per acre; and I do not see why that kind of a proposition should not have been placed in the bill, and the residence period limited to three years. Five years is a long time for a man who is trying to make a home to be without title. So long as he is without his title he is practically without standing in the credit world, and he must pay high interest if he gets credit at all. These long terms of penal servitude to show good faith are all wrong.

Mr. CHAMBERLAIN. I am not at variance with the Senator on that proposition. We thought we had relieved the homesteader of the serious part of the settlement of these lands when we said that he would not have to cultivate as much. It is just left to the discretion of the Secretary of the Interior.

Mr. NELSON. Mr. President, I want to call the Senator's attention to the fact that these homestead lands are to be paid for at the rate of $2.50 an acre. They only pay 50 cents an acre down, and the other $2 are paid when they make the final proof, and there is no interest to be paid on it; so that they have a benefit from that.

Mr. BORAH. Mr. President, as a practical proposition I do not think that is very much of a benefit. You put a man out upon a homestead and compel him to go along in life without the title to his land upon which to base his security and his credit to do business, and at the end of five years he will not have any $2 an acre with which to pay. It is impossible. You might just as well ask a business man down here in Wash-

ington to enter upon a business course without title to his goods or title to his property, and expect him to maintain and sustain his credit for five years and then get out, as to ask a man to go on one of these homesteads and remain there for five years and have any credit at the end of the five years.

Mr. CHAMBERLAIN. I am inclined to agree largely with the Senator about that; but I will say to the Senator that whenever he has attempted to reform the homestead law so as to relieve the condition of the settlers I have usually favored it with him.

Mr. BORAH. I was not criticizing the Senator's position at all. I understand that this provision with reference to the five-year homestead law came from another source entirely; but I should be glad to join in an effort, if it would not jeopardize the Senator's bill, to reform that particular feature.

Mr. JONES. Mr. President, in that same connection I want to ask the Senator if this provision does not do away, so far as these settlers are concerned; with the provision in the three-year homestead law under which they have five months' leave of absence each year?

Mr. CHAMBERLAIN. I think not.

Mr. JONES. The Senator thinks that right is preserved?

Mr. CHAMBERLAIN. I think so. I think it is preserved to them. I think it is placed more largely in the discretion of the Secretary of the Interior. If the Senator has any doubt about that, after reading it carefully, I should like him to suggest an amendment.

Mr. JONES. Yes; because I think it very important that in the case of these lands, especially, they should not be required to stay on the land continually, because they will have to get out somewhere where they can work and make something with which to maintain themselves.

Mr. CHAMBERLAIN. I think that is true.

Mr. JONES. My recollection is that that provision is in the three-year homestead law, and is not contained in the general homestead law except as it is contained in the three-year homestead law; but I will look that up.

Mr. CHAMBERLAIN. I wish the Senator would.

Mr. President, we have digressed a little bit from the proposition I was undertaking to establish, and that was that justice demands the greatest liberality to the State. If the Senators will turn to the bill as it passed the House they will find that the timber on lands of class 2 is to be sold on a credit of 10 years, payable in installments. Everybody who buys the timber under these conditions would probably buy on credit instead of for cash and take a chance on the market advancing so as to realize a greater profit. The bill as it was originally prepared by me and introduced in the Senate provided for the cash sale of this timber, with the provision that as soon as the timber was sold a patent was to be issued for the timber apart from the land and the timber made subject to assessment. The report of Mr. Williams shows that the people of Oregon are insisting that this property shall be subject to taxation. Some of the counties can not stand having these lands withdrawn even for a period of 10 years, and the period of practical withdrawal of three years by the railroad companies which have refused to pay the taxes for that length of time has almost bankrupted some of those counties. Now, the department says that if you sell the timber on credit you will get more for it than if you sell for cash. That may be true; but in the meantime no taxes are being collected by either the counties or the State.

Mr. BORAH. Mr. President, I do not believe I understand the Senator with reference to this question of taxation. Is the provision with reference to taxation to which he refers the provision which appears on page 16?

Mr. CHAMBERLAIN. Oh, no. On pages 6 and 7 is the House provision, which provides for the sale of the timber on credit. The amendment proposed by the Senate committee is found on page 8. It provides for a cash sale, and subjects the timber, when sold for cash, to the jurisdiction of the taxing power.

Mr. BORAH. I see the point of the Senator.

Mr. POINDEXTER. Mr. President——

The PRESIDING OFFICER (Mr. WALSH in the chair). Does the Senator from Oregon yield to the Senator from Washington?

Mr. CHAMBERLAIN. I yield.

Mr. POINDEXTER. I should like the Senator, before he leaves that particular point, to explain why lands sold on the plan provided for in the House bill, to be paid for in 10 annual installments, can not be made subject to taxation. If they are sold under those conditions, and if the bill should provide that the lands shall be subject to taxation, they will be subject to taxation until they are forfeited and taken back by the Government.

Mr. CHAMBERLAIN. I will say to the Senator that the title to the land is in the Government of the United States.

Mr. POINDEXTER. It need not be, Mr. President. In the first place, we are speaking of the sale of timber, not land. The title to the land is in the Government of the United States according to the bill, but that is a matter which can be regulated by the bill. What I am trying to ascertain is whether the Senator contends that it is impossible for Congress in this bill, if this timber is sold on time, to provide also for its taxation?

Mr. CHAMBERLAIN. Let me have the Secretary of the Interior answer that for the Senator, because the bill as I originally introduced it provided for the cash sale, just as this amendment of the Senate committee provides. That bill was referred by the Public Lands Committee to the Secretary of the Interior, and here is what he said about that very proposition:

> The Secretary of Agriculture will recommend that the timber be disposed of at such times, in such quantities, and under such terms as the Secretary of the Interior may prescribe. If it were not for the fact that such a provision would, in effect, prevent the State and local authorities from taxing such timber, I would be inclined to favor the plan.

That is what the House did.

Mr. POINDEXTER rose.

Mr. CHAMBERLAIN. I will ask the Senator to let me conclude without interruption, because it is a continued story with reference to that.

Under it—

Says the Secretary of the Interior—

> the Government will receive larger prices for the timber than is possible where full cash payments are required and where the timber after such sale will be subject to local and State taxation. Extended consideration has been given and an attempt made to work out a plan whereby the lands could be sold in the manner provided for in the bill—

That was the original bill for cash sale—

> upon deferred payments, but so many obstacles have presented themselves that I have concluded it is better to sell the timber for cash, as is proposed in the bill, and issue a patent for the timber than it would be to make such sales on time.

I hope the Senator will listen to this, because it answers him completely:

> Unless it is otherwise provided, the lands would not be subject to taxation as long as the interest of the Government remains unsatisfied. Moreover, if sold upon time payments the Government would lose control over the timber, but in order to protect its interests it must stand ready to protect the timber against loss by fire, etc. If provision was made for taxing the timber prior to the time it was fully paid for, the Government would inevitably be drawn into controversies concerning local and State tax rates and other kindred questions, and might be compelled to satisfy tax liens to protect its interests. The plan proposed by the Secretary of Agriculture is workable, but it will deprive the States and counties of taxing privileges. I therefore follow the general plan for disposing of the timber proposed by the bill under consideration.

The Secretary of the Interior finally, while not surrendering his opinion on that subject as to the merits of the two propositions, in his report on the bill before the House committee, says this in reference to the sale of timber:

> In my report on Senate bill No. 30 I commented at considerable length on the relative advantages to the United States and the State in the sale of the timber for cash or on deferred payments, it being concluded therein that to avoid expensive administrative duties on the part of the one and enable the other to tax the timber after its sale, without any subsequent complications resulting from the unsatisfied claims of the United States, the sale of the timber for cash, followed by a patent to the purchaser, afforded the only remedy, though it was admitted that better prices for the timber would probably be secured on deferred payments.

Now, here is what the Secretary says:

> The scheme now proposed in this bill—

That is the House bill, and the one sought to be amended by the committee of the Senate—

> The scheme now proposed in this bill, by which patents will issue from time to time on the payment of the full purchase price of any legal subdivision, and the postponement of the right of the State to tax the timber until after the issuance of the patent, seems to meet in substantial form the objection that I entertained at that time to the sale of the timber on deferred payments. The measure as now presented therefore meets with my approval.

In other words, the Secretary of the Interior says that, while he favored a cash-basis proposition for timber sales, he was willing to assent to the proposition contained in the House bill because, as a purchaser of timber paid for a subdivision at a time, he could get a patent for the part paid for, and this could be taxed by the authorities. The result of such a plan must inevitably be that all this railroad land will be withheld from taxation for at least 10 years. Some one suggested to me that a good, shrewd timber purchaser could escape taxation entirely in the following way: He is not allowed to cut timber until he pays for a small subdivision—we will say 40 acres. He buys timber on a thousand acres and he proceeds to pay for and to cut the timber on 40 or 80 acres between the 1st of April and the 1st of the following March.

Mr. SMITH of Michigan. He pays for the 40 acres.

Mr. CHAMBERLAIN. Yes. Let me show you how he can dodge taxation. The assessment roll is returned on the 1st of March. He will pay for it the 1st of April. He is entitled to a patent to the timber if he asks for it. Instead of doing that he cuts 40 acres of timber before the 1st day of the next March, and there is nothing left to tax. He has cut off the timber between the taxing period, has sold it, and there is nothing to tax.

There is only one criticism I have to make of the amendment proposed by the Senate committee, and I did not see how to avoid it, and that is that it leaves it optional with the purchaser of timber when he will take it off. I insist that under this provision for a cash sale the purchaser must sell in the first normal market, otherwise the taxes will consume his investment. Taxes come pretty high. Some of that timbered land has been taxed as high as $40 an acre.

Mr. CLARK of Wyoming. There are thousands of acres in patent now.

Mr. CHAMBERLAIN. Yes; and it was taxed very high in the hands of the railroad company.

Mr. CLARK of Wyoming. Timberland?

Mr. CHAMBERLAIN. Timberland; and the authorities assess the timberland at what it is actually worth. So if a purchaser bought 100,000 acres of timberland and determined to hold it for an indefinite time, it would eventually destroy his investment. In other words, he is bound to take advantage of the normal market in order to save himself.

So, Mr. President, I do not believe that any purchaser would hold this timber indefinitely. He would sell it in order to protect himself against taxation. It does seem to me that what people out there want most are two things. They want that country developed; they want settlers on the land; they want mills on it; they want the country to thrive; and while it is being developed, Mr. President, they want to have the money with which to carry on the governmental affairs.

This bill provides that the timber shall be sold on a cash basis, and the only serious question in it is as to whether you want to adopt a policy of reservation and conservation, applied to these grant lands, or whether you want to place them in a position where they will assist in the payment of the expenses of the State.

Mr. CUMMINS. Mr. President, there is one point I do not quite understand. That is the difficulty about uniting the two plans—to sell for cash and to sell on time?

Mr. CHAMBERLAIN. That is what the House bill tries to do.

Mr. CUMMINS. There is no difficulty about bringing it within the taxing power of the States even if sold on time?

Mr. CHAMBERLAIN. Bringing the timber itself.

Mr. CUMMINS. Bringing the timber itself. The very moment you sever the two interests, timber becomes personal property; it is no longer real estate; and if the title passes it at once becomes subject to taxation in the hands of whoever buys it, even though it is sold on time. All the Government would have to do would be to take such security for the payment of the purchase price as to make it reasonably certain that it will ultimately get its money.

Mr. CHAMBERLAIN. Let me ask the Senator: Suppose 160 acres of timber are sold on credit; it is taxed; and after the first year failure is made by the purchaser to make any payment; where does the tax come in?

Mr. CUMMINS. You tax the timber just as you collect any other tax.

Mr. CHAMBERLAIN. The Government owns the timber.

Mr. CUMMINS. No; the Government does not own the timber. This is not an ordinary transaction. The Government proposes to separate it from the soil and sell the timber. If the Government wants to sell the timber on time it can part with its title at the same moment, and it can take from the purchaser such security as in its judgment is necessary to insure final payment of the price, whatever it may be.

Mr. CHAMBERLAIN. So you have the security aside from the timber itself.

Mr. CUMMINS. Certainly. No one is going to buy this timber who is not able to give security of some kind.

Mr. CHAMBERLAIN. There is no suggestion of that kind in the House provision.

Mr. CUMMINS. None.

Mr. CHAMBERLAIN. It may be the Senator can work out some provision that would test that, but those who worked out this House provision say that there would be none.

Mr. NORRIS. Mr. President, does the Senator see anything in the House bill in regard to the taxation of timber after it is sold.

Mr. CHAMBERLAIN. I did not put quite that construction on it, I will say, but it provides for taxation after patent issues.

Mr. NORRIS. It provides that patent shall issue when the sale is made and the money paid.

Mr. CHAMBERLAIN. Yes; when the money is paid.

Mr. CUMMINS. I was suggesting that the title could pass before the money is paid if the Government takes security for it; that is, if it wants to do so. If it does not, let it take its chances like any other seller of property.

Mr. NORRIS. There is this provision in the bill as passed by the House:

> All timber sold under this act shall be subject to the taxing power of the States apart from the land as soon as patents are issued as provided for herein.

Mr. CHAMBERLAIN. That is right.

Mr. NORRIS. Provided that when anyone buys any of the timber the Secretary of the Interior shall give patent for the timber that he buys.

Mr. CUMMINS. In my opinion Congress has nothing to do with the taxing power of the States, and can neither enlarge it nor diminish it. Whenever the property becomes the property of a private owner, then it is subject to taxation. I can not believe that Congress could relieve it from taxation. But the status must be changed. It must become the property of the purchaser, and I assume that under the House bill it does not become the property of the purchaser until the patent issues, and therefore until that time comes it is by operation of fundamental law relieved from State taxation.

I think one of the great necessities of that part of the country is to see to it that no property that has hitherto been subject to taxation shall be removed from taxation. It has a hard enough time now, and I would think it a very bad policy to remove any part of this property from taxation.

Mr. CHAMBERLAIN. I am glad the Senator feels that way because he describes the situation exactly.

Mr. CUMMINS. That is perfectly obvious to anyone who looks at the situation. It is true of the whole western country. So large a part of the property has been taken away from the power of taxation and taken away from the power of anybody to acquire it that the burden of maintaining those governments out there is becoming very severe. Congress ought to take notice of that situation if it wants that country developed.

Mr. FALL. The people of Oregon, under the provisions of this bill, would be relieved from the situation in which the people of the other States find themselves in reference to taxation, even if they could not tax these lands for this timber, because they get a portion of the proceeds from the sale of the timber. In other portions of the West we can not tax the Government lands taken up under the homestead or any other act of Congress nor do we get any part of the proceeds of the sales.

Mr. CHAMBERLAIN. Yes; you do.

Mr. FALL. We get for United States purposes, supposed to be returned; we get for school purposes.

Mr. BORAH. It seems to me that one of the virtues in this bill is the precedent which it will establish.

Mr. FALL. Precisely; and I am in favor of it. I wanted to emphasize the fact that this is a departure in the right direction. I am thoroughly in favor of the measure.

Mr. CLARK of Wyoming. I suppose the Senator from Oregon is thoroughly in favor of a bill of the character we have here?

Mr. CHAMBERLAIN. I am.

Mr. FALL. I am glad the Senator from Oregon is in accord with me on this proposition. I remember that four years ago we were not in accord at all. He was thoroughly imbued with the idea of the department in the administration of the forest reserves, and I took the opposite view. I am glad to find he has worked around to my view.

Mr. CHAMBERLAIN. Please understand——

Mr. FALL. I do not want to commit the Senator.

Mr. CHAMBERLAIN. We have an entirely new proposition here. Here is land that has been in private ownership and has been subject to taxation for a number of years and then it comes back and the title is vested in the Government. But I will say to the Senator I have a little more sympathy for his views than I used to have because of some recent experience.

Mr. FALL. I am glad to know that experience, if not my argument, has brought the Senator to a realization of the case. If my argument had no effect on him, I am glad that experience has modified his views to some extent. But I want to make this suggestion, that in consideration of the fact that Oregon does get a portion of the proceeds of the sales——

Mr. NORRIS. Getting all of it, practically.

Mr. FALL. Practically all of it.

Mr. CHAMBERLAIN. It ought to have it.

Mr. NORRIS. It gets practically everything.

Mr. FALL. I agree with the Senator there, it ought to it all; but in view of the fact that it does get a portion of it, and a large portion of it, does not the Senator really think if the land or the timber were sold on time and the State was not able to tax the timber it would get by virtue of an increased price by selling the land on time more than enough to make up the amount of the taxation which it would lose?

Mr. CHAMBERLAIN. That is the theory of the Forestry Service. I do not agree with that.

Mr. FALL. I want to suggest another thought to the Senator. A cash sale of timber of any amount will preclude the small purchaser or the poor man from buying timber.

Mr. CHAMBERLAIN. Oh, no.

Mr. FALL. Unless sold on time.

Mr. CHAMBERLAIN. If the Senator will examine the bill, he will see that it provides for preference being given to the small purchaser or the small subdivision.

Mr. FALL. The small purchaser for cash?

Mr. CHAMBERLAIN. Yes.

Mr. FALL. I do not know but the Senator may have small purchasers at hand who have the cash. I imagine that under the provisions of the bill there will not be very many small purchasers. However, I am in thorough agreement with the idea of getting the land into private ownership and getting revenue from it and getting all that can be gotten out of it.

Mr. CHAMBERLAIN. I want to say to the Senator that this matter has been receiving my attention for 9 or 10 years. I am frank to say I have never reached a solution of any part of it that was entirely satisfactory to me. One of the questions that has haunted me sometimes is as to just what the result would be; but I will say to the Senator that while there is a provision for bringing this land under the taxing power of the State it is only after payment has been made at the end of a year, say, if a man pays for a small subdivision, as I tried to explain awhile ago, the man who wants to avoid taxation will come pretty near doing so.

Mr. President, I do not think I want to take any more of the time of the Senate except to call attention to the distribution of the fund.

Mr. BORAH. Before the Senator goes into that, he knows something of the difficulty surrounding the formation of this bill and I do not because I am not a member of the Public Lands Committee. I am in favor of the bill and I do not want to be a part of any effort to imperil the bill, but unless the Senator believes that it would imperil the bill I should like to help reform this homestead proposition. The homestead law was supposed to be a poor man's law, but no man can take homesteads in this day under this law unless he has a bank account to start with. It is a rich man's law to begin with.

In view of the scarcity of land and the number of poor people who ought to have homes and who would go and get homes it seems to me every homestead law should be made truly and emphatically a poor man's law—that is to say, under which a man with the most limited means could go and acquire a home by his physical effort, his labor, and so forth. But if a man is to go on this land and stay for five years and then at the end of the time pay $2 an acre he must have a competency when he goes on the land in the first place. He can never work it out to a fruition in title.

I think that the homestead residence ought to be reduced to three years and leave of absence ought to be provided for. I only hesitate to do it because, as I said, the Senator knows something of the different conflicting interests which it is necessary to reconcile, and if those favoring these provisions are insistent it might be dangerous to insist upon a change. But I feel the change should be made, and unless I become satisfied it would imperil the bill I shall offer some amendments. It would not only be better for the settler but it would be better for the State—it brings the lands under taxation sooner.

Mr. CHAMBERLAIN. I am not sure that it would. I have had no conferences with the Members of the House committee, although I have read the hearings. So far as I am individually concerned, I would have no objection to having an amendment of that kind added to the bill, and then, if the conferees outvote us, it would not be our fault.

I am in thorough accord with the Senator in his efforts made in the past and being made now to protect the homesteaders, because conditions are not as they were 25 years ago. When I first went out West in 1876 one could get a homestead almost anywhere and could make a living on it without much trouble, but you can not do it any more. A man who takes up a homestead now, whether it is in the arid region or not, has a pretty hard time to work out a living.

I want to say that the House committee worked industriously on the bill, and all of them gave it their undivided and conscientious attention and faithfully endeavored to reach a proper solution of the questions involved. The fact is they had extensive hearings, and every time I went over there I found that the full committee nearly was present, each and every one of them taking an active interest in the bill. When the Senate committee took it up they wanted to make just as few changes in it as possible, because the committee knew the painstaking care that had been exercised in the preparation of the bill, and the only changes made are practically the few to which I have called attention. We did not think the House committee had been quite generous enough to Oregon because of the conditions which I have undertaken to describe. Let me call attention to one thing.

The bill as passed by the House required that 40 per cent of the money that comes from the sale of this timber should go into the reclamation fund. Under ordinary circumstances I would not object to that very seriously, but let us see what Oregon has suffered under the proposition. Oregon ranks second in the list of 16 States that have contributed to the reclamation fund. There is no other State in the West that has contributed as much to the reclamation fund except North Dakota. Up to the end of last year North Dakota had contributed $12,080,995.97 to the reclamation fund. Oregon contributed $10,717,809.39—second on the list. When it comes to investing the proceeds of public lands that are in the reclamation fund to the development of irrigation projects in the States, Oregon ranks eleventh.

Mr. BORAH. Oregon has a great deal of rainfall.

Mr. CHAMBERLAIN. East of the Cascade Mountains conditions are like those in the Senator's State. There is a lot of arid land and very many reclamation projects that ought to be developed. The State itself has undertaken to develop one project and sought here a year or two ago, just as we have always sought in river and harbor improvements, to get cooperation between the Government and the State. The Senator will remember that the distinguished Senator from Utah said he would never consent to have cooperation between the State and the Federal Government in irrigation. Oregon puts up dollar for dollar for river and harbor improvement and is willing to put up dollar for dollar for reclamation.

Mr. FALL. Is it not a fact that the very showing the Senator has made proves that while, for instance, New Mexico and Arizona have contributed comparatively nothing, in view of what the great State of Oregon has contributed to the reclamation fund, they have had no means to dispose of their lands under the present law?

Mr. CHAMBERLAIN. I am not complaining of that——

Mr. FALL. The State of Oregon is so blessed that her people could acquire land and make homes in the State, and through the acquisition of the land Oregon has contributed a large amount to the reclamation fund. As the Senator is modifying his views I want to impress on him now the difference that exists due to the rainfall in the different States of the Union. We have had quite a large amount of money expended in New Mexico from the reclamation fund. We have availed ourselves very liberally of it, or at least the Government allowed us to use what was contributed by Oregon. New Mexico has thirty-odd million acres of land which, under the present law, can not be sold for the reclamation fund or any other fund.

Mr. CHAMBERLAIN. I am not complaining of the generosity of the Government to the Senator's State. I am glad that it has been generous. Arizona, for instance, has contributed $1,318,630.05 to the reclamation fund and the Government has expended there for reclamation projects $16,000,000. I am not complaining of that. What I am suggesting is that in view of the fact that Oregon has been the second largest contributor and stands eleventh as receiver of money for reclamation, when a condition arises in the State that is sui generis and there is an opportunity to expend the money within the boundaries of the State where the Reclamation Service holds a million acres that are susceptible of irrigation, she ought to have the benefit of it.

Mr. FALL. Mr. President——

Mr. CHAMBERLAIN. Pardon me just a moment. The House bill provides that 40 per cent of the proceeds shall go into the reclamation fund, and possibly all of it may go to New Mexico.

Mr. FALL. The fact, however, remains that while the entire area of New Mexico and the entire area of Arizona susceptible of cultivation, if cultivated at all, must be cultivated by irrigation, a large portion of the State of Oregon is so situated that it can be cultivated by virtue of rainfall without irrigation.

Mr. CHAMBERLAIN. The Senator misapprehends the conditions up there. Nearly the whole eastern part of the State is

in the semiarid region. In some of the counties they have only 8 inches of rainfall and in some of them from 8 to 13 inches.

Mr. FALL. What proportion is that of the entire State?

Mr. CHAMBERLAIN. It is practically a line running through the center of the State east and west from the Cascade Mountains to the eastern boundary of the State. It is practically half of the State.

Mr. FALL. I want to say to the Senator, under the theory which he has been advocating, every tree in New Mexico is taken away from the people of New Mexico and we have not anything left to sell.

Mr. NORRIS. Mr. President, as the Senator is aware, of course, the old reclamation law itself provides that officials shall, I think, at every 10-year period, as near as they can, equalize the expenditures for reclamation projects in various States. He realizes that it would be an impossibility by the use of the reclamation fund to make an accurate division between the States, and where one State gets more money during the first 10-year period the probabilities are that another State will get more in another period. When they start in with projects they necessarily have to finish them, and they can not begin more projects than they are going to complete.

Mr. CHAMBERLAIN. There is some force in that, too, but the Senator will remember that under the law as it was the major portion of the reclamation fund from any State had to be expended on feasible projects in the State. That law was subsequently changed. I was willing to have that change made, leaving it to the Reclamation Service.

Mr. NORRIS. I think the Senator was right in that. I think it is not difficult to see that that is really the only practical way to administer this fund.

It can not be divided equally, but I think they should do it as nearly as they can. If Oregon was not getting as much as she did get out of the fund within a certain period it was because projects had been commenced and money expended in other States, and when they are completed the probabilities are that in the next period Oregon will perhaps get more than her proportionate share. In other words, we can not keep an equal division of that fund between the States all the time, and the law never contemplated that it should be done.

Mr. CHAMBERLAIN. The old law has been changed, the Senator will remember. I was saying that I favored that repeal for the simple reason that if the major portion of the fund had to be expended in a State it resulted in the constant harassing by the Senators and Representatives from that State of the Reclamation Service to get them to spend the money on projects that were not feasible. So I favored the change in the law, leaving the discretion somewhere else. Yet every time I have been up for office in Oregon since then I have had to meet the charge that I had been "sleeping at the switch" and let the change be made. It was the honest thing to do, even if it did affect my State a little injuriously. It had the same effect on other States.

Mr. SMITH of Arizona. Mr. President, inasmuch as Arizona has been drawn into this debate, I feel that I ought to say a single word. I am glad to see the very generous spirit that is expressed in the Senate to-day. I have been trying ever since I have been here to get the kind of land that Oregon has been selling and contributing so generously to the Reclamation Service in an attitude where we could sell it at all or use it at all.

The result is that the State of Oregon had land that it could sell. The State of Arizona has never had any land that it could sell for the Government saw fit to take it and keep it. So it was not possible for us to contribute to the Reclamation Service when the Government had taken it either as forest reserves or for an unnecessarily large Indian reservation. What is left is lying there, not semiarid but actual arid waste and barren mountain, and the contribution that we could make the fund would amount to nothing. I am glad to see that the sentiment is growing in this body that justice shall be done the Western States. It is impossible that they can live with the Government holding all the valuable lands within them. Conservation for what? We can not use the timber. I am buying what timber I need at home from Oregon, while within sight of me is as fine timber as ever grew in the world. I can not touch it. That is the condition there, and it is that condition against which I have been complaining. I will gladly welcome the day when every man upon the other side of the Rocky Mountains may see the necessity of being at least fair, of giving those people a chance to live; and not conserve everything in their State for the other States which have disposed of all the lands that they ever had.

Mr. SMITH of Michigan. Mr. President, I should like to ask the Senator from Oregon a question.

Mr. NEWLANDS. Mr. President——

Mr. SMITH of Michigan. Does the Senator from Nevada desire to take the floor in his own right?

Mr. NEWLANDS. No; I wish to ask the Senator from Oregon a question.

Mr. SMITH of Michigan. Then, I will wait until the Senator does so.

Mr. NEWLANDS. I wish to ask the Senator from Oregon what is the estimated value of the lands that are to be sold?

Mr. CHAMBERLAIN. It was stipulated at the trial of the case that they were worth about $35,000,000; but, of course, that is an estimate. It is impossible to tell exactly what they are worth.

Mr. NEWLANDS. Does the Senator from Oregon think that is above or below their value?

Mr. CHAMBERLAIN. I am inclined to think it is a little above their value.

Mr. NEWLANDS. Is it much above their value?

Mr. CHAMBERLAIN. Not a great deal. The land is assessed for $22,000,000; and they have sought to assess the properties there at something like their value.

Mr. NEWLANDS. Now, then, assuming that the lands are worth, say, $30,000,000, what proportion of that would go to the State of Oregon for reclamation purposes?

Mr. CHAMBERLAIN. I think the bill provides for only 10 per cent.

Mr. NEWLANDS. For reclamation?

Mr. CHAMBERLAIN. Yes.

Mr NEWLANDS. Does the Senator mean 10 per cent goes to the reclamation fund or to the State of Oregon?

Mr. CHAMBERLAIN. It goes into the reclamation fund to be expended in Oregon.

Mr. NEWLANDS. But all of it has to be expended in the State of Oregon?

Mr. CHAMBERLAIN. Yes; it goes into the general reclamation fund of the Government, to be expended by it in Oregon.

Mr. NEWLANDS. About what per cent of that?

Mr. CHAMBERLAIN. Ten per cent.

Mr. NEWLANDS. Is that under the Senate amendment?

Mr. CHAMBERLAIN. That is under the Senate amendment, found on page 16 of the bill.

Mr. LA FOLLETTE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Wisconsin?

Mr. CHAMBERLAIN. I do.

Mr. LA FOLLETTE. Would the Senator from Oregon, just on that point, permit me to call his attention to the fact that the House hearings show that the State forester of Oregon has estimated the timber upon this land at 40,000,000,000 feet?

Mr. CHAMBERLAIN. It is estimated by him at 44,000,000,000 feet, is it not—somewhere near that amount?

Mr. LA FOLLETTE. In round numbers, 40,000,000,000 feet. That timber is estimated at approximately worth a dollar a thousand, which would make the timber alone worth $40,000,000.

Mr. CHAMBERLAIN. That is right. I will say to the Senator that they have estimates that would run it up as high as $45,000,000.

Mr. LA FOLLETTE. Then, the estimate that the total value of the land is $35,000,000 must be very low, indeed?

Mr. CHAMBERLAIN. But the Senator will understand that there is a great deal of that land that is not worth anything, and so the value of the entire property is problematical. All these estimates are more or less guesswork.

Mr. LA FOLLETTE. This timber estimate must be pretty accurate. A good estimator can practically get at the value of timber fairly well.

Mr. CHAMBERLAIN. Possibly. I think one of the agents out there estimated the timber at 50 cents a thousand stumpage, while the Senator from Wisconsin puts it at a dollar.

Mr. LA FOLLETTE. The testimony, I think, puts it at a dollar.

Mr. CHAMBERLAIN. It is a varying factor between 50 cents and a dollar, as to what the timber will bring. It is safe to say, however, that the land is worth between $28,000,000 and $40,000,000—somewhere along there.

Mr. SMITH of Michigan. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Michigan?

Mr. CHAMBERLAIN. I yield to the Senator from Michigan.

Mr. SMITH of Michigan. Mr. President, this bill is very evidently in the interest of the State of Oregon, appropriately so, in my opinion. Of course the citizens of that State should be the principal beneficiaries of this legislation.

The Senator from Oregon has called attention to the diligent work performed by the House committee, but I am impressed

very strongly with the equitable character of the Senate amendments, especially that part which provides a way in which the harbor districts may be partially compensated for loss of taxable property.

I do not want the Senator, and, of course, the Senator will not overlook this aspect of the situation. It is very evident that the work that has been done in the harbors will add to the value of this timber very greatly. They have bonded themselves and improved their ports, and are to improve their highways under this bill. Every dollar expended by those municipalities or political subdivisions will very largely increase the value of this timber, will it not?

Mr. CHAMBERLAIN. There is no question about that.

Mr. SMITH of Michigan. In other words, if these investments had not been made by the various port districts there would be no way to get these logs to market. Now the way is open, and the Senator's amendment proposes to take care of the municipalities that have obligated themselves far into the future in order that there may be ample harbor facilities. I want to commend that aspect of this bill. There is in it a sense of equity and justice which appeals strongly to me. I hope that when this bill gets into conference, if it should reach that stage, the Senate committee will insist with all their vigor that this equitable recognition shall become a part of the law.

Mr. CHAMBERLAIN. Mr. President, I am not going to take the time of the Senate any further. To save making a lengthy statement—I have imposed on the kindness of the Senate too long already—I am going to ask to have inserted in the RECORD, as a part of my remarks, a statement of Mr. Louis E. Bean with reference to these port districts. Mr. Bean appeared as a witness before the subcommittee and testified on the subject.

The PRESIDING OFFICER. Without objection, permission to do so is granted.

The matter referred to is as follows:

The pending legislation involving the Oregon and California land-grant lands is of most vital importance to Oregon as a whole, and more particularly to the counties and port districts in which these lands are situated. The organization which I represent is made up of the Oregon coast ports, which are quasi municipal corporations organized under the statute of our State, giving to local communities the authority and power to form port districts for the improvement and development of the rivers and harbors along the Oregon coast. Ten or eleven such port districts have been organized within recent years under this statute. These organizations met together, formed a federation for their own mutual benefit and advancement, and I am here to-day to try and point out to you gentlemen the justice of their cause.

The act under which these ports were formed was passed in 1909, immediately following which the several local communities along the Oregon coast, embracing undeveloped harbors of more or less importance, took advantage of the law and proceeded to organize their respective port districts. At that time very little harbor improvement had been made in Oregon, aside from that at the mouth of the Columbia River. Federal aid was denied to us because of the lack of present commerce, although we were, by nature, most richly endowed with vast undeveloped resources awaiting only the opening and development of our magnificent waterways leading to the Pacific. Our people are pioneers and recognize no obstacle or barrier. Consequently, being unable to obtain Federal assistance, took the question of harbor improvement into their own hands and by their own indomitable spirit, energy, and courage went to work to do that that had been done in other States by the Federal Government, a task that might be little expected of a less progressive people—to make harbors for themselves that the abundant undeveloped resources might be turned into present commerce and thereby enrich not only the local community but the Nation as well.

We have a number of these very important harbors along the Oregon coast south of the Columbia River, with a vast area of virgin forest, coal fields, and other undeveloped resources at their very doors, awaiting only the necessary improvement of these harbors to unlock to the markets of the world these resources.

Among these harbors are the Nehalem, the Tillamook, the Siuslaw, the Umpqua, the Coos Bay, and the Coquille. At all of these (and others) port districts have been organized for the purpose of constructing harbor improvements, so as to confine the currents of the waters to a fixed and definite channel and thereby to cut away the bar that separates the inner harbor or bay from the ocean itself, in order that the ships of all countries may enter our harbors, rest in peace while therein, load with our lumber and other products, and depart in safety.

The statute under which these ports were formed limit the amount of bonded debt that may be incurred for these improvements to 10 per cent of the total assessed value of all property within the port district. At the time of the formation of these ports, and on account of the undeveloped condition of our harbors, the assessed value of the taxable property was necessarily very low, in consequence of which, and the large sums of money that would be required to make these improvements, a bonded debt near, if not quite, the full limit allowed by law, was inevitable. The ports met this condition, however, sold their bonds, commenced and carried on their improvements to an extent sufficient to convince the Federal Government that these harbors were worthy projects and would develop sufficient commerce to warrant their full development and improvement. The first among these port districts to bond itself and undertake this harbor improvement unaided by Federal appropriation was the port of Siuslaw. In 1909 this port sold its first issue of $100,000 of bonds and with the proceeds constructed several thousand feet of well-rocked jetty into the sea without Government aid.

At the commencement of this work the surveys on the bar showed but 8 feet of water at mean tide, and not permanent at that. At the completion of the expenditure of this sum by the port the depth of water had been materially increased. At this point the engineers of the War Department recommended to Congress that aid be given to the port, based upon which Congress appropriated $215,500, with the provision, however, that to become available, the port should appropriate a like sum, the port to have credit for the work already completed by it. The port accepted the terms, sold an additional issue of bonds to the amount of $115,500, and paid the same over to the War Department. This sum was expended by the Secretary of War in further improvement on the bar, resulting in greatly increased depth of water, but yet the project was uncompleted.

Based upon the further recommendation of the department engineers, further appropriation was made by Congress in the sum of $112,500, with the same provision that the port should appropriate a like amount. Again the local community acquiesced, sold a further issue of bonds, and paid over to the War Department the sum of $112,500. This last appropriation has not been fully expended, but it is predicted that upon completion of the present contract, some time this year, a depth of water above 20 feet will be permanently obtained upon the bar.

Senator THOMAS. How far is that south of the Columbia River?

Mr. BEAN. About 150 miles, I should say, possibly a little farther. The port of Siuslaw, as I have enumerated, has contributed directly to this harbor improvement $328,000, aside from the interest payments on its bonds and its current expenses. The total assessed value of the port of Siuslaw, as shown by the assessment roll, at the time of its organization, was, in round numbers, $3,000,000. Ten per cent was the limit of bonded indebtedness fixed by law. Consequently, without the increased value, by reason of the improvements made, the port would have reached its full limit so provided, but fortunately, by reason of the improvement of the harbor, the taxable area has increased to $4,500,000.

Senator THOMAS. The area, or value?

Mr. BEAN. The taxable value, Senator Thomas. The increase in the value of the property within the port district has been brought about by the improvement of the harbor; not only that, but the improvement of this harbor and the harbor at Coos Bay, which has been improved in like condition, but to a much greater extent, has been the means of bringing a first-class railroad from Eugene, by way of Siuslaw, to Coos Bay.

The total taxable valuation, as assessed of all property, real and personal, within the port Siuslaw district is $4,500,000. Within the boundaries of this port district is a large area of these Oregon and California grant lands, approximating 126,000 acres, the assessed value of which upon the assessment roll is $1,408,000.

Senator THOMAS. Is that in addition to the $4,500,000?

Mr. BEAN. No, sir. The $1,408,000 assessed against the grant lands is included in the total assessed value of $4,500,000, and if deducted would leave upon the assessment roll as the full taxable value of the port district $3,092,000, upon which to levy a tax annually sufficient to pay the interest and principal of the bonds now outstanding, amounting to over $300,000. In other words, a levy of 6 mills on each dollar of property annually will be required to pay interest alone, to say nothing of the payment of the principal, which will soon commence to fall due. The other ports are in similar condition to the port of Siuslaw. The port of Coos Bay furnishes perhaps the best harbor on the Pacific coast between the Columbia River in Oregon and San Francisco, Cal. More than $1,200,000 has been expended on the Coos Bay Harbor, the port of Coos Bay paying dollar for dollar with the Federal Government. The cities of Marshfield and North Bend are the principal cities on the bay. Regular steamship transportation is maintained between Coos Bay and Portland on the north and San Francisco on the south, and many cargoes of lumber are sent foreign annually. The country surrounding Coos Bay is rich in its coal fields, its forests, and its agriculture. The new Southern Pacific Railroad from Eugene by Siuslaw makes its terminus on the bay. Its harbor improvement is attracting new industries, and not in the far distant future Coos Bay is to be reckoned among the first-class harbors of the Pacific. The local community, the port of Coos Bay, has bonded itself for $600,000 to make possible these conditions; 35,393 acres of these grant lands are within the boundaries of the port of Coos Bay, the present assessed value of which amounts to $540,097.

The port of Umpqua, situate midway between the port Siuslaw and the port Coos Bay, is a most magnificent harbor. The Umpqua River, from which the port derives its name, is a large fresh-water stream extending to the summit of the Cascade Range of mountains, and is navigable for all purposes for a distance of 29 miles from its mouth. The taxable area of the port of Umpqua is over 700 square miles, or about 450,000 acres, 20 per cent of which can be converted into tillable agricultural land. The principal industries are lumber, agriculture, and fishing. It is estimated that the port district contains 15,000,000,000 feet of merchantable timber. The total assessed value of the port district is $4,330,000, within which is 108,583 acres of these grant lands, assessed at $1,117,520, or approximately one-fourth of the entire value of the port district. This port is now preparing for the improvement of its harbor, and to that end is now selling, or has sold, an issue of $200,000 of bonds, expecting to join hands with the Federal Government in making the improvements on their harbor.

The port of Coquille has within its boundaries 65,078 acres of these grant lands, the assessed value of which amounts to approximately $1,000,000.

The port of Bandon, at the mouth of the Coquille River, is an old and important harbor. This port has sold a large amount of bonds and expended the money derived therefrom in joint partnership with the Federal Government in the improvement of its harbor. Of these grant lands 7,854 acres are within the boundaries of this port district, the assessed value of which amounts to $120,000.

The port of Bay City has only about 4,000 acres of these grant lands within its boundaries, the assessed value of which is $21,000.

The several ports along the Oregon coast south of the Columbia River have issued and sold in the aggregate over $2,000,000 of bonds and used the proceeds in joint partnership with the Federal Government, paying dollar for dollar in the improvement of these harbors.

The CHAIRMAN. $2,000,000?

Mr. BEAN. Yes, sir; more than $2,000,000. The money was paid over to the War Department and has been expended for harbor improvement under its direction. The improvement of these harbors by means of self-help by the local communities has tended greatly to the development of the commerce of the State and Nation and has directly made the value of these grant lands. If I am advised correctly, Oregon stands alone as the only State in the Union where deep-sea harbors have been made largely by the local community self-help.

The CHAIRMAN. In other words, you contribute a dollar for every dollar the Government contributes?

Mr. BEAN. Yes, sir; exactly: $4,000,000 and more has been expended by the local communities and the Federal Government in the improvement of these harbors, but the improvement is not yet completed. Further large sums will be required in the future for the maintenance of these improvements and their further development. These port districts at the time of entering into this partnership, as it were, relied upon the taxable area within their respective boundaries as a fixed and immovable resource that would grow in value as the improvement of these harbors progressed. Also, the people who bought our bonds relied upon the value of these resources as a security behind the bonds.

Mr. NEWLANDS. Mr. President, if I may now pursue the inquiry I was making, I wish to say that, as I understand, certainly $30,000,000 will be realized, and the House bill provided that of that $30,000,000, 30 per cent should go for roads in the State of Oregon and that 20 per cent should go to schools in the State of Oregon, making 50 per cent, and that 40 per cent should go to the general reclamation fund. May I ask the Senator from Oregon, Is that the entire disposition that is made of the fund by the bill as it passed the House—30 per cent for roads, 20 per cent for schools, and 40 per cent for the reclamation fund?

Mr. CHAMBERLAIN. That is all by percentages. Of course, the balance under that bill goes into the Treasury of the United States.

Mr. NEWLANDS. Ten per cent goes into the Treasury of the United States?

Mr. CHAMBERLAIN. No; the balance. But there is a percentage—the Senator read it, I think—and the percentages are fixed for everything but as to the United States Government, which gets the balance.

Mr. NEWLANDS. Yes. Now, as I understand, by the amendment offered in the Senate, 10 per cent of this fund of $30,000,000 will go for reclamation projects in Oregon; 10 per cent will go to the United States; 30 per cent will go to certain counties; and 20 per cent to certain other counties, so that, under this amendment, of this $30,000,000 Oregon, in one form or another, will get about 90 per cent, the United States will get about 10 per cent, and the general reclamation fund will get nothing.

Mr. CHAMBERLAIN. Oh, no. I will have to call the Senator's attention to the act of 1912.

The Government of the United States commenced a great many suits against men who had bought land from the railroad company in excess of 160 acres and in excess of $2.50 an acre. By the act of 1912, which was passed by Congress, those suits were authorized to be compromised by the Attorney General upon the payment to the Government of $2.50 per acre for all of this illegally sold land. So the Government has already gotten a large sum of money out of the railroad company.

Further than that——

Mr. NEWLANDS. Can the Senator from Oregon tell me how much the Government has gotten?

Mr. CHAMBERLAIN. I have not the statement at hand just now, but shall be very glad to furnish it to the Senator. I can easily get it from the Secretary of the Interior.

Mr. NEWLANDS. I shall be glad to get it.

Mr. President, I am sure that I shall be very glad to see Oregon benefited by this transaction; but the question arises in my mind as to whether or not the House plan did not present a more equitable distribution of this fund of $30,000,000 than does the Senate committee plan. Under the House plan 40 per cent at least went into the general reclamation fund, which is applicable to irrigation enterprises in some 16 States, whereas under the Senate committee plan nothing whatever goes into the general reclamation fund. Ninety per cent of all of these moneys goes in one form or another to the State of Oregon.

It is true that Oregon has contributed very handsomely to the reclamation fund. It has contributed about $10,000,000, I believe, or something in excess of that, while it has received for reclamation projects only about $5,000,000. I assume that the reason that more than $5,000,000 has not been expended in reclamation projects in Oregon is that it has been somewhat difficult to find feasible projects upon which that amount of money can be expended, and that arises from the fact that Oregon is regarded as a humid State. On the Pacific coast it is called the "Web Foot" State.

Mr. CHAMBERLAIN. Mr. President, let me put the Senator right.

Mr. NEWLANDS. It is true that, so far as the eastern part of it is concerned—I am going to refer to that—about a fourth of the State is exceedingly arid.

Mr. CHAMBERLAIN. A fourth of it is exactly like the State of Nevada.

Mr. NEWLANDS. A fourth of it is just as arid as is my State; and I assume that in that portion they have not been able to find the water that would enable them to establish a feasible project, and therefore the Reclamation Service has not constructed such works. I do not know, of course, as to that with certainty, and yield to the superior information of the Senator from Oregon.

Mr. CHAMBERLAIN. Let me say to the Senator that he misunderstands the situation there. The Reclamation Service says that there are now a million acres of land in Oregon which can be irrigated from waters they now have; but Oregon has been limited in the fund they have available. Nevada has received $5,000,000, or in excess of $5,000,000, for expenditure on reclamation work; while Oregon has not received in excess of $3,000,000.

Mr. NEWLANDS. Yes; and Oregon ought to have more expended—there is no question about that—if there are feasible projects there. Can the Senator explain why it is that the Reclamation Service, having received $10,000,000 from the sale of lands in Oregon, has not found it advisable to expend thus far more than $3,500,000 on irrigation projects there?

Mr. CHAMBERLAIN. I want to say to the Senator, that I sometimes think, under the old law, that possibly it is the fellow with the longest pole who gets the persimmons. There were some distinguished Representatives here who, under the old practice, used to get appropriations whenever they asked for them, and others would not. The Reclamation Service seemed to be partial to some States, and did not treat the others so liberally; but, as I have said, the Reclamation Service states that there are a million acres of land in Oregon which can be irrigated now.

Mr. NEWLANDS. Do they say that they have the water to irrigate that acreage?

Mr. CHAMBERLAIN. Yes.

Mr. SMITH of Arizona. Mr. President, I want to suggest, in that connection, that very probably, especially in the earlier days of the Irrigation Service, they were attempting to demonstrate the feasibility and profit of irrigating lands where crops different from the crops of the temperate zone could be raised. I imagine that, if Oregon has been neglected, it has been due to the fact that they were attempting to irrigate land where high-priced crops, such as oranges and other semitropical fruits, could be grown rather than land which would grow crops that would come in direct competition with products which were already being exported in large amounts from the country. I think that is probably the motive which animated the Irrigation Service.

Mr. NEWLANDS. If Oregon has been unfairly dealt with, all I can say is that I want to see her fairly dealt with; and if there are feasible projects in that State, which would justify an expenditure of $10,000,000, I hope that ultimately Oregon will receive that amount from the fund to which she has contributed $10,000,000; but it will be recollected that the purpose of the reclamation act was to regard the entire public domain as a unit; and it is a unit, regardless of State boundaries, and the purpose of that act was to sell lands that were salable and to devote the proceeds to the reclamation of the lands that were unsalable without water, wherever they might be in the arid regions.

Mr. FALL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from New Mexico?

Mr. NEWLANDS. Yes.

Mr. FALL. I would have very much more at heart the question of the disposition of these lands if the statement which the Senator has just made correctly settled, to my mind, the proposition with reference to the disposition of the proceeds of the sale of the public lands. According to the Senator's statement, it would appear that 95 per cent of the proceeds of the sales of public lands in Oregon would go to the building up of irrigation enterprises in other States. That is not correct. Ninety-five per cent of the proceeds of the sales of such land is loaned, to be returned. It is purely an advance, and not a gift to the other States at all, or, rather, it is not a gift to the users under the reclamation projects.

Mr. NEWLANDS. That provision was repealed, as I understand. The Senator from Oregon, I think, so stated.

Mr. FALL. Oh, no.

Mr. NEWLANDS. I refer to the provision which compels the application of a majority of the proceeds of the sales of public lands in an individual State to reclamation projects within that State.

Mr. FALL. Every water user under every irrigation project is taxed for the cost of that project. Where does it go?

Mr. NEWLANDS. It goes into the general fund.

Mr. FALL. Then, I would rather have it go into the State fund of Oregon than into the general fund of the United States Government.

Mr. NEWLANDS. Not the general fund of the United States, but the general reclamation fund.

Mr. FALL. What is to become of that general reclamation fund?

Mr. NEWLANDS. It is to be spent on new projects wherever necessity for them arises, regardless of State boundaries.

Mr. FALL. And the users pay every dollar of it?

Mr. NEWLANDS. Yes.

Mr. FALL. Then it is only a loan in so far as the water users are concerned.

Mr. NEWLANDS. That is true.

Mr. FALL. That is the point I am making.

Mr. NEWLANDS. It constitutes a revolving fund, to be used over and over again on new enterprises.

Mr. FALL. It is simply reimbursable; that is, eventually, after it revolves until it has done all of this work—and the people are taxed under these projects to pay the money back so that the fund can continue to revolve—it settles finally, I presume, somewhere in the United States Treasury.

Mr. NEWLANDS. It can be used, of course, for other public enterprises or can go into the United States Treasury when the entire field of reclamation is covered.

Mr. FALL. The difference in this case is that under the peculiar condition of affairs in Oregon the greater portion of this fund, instead of going back to the United States Treasury at some time, will remain in the treasury of the State of Oregon, in which the lands are situated. That is the only difference so far as any benefit to the users under the irrigation enterprise is concerned.

Mr. NEWLANDS. Upon that theory, Mr. President, the entire reclamation fund would disappear, because the Senator contends——

Mr. FALL. Oh, no; it would not.

Mr. NEWLANDS. That the moneys in that fund should go to the State from which the moneys were received from the sale of lands, and hence they would absolutely disappear and the fund would be at an end.

Mr. FALL. If the Senator will allow me, I will call his attention to the distinction, as I see it. A very peculiar condition exists in the State of Oregon. It was one not contemplated under the general reclamation act. Under the general reclamation act, under the land-sales act, under the policy of the United States Government in disposing of its lands, 95 per cent of the proceeds of land sales goes to the reclamation fund. What does that amount to for 160 acres under the homestead act? For 160 acres, 95 per cent of $21 at the outside, and only 95 per cent of $14 in some instances, is all that goes into the reclamation fund. Now, under this proposition the 10 per cent of the proceeds which would be used in Oregon—and I think the Senator from Oregon has rather shown that the State is entitled to have it used there—would amount to something like $32, from $32 to $40, for 160 acres, instead of the $20 or $21 under the ordinary land sales which would flow into the reclamation fund as contemplated under the reclamation act. The condition existing in Oregon is a peculiar one, and I am simply calling the Senator's attention to it.

Mr. NEWLANDS. Mr. President, I can not see any peculiarity in the conditions. All I see is that public lands are about to be sold for the sum of $30,000,000; that under the law as it stands all of that $30,000,000 would go into the general reclamation fund, to be applied to feasible projects in the entire arid region, regardless of State boundaries, the purpose of the Government being to use the money derived from the sale of salable land in making other public lands cultivable and homes for the people, and compelling those people whose lands are thus reclaimed to pay back in a period of 20 years the money paid for their reclamation into this fund, so that it can be used over and over again in the creation of new irrigation projects.

Mr. FALL. Mr. President, I do not think that the Senator understands the point made by me. He intimates that he does not understand that there is any distinction. Suppose that this bill simply proposed to return—as it does in one of its sections—these lands in Oregon to the United States; then they would become public lands of the United States, subject to the public-land laws of the United States. That means they would be subject to the homestead law and to the desert-land act; but, as a majority of these lands would not come under the desert-land act, we will say that they will be subject to the homestead law, under which for 160 acres the total sale price would be $21, at the outside, of which the reclamation fund would get 95 per cent. The peculiarity of this condition is that, instead of being turned over to the United States and coming under the disposition of the general land laws of the United States, we are now enacting a special law under which the land shall be disposed of.

Mr. NEWLANDS. But these lands are to be sold, and the policy of the United States is to put all the proceeds from the sales of public lands into the reclamation fund. I understand the Senator says that more is to be realized from the method of sale proposed than would be realized by opening the land to homestead and desert-land entry. That is probably so; but, as I understand, a very large portion of these lands are timberlands, and certainly the Government is not allowing timberlands to be entered under the homestead law.

Mr. FALL. It is not?

Mr. NEWLANDS. No; it is not.

Mr. FALL. Well, it should; and it is everywhere, except in the forest reserves, under the theory of which the lands are held in the United States Government.

Mr. NEWLANDS. Under the present policy of the Government all lands that are better for forestry than they are for cultivation are in forest reserves; and a good many lands that are not are also in forest reserves.

Mr. FALL. But Congress has by legislation prohibited the creation of further forest reserves. This land in Oregon, if it became public land, would be subject to entry under the public-land laws and would not be in a forest reserve. If it were in a forest reserve, it would be, as is the case with other forest reserves, of benefit to no one to any extent at all; but not being in a forest reserve, it would be subject to homestead entry. So the figures which I mentioned a little while ago would be applicable, and the reclamation fund would derive 95 per cent of $21.

Mr. NEWLANDS. The lands would be subject to homestead entry if the United States Government were foolish enough to permit lands worth a very large sum for timber to be entered under the homestead law. The fact is, that the policy of the reclamation act is that the proceeds of the sales of all public land shall go into the general reclamation fund, to be devoted to projects throughout the entire arid region; and the effect of this bill is to take the 90 per cent of $30,000,000, that would go into the general reclamation fund, and apply that sum to the wants of Oregon alone. I say that that is not within the spirit of the reclamation act and is not fair nor just.

Mr. NELSON. Mr. President——

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Minnesota?

Mr. NEWLANDS. Certainly.

Mr. NELSON. I want to call the Senator's attention to the fact that the reclamation act, under which the proceeds from the sale of Government lands go into the reclamation fund, contemplated the disposal of the public lands in the ordinary way. These lands in Oregon are not ordinary public lands. If they were simply public lands, I know of no general law under which the public could go on them and sell the timber separately, and afterwards the lands be subject to homestead entry, as provided for in this bill.

If these were public lands to-day, I do not see how, under the general land laws, anything could inure to the reclamation fund. They would be open to homestead settlers, and unless they commuted their interest and paid for the land the Government would be getting nothing, and nothing would go to the reclamation fund. There might be special cases—for instance, if there was a mining claim inside of this—where something more would inure.

In this case, however, here is a grant of lands made by the Government years ago, with the conditions of which the railroad company have failed to comply. The grant was given to the company on the basis that they were to realize $2.50 an acre out of it. That was the condition on which they got the grant—that they were to dispose of it to actual settlers at $2.50 an acre. They violated those conditions. They violated them entirely. On account of that violation and on account of the decision of the Supreme Court that we have had in respect to this matter, we propose now to cure that entire matter. The Government proposes to assume a sort of a trust in respect to these lands, resume the possession of them, and classify them into three classes of lands—lands with water-power sites on them, lands that are valuable chiefly for the timber, and agricultural lands. Then the bill provides what we have not provided in any other law except in the case of certain Indian reservations—for the sale of the timber separately from the land; and then, after the timber has been sold and cut off, it leaves the denuded timberland open to homestead settlers.

In respect of the agricultural lands, the homestead settlers, unlike the condition under the general homestead law, are required to pay $2.50 an acre, and out of the timber we sell we expect to get a good deal more. They have put an estimate of thirty millions on this. We do not know what it will amount to, because the timber has to be sold. We can estimate what the agricultural lands that may be entered amount to. That would be $2.50 an acre; but out of the fund that we get from resuming

possession of these lands we contemplate paying to the railroad company $2.50 an acre for the entire grant. That comes out, and a large quantity of taxes comes out of it. Then, in addition to that, the Government has had a most expensive litigation from first to last in connection with this matter. It has had a great expense. The Government ought to be reimbursed for that. Then the balance of this money goes mainly to the State of Oregon; and why should it not? The Reclamation Service will get more out of this fund than it could possibly get if it were simply Government land without any conditions imposed upon it.

Oregon has suffered in this case for years. This land has not been taxed. We propose to remedy that. The Government retains a small percentage of this fund. Ten per cent is turned over to the reclamation fund; but most of the balance goes to the people of Oregon, and why should it not? This land grant, in the first instance, was made for the purpose of giving the people of Oregon railroad facilities. Now, why should we apply the rule that the Senator from Nevada insists upon in a case of this kind, sui generis—of its own kind, nothing like it—a case in which the Government simply acts as a species of trustee to dispose of this land and adjust it for the benefit of all parties in interest?

We do not propose to rob the railroad company. We give them here what the law contemplated they were to have in the first instance; and the balance of it, after paying the taxes and the costs and expenses, we devote to the State of Oregon, to the Reclamation Service, and a little bit of it to the Government. Why is not that just in this case?

Mr. NEWLANDS. I will explain to the Senator why I think it is not just. The fact is that the United States is to receive by these sales over $30,000,000 for public lands, and the United States has in the reclamation act declared a policy regarding the sales of public lands; and under that policy those moneys would go into that fund, to be expended in sixteen States instead of only one.

Mr. NORRIS. Mr. President——

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. Certainly.

Mr. NORRIS. The Senator from Minnesota [Mr. NELSON] said that if nothing had happened out there the reclamation fund would have gotten nothing out of this, because there would not have been any $2.50 to-day. I want to suggest to the Senator from Nevada, in consideration of that statement, that these lands, if no attempt had been made to give them to these railroads, would not be subject to entry under the homestead laws, but would be subject to entry under the timber and stone act, and that under the timber and stone act they would have been appraised and sold by the Government of the United States at their appraised value. So that the reclamation fund, as a matter of fact, would have received the entire benefit for the full value of all these lands.

Mr. NEWLANDS. Mr. President, whilst I wish to be entirely fair and liberal to the State of Oregon, and am entirely willing that she shall receive a considerable portion of this $30,000,000, I contend that it should not all be diverted from the reclamation fund, and that whilst a part of it may be properly dedicated to reclamation projects in Oregon alone, yet that a large proportion of it ought to go to the general fund.

So far as the public domain is concerned, I do not think we should recognize State lines. It is a unit. The Congress of the United States has declared a policy regarding it. It proposes to devote the proceeds of all public lands to the preparation of other lands for sale, with compensation to the fund in the sale of water rights, and the application of the moneys thus received to new projects.

Mr. FALL. Mr. President, will the Senator yield for a moment?

Mr. NEWLANDS. I will yield, although I prefer to go on.

Mr. FALL. The Senator is making a broad statement again. That only applies to the public lands in certain States.

Mr. NEWLANDS. That is right.

Mr. FALL. It is not applicable to the public lands in all the States.

Mr. NEWLANDS. That is true; but those happen to be about the only States in which there are public lands, for the great public domain now consists mainly of reserved timberlands and of arid lands that are worthless without water.

Mr. CUMMINS. Mr. President——

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Iowa?

Mr. NEWLANDS. I do.

Mr. CUMMINS. I ask for information: When the United States sells timber from a forest reserve, do the proceeds of the timber go into the reclamation fund?

Mr. NEWLANDS. My recollection is that they do. I do not remember whether the whole proceeds go in, or only one-half. Can the Senator from Nebraska inform me as to that?

Mr. NORRIS. Will the Senator repeat his question?

Mr. CUMMINS. I have just asked the Senator from Nevada whether, when the United States sells timber from a forest reserve, the proceeds of the timber go into the reclamation fund.

Mr. NORRIS. No; my understanding is that they do not.

Mr. FALL. No.

Mr. NEWLANDS. My recollection is that a large proportion of them do.

Mr. FALL. Oh, no. Twenty-five per cent of the proceeds from the sale of timber goes back into making roads, and so forth, in the States in which the timber is sold, and the other 75 per cent goes to pay a lot of clerks.

Mr. SHAFROTH. And only 10 per cent of it goes to the construction of roads in the forest reserves?

Mr. FALL. Yes.

Mr. SHAFROTH. So that it makes 35 per cent.

Mr. NEWLANDS. I will ask whether any portion of the proceeds of the sale of timber goes into the reclamation fund?

Mr. SHAFROTH. All of it goes into the reclamation fund, and then there is paid out, by check given by the Treasurer to the governor of the State, 25 per cent of all the receipts from forest reserves, and then, in addition to that, 10 per cent for the construction of roads, and that goes to the governor of the State.

Mr. CUMMINS. Then the expense of the service itself comes out?

Mr. SHAFROTH. Oh, no; the expense of the service itself is paid by the United States Government, in an appropriation made in the general Agricultural appropriation bill.

Mr. FALL. But does the Senator from Colorado maintain that the balance, over and above the 25 and the 10 per cent, goes into the reclamation fund?

Mr. SHAFROTH. I think it does.

Mr. WALSH. Mr. President, I think the Senator will recall that he is in error about that. The appropriation bill regularly appropriates all the avails of the use of the forests to the service itself, so that 25 per cent goes to the States, 10 per cent to use for the construction of roads, and all the rest of the returns go to meeting the expenditures of the service.

Mr. FALL. The Senator is entirely correct. Not a cent of it goes into the reclamation fund.

Mr. CUMMINS. That was my understanding. Now, I desire to ask another question, having ascertained the status of the money received for the sale of timber in forest reserves.

The Senator from Nevada knows that a very large part of the land grant that has been taken from the railway company and resumed by the United States is, or was, timberland?

Mr. NEWLANDS. Yes.

Mr. CUMMINS. The purpose of a reclamation act is to bring more land into profitable use, of course?

Mr. NEWLANDS. Yes.

Mr. CUMMINS. A great deal of this land is heavily timbered yet, and before it can be devoted to agricultural purposes it must be cleared; and in the case of the greater part of it it will cost from $100 to $200 an acre to clear it. Now, is it not just as much the duty of the Government to help clear that land, in order that it can be used, as it is the duty of the Government to put water upon arid land? And why, in some fashion or other, should not the people of Oregon have the benefit of all the proceeds that arise from the disposition of the timber?

I can not, for the life of me, see why you should put a struggling homesteader upon land from which the timber has been cut and expect him to spend from $100 to $200 an acre in order to bring it into use without any help from the Government, and square it with the policy of the Government trying to put water upon arid land in order that it may be brought into use.

Mr. NEWLANDS. But this bill does not propose to turn over any part of this $30,000,000 to the struggling homesteader.

Mr. CUMMINS. If I had my way about it, having in view just one object—namely, the bringing of land into profitable productive use—I would a great deal rather see the Government help the homesteader to clear this land than to turn over to any other purpose the money derived from the sale of the property. We have to get under use in this country all the land possible, and I have no more sympathy with the arid land than I have with the cultivable land that is covered with stumps. In the one case you must put water on the land in order to raise a crop. In the other case you must get rid of the stumps, and ordinarily

it costs more to get rid of the stumps than it does to put on the water.

Mr. NEWLANDS. Mr. President, it might be a more beneficial use of this $30,000,000 to apply it in pulling out the stumps from this forest land in order to prepare it for cultivation than to use it in developing water storage for the reclamation of arid lands, but we have not that question before us.

Mr. CUMMINS. Mr. President, we can bring it before us.

Mr. NEWLANDS. Ah! That is another thing. The question now presented before us is this: What is to be done with this $30,000,000 that the Government is to receive for public lands? Shall it go into the General Treasury of the United States, or shall it go into the treasury of the State of Oregon for the good of that State, or shall it go into the general reclamation fund, or shall it be divided between the three, a part going to the General Treasury of the United States, a part going to the reclamation fund, and a part going to the State of Oregon? The House bill makes the latter segregation, and I think it is the fairest.

Mr. SHAFROTH. Mr. President, I should like to call the attention of the Senator to the fact that the reclamation law, concerning which we were speaking a little while ago, reads as follows:

Be it enacted, etc., That all moneys received from the sale and disposal of public lands in Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming, beginning with the fiscal year ending June 30, 1901, including the surplus of fees and commissions in excess of allowances to registers and receivers, and excepting the 5 per cent of the proceeds of the sales of public lands in the above States set aside by law for educational and other purposes, shall be, and the same are hereby, reserved, set aside, and appropriated as a special fund in the Treasury to be known as the "reclamation fund," to be used in the examination and survey for and the construction and maintenance of irrigation works for the storage, diversion, and development of waters for the reclamation of arid and semiarid lands in the said States and Territories, and for the payment of all other expenditures provided for in this act.

Mr. NEWLANDS. Mr. President, it is perfectly clear. These lands are public lands. There is no question about that. By the reclamation act they are absolutely dedicated to this work of reclamation of arid lands, and the effect of this bill is to repeal the reclamation act so far as the proceeds of these particular lands are concerned.

Mr. CUMMINS. No, Mr. President. The statute quoted by the Senator from Colorado does not touch the question that I asked. I asked whether the sale of timber, which is not the sale of public land at all, was within the reclamation act; that is to say, whether the proceeds of timber were turned into the general reclamation fund. The statute quoted by the Senator from Colorado does not answer that question in any other way than it has already been answered, and this bill provides for the sale of the timber.

Mr. NEWLANDS. It provides also for the sale of the land, does it not?

Mr. CUMMINS. At a very small sum of money. Of course, its principal value is in the timber.

Mr. SHAFROTH. Mr. President, this act provides that the proceeds of the lands shall become a part of the fund subject to expenditure. Of course, I can see that this money goes into some expenditures, perhaps; but, at the same time, just like the proceeds of the sale of public lands, it becomes a part of the reclamation fund. Inasmuch as the timber is a part of the land, and would go by virtue of a deed of the land, I do not see why it would not be a part of the reclamation fund.

Mr. CUMMINS. Of course, the timber would go under a deed of the land; but I asked whether the proceeds of the timber that is sold by the Forest Service—and it is selling timber all the time—were devoted to reclamation. I do not know certainly, but I would be very much surprised to discover that any part of the money that the Forestry Service received from the sale of timber goes to the reclamation of land. I have heard it asserted many, many times—I do not know upon what authority—that the entire proceeds of all the property sold by the Forestry Service were very much less than the expense of maintaining that service, and that we needed and were compelled to make from year to year an appropriation in order to sustain the Forestry Service, after giving it credit for all of the money that it had received by way of sale.

Mr. FALL. Mr. President, if the Senator will yield just one moment, this is an entire departure from any policy that has ever been pursued heretofore by the United States in the distribution of either its timber or its real estate. The bill provides—and it appears from the letter which the Senator from Oregon read to have been worked out by the Secretary of the Interior—a patent for standing timber on land. The land remains the property of the United States Government. That standing timber is to be sold, and a patent issued for the standing timber containing no title whatsoever to the land. Then the timber is to be cut off, and then the land is reclassified, or automatically goes into the other classification provided for in this bill.

The use of the word "patent," of course, is a misnomer in so far as the ordinary legal interpretation of the word is concerned. The title to timber is simply a license to go upon the land to cut timber upon it, and it becomes your property when you cut it and sever it from the real estate. The wording of this bill, however, is that the patent shall be granted for the timber itself, immediately upon its being paid for, and before it is cut. The title to the land remains in the Government, and under the terms of the bill becomes reclassified and salable under the homestead provisions of the bill at $2.50 an acre on five years' time.

The Senator from Iowa is entirely correct. There is no question in the world about the legal proposition that under no conception of the law applicable to the reclamation of arid lands as it stands now, without additional legislation, would the proceeds of this timberland go to the reclamation fund. You would have to amend the reclamation act.

Mr. NEWLANDS. Mr. President, so far as the Forest Service is concerned, it is true that the receipts from the sales of timber do not yet equal the expenses of administration, so that there is no surplus either to go into the Federal Treasury or to go into the reclamation fund. It is also true that under this bill the timber has been separated from the land, with a view, I presume, to a larger realization and with a view to holding the land for homestead proprietorship. But the fact remains that the public domain has been dedicated practically to the reclamation work, and that $30,000,000 is about to be secured from the sale of what we know as timberlands. I do not care whether you separate the timber from the land or not. The fact is that we have so many acres of the public domain, that are worth $30,000,000 or more, and from which $30,000,000 are to be realized.

Now, what public policy has the Congress of the United States declared with reference to that $30,000,000, the proceeds of public lands? It has provided that those moneys shall go into a reclamation fund, to be used for the benefit of all of the States in the arid region and not for one. No State can claim that it owns any part of the public domain within its borders. It is true that the State of Oregon is suffering, so far as its taxing power is concerned, from large timber reserves, and from the fact that there are large areas there of arid lands that are worthless without water and are in Government ownership. But the State of Nevada and the State of Arizona and the State of New Mexico have all suffered to a greater degree. In the State of Arizona, under the policy of this law, the Government has been able to realize only $1,318,000 from the lands within its boundaries, and that money has gone into the fund, and the Reclamation Service has expended in Arizona $16,000,000, coming, for the most part, from the sales of lands in other States. The State of North Dakota has contributed enormously to this fund—$12,000,000—and they have expended in that State only about $2,000,000 for reclamation projects. The State of Oklahoma has contributed over $5,000,000. They have only found one feasible project in that State, upon which they have expended $78,000. Both Oklahoma and North Dakota are favored in having for the most part of their domain sufficient rains; and, unfortunately, with reference to their arid portions or semiarid portions, they have not as yet been able to find water sufficiently accessible at a reasonable expenditure.

Mr. CUMMINS. Mr. President, the Senate passed the other day a bill granting to the State of Nevada 7,000,000 acres of land for its school fund. Was that in violation of the reclamation policy?

Mr. NEWLANDS. Yes, to that extent. It took 7,000,000 acres out of the public domain, but it was land that is not reclaimed. Probably a very small proportion of it is possible of reclamation. The most arid States in the Union are the States of Nevada, New Mexico, and Arizona. No one of those States has been able to contribute much to the reclamation fund. Each one of them has received from it sums largely in excess of the sums contributed to the reclamation fund from the sales of public lands in those States. On the other hand, there are States that have contributed enormously to the fund, and yet they have been so blessed by nature with rains that it is either unnecessary to reclaim their lands or where they have semiarid lands water was not available, and so none of this money has been expended upon it.

So far as the State of Oregon is concerned, it has contributed liberally to this fund—not the State itself, but the proceeds of the sale of lands in that State. Oregon is fortunate in having lands that can be sold. Ten million dollars have been received

from the sales, and they have been able to expend only about $5,000,000 thus far in that State. I hope to see the whole $10,000,000 expended in that State at some time. But what does Oregon get under this measure? Very nearly 90 per cent of $30,000,000. I say when you come to the question of apportionment the House apportionment is very much fairer than the Senate committee apportionment, because the House apportionment gives to the State of Oregon only 40 per cent of this $30,000,000, or $12,000,000, which is a very handsome sum.

I do not wish, Mr. President, to do Oregon any injustice. I am glad she is so favored by nature. I am glad that she is not subjected to the necessity, as the States of Arizona, New Mexico, and Nevada, of resorting to artificial means in order to water the lands. I am perfectly willing that she shall have a very large proportion of the moneys that are derived from the sales of public land in that State, but I say that 40 per cent, under the bill as passed by the House, is sufficient. The general reclamation fund ought to have at least 40 per cent.

Now, what is the status of New Mexico and Arizona and Nevada? They are about in the same condition. Nevada is in perhaps the most deplorable condition of all. Ninety per cent of the land of Nevada is in public ownership, and she is obliged to rely upon the other 10 per cent to maintain the burdens of municipal and State government. She was persuaded into the Union before she was able to assume the burdens of Statehood with a view to carrying constitutional amendments that were necessary and essential after the Civil War, and she has been struggling ever since.

If there is a public domain and if there is money to be derived from the sale of that public domain and if it is the public policy to see that those moneys are applied to develop arid land so as to make homes for men, what State is entitled to those moneys? The State, of course, that has contributed least to the fund, because that very fact demonstrates that in that State there is a greater necessity.

Mr. SHAFROTH. Mr. President, I should like to call the attention of the Senator from Nevada and the Senator from Iowa to the fact, as I take it, that the reclamation act prescribed that the money received from the sale of the public lands should go into the reclamation fund. The only exception that exists, I think, with relation to the matter is where the Government undertakes to sell timber on a forest reserve. That timber on a forest reserve goes as far as it will go for the purpose of paying the expenses of administering the Forestry Service. But there is no law on the statute books that separates the land from the timber in any other phase, except in reclamation in a forest reserve, and therefore, in the absence of any other law, the proceeds of the sale of these lands with the timber on them would unquestionably go to the reclamation fund.

I can see that the statement which the Senator makes is correct in that respect, and yet I think he loses sight of one thing. The State of Oregon was not able to collect a dollar of taxes on this land from 1866 to 1886, and the tax upon the land with reasonable interest each year upon the payment in 20 or 30 years in the Western States is equal to the value of the land.

Mr. NEWLANDS. Let me remind the Senator, however, that the State of Nevada has not been able to get taxes upon 90 per cent of its land.

Mr. SHAFROTH. That is true, but it is all wrong that the National Government should exempt these lands from taxation forever or for any great period of time. However, it has made Oregon pay for these lands practically in making assessments upon the persons owning private lands and private property in that State. I think the proposition here would be a good policy to start as to Oregon and to extend to every other Western State.

Mr. FALL. Will the Senator from Nevada yield to me for just a moment?

Mr. NEWLANDS. Yes, sir.

Mr. FALL. If the argument of the Senator from Colorado with which the Senator from Nevada seems to be in accord—for that which the Senator himself just made it seems to me is in accord with what the Senator from Colorado has stated—I do not understand by what process of reasoning the Senator can arrive at the conclusion that in the disposition of public lands State lines should be ignored. He has just stated that Nevada can not build up her own irrigation enterprises by the sale of the land within her own borders, but that under his reclamation project she should receive a benefit, because of her peculiar condition, from the sale of lands in other States.

It seems to me that every argument the Senator can make simply fortifies the argument that was made here in this Chamber 70 years ago, when our general policy of handling our lands was settled definitely for the future by the result of the debate between Hayne and Daniel Webster, where one insisted that the public lands should belong absolutely to the States within which they were situated, to be handled entirely as they pleased, and the other that they were a great national heritage to be administered by the people of the entire Union, but admitting that he had always contended and would continue to contend that the administration of those lands within the States should be for the benefit of the State in which they were situated. The Senator seems to have adopted an entirely different theory, and I am sorry that I can not go with him.

Mr. NEWLANDS. The Senator alludes to the position of Nevada. Let me say that the position of the State of New Mexico is about the same. The State of New Mexico has paid into this fund $4,323,000.

Mr. FALL. I recognize that fact, and that it will never be able to pay under the present laws of the United States to the reclamation fund what it should pay to it. The laws will have to be changed, and the laws that will enable you to do anything with the land in your State of Nevada must be different from the laws applicable to the State of South Dakota, and therefore you must in legislation for the disposition of the lands recognize State lines and not blot them out, as the Senator suggested.

Mr. NEWLANDS. Very well. If State lines had been recognized, the State of New Mexico would not have received as much money as she has for irrigation enterprises.

Mr. FALL. The people of New Mexico under the reclamation project are now being taxed twice. The land it was agreed should be taxed by the Reclamation Service, and if they are financially able to carry out their contract not one dollar of benefit will they ever receive from the old law which the Senator is so fond of discussing upon every occasion.

Mr. NEWLANDS. I am very sorry that the experience of New Mexico has been so bad. That has not been the experience of other States. So far as Arizona is concerned, she has paid into the fund $1,318,000 and has received in works $16,000,000. Of course, that money is to be paid back. It is a mere loan, it is true. Can any one doubt that that has been of great benefit to the State of Arizona?

Mr. FALL. But how much benefit will it be to them after they will have paid it back? They will have paid for their own development.

Mr. NEWLANDS. Mr. President, I have shown that in these three States the contributions to the funds from the sales of public lands is a very small one as compared with the amount contributed to the project, or the loan, if you prefer that term, to the projects in those States. The only way the very arid States can be reclaimed is through the proceeds of the sales of lands in more fortunate States. The Congress of the United States has declared the public policy regarding the sales of those lands. The Government of the United States has suddenly been favored with a windfall in its annulment of the railroad grant through which it is to receive $30,000,000 for public lands in Oregon, and the question is how that $30,000,000 shall be equitably apportioned, how much of it shall go to Oregon for local purposes, how much of it shall go to the general reclamation fund for the benefit of the entire arid region, how much of it shall go into the general fund of the Treasury of the United States?

I say the House apportionment was a fair apportionment. They gave Oregon only 40 per cent of this fund instead of nearly all of it, as the Senate committee amendment does, and gave the general reclamation fund 40 per cent to be distributed among 16 arid States in feasible projects, or rather loans of the moneys to be ultimately paid back. Recollect this is a trust fund. You divert $30,000,000 from this trust fund and turn it almost entirely over for the benefit of a single State. Of course, the same thing may be said regarding the grant of 7,000,000 acres to the State of Nevada. The proceeds of those lands are necessarily taken out of this fund if they can ever be sold. But what did we show? We showed that we have been 60 years in selling a 3,000,000-acre grant for school purposes, and we showed further that the 7,000,000 acres would only equalize the grants made to other States, not, perhaps, in number of acres but in essential value.

Mr. CUMMINS. Mr. President, I hope the Senator from Nevada will not infer that I have any criticism of the grant to the State of Nevada. I think it was a very wise one, for I think it was much more important to the schools of the State of Nevada to be supported and maintained properly than to build reclamation projects, just as I think it is a great deal more important to the State of Oregon that she shall be permitted to use this fund in the way suggested than to turn the fund into the reclamation treasury. I should like to know from the Senator from Nevada how many of the reclamation projects carried on by the United States have been paid up? How many farmers have been able to make their payments, so that the fund as to that project has been restored?

Mr. NEWLANDS. I do not think that any have been paid up in full.

Mr. CUMMINS. Why not?

Mr. NEWLANDS. Because 10 years' time was given for payment, and that was subsequently extended 10 years more—20 years in all. The moneys are paid in yearly installments and are not yet due. Then also the difficulties of the situation have been very great. In the first place, the reclamation estimates were low. They were made upon a low labor and supply material market in 1902. The Senator knows how greatly the wages of labor and the cost of supplies have increased since that time. The Senator knows that as to the Panama Canal, where an estimate was made of $150,000,000, they have expended $400,000,000. So the Reclamation Service is not to be criticized.

Mr. CUMMINS. I am not criticizing it at all. I only say——

Mr. NEWLANDS. That, of course, imposes an obligation upon the settler that he did not contemplate in the first instance when he entered upon the land. Then, in the second place, they have had all kinds of questions to solve regarding the chemical character of the soil, the alkali in the soil, questions regarding the drainage of lands after they had been reclaimed. In many regions the waters soaking into the soil brought up to the surface alkali that was concealed.

Mr. CUMMINS. Why, the land is not worth what it cost. A farmer can not go upon the land and make a living and make a profit upon the basis of what it has cost him. That is the real trouble, is it not?

Mr. NEWLANDS. I think all these enterprises are now upon a substantial basis, but, of course, there were conditions with reference to which Congress had to legislate, and among other things it did so to the extent of the time of the payments. They have not been released from the payments, but the time has been extended from 10 to 20 years, and very large sums are now being received from many of the reclamation projects. The fund is being turned over and over again. Under this law the settlers on reclaimed lands in Arizona will be compelled to pay back into the fund the $16,000,000 which was expended on Arizona projects, and it will go to projects elsewhere either in that State or in other States, and then if the fund remains intact we will one of these days have an enormous fund aggregating several hundred million dollars to apply to some other public use, such as the construction of railways, good roads, and so forth.

POSTAL SAVINGS BANK.

Mr. SHEPPARD. Mr. President, before the Senate adjourns I wish to give a brief description of a bill I introduced to-day during the morning hour. It is the bill (S. 6224) to increase the utility of the postal savings bank, to encourage savings among the people, to secure the largest returns for such savings consistent with adequate security, to provide for the loans of such savings for the promotion of agriculture and other useful productive industries, and for the promotion of home building and home improvement in the rural districts and elsewhere.

The bill to increase the utility of the postal savings bank is intended to mobilize the money in the country outside the banks, to facilitate and encourage the saving and banking habit among the people, and serve as an automatic regulator of interest rates. Nearly $2,000,000,000 of so-called real money remain outside of existing banks. The addition of this amount, or a large portion of it, to the banking capital of the country will be of immense benefit.

The bill removes the limit from deposits in postal savings banks and requires the employees of the Postal System to serve the people in their dealings with these banks as they now serve them in the matter of letters, money orders, parcels, and so forth; that is, without limit as to amount of deposits, as letters and parcels are without limit.

It requires that such interest be paid the depositors as their deposits will earn on adequate security. At present the Government takes the people's money at 2 per cent, turns it over to the banks at 2¼ per cent, and the banks lend it at anywhere from 6 to 10 and 12 per cent, and upward. Why should banks alone be allowed to use the money of the postal bank when other institutions and private citizens would offer security equally as good, and would pay more interest? The security must be of equal quality with that approved by New York and Massachusetts for investments of savings banks, or such as is considered equally as good by the board of national trustees, composed of certain Cabinet officers, including cotton, wheat, and other nonperishable products adequately insured and warehoused. The deposits may also be loaned on real estate or to persons without collateral, if guaranteed by a bank, trust company, or similar corporation of accepted standing. The guarantor is allowed a small commission. At present savings banks and building and loan associations earn from 4 to 7 per cent on deposits. Why should depositors with the Government be restricted to 2 per cent?

To encourage the saving and banking habit among the people the bill provides for negotiable certificates of deposit, of the same size and form as ordinary currency, in sums from 5 cents to $1, $2, $5, $10, $100, $1,000, or more. These are payable to bearer or order, as depositors desire. Certificates of $10 or more bear interest after three months from date compounded semiannually. These certificates, while not having the function of legal tender, will pass from hand to hand by common consent in place of money and drive money into the banks, where it should be. Interest and principal of certificates of deposit are payable on surrender. Thus individual bookkeeping and the machinery of check books and the present exchange system will be avoided. These certificates, like gold certificates, will be good anywhere. Existing savings banks in good standing may become agents of the Postal Savings System under this bill, receiving a commission on deposits they secure and maintain. Existing commercial banks of acceptable character may become agents for the loan of postal bank deposits on real estate or otherwise, each bank guaranteeing the loan and receiving a small commission on interest collections.

The bill makes the Postal Savings System a single institution, with branches and subbranches at every post office, an ally of existing commercial and savings banks, a vast reservoir in which they may deposit and from which they may withdraw deposits as their needs determine.

The bill permits these negotiable certificates to be counted as a part of the legal reserve of commercial banks, thus releasing enormous resources now tied up.

It is calculated that the enlarged Postal Savings System provided by this bill will mobilize between $35,000,000,000 and $40,000,000,000 of credits, taking the New York City savings deposits of nearly $2,000,000,000 as an example.

On the basis of the experience of the Government savings banks of Australia, where three-sevenths of the people are depositors, the enlarged system of the present bill should mobilize an army of 40,000,000 depositors instead of less than 600,000 as at present.

The present gold basis will be in no way affected. Of course actual gold will be called for only as limited commercial exigencies compel its use, because gold in possession earns no interest, while certificates of deposit in possession earn compound interest.

Unshackle the postal savings bank. Let the people's bank serve the people. Criticisms and suggestions are cordially invited.

Let me quote here a resolution adopted by the fortieth annual convention of the Cattle Raisers' Association of Texas, assembled at Houston, Tex., March 21, 22, and 23, 1916:

> We further demand that the postal savings banks be "unshackled" and be made in fact the postal savings banks of the people of these United States, to the end that the savings of the people can be utilized so as to bring them the largest returns consistent with safety, and so that these savings may be mobilized and used where they will be of the greatest value to the whole Nation.

RECESS.

Mr. CHAMBERLAIN. I move that the Senate take a recess until 12 o'clock to-morrow.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m. Wednesday, May 31, 1916) the Senate took a recess until to-morrow, Thursday, June 1, 1916, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *May 31, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

O Thou who art infinitely wise and good, we believe in Thee, that Thou art a God hearing and a God answering prayer. Teach us, we beseech Thee, how to be noble, how to be grand in the common duties of daily life, how to unfold and develop all the powers of mind and soul with which Thou hast endowed us unto the perfect man, as we know it in the Lord Jesus Christ, our Example and our spiritual Guide. Amen.

The Journal of the proceedings of yesterday was read and approved.

NAVAL APPROPRIATION BILL.

The SPEAKER. The House automatically resolves itself into the Committee of the Whole House on the state of the Union for the further consideration of the naval appropriation bill, and

the gentleman from New York [Mr. FITZGERALD] will take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, with Mr. FITZGERALD in the chair.

Mr. PADGETT. Mr. Chairman, on account of the amendment adopted yesterday afternoon increasing the number of submarines, it is proper to increase certain appropriations, and I offer an amendment for that purpose.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Committee amendment: Page 98, line 21, strike out "$4,257,000" and insert in lieu thereof "$9,387,000."

The amendment was agreed to.

Also, the following:

Committee amendment: Page 100, line 7, strike out "$11,245,925" and in lieu thereof insert "$11,329,925."

Mr. ROBERTS of Massachusetts. Mr. Chairman, is not that an error?

Mr. PADGETT. No, I think not. It adds $2,800 for ammunition for each submarine.

The amendment was agreed to.

Also the following:

Committee amendment: Page 100, line 9, strike out "$98,859,378" and insert in lieu thereof "$104,073,378."

Mr. PADGETT. That is the aggregate.

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I wish to offer an amendment of which I gave notice yesterday.

The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

Mr. BUTLER. Is this the printed Senate bill?

Mr. PADGETT. No; this is not the armor-plate amendment. This is the provision for speeding up.

Mr. BUTLER. The bounty provision?

Mr. PADGETT. The bonus provision.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Committee amendment: Page 100, after line 9, insert:

"To provide for the speedy construction of the vessels herein authorized and for the additional cost incident thereto, including the employment of more than one shift of labor per day, overtime work, and the speedy delivery of material, the Secretary of the Navy in his discretion is hereby authorized to increase the total cost of each of said vessels, including the armor and armament, not to exceed 20 per cent thereof if any of said vessels be constructed in Government navy yards; and if any of said vessels or the armor or armament for same be constructed by private contract, the Secretary of the Navy in his discretion is hereby authorized to prescribe in the contracts for same provisions for the payment of premiums over and above the contract price, not to exceed 20 per cent thereof, for the most expeditious delivery of same, and further provisions for penalties for delays and failure to complete within the contract time.

Mr. BENNET. Mr. Chairman, I move to strike out the last word, for the purpose of asking a question. As I caught the reading of the amendment, that puts the navy yards and outside contractors on a parity?

Mr. PADGETT. Yes.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words. This provision is a bounty to contractors in the construction of ships?

Mr. PADGETT. For expeditious delivery.

Mr. MOORE of Pennsylvania. And the purpose of it is to speed up?

Mr. PADGETT. Yes.

Mr. MOORE of Pennsylvania. How does that harmonize with the proviso on page 102, which prevents speeding up so far as the workmen are concerned? The gentleman will observe that in his bill on page 102 there is a proviso which incorporates the so-called stop-watch provision or time-measuring device and prevents the payment of premiums or bonuses or cash rewards to employees in addition to their regular wages, and that this is to apply generally to those who have contracts with the Government as well as those who are employed by the Government.

Mr. PADGETT. That relates to the eight-hour law and what is known as the Taylor system, and has nothing to do with the question of different shifts and overtime work.

Mr. MOORE of Pennsylvania. I wonder whether the gentleman does not present a paradox in the amendment he now offers——

Mr. PADGETT. No.

Mr. MOORE of Pennsylvania. When he proposes to speed up in one direction and to speed down in another.

Mr. PADGETT. No; I think not.

Mr. MOORE of Pennsylvania. May I ask the gentleman how far this proviso on page 102 is intended to go with respect to those who have materials to sell to the Government which enter into the construction of ships and those who have contracts with the Government for the construction of ships?

Mr. PADGETT. It has nothing to do with it. It is the present law. The provision on page 102 is the present law, and has been for some time.

Mr. MOORE of Pennsylvania. Has this identical provision been in the naval bill heretofore?

Mr. PADGETT. Yes; that identical language is the law under which the department is now operating.

Mr. MOORE of Pennsylvania. It was in the law last year?

Mr. PADGETT. Yes. It is the identical provision of the existing law.

Mr. MOORE of Pennsylvania. I submit to the gentleman that while he may be speeding up in one direction, even though it is the existing law, he may not be speeding up in the other direction.

Mr. PADGETT. This one is to speed up, and the other is with reference to time-measuring devices.

Mr. MOORE of Pennsylvania. The amendment here offered proposes a bonus, a cash premium, an extra reward to a contractor for getting certain work done, whereas the proviso on page 102 prevents a workman from getting any cash bonus or premium or extra reward for speeding up or doing any extra work at all.

Mr. PADGETT. No; it prevents the others from using what is known as the stop-watch system.

Mr. MOORE of Pennsylvania. It goes further than that, if the gentleman will permit, in that it prevents the payment of any premium or bonus or cash reward to any employee in addition to his regular wages, so that there is no encouragement for the man who wants to speed up to do so.

Mr. PADGETT. This amendment allows the employment of different shifts during the day and night.

Mr. ROBERTS of Massachusetts. It is an added compensation to the employers, but not to the employees. It means a profit to the employers, but the employees will not be able to get in by reason of the provision unless all are given the same thing.

Mr. KEATING. Will the gentleman yield?

Mr. PADGETT. Yes.

Mr. KEATING. As the chairman has stated, there is absolutely no connection between the two provisions. The provision in the bill provides that you shall not speed up the workmen, and the other provision merely authorizes or encourages the employers to employ an extra force in order to turn out the work in a given time.

Mr. MOORE of Pennsylvania. Will the gentleman, who is an expert in this matter——

Mr. KEATING. I am not an expert.

Mr. MOORE of Pennsylvania. The spokesman, at least——

Mr. KEATING. I am not the spokesman.

Mr. MOORE of Pennsylvania. I think the gentleman is both an expert and a spokesman. This stop-watch provision says it shall not apply "to the movements of the employees" while engaged in such work——

Mr. KEATING. That is the technical language required in regard to the use of the stop watch in Government arsenals.

Mr. MOORE of Pennsylvania. Does it mean that the employee may do exactly as he pleases, without regard to the time employed?

Mr. KEATING. Not at all.

Mr. MOORE of Pennsylvania. Or that the Government shall have no control over him?

Mr. KEATING. There is absolute control over him; there is control over him which secures absolute efficiency, and the only thing that is barred is the stop watch and the speeding-up system over individual workmen.

Mr. MOORE of Pennsylvania. If a man is more efficient than the rest, he can not get additional pay.

Mr. KEATING. Oh, not at all; he can be paid any salary that the foreman or employer sees fit to pay him.

The CHAIRMAN. The question is on the amendment.

The question was taken, and the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer the following amendment as a new paragraph.

The Clerk read as follows:

On page 17, after line 14, insert as a new paragraph the following:

"The Secretary of the Navy is hereby authorized and directed to provide, either by the erection of a factory or by the purchase of a factory, or both, for the manufacture of armor for the vessels of the Navy; said factory or factories to have an annual capacity of not less than 20,000 tons of armor; to be located at a place or places approved by the General Board of the Navy, with especial reference to considerations of safety in time of war; and the sum of $11,000,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be immediately available, for the purposes of this act. The expendi-

tures for drafting, technical, expert, and clerical assistance necessary shall be paid from the appropriation herein made.

The Secretary of the Navy shall keep accurate and itemized account of the cost per ton of the product of such factory or factories and report the same to Congress in his annual report."

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Pennsylvania for the purpose of offering an amendment to the amendment.

Mr. BUTLER. Mr. Chairman, I offer the following amendment to the amendment.

The Clerk read as follows:

After line 3, on page 2, of the Padgett amendment insert the following:

"The Federal Trade Commission is hereby directed, immediately after the passage of this act, and annually thereafter, upon the request of the Secretary of the Navy, to investigate and inventory the armor-plate plants of the United States, examine their books, and estimate and determine the average full cost of producing armor plate at said plants under the four following conditions, to wit:

"(a) Plants running at full capacity.

"(b) Plants running at two-thirds capacity.

"(c) Plants running at half capacity.

"(d) Plants running at one-third capacity.

"If the manufacturers of armor plate shall refuse the Federal Trade Commission full opportunity for examination and investigation as above mentioned, the said appropriation for the erection of an armor-plate factory or factories shall be immediately available for that purpose; but if such opportunity shall be afforded the said commission, it shall at once determine the full cost of producing armor plate at said plants, and shall immediately report to the Secretary of the Navy a fair and reasonable price the Government shall pay for its armor plate.

"Upon the receipt of such report the Secretary of the Navy is hereby authorized to enter into a contract or contracts for armor plate to meet the needs of the Government, now or hereafter, at or below the price per ton so reported as the fair price for the proportion which the tonnage awarded bears to the aggregate capacity of the plants, and the appropriation hereby made for the erection or purchase of an armor-plate plant shall not be used for that purpose until the said report has been made to the Secretary of the Navy, and the manufacturers of armor plate have failed, within 30 days after notice of such report, to accept the same and to enter into a contract or contracts for the manufacture of said armor plate to provide for the then requirements of the Government, as specified by the Secretary of the Navy, at or below the price per ton so reported by said commission."

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. BUTLER. Mr. Chairman, I will ask the gentleman from Tennessee if it would not be possible for us to agree on some time for debate upon the amendment of the gentleman from Tennessee and on the amendment to the amendment which I have offered?

Mr. PADGETT. I think so, on all amendments thereto. What time would the gentleman suggest?

Mr. BUTLER. Requests from gentlemen surrounding me for time would indicate that an hour and a half is desired on this side. I assume that after we have disposed of this proposition, the most troublesome part of our bill will have been disposed of, and that we may then move forward quickly. I would be very grateful to the gentleman if he would consent to let us have on this side an hour and 15 minutes.

Mr. PADGETT. I was hoping that we could agree on an hour on a side.

Mr. BUTLER. Just now a gentleman made a request to me for five minutes. I do not expect to take any of the time myself.

Mr. PADGETT. An hour and 15 minutes on a side?

Mr. BUTLER. Yes.

Mr. PADGETT. This is a new proposition, and it will be agreeable to me to take an hour and 15 minutes on a side.

Mr. BUTLER. Two hours and a half altogether.

Mr. PADGETT. That will be agreeable.

Mr. BUTLER. Will the gentleman include in that all of the amendments that may be offered?

Mr. PADGETT. Yes; an hour and a half on a side for debate upon the amendment which I offer and all amendments thereto.

Mr. VARE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. VARE. I want at the proper time, if it is decided to construct a Government armor-plate plant, to reserve the right to offer an amendment that it be located in accordance with the report of the Padgett-Tillman-Strauss committee, namely, the Philadelphia Navy Yard.

Mr. MANN. Mr. Chairman, I hope the gentleman from Pennsylvania will be willing to refrain from offering that amendment so that we can agree on a time for voting.

Mr. VARE. Do I understand that my colleague desires me to give up my rights to offer an amendment?

Mr. MANN. I hope the gentleman will, so that we can agree on a time for voting.

Mr. VARE. I am not going to object to the time, but I certainly want to reserve the right to offer this amendment at some stage of these proceedings.

Mr. MANN. The gentleman would have the right to offer his amendment after the amendment of the gentleman from Pennsylvania [Mr. BUTLER] is disposed of, but there would be no debate upon it under this proposed agreement.

Mr. SHERLEY. Why can we not do this: Have a time fixed with the understanding that amendments may be offered during that period of time? There is one amendment which needs to be offered from this side if we are to adopt the affirmative proposition of the gentleman from Tennessee; an amendment which, I think, everybody will agree to.

Mr. MANN. The amendment could be offered after the amendment of the gentleman from Pennsylvania [Mr. BUTLER] is voted on.

Mr. SHERLEY. I have no objection to that; but what I want is to have the amendment pending before the House while debate is going on and not to have a debate of two or three hours, and then at the end of that time have, perhaps, a new proposition presented.

Mr. MANN. Having a lot of amendments pending is always confusing.

Mr. SHERLEY. There are only two amendments that I know of. I understand from his statement that the gentleman from Pennsylvania [Mr. VARE] desires to offer an amendment to locate the plant at a particular point. Incidentally I am very much opposed to that, but I think there should be an authorization for the selection of a site so that when we appropriate this money we can use it.

Mr. PADGETT. I have noticed that the bill in specific terms does not provide for the purchase of a site, and I was going to offer that amendment to the amendment myself.

Mr. MANN. Of course the gentleman or anyone else would have the right to offer an amendment after the amendment of the gentleman from Pennsylvania [Mr. BUTLER] is disposed of.

Mr. PADGETT. Certainly.

Mr. MANN. And in the debate notice can be given of it.

Mr. PADGETT. Yes. Mr. Chairman, I make the request that two hours and a half be devoted to debate on this amendment and all amendments thereto, one half of that time to be controlled by the gentleman from Pennsylvania [Mr. BUTLER] and the other half by myself.

Mr. HOPWOOD. Mr. Chairman, reserving the right to object, this matter is of such vital importance to not only the whole country but particularly to the State of Pennsylvania—and we are very modest people in Pennsylvania and have not had much to say on the floor of this House; 36 Members coming from that State—that it seems to me that an hour and 15 minutes on each side to discuss this amendment is entirely too limited a time in which to dispose of plants worth $25,000,000 and put them in the scrap heap and to spend $11,000,000 initial money of the Government to build a Government plant with probably twenty or twenty-five million dollars of Government money to come afterward before the plant will be in any way efficient. There are 36 Members from the State of Pennsylvania, and probably half of them would like to talk on this matter, and that hour and a half of time if given to the Members from that State alone would yield us less than five minutes each. It strikes me that this is too important a matter to rush through in this limited time, and I ask for more time.

Mr. SHERLEY. The gentleman realizes that what we are doing is to liberalize the time very much. Under the rule under which we are operating it would be in the power of the committee to cut off debate in 10 minutes.

Mr. MOORE of Pennsylvania. Gentlemen will give us credit for voting against the rule.

Mr. SHERLEY. I understand that 11 on that side did.

Mr. MOORE of Pennsylvania. A gag rule, under which we have no rights.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

Mr. HOPWOOD. Mr. Chairman, a great many of the Members from Pennsylvania are new Members, and we have been used to talking in forums where we have had an opportunity to talk until the argument is completed. For a new man to come in here and talk five or ten minutes on a question of this kind and undertake in that time to present an argument worth listening to is simply impossible. Now, it strikes me that while the rule heretofore may be as the gentleman stated, he knows better. I have indicated before that I do not, and a great many others who are new do not; but, whatever the rule may be, I ask that in view of the importance of the measure under discussion that we be given additional time.

The CHAIRMAN. The gentleman must submit some specific request. The Chair can not submit an indefinite request of this kind.

Mr. HOPWOOD. I ask that two hours be given to either side.

The CHAIRMAN. The gentleman from Tennessee asked two hours and a half——

Mr. HOPWOOD. But that was two hours and a half on both sides.

Mr. PADGETT. I could not agree to that; but I will agree on an hour and a half on a side, making it three hours in all; and, Mr. Chairman, I will ask to modify my request to that extent.

Mr. HILL. Mr. Chairman, reserving the right to object, I would like to ask a question. This is a business proposition. I want to offer an amendment looking to the real exigency of the present situation before this bill reaches a final vote. I am honestly and earnestly of the belief that an exigency exists. Now, are we to be shut off from offering amendments because we do not happen to be members of the committee? That is the question I want to ask; and I ask the chairman of the committee whether the privilege will be given to gentlemen who are not members of the committee to offer amendments which they earnestly and honestly believe ought to be adopted?

Mr. PADGETT. I think so.

Mr. HILL. Must they be offered to-day?

Mr. PADGETT. We have got three more days.

Mr. HILL. No, we have not; for one of those days is to be consumed on this business proposition.

Mr. PADGETT. We are not proposing to take up the whole day; three hours does not take up the whole day by a long ways.

Mr. HILL. I think less than three hours would be better, but I withdraw my objection.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate upon the amendment and all amendments thereto be limited to three hours, one-half to be controlled by the gentleman from Pennsylvania [Mr. BUTLER] and one-half by himself. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. PADGETT. Mr. Chairman, I will ask the gentleman from Pennsylvania to use some of his time.

Mr. BUTLER. Mr. Chairman, I yield 10 minutes to my colleague from Pennsylvania [Mr. STEELE].

The CHAIRMAN. The gentleman from Pennsylvania is recognized for 10 minutes.

Mr. STEELE of Pennsylvania. Mr. Chairman, the pending amendment proposes to appropriate $11,000,000 for the construction of a Government plant for the manufacture of armor. In order that we may have some intelligent understanding of the purposes of this amendment it is necessary briefly to refer to the history of armor manufacture in this country. Prior to the early eighties armor plate was not manufactured in the United States. The first armor was brought over from England under a contract by the Government of the United States and delivered here at a cost of something in excess of $500 per ton. After that time the Secretary of the Navy estimated he would need in the construction of vessels then authorized something in excess of 6,000 tons of armor plate, and in order to meet that need he sent a circular letter to the different manufacturers of steel throughout the country asking them to bid upon the then needs of the Government and to erect armor-plate factories for the purpose of meeting that construction.

In pursuance of this circular letter which the Secretary of the Navy forwarded a contract was awarded to the Bethlehem Steel Co. for the manufacture of those 6,000 tons of armor plate, and that was the first contract made in the United States for the furnishing of armor plate for war vessels.

Mr. EMERSON. What date was that?

Mr. STEELE of Pennsylvania. About 1887.

Mr. MOORE of Pennsylvania. The Secretary of the Navy then was whom?

Mr. STEELE. I have forgotten the name of the Secretary of the Navy then, but my impression is it was during the second Cleveland administration.

Mr. MOORE of Pennsylvania. Mr. Whitney?

Mr. FESS. Hilary A. Herbert was Secretary under the second administration.

Mr. STEELE of Pennsylvania. This contract was made, and the Bethlehem Steel Co. proceeded in the construction of this plant. Subsequently, about 1890 or 1891, at the solicitation of the Secretary of the Navy, in order to secure some kind of competition in the manufacture of armor, the Carnegie Co. also constructed an armor-plate plant, and those two companies supplied the Government with armor plate down to about 1903 when the Midvale Steel Co. entered the field, and from 1903 down to this time those three companies have occupied the field and furnished armor plate for the Government.

Now, at the present time those three plants, being the sole ones in the manufacture of armor, are all three located in the State of Pennsylvania. The aggregate value of their plants is estimated to be about $20,000,000 and the aggregate capacity of the three plants is estimated to be about 32,000 tons per annum. The average amount of armor consumed down to the present time by the Government has been less than 10,000 tons per annum; therefore the capacity of the plants has been three times the needs of the Government down to this time.

Under the five-year program which was suggested by the Secretary of the Navy this year, it was estimated that the requirements of the Navy under the five-year program would be about 24,000 tons per annum, but under the changed program, as recommended by the House Committee on Naval Affairs, that quantity has been reduced practically to one-half. As I understand, the quantity of armor necessary for a battleship is about 8,000 tons and that for a battle cruiser about 2,500 tons, depending upon the thickness of the plate, so that what will be required at this time will be from 12,000 to 15,000 tons per annum under the present naval bill, which will at least be about one-half the capacity of those three armor-plate plants.

Now, the experience in the manufacture of armor plate in this country has shown certain facts beyond dispute and which are admitted in the various reports submitted by the Secretaries of the Navy. They show the following to be conceded facts:

First. The Government has from time to time increased the severity of its specifications for armor and the armor makers have honestly striven to produce the best possible armor.

Second. At present American armor is superior in quality to any in the world.

Third. Deliveries of armor within the times specified have been satisfactory.

Fourth. Notwithstanding the increased price paid for labor in this country, the price paid by the Government for armor has been lower than that paid by any foreign great naval power.

So that the quality of the armor is beyond dispute, the deliveries are beyond question, and the only point of controversy so far between the Government and the manufacturers of armor has been the question of price.

When Admiral Strauss was on the stand testifying before the Committee on Naval Affairs the question was asked him distinctly whether that was not the only question in controversy, and his answer was in the affirmative.

Now, what is proposed by this bill? In order to meet the question of price, this bill proposes to do a variety of things. It proposes to erect a factory, or purchase a factory, or both, for the manufacture of armor for the vessels of the Navy; said factory or factories to have an annual capacity of not less than 20,000 tons of armor, so that a number of factories can be gotten by the Government under the provisions of this bill. It can purchase a factory, or it can erect a factory, but the combined capacity must be 20,000 tons per annum.

Now, it is impossible to buy a factory, because the armor-plate departments of the different steel plants that manufacture armor can not be segregated from the remaining portions of the plants, and therefore the question of purchase is an impossibility without the purchase of the entire plant; which means the purchase of an entire plant, and the capacity must be 20,000 tons.

Now, as I have stated, the proposed capacity of the Government plant being 20,000 tons, and the needs of the Government under the most efficient plan that has been presented under the bill now under consideration being less than 15,000 tons, it is obvious that the Government plant, if it is to be used at all, will afford sufficient capacity for the Government to manufacture all the armor plate it will need for years to come, and there will be no use for the private plants.

Mr. EMERSON. Mr. Chairman, will the gentleman yield?

Mr. STEELE of Pennsylvania. Yes.

Mr. EMERSON. What do these other plants do with their surplus armor? Do they not manufacture surplus armor?

Mr. STEELE of Pennsylvania. No; they do not manufacture any surplus armor at all, sir. In the past the plants have been operated at about one-third of the time. Two-thirds of the time they have been idle.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. STEELE of Pennsylvania. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

Mr. BUTLER. Mr. Chairman, after a careful allotment of the time, I find I have three minutes left, and I will yield those three minutes to my colleague from Pennsylvania.

The CHAIRMAN. The gentleman from Pennsylvania is recognized for three minutes more.

Mr. MOORE of Pennsylvania. Mr. Chairman, if the gentleman will permit, since the gentleman from Pennsylvania is covering the ground thoroughly and well, I will gladly yield to him my five minutes.

Mr. BUTLER. That makes eight minutes.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. STEELE] is recognized for eight minutes more.

Mr. STEELE of Pennsylvania. I thank you, gentlemen.

Mr. MOORE of Pennsylvania. Now, Mr. Chairman, will the gentleman yield to me for a question?

Mr. STEELE of Pennsylvania. Yes.

Mr. MOORE of Pennsylvania. The owners of the Bethlehem Steel plant have indicated that their armor-plate investment there is about $7,000,000. Is that correct?

Mr. STEELE of Pennsylvania. That is correct.

Mr. MOORE of Pennsylvania. This bill proposes to appropriate $11,000,000 to begin a plant anew?

Mr. STEELE of Pennsylvania. Yes, sir.

Mr. MOORE of Pennsylvania. The Bethlehem plant, with $7,000,000 invested, would be sufficient to manufacture all the armor plate that the Government could possibly need?

Mr. STEELE of Pennsylvania. Possibly so. Its capacity now is 12,000 tons, and that would be the needs under the bill as the bill is now written.

Mr. MOORE of Pennsylvania. And the owners have indicated that they would transfer their plant to the Government, or they would accept the Government's price for the armor plate manufactured?

Mr. STEELE of Pennsylvania. They could not transfer their armor plant without transferring their entire plant, but they have indicated their willingness to agree that the price of armor plate should be fixed by a governmental agency—the Federal Trade Commission.

Mr. MOORE of Pennsylvania. Then the effect would be that instead of taking an existing plant ready for action the investment in which is $7,000,000, this bill proposes to take $11,000,000 out of the Treasury and go into the experiment of building a new factory and putting all these private plants out of business?

Mr. STEELE of Pennsylvania. Absolutely so. The effect of the building of this plant by the Government will be either one of two things: Either the investment of the Government must go to absolute waste or else the private plants must go out of business, and their capital of $20,000,000 must be lost entirely to the stockholders of these various companies. Either one or the other result must necessarily follow.

Mr. MOORE of Pennsylvania. Will the gentleman pardon me for just one other question?

Mr. STEELE of Pennsylvania. Yes.

Mr. MOORE of Pennsylvania. Does not a moral obligation exist on the part of the Government to encourage these plants that were induced to go into the armor-plate business for the Government's sake?

Mr. STEELE of Pennsylvania. Yes. Almost every report of the Secretaries of the Navy that I have read has admitted that these three plants were constructed at the instigation or suggestion of the Government.

Mr. MOORE of Pennsylvania. And this bill would mean practical confiscation?

Mr. STEELE of Pennsylvania. Yes.

Mr. SHERLEY. Mr. Chairman, will the gentleman yield there?

Mr. STEELE of Pennsylvania. Yes.

Mr. SHERLEY. Would not that depend upon the profits on their investment after a series of years?

Mr. CANNON. Mr. Chairman, I think the gentleman had better go ahead without interruption. I think he can tell us better without interruption than with it.

Mr. STEELE of Pennsylvania. I will reach that point at the proper time. The proposition in this amendment is the ordinary proposition that has frequently been resorted to by this Government in settling differences as to prices. The only question of difference here, as I have stated, is the matter of price between the Government and the manufacturers. Now, when the question as to the prices for transportation charged by the railroads was raised, the Government did not undertake to buy railroads or build separate railroads, but the Government instituted an Interstate Commerce Commission to regulate the prices paid for that service, and the result has been entirely satisfactory to the country.

Now, the purpose of this amendment is evidently regulation, not confiscation. The purpose is to utilize a governmental agency, the Federal Trade Commission, which has been established purposely for occasions of this kind—that this governmental agency, the members of which are appointed by the President and confirmed by the Senate, shall go over the books of these various companies and report a fair and reasonable price to be paid for this product, and if the armor-plate manufacturers refuse to accept this fair and reasonable price which has been fixed by this Federal Trade Commission, then this appropriation shall be immediately available for the purposes mentioned in the act.

That, as a reasonable business proposition, means that the Government as the sole purchaser of armor plate practically fixes its own price for its product, and then it will not be necessary to confiscate any property and to waste $11,000,000 of the taxpayers' money. [Applause.]

Much has been said concerning the question of price that has been paid and the profits in the past. There to my mind is one of the mistakes which the manufacturers of armor plate have made in the past. They have permitted that calumny to go forth year after year without paying any attention to it, allowing it to go by in dignified silence. Under Secretary Herbert a report was filed by an inspector who went to Harrisburg and examined the annual tax returns of these various companies, in order to ascertain the profits which they had made out of the manufacture of armor plate. Those tax returns afforded him practically no information on the subject, because armor-plate manufacture was not distinguished from the gross general business of all these various companies. Basing an inference upon an inference and a deduction upon a deduction, he made the inference, as he frankly admitted in his report, that the Bethlehem Co. had made enough money out of these contracts to pay for its plant and 22 per cent in addition. Why, gentlemen, if the Bethlehem Co. had not paid a dollar for its materials or a dollar for its labor, the aggregate amount that it had received from the Government down to that time would not have been sufficient to do that. The aggregate number of tons contracted for down to 1896, when that report was made, was but 12,000 tons of armor plate, and the aggregate amount received, according to the price paid, was but $6,600,000. The Government estimated the value of the plant in 1896 to be $5,000,000; and 5 per cent upon that investment would have made a total of $7,500,000; so that the amount received from the Government would have been entirely inadequate to pay back to the company the cost of its investment, if it had not paid a dollar for its material or a dollar for its labor. [Applause.] The whole charge is utterly absurd and ridiculous, and this corroborates the testimony of Mr. Grace, the president of the Bethlehem Steel Co., before the Naval Committee, that the entire average profit made during the entire period of time was but 1¾ per cent upon the capital invested, and that if they had invested the same amount of capital in the general steel business they could have made at least 10 per cent upon it. [Applause.]

One thing seems to be assured from the present phraseology of the bill, and it is that the great State of Pennsylvania, which now contains the three plants manufacturing this product, will be excluded from any consideration in the location of a Government plant. I know that the chairman of the Senate Naval Committee has stated that he believed the League Island Navy Yard at Philadelphia would be an advantageous location; but an amendment made to the bill in the Senate provides that such plant shall be located by the General Board of the Navy with special reference to considerations of safety in time of war, and we know the General Board has recommended that munition plants shall be located west of the Appalachian Range. It is, therefore, quite clear that if this plant is to be built, its location will be either in the West or the South. The State which answered the call of the Government for the erection of these plants, and furnished the capital to do so, can then scrap these plants and pocket their $20,000,000 loss. I have no interest in any of the financial affairs of these companies, but I am interested in securing fair play for the 23,000 employees of the Bethlehem Steel Co., resident in the district I represent.

Mr. BUTLER. I yield seven minutes to my colleague on the committee [Mr. BROWNING].

Mr. BROWNING. Mr. Chairman, I wish to quote a paragraph from an address delivered in New York City, on April 12, 1916, by a distinguished ex-Secretary of the Treasury, Hon. Leslie M. Shaw:

> From the close of the Civil War until very recently the Government cooperated with business, encouraged development, and fostered industry. The result is inspiring. Our wealth is unequaled; our standards of living unapproached; our scale of wages 100 per cent higher than the highest. Our mines yield gold annually by the train load, silver more abundantly still; and we unload from coastwise ships and railroads upon the shores of Ohio alone more iron ore than any other country in the world produces. We cut from our forests 100,000,000 feet of lumber for every day of the calendar year; our domestic trade is three times the aggregate international trade of all creation; our shops and factories, even in normal times, produce more finished products than all the shops and all the factories of Great Britain and Germany and France combined, plus 5,000,000,000 every 12 months; and we pay out as much in wages as all the rest of the world.

Now, Mr. Chairman, in these critical times of great uncertainty and grave danger when effort is being made to mobilize the industries of our country to be used in her defense

and for her sustenance in time of possible stress it is not the part of fairness or wisdom for the Government to embark in the armor-plate business or any other business. It is a blow below the belt.

In the armor-plate industry we find three plants engaged, representing investment amounting to about $20,000,000, and in two of the three instances the investment was made at the solicitation of the Government, the third concern having entered without solicitation, but with the Government the only purchaser of the commodity. I, for one, do not believe we have ever been overcharged for armor plate. If the figures presented to the Committee on Naval Affairs are correct, the United States is buying armor plate at a less cost than is any other country in the world. We are paying $425 per ton.

England has five privately owned plants, and is paying $503 per ton.

Germany has two privately owned plants and is paying $490 per ton.

Austria is paying $511 per ton.

France is paying $460 per ton.

Japan's armor plate—and she owns her plant, and Japanese labor is the cheapest in the world—is said to cost $490 per ton.

It is alleged that these figures are not accurate. I know of no reason why they should not be accurate in every instance, unless it be that of Japan, as the other nations purchase in the open market just as we do. Japan's secretive methods in all matters of war preparations may render the figures in her case uncertain.

But, Mr. Chairman, for the sake of argument, suppose we have been overcharged for this commodity, we now have the assurance of procuring the best possible finished product at a price to be agreed upon by the Navy Department after due investigation and computations to be made by the Federal Trade Board.

Now, Mr. Chairman, the adoption of the Butler amendment will accomplish all that could possibly be accomplished by a Government owned and controlled armor-plate factory, and vastly more. It is estimated that a plant would cost the Government $11,000,000, but it will doubtless be realized later that a plant of the capacity of 20,000 tons will cost nearer $16,000,000. I believe that $16,000,000 had better be spent in building a battleship. To use the words of the minority report of our committee, it seems to me that we are much more in need at the present time of a "fighting Navy" than a "manufacturing Navy." Certainly there is no excuse for wasting from eleven to sixteen million dollars to drive out of business plants in perfect readiness to supply our needs to our entire satisfaction in every respect.

Mr. PADGETT. I yield 10 minutes to the gentleman from Texas [Mr. DAVIS].

Mr. DAVIS of Texas. Mr. Chairman, I have indeed been interested in this whole question. I believe in a thorough and adequate defense, but from my viewpoint I believe that preparation should be permanent and for the future, because I see absolutely nothing to terrify or endanger us in present times or in the near future. It seems to me perfect sophistry to talk about imminent dangers confronting us, when God Almighty laid oceans on either side, 6,000 miles, and when a fleet to invade us must mobilize for several months in its own country, come at least 5 miles abreast, and spend nearly a month to get here; and modern inventive genius makes it possible to submarine and mine the ocean front at a nominal cost in a few weeks' time, and hence blast them into atoms before they got even in sight of our ports. This Government needs this armor-plate plant as a part of its necessary defensive program, for we should protect ourselves against enemies within as well as without. This Navy bill is inadequate without it, although it carries an appropriation of over $200,000,000.

Mr. FARR. Will the gentleman yield?

Mr. DAVIS of Texas. After a while. I have not made a speech on this question, and the gentleman has made several. I will yield later on, but I want to get off this thought, thank you.

The CHAIRMAN. The gentleman declines to yield for the present.

Mr. DAVIS of Texas. The whole proposition is resolved into a defensive measure; for I am not willing to believe that we are preparing to wade the oceans of the earth for conquest and invasion and aggression. I am ready to vote millions for defense but not a dollar for aggression. I am not one of those Americans who believe such a thing as that ought to come, or will come until we have lost all our American ideals and all hope of liberty and justice.

Our measure must be defensive. Otherwise it is un-American and unnecessary.

Another question that has interested me in this whole matter has been the fact that in the multifarious speeches that have been delivered, the very eloquent dissertations and expansive arguments that have been made, I have never yet heard one man discuss the question from the theory and standpoint of the taxpayer. The whole burthen has been upon the theory, How much money can be spent, how fast can we spend it, and how shall we spend it? The question of where we will get the money has never been discussed. Why, if you would listen to the men, largely on the Republican side of the House, they discuss it upon the theory that all you have to do is to rub a kind of Aladdin's lamp and the next morning you get millions, which come in answer to the magic wand that you lift.

I stand in your presence and tell you that when I hear you talk about our great, massive wealth, our magnificent resources, and the overwhelming riches in our country I say "yes"; but I remember when I was a boy there was an old negro, Hamp Magee, who used to talk about how wealthy he and Marse Joe were. He would say, "We got the finest horses in the country; got more of everything in the country; we are the best folks and got the finest house and everything in the country." But Hamp did not represent much of the wealth; he was an ordinary negro; his master owned the wealth. So when you talk about the great wealth of this country I say "Amen." But listen: Of the 100,000,000 people in this country 60,000,000 of them to-day can repeat the declaration made by Jesus Christ when he said:

> The foxes have holes and the birds of the air have nests, but the Son of Man hath not where to lay his head.

Thirty millions of people to-day must beg for the privilege to earn the bread they eat. Our tenant farm list, our mechanics and journeymen workmen list, and our industrial labor list, with mechanics and artisans, in this country represent about 60,000,000 of our people. Twenty millions more represent the great common business class. The remainder represent the overgrown, exorbitant, and swollen fortunes in this country—the malevolent rich. If you pile up these millions, the income-tax list shows that this class have been dodging their taxes and defrauding the Government out of $150,000,000 to $250,000,000 of the honest collections on incomes that should have been made in the last two years. And so the great burden of taxes must fall on the great common masses of the people. And when you pile out millions I want it for defense only. I want the necessary defense. Give us some aeronautic stations from which we can rise and scout the ocean and spy a fleet three days before it gets to our shores. Give us the submarine equipment and the necessary adjuncts and string the ocean with mines, and some armor-plated cruisers and a few stalwart battleships, and there is no nation on earth that can invade or terrify us.

I am amused at the logic of the discussion that has been brought here. They tell us that we are in impending imminent danger now. I have heard those very words repeated time and again—"in impending danger now." With all due respect to gentlemen who make that statement, I answer no—ten thousand times no. These people on the other side of the ocean are famished, wrecked, impoverished, slaughtered, slaying, killing, crucifying, burning up, and destroying the accumulation of centuries, and are now prostrate, bleeding, wounded, torn, desolate, dead and dying by the million; and yet you tell us that they will get up, lock hands, organize a fleet, and swim over here and whip us. Please hush slandering our country with such twaddle. My God, we are feeding and clothing them now and sending them money to fight each other with. How can they fight us under such circumstances? [Applause.]

I am ready to meet the logic of facts that kings and crowns can get together mighty quick if they want to crush a republic which stands for liberty and justice and the rule of the people, and I am willing to prepare for all necessary measures of defense; hence I am for the amendment for the Government armor-plate proposition upon the theory that we will be free from the clutches of any criminal combine of the corporations that prepare the armor in this country. I do not know that it is necessary to manufacture a great deal of it ourselves. The fact that we are able to do it and ready to do it makes us safe. [Applause.]

When I hear the clamoring call for more big battleships and tremendous dreadnaughts I can not resist the feeling that it must be the call of an uninformed mind or the plaintive plea of an advocate of patronage for the Steel Trust and its allied monopolies. I am not an expert in matters of war and Navy equipment and do not claim to be, but I do assume to have

common sense and some knowledge of the world's affairs, and one thing above all else that the present war has demonstrated is that the efficient instrument of warfare is not the great massive battleship. England, with the biggest navy of any country on earth, and France and Italy's navies to draw from, found Turkey without a respectable fighting ship, and yet was never able to land on her shores; and after having several of her massive ships blown to atoms by submarines, mines, and invisible enemies in the water, took her big, fine $20,000,000 ships and sailed back and vacated all effort to land an army or batter down Turkish forts. Helgoland, a German island occupied by less than half a million people, stands more or less isolated within a few hours' travel from the English shores, and yet with all her naval power England has never undertaken to bombard that little island. During all these two years' warfare her great fleet has never been able to effect a landing on Germany's coast line. Therefore, it is useless to argue with me that we ought to feed into the greedy maw of the Steel Trust two or three hundred millions of money to fit us up with great massive dreadnaughts. They would be nice ponderous palaces to float around in naval parade and banquet feast to officers but comparatively useless except a few for defensive purposes. I would like to see America have a thoroughly equipped and ample merchant marine for purposes of trade and see our coast line supplied with aeronautic stations and airships for scouting military purposes. I am one of those that believe the scouting for the future will largely be done in mid-air. Several good armored cruisers for rapid transit and effective fighting with a few good standard dreadnaughts to stay close to home for defensive purposes, with coast defense forts, submarines, and mine equipments we would be amply prepared to repel any and all of the nations of the earth if they sought to invade us. I would divide this general equipment into two parts, have a Pacific defense and an Atlantic defense. But all this can be done at what a few great dreadnaughts would cost and be far more efficient and effective.

It has always been a policy of the Democratic Party to stand for an adequate and efficient Navy, and I think this measure is an elaborate and extensive measure in that way. It goes much further in general expense than I would have had it go. I should have preferred a far less expensive armament in big ships and a more elaborate development of submarine, mine, aeronautic, and coast defenses, and this process should have made ample provisions for both the Atlantic and Pacific defenses, as well as for the Gulf coast lines. I am not one of those that believe that it would be convenient to swing our fleets back and forth from the Atlantic to the Pacific through the Panama Canal. The risk would be entirely too great to expect to transfer a fleet from the Atlantic to the Pacific in case danger threatened us on that shore. The distance from New York around to Seattle and Puget Sound is farther than from Japan or China to those points.

But speaking for myself, I believe in the Government taking the profits out of war by the manufacture of its own munitions and implements of warfare, or, at least, be able to do so at any time, and thereby be able to protect itself against the aggressions and inordinate greed of the great criminal combines and corporations that are now feasting on the world's agony and distress in war. For, Mr. Chairman, it is a well-known fact and has been clearly demonstrated for years that there is an international war trust which controls the armaments of nations and dictates the prices of the world's equipment for war. And not only that, but by control of the sources of information, education, and intelligence it spends part of its ill-gotten, fraudulent millions in bringing on and provoking wars. These things being true, I am with all my heart anxious to see this great Republic make the start to liberate itself from these infamous and heartless combinations.

Mr. PADGETT. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. HENSLEY].

Mr. HENSLEY. Mr. Chairman and gentlemen of the committee, I desire to say something concerning the pending amendment. I am in favor of the amendment for several reasons, which I shall endeavor to give. We have heard a great deal said with reference to the price at which the Bethlehem Steel Co. is willing to contract with the Government for the sale of armor plate for naval purposes. The company insists that it only enjoyed a dividend representing 1¾ per cent upon its capital for the last several years. If that be true—and I do not know whether it is true or not—it does occur to me that the company would not be making the tremendous effort it is making and has made to retain this business, and you gentlemen on the other side would not complain so tremendously if the Government should build an armor-plate factory, and thus deprive the Bethlehem Steel Co. of this business. That argument does not appeal to me as a business proposition. There have been several moves made by the Government heretofore to engage in the manufacture of armor plate. Some of these moves have not gotten very far. None of them have succeeded in accomplishing any definite purpose; but now, at this juncture, when it looks like that not only are the people in earnest but that Congress is in dead earnest, and proposes to appropriate the necessary money to build an armor-plate factory in order to have something to do with the fixing of prices, this steel company comes forward and submits a proposition which upon its face appears very fair and just. Why has it not submitted a proposition of this character to the Government heretofore? Why has it waited until now to submit a proposition which indicates that it is willing to charge a reasonable price for armor plate? I have not the means of knowing, except this, Mr. Chairman: According to the hearings had before our committee, this same company, the Bethlehem Steel Co., has on several occasions sold armor plate to other countries at a much lower price than it was at the time selling armor plate to this Government. For instance, as I recall the testimony, it was selling armor plate to Russia for $249 per ton when it was selling the same grade of armor to this country for $616 per ton.

Mr. STEELE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. HENSLEY. Certainly.

Mr. STEELE of Pennsylvania. Was not that a sample of armor plate sold them and not for general use?

Mr. HENSLEY. That is the statement made by Mr. Grace, the president of the Bethlehem Steel Co.; but the gentleman from Pennsylvania will not undertake to say that it was not selling to Russia and Italy armor plate according to the samples it was furnishing those countries at a much lower figure than it was selling armor plate to this country for, though there may be a question as to whether the difference was as great as that.

Mr. STEELE of Pennsylvania. According to Mr. Grace, they sold it in excess of what it sold for here.

Mr. HENSLEY. That is not according to the testimony, for Mr. Grace said when before our committee that "the price was not $616 that his company received from Russia, but, instead, was $520 per ton." That was in the year 1894, and Mr. OLIVER, of Alabama, asked Mr. Grace this question:

That $616 is made up of elements added to it?

Mr. GRACE. I should say that $616 would be some small particular class, but if we start dealing with those things we are going to get out of all comparison.

The CHAIRMAN. On that, does the $520 per ton include the royalty, or did the Government have to pay the royalty in addition to the $520?

And Mr. Grace answered:

I could not answer that, because it has been both ways, and I do not just know the years that took effect. At some times the company has paid it and at other times the Government assumed it.

Mr. Grace was before our committee for something like two days, and made a very exhaustive statement, and he in every particular acquitted himself as a very high-class business man. According to the testimony before our committee, there has been no competition between these armor-plate companies for several years, and the Secretary of the Navy, Mr. Daniels, has succeeded in his businesslike negotiations in reducing the price of armor plate over former years sufficiently to represent about $200,000 to each battleship.

But the reason that I more particularly insist upon the Government going into the manufacture of armor plate is because I desire that these private concerns be taken out of the traffic of war munitions. I do not charge that these particular concerns are responsible in any degree for the present propaganda for preparedness that is being carried on and which has been going on for some time, but I do know this, that Mr. Grace told us that the stock in his company before the present European war began was selling for $30 per share and that at the time he was giving his testimony the same stock was selling on the market at $530 per share. It may be true and it may not be true that men are actuated by selfish interest, that men will advocate the course that will best serve their individual interests, and that these big concerns are desirous of making profits for their stockholders. I say, whether that be true or not, I do not want the people of this country to believe that these concerns engaged in this character of traffic favor a condition which is war as against peace in order that they may be able to make these enormous profits.

Mr. BUTLER. Will the gentleman yield?

Mr. HENSLEY. Certainly.

Mr. BUTLER. Does the gentleman recall the amount of armor plate made by the Bethlehem Steel Co. as compared with all other business; what per cent?

Mr. HENSLEY. No; I do not recall exactly the per cent, but the difference is considerable.

Mr. BUTLER. The armor plate is about 2 or 3 per cent.

Mr. HENSLEY. It is only a small per cent, as I remember.

Mr. SMITH of Michigan. Will the gentleman yield?

Mr. HENSLEY. No; I have not the time. But here is the point I desire to make, that profits should be taken out of war. It ought to be a question of patriotism. No man who reveres the flag will hesitate to respond to a call to go out and fight for the liberties of his country and sustain the flag. [Applause.] I do not want any man to be put in a position where the people may point to him and say, "He stands for war simply because it means profits to him and his associates, and only pretends to stand for the flag."

When war comes and the people are called upon to serve and sacrifice for their country, even unto death, I maintain that no element or class of our people should be making a profit out of a situation of that kind. This Government, whether it ever uses an armor-plate concern or not, can afford to make this authorization for the effect it will have in further reducing the price of armor plate. We may or may not make a ton of armor plate. I want to say here and now that the Secretary of the Navy has rendered a great service to the country, for he has reduced the price of armor plate and has saved hundreds of thousands of dollars in the armor plate that will go into the battle cruisers that this bill carries. [Applause.]

The same argument was made by some against the Government manufacturing powder when it was first proposed a few years ago, but now we are making our powder for the Navy much cheaper than we were ever able to purchase it from the private concerns.

Mr. MEEKER. Mr. Chairman, will the gentleman yield for a question—just one?

Mr. HENSLEY. Yes.

Mr. MEEKER. Does the gentleman think that there is also an increased profit to the people who sell horses and mules and cattle and butter and eggs?

Mr. HENSLEY. Mr. Chairman, I will not take the time of this House to discuss that. These products may have increased, but I am sure it represents so little to the farmers that no person would for one minute believe them influenced by it.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. HENSLEY. Yes; I will yield now to the gentleman from Michigan.

Mr. SMITH of Michigan. Is it not true that a short time ago aniline sold for 40 cents a pound and is now worth $20 a pound?

Mr. HENSLEY. That may be, and chemicals of different kinds may be selling now for advanced prices; the Government has nothing to do with those articles; but these are the things that the Government has to do with, and the Government by the establishing of an armor-plate factory can protect itself against such increases. The Government certainly does not want to be placed in the attitude of promoting the things and the institutions that make these profits out of war.

Mr. HENSLEY was granted leave to extend his remarks in the RECORD.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. FOSTER].

Mr. FOSTER. Mr. Chairman, I am for this amendment offered by the gentleman from Tennessee [Mr. PADGETT] for the Government to establish an armor-plate factory. The cry of men now, particularly of men who own these armor-plate factories, is that of a dying man who has been a sinner all of his life and is now promising to be good providing he may be permitted to live, but they have sinned too often and too long, their arrogant ways will no longer be tolerated. The Bethlehem Steel Co. has sent out circulars, I do not know how many, but quite a number up to the present time, stating how good they are going to be to the Government if it will just withhold the building of an armor-plate factory for the use of the Government. That may be all right and all good, but we remember the past and what has occurred in buying armor plate for the battleships of the country. There have been charges on this floor, and I do not know that it has been denied by them, that the Carnegie Steel Co. has sold armor plate to the Government full of blowholes, and that to cover up these defects they were filled in some way to prevent detection.

Mr. HOPWOOD. Mr. Chairman, will the gentleman yield?

Mr. FOSTER. No; I can not yield as I have only five minutes. The charge was made against the Carnegie people, and I think they admitted it at the time, that they had sold to the Government this armor plate full of blowholes. It was reported by workmen in the factory and the company was fined for doing so. Afterwards a part of the fine was remitted by the Government. We remember not a great while ago that the Secretary of the Navy asked for bids for armor plate from the three companies that manufacture armor plate in this country, and when the bids were opened they were exactly the same. There was a wonderful mental telepathy, as you might call it, existing between the heads of these concerns by which they were able to tell precisely what armor plate was worth and the lowest price at which they could sell it to the Government, and all agree on exactly the same figures that the Government must pay to these concerns.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a question?

Mr. FOSTER. I have only five minutes, but I will yield for a question.

Mr. MADDEN. I was just wondering whether the physicians of the country in different communities had any understanding about whether they shall all charge the same fee for like services?

Mr. FOSTER. I think not. I do not think there is any understanding among them, and everybody knows they are poorly paid, anyway, so that the poor doctor would not be compared to these great corporations. But we remember, and I think the statement has been made a good many times, that these armor-plate factories years ago charged the Government a high price, and such a high price that their profits were enormous, and if they should go out of business now, which I do not believe they will do, I expect that these companies will not have lost any money, for they certainly have not lost any while they have been in the business, and I suspect that their capital has been paid for many times over through the profits they have made during all these years they have been selling armor plate to the Government at such a high price. I am not one of those who gets scared because the Government talks about going into business for itself. I believe that the Government ought to have a right to manufacture those things necessary to use in time of war. We have seen the same fight made against the Government manufacturing powder, and I am sure that under the able leadership of the gentleman from Kentucky [Mr. SHERLEY], who has had the management of the fortification appropriation bill for several years in this House, the price of powder has been materially reduced as a result of the Government's manufacturing a part of the powder for its own use. I hope this amendment will be adopted.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BUTLER. Mr. Chairman, I yield 10 minutes to the gentleman from Michigan [Mr. KELLEY].

Mr. KELLEY. Mr. Chairman, in arriving at a conclusion for myself upon this question, I have considered only what would, in my judgment, be best for the Government of the United States. I have approached the matter entirely from the public side and the public interest. There are three considerations entering into the question. In the first place, there is the quality of the armor; in the second place, there is the matter of price; in the third place, there are the military considerations involved in the question.

As to the quality of armor, I think there is absolutely no question. The gentleman from Illinois [Mr. FOSTER] has had something to say about armor plate having been furnished some 20 years ago of inferior quality. That may be true, and I think it is, but I have here a report made by the Bureau of Ordnance in July, 1913, in which this language is used as to the present-day armor plate furnished by these companies:

> The bureau believes that the superior excellence of American armor is due to the fact that the Bureau of Ordnance has consistently and persistently demanded from armor makers the best armor they could produce, and has from time to time increased the severity of its specifications, particularly as to ballistic tests, and also to the fact that the armor makers have honestly and conscientiously striven to produce the best possible armor.

That is a report made in July, 1913.

Mr. McLAUGHLIN. By whom?

Mr. KELLEY. By the Bureau of Ordnance of the United States. I think Admiral Strauss was at the head of the bureau at that time.

Mr. BUTLER. That is correct.

Mr. KELLEY. As to the price, I have not been able to convince myself that these companies, during the last 15 years, since 1900, whatever may have been the case prior to that time, have charged an exorbitant price.

Now I will give you the reasons why I think so, and in this connection I want to remind the committee that under the proposition submitted by Mr. BUTLER, whatever the fact may be as to that price of armor, for the future the Government can fix the price absolutely itself. But as to the past, have these companies been making an excessive profit on their investment? All the reports made by the Navy Department and special commissions appointed to investigate the cost of building an armor-plate factory for the Government have placed the cost of plants similar to those now in existence, approximately of 10,000 tons

capacity, at substantially the same figure which these companies claim to have invested in the business, upward of $7,000,000 each. This late report which I have quoted from as to the quality of the armor reports that to build a plant of 10,000 tons capacity would require an investment by the Government of $8,466,000. The report made by the Tillman Commission, of which Mr. PADGETT was a member, estimated the cost at $6,300,000 for a 10,000-ton plant, which is approximately the size of two of the three existing plants and a little larger than the third. So that I think it is fair to assume that the sworn statement made by an officer of one of these companies to the effect that the value of his company's plant is upward of $7,000,000, can be accepted as true.

Now, according to figures furnished me by the Navy Department, we have purchased during the last 10 years from the Bethlehem Steel Co., the oldest company making armor plate, 41,610 tons and have paid that company $17,740,305 for it. That is an average of 4,161 tons a year, less than half the capacity, and the average price paid was $426.35 per ton. These figures were furnished me by the Bureau of Ordnance of the Navy Department only two or three weeks ago. The average annual gross receipts of the Bethlehem Steel Co. from the Government during the last 10 years was $1,774,030.50. Now this sum represents the entire average annual receipts of that company for armor sold to the Government during the past 10 years—a sum less than 25 per cent of the capital invested in the business. Now out of these gross receipts the company, of course, had to buy its raw material and pay the men in its employ. It does not occur to me that if a company's annual gross receipts were only 25 per cent of its investment that it was possible for that company to make exorbitant profits out of its business. [Applause.] I can not understand how it can be done.

Mr. GORDON rose.

Mr. KELLEY. There are many manufacturing companies, I assume, in the country making 20 per cent profit upon their investment, while the gross reecipts of these armor companies annually is only between 20 and 25 per cent on their investment.

Mr. GORDON. Is the Government the only patron that the Bethlehem Steel Co. has?

Mr. KELLEY. The Government is the only purchaser of armor.

Mr. GORDON. The United States Government?

Mr. KELLEY. The United States Government.

Mr. GORDON. I thought they sold abroad.

Mr. KELLEY. Oh, they have sold a few orders abroad 20 years ago and, I think, one order in 1911, as Mr. HENSLEY has said. It is their claim that they tried to get into the outside markets 20 or 25 years ago, but without success. These foreign transactions amounted to only about 5,000 tons, all told. Practically speaking, these companies have never had any foreign business and are not now selling abroad.

Mr. GORDON. Why not?

Mr. KELLEY. Other countries have armor plants of their own. In many countries abroad it is claimed that, while the plants are under private management, the Government has some financial interest.

Mr. GORDON. How does Mr. BUTLER propose to give the Government authority to fix the prices for the Bethlehem Steel Co. on armor?

Mr. KELLEY. Through the Federal Trade Commission.

Mr. STAFFORD. Read the amendment.

Mr. GORDON. But it requires the company's consent, does it not?

Mr. KELLEY. If the armor people should refuse to accept the price fixed by the Government of the United States, the Secretary of the Navy is then clothed with power under the Butler amendment to go ahead and build the factory.

Mr. OLIVER. Will the gentleman yield?

Mr. KELLEY. I have not the time—yes; I will yield to the gentleman.

Mr. OLIVER. The gentleman stated that these companies were not now selling abroad. Is the gentleman aware that in the report made by the Secretary of the Navy in 1906——

Mr. KELLEY. Be quick; my time is passing.

Mr. OLIVER. The report shows a combination between the foreign armor plants and the home armor plants that the armor-plate plants in this country would stay out of the foreign markets.

Mr. KELLEY. I have not time to discuss that particular phase of the question. What the gentleman says may be true. I only know that the records show that practically no armor plate made in this country has been sold abroad. The officers of the company testify that they have tried to get into foreign markets, but without success. If the gentleman has any authority showing that they have sold abroad, except in the limited way stated, why, I should be glad to get the information in his own time.

Mr. OLIVER. The gentleman did not answer me.

Mr. KELLEY. I have not the time to go into that. My time is nearly up, and I want to pursue the question of price which I was discussing when I yielded to the gentleman from Ohio [Mr. GORDON].

Mr. OLIVER. I will answer.

Mr. KELLEY. Another reason why——

The CHAIRMAN. The time of the gentleman has expired.

Mr. KELLEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. KELLEY. Bearing further upon the question of the profits in the armor-plate business, I should like to state that during the 29 years since the Bethlehem Co. began making armor plate the Government has purchased from that company 95,007 tons, at an aggregate price of $42,344,937. It will be seen from these figures that the average annual sales of this company to the Government was 3,280 tons, for which the Government paid the company $1,465,896 annually. On a $7,000,000 investment we find, then, that the total average sales have been but a trifle over 20 per cent of the capital invested. If this company had been able to manufacture armor for nothing, it is apparent from these figures that it could not have made more than 20 per cent on its investment at the prices paid by the Government. Of course, out of its annual gross receipts all manufacturing costs had to be paid, an allowance had to be made for depreciation of plant, besides insurance, taxes, and administration charges. Under these facts I hardly see how the profits in the armor business could be as great as has been frequently stated. The great difficulty, it seems to me, in the way of reducing the price of armor plate has been the fact that the average requirements of the Government have been less than one-third of the capacity of existing armor plants. There is three times as much capital invested in the business now as is necessary to supply the needs of the Government. For the past 10 years the three existing plants have been idle two-thirds of the time. It is necessary to take this fact into account in arriving at a reasonable price which the Government should pay. On page 3723 of Secretary Daniel's hearings before the Committee on Naval Affairs is a table prepared by the Bureau of Ordnance on June 28, 1913, estimating the cost of armor plate in a 10,000-ton plant running at full capacity and also at one-half capacity. The table referred to follows:

FULL COST.

[Reckoned on a capacity of 10,000 tons a year.]

Production cost	$202.83
Administration: One-seventh of officials' salaries and office expenses, which is the proportion allotted to armor manufacture (one-seventh of $1,050,000)	15.00
Depreciation: 6⅔ per cent of value of plant, estimated to be $7,125,000 (life of plant taken to be 15 years)	47.52
Taxes and insurance	4.00
Total	269.35

Estimated cost of production of armor of a 10,000-ton plant, producing varying amounts.

	10,000 tons.	5,000 tons.
Production cost	$202.83	$220.00
Administration	15.00	30.00
Depreciation	47.52	95.04
Taxes	4.00	8.00
Total	269.35	353.04

The cost of armor plate, as estimated by the Bureau of Ordnance, in a 10,000-ton plant running at full capacity is $269.35 per ton, and running at half capacity $353.04 per ton. These costs include every proper charge except interest on the investment. If the existing factories were given business enough to run at half capacity, the cost of manufacture of armor plate would therefore be $353.04, allowing nothing for profits or interest on investment, according to this estimate of the Bureau of Ordnance. Five per cent interest on a $7,000,000 investment would amount to $350,000 per year. If the annual output of the factory was 5,000 tons (half capacity), the interest charge would therefore be $70 per ton. Adding $70 per ton interest charge to the $353.04 production charge makes a total of $423.04 per ton, which represents full cost of manufacture and a 5 per

cent profit to the company on its investment. The price paid by the Government for armor plate during the last 15 years is shown by the following table:

1900 (plus $21.85 royalty)	$420
1903 (plus $21.85 royalty)	420
1903 (plus $21.85 royalty)	420
1905 (plus $21.85 royalty)	420
1906	346
1907	420
1908	420
1909	420
1910	420
1911	420
1912	420
1913 (8-hour law in effect)	454
1913 (8-hour law in effect)	440
1914 (8-hour law in effect)	425
1915 (8-hour law in effect)	425

If the estimate of armor cost made by the Bureau of Ordnance is correct, I hardly see how the profits in the armor business during the last 15 years has been excessive. But whatever the truth may be as to this, under the amendment proposed by the gentleman from Pennsylvania [Mr. BUTLER], it will be impossible for these companies to overreach the Government in the future, for the reason that the Government itself fixes the price. The appropriation for the armor plant under the Butler amendment is simply held in abeyance and is available at any time when the armor-plate companies refuse to provide the Government with such armor as it may require at a price designated by the Secretary of the Navy.

Besides the question of quality of armor and price of armor there is the further question of the military value of the existing armor plants to the Government. They are connected with great steel mills and could be expanded quickly to almost any extent should occasion require. The business has been divided among them for many years in order that all of them might be kept in existence and ready for an emergency. If the Government puts up a 20,000-ton plant one of two courses will be pursued. It will either manufacture all the armor that the Government needs or it will divide the business between the Government plant and the three private plants. If it pursues the former course the three existing private plants will pass out of existence, and in case of an emergency we will not have this great reserve of armor-making ability to fall back upon. If it pursues the policy of dividing the business between the Government plant and the three existing plants, the share of the business given to each will be so small that all the plants will be idle a greater portion of the time than even now, and the cost of production, not only in the Government plant but in the private plants, will be correspondingly increased.

In conclusion, it seems to me that the proper way to handle this matter is to adopt the amendment offered by Mr. BUTLER, under the terms of which the Government can fix the price of armor plate. This will protect the Government against exorbitant prices and at the same time keep in existence for the use of the Government and for its protection in time of need all of the present armor-making facilities of the country.

Mr. BUTLER. Mr. Chairman, I regret I have not more time to yield the gentleman, but I have not got it. I yield 10 minutes to the gentleman from Pennsylvania [Mr. HOPWOOD].

Mr. HOPWOOD. Mr. Chairman, the gentlemen of the Southland seem to think that Pennsylvanians and New Yorkers and men from Massachusetts ought all to be put in jail, and particularly the gentleman from Texas [Mr. DAVIS] seems to think that. I have heard all of them talk about on that line here in the last three days, and they do not seem to have any use for people who manufacture anything. They seem to be willing to send cars east to advertise semiarid lands and sell them to people in the North for ten times what they are worth, and, by the way, there was a car went through my town selling them, and one of those gentlemen got into jail before he left town, so some people besides Pennsylvanians do get in jail occasionally.

Now, the Carnegie Steel Co. has been painted here in very dark colors, and I am not presenting a defense for them, but they have, however, done some good things; they have established a $12,000,000 fund for pensioning their old, aged employees, and the Government, upon the whole, has yet to take up a bill for the pensioning of a few people in Government employ. Such a bill was presented in this House for pensioning postal employees, but you gentlemen on the Democratic side have tried to smother it by referring it to the wrong committee. So this wicked corporation has done a thing for its employees that you do not want to do for Government employees.

They have also appropriated some millions for people who have been hurt in the mines. They take care of them for a year if necessary, if temporarily disabled, and if they are permanently disabled they take care of them for life. They have done many other things in that line that I would like to call your attention to if I had the time, but that is not the question at issue here, and I will not take up further time in referring to it.

Mr. GORDON. No; talk about blowholes. [Laughter on the Democratic side.]

Mr. HOPWOOD. Oh, that was away back in 1894, nearly 20 years ago, and you have been blowing about it ever since. [Laughter on the Republican side.]

Mr. GORDON. Then that is covered by the statute of limitations.

Mr. HOPWOOD. The only things you people remember seem to be things that occurred 20 and 25 years ago. Now, as to that Russian sale that you talk so much about, when did that occur? That occurred back in 1894, and I will tell you that in 1894 and 1895 the Bethlehem Steel Co. did not have a contract with the United States, could not sell a pound of their material to the United States Government, and they tried to secure some business elsewhere. From 1887, when they established their plant, down to 1893 they sold only 6,000 tons, an average of only 1,000 tons a year, to the United States Government.

In 1893 they got a contract for 3,500 tons. In 1894 and 1895 they got nothing, so in 1894 and 1895 they attempted to get business abroad, and then they sold armor to Russia. In December, 1894, they sold 1,115 tons to Russia at $249 per ton for nickel steel or harveyized steel, and in May, 1895, they sold 224 tons at the same price. On November 27 to December 9, 1895, they got some real business from Russia by selling them 1,137 tons at £107 per ton, or approximately $524 per ton.

You gentlemen forgot to mention that sale. You mentioned the 1894 sale, but you forgot to mention the 1895 sale. It is in the testimony. Gentlemen, try and be fair in this matter, and when you call attention to things away back there that were not right and that were not defended on the floor here, give credit for selling good armor and give credit for selling it at a fair price now.

Gentlemen, in recent years you have been getting armor cheaper than any other country in the world. The testimony shows that, and you gentlemen, if you will look it over, will find it out. You will find that we are getting the armor at $425 a ton, while all other nations except one are paying more; and Japan, with her own plant, estimates that it costs her $496 to make her armor plate.

Now, gentlemen, in view of the fact that we are buying our armor at $425 a ton, and in view of the fact that we have established these plants, or, rather, had them established at our own request, and the fact that they have served us well, with one or two exceptions that have been mentioned here and which have been made much of, it can not be denied that we are producing the goods at a fair price to-day, and yet you gentlemen here, who were elected because of the extravagance of our side of the House, want to throw $11,000,000 away and establish a plant that will be nothing but scrap when it is done.

I think if I had the time I could demonstrate to you that you can never make armor anyway. You can not employ people like Charlie Schwab to make it. They are not in the market at Government prices. A salary of $100,000 a year would be nothing to him, for the valuable information that he has acquired since he was a boy employed in steel mills, a business in which he has amassed a fortune of $100,000,000, perhaps. But, gentlemen, you do not like a man worth $100,000,000. You like a man worth—well, say, 30 cents. [Laughter on the Republican side.] I like the 30-cent man pretty well, too, but I also like the man who can make his way in the world in whatever line of endeavor he starts. [Applause on the Republican side.]

Mr. PADGETT. Mr. Chairman, will the gentleman yield?

Mr. HOPWOOD. Yes.

Mr. PADGETT Denying the proposition that we are prejudiced against a man of wealth, I want to confess very freely that on this side of the House we do have a regard for the poor man that can not take care of himself. [Applause on the Democratic side.]

Mr. HOPWOOD. Well, we take care of the poor men in Pennsylvania, as I have indicated, much better than any man over there in any one of your States ever took care of a poor man. [Applause on the Republican side.] I will give you a talk on that question some time when I get the opportunity, and I will tell you how we take care of the poor man in Pennsylvania. But that would be a digression now.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Kentucky?

Mr. HOPWOOD. No; I can not yield. I have only 10 minutes. You propose to put $11,000,000 into an armor-plate plant. What will you have then? You will have a naked plant, with no expert knowledge to run it. You will have to go out and get people to run it. You can not get them from the steel mills. They have their experts, and they will keep them. They will not sell them to you nor hire them to you. It has taken 20 or 30 years to educate these men as specialists. You will have a plant without any experts to make the goods. Neither will you have any raw material. These plants are not only steel plants; they have back of them all the raw material necessary for the production of finished goods. The coal, the coke, the iron ore, the furnaces, and everything necessary is back of those plants.

Mr. CARAWAY. Mr. Chairman, will the gentleman yield?

Mr. HOPWOOD. Yes.

Mr. CARAWAY. If it is impossible for the Government to run its plant after it builds it, why do you object to the Government building it?

Mr. HOPWOOD. Simply because you Democrats will throw the money away. We have to help pay the taxes. [Applause on the Republican side.] I notice every time anything comes up about taxes you say, "We will make those fellows up in Pennsylvania and New York pay for it." You talk about preparedness, but you are not willing yourselves to pay for it. We are willing to pay our share.

Mr. CARAWAY. The Government will have to buy the steel to build the plant, will it not?

Mr. HOPWOOD. Yes; but you can not do it.

Mr. CARAWAY. Then what are you kicking about? [Laughter on the Democratic side.]

Mr. HOPWOOD. You have to practically make all the stuff in the plant before you can get a plant.

Mr. CARAWAY. Then why do you take up the time of the House to cry about it, if you are not going to be hurt? [Laughter on the Democratic side.]

Mr. HOPWOOD. Oh, you are doing the crying over there. You will be weeping if this bill goes into effect, because if your armor plant is built, you will find that you have nothing when it is done.

As I was saying, you have not got the raw material back of it. You will invest $11,000,000 in a naked plant. You would have to put $25,000,000 more into it in order to have an efficient plant, to have the things that are necessary to go into that plant to make it effective. No steel mill has ever succeeded in my country about Pittsburgh unless it had those things. Every steel company in Pittsburgh to-day has gone out into the coke fields and bought thousands of acres of coking coal. They have built their own furnaces; they have their own ore beds. The Government does not propose to acquire these things, and it would be very foolish if it did. I say that the building of this plant, to begin with, is one of the most foolish things that that party over there has ever proposed, in view of the fact that you are now getting good goods. You can not deny that. You are getting them at a proper price, better than other people are paying for similar goods in other countries, even where they have their own plants. Then if the cost is right, if the goods are right, if the plants are there, and if those plants have been induced to make this material because of the fact that the Government asked them to do it, and if those plants have no value for any other purpose—that is, those parts of the plants devoted to the making of armor plate—still you want to put those people out of business, confiscate the armor-plate plant entirely, throw it into the scrap heap, lose our people $20,000,000, lose the $11,000,000 you are going to put in of your own money, besides a good deal more that you will put in later, and all because you want a Government armor plant, and you can not run it after you get it. [Applause on the Republican side.]

Mr. BUTLER. Mr. Chairman, I yield 10 minutes to the gentleman from Pennsylvania [Mr. GARLAND].

Mr. GARLAND. Mr. Chairman, while I am not an accountant, neither do I pretend to be a bookkeeper, it has been necessary for me for a part of my life to know the cost of making steel and iron in order to meet the employers and argue for the wages for the men whom I represented in the big labor organization of the country, the Amalgamated Association of Iron and Steel Workers.

I have gone carefully over the report of this committee. I presume that the chairman did not bring in a report of the majority of his committee unless they knew something about the cost of making armor plate as well as the building of the plant. I have hunted carefully for some evidence of what the cost would be. I have gone back and found that in 1906 the naval board of officers made a report on the cost of making armor plate, and they went right down through it in detail, and among other things they provided a discard item of 37 per cent, and then added 5 per cent for imperfect ingots not forged and 5 per cent for ingots forged into condemned plate and 3 per cent for oxidation in forging, making a loss of 50 per cent. The report adds that "the above items are turned back to the furnace and their value is only that of the cost of cutting and conveying to the furnace." The report further shows the value of the ingot at forge to be about $71 per ton, or about 23 cents per pound, and this point is where the discard takes place.

In the making of armor plate the practice is that more than 50 per cent—running from 50 per cent to 58 per cent—of the ingots that are made for the purpose of making the armor plate is scrap, or, in other words, rejected. The practice of armor-plate companies is to take these big ingots that are scrap, cut them into shape, and make them into something else, like axles, something in high grade of steel that can be used; they do not lose them. If the Government is making armor plate and 50 per cent of the ingots are rejected, when they come to the forging point it is worth then about 23 cents a pound. The value has been put in it by labor and by metals and ingredients. What is the Government going to do with these rejected ingots, cut them up and make them into some other article? Oh, no; the committee refused a rule to let anything of that kind in, although the gentleman from Illinois, Mr. BUCHANAN, proposed to do it. What will they do? Melt it over? Then it becomes scrap, and, in the words of the report referred to, of value only of cutting and returning to the furnace.

Mr. SHERLEY. Will the gentleman yield?

Mr. GARLAND. No; I can not yield.

The CHAIRMAN. The gentleman is not obliged to yield.

Mr. GARLAND. At the least calculation 20 cents a pound of the 50 per cent of your steel is lost. In other words, you make 20,000 tons a year of armor plate and you require 40,000 tons of ingots necessarily to make that much plate. Then you cut off half of it and put it back into scrap; 20,000 tons is 40,000,000 pounds, at 20 cents worth $8,000,000, and the Government has lost that amount. The making of armor plate by the Government will be a failure. It is an attempt to make a campaign document, but it will be the biggest monument of foolishness and inability that the Democratic Party ever put into existence. [Laughter and applause on the Republican side.] Spend the people's money if you will, but remember the working people of this country will not agree to a wanton extravagance even though you do it to catch their votes.

I want the chairman of this committee or some one on the committee to explain to this Congress before they go any further in this matter as to the absolute justice of these figures and show where the credit is given.

I heard something on that side of the House said about blowholes. It is evident on that side that there was a thought that this side might be desirous of escaping that thought. Not at all; I willingly welcome it. I know something about it, and if you think you are going to make armor plate without blowholes, you have another guess yourselves. They may not be as big as they were when they first started to make armor plate, but steel is porous, and there are holes in it—smaller holes now it is true—but the defects are there, no matter where you make it or who makes it.

Reverting to these blowholes, that was another time in our history when the Democracy was in full bloom, as it is now. You had both the Houses and the President, and I remember well who discovered the blowholes. Not the administration down here but the men who worked in the mills—the Republican boys of Pennsylvania. [Applause on the Republican side.] The boys that go as sailors and soldiers and who have worked alongside of the men whose brothers and sons go out as sailors and who did not want to see them go down into the sea with any chance of losing their lives by defective work; they were the men that brought the evidence here. What was done? An investigation and a fine and then an exoneration. I do not forget the words, for I was working in the rolling mill at the time, and they keep coming back to me. I think it was Secretary Herbert who said in the exoneration that—

> While the highest point of efficiency required by the specifications for armor plate was not reached in this instance, yet the minimum specifications of efficiency that were required in making the armor plate were exceeded and therefore you are excused.

[Laughter and applause on the Republican side.]

That was during a Democratic administration, and the dishonesty, if you please to call it so—and whether it was or not is a question when you go into the making of armor plate—was routed out by the Republican boys in the mills of Pennsylvania. As I said, it was a Democratic administration, in full

bloom, from one House to the other, and up there in the White House, that excused it all and refused to continue the fine.

The report of the committee provides against a time study of "any job of any employee between the starting and completion thereof of the movement of any such employee while engaged upon such work," and so forth. Mr. Chairman, if the Government ever makes armor plate and tries to operate under the proposed rule as above, it will have to establish a morgue along with the plant. The pouring pits of the steel mills have been the scene of the most horrible accidents and most of it because some one faltered in the quick, efficient, and timed moment when a great molten mass of steel weighing up to as much as 350,000 pounds was poured and handled. I have had the experience of not alone carrying my fellow workmen out of the mill dead, but have lain many days between life and death just for the reason that a half dozen men faltered in their duty for one moment before the terrific heat of an open-furnace door.

As to the necessity of an armor-plate plant from the standpoint of use, there is no doubt but that the use of armor plate in large quantities is problematical. Modern war has reduced the effectiveness of high explosives. It is now a war of the best shells instead of the best armor, the problem is to get the shell to the place most needed to destroy. Whether it is carried to the spot by an aeroplane or a whirligig hung on its tail and it is spouted from the depth of the ocean or it is shot from the mouth of a cannon makes no difference when it strikes the strongest armored battleship, the result is the same. The present European war has shown wonderful progress in the two former plans of carrying and putting the shell where it does the greatest harm, and I believe both these means of destruction will improve and make less desirable in war in the future of heavy armor plate.

The recommendation of the committee on the ratio of six battle cruisers to two heavy armored vessels is an indorsement of this thought; as the cruiser has less than one-half the thickness of armor, but has greater speed, it is less resistant but more offensive.

Mr. BUTLER. Mr. Chairman, will the gentleman from Tennessee use some of his time?

Mr. PADGETT. I yield five minutes to the gentleman from Washington [Mr. DILL].

Mr. DILL. Mr. Chairman and gentlemen of the committee, I rise to support the amendment for a Government armor-plate factory. I am strongly in favor of it, because it is another step toward taking the profit out of preparedness. If I had my way the Government would, as soon as facilities could be provided, build every ship for its Navy and make all of its own munitions. I am in favor of the Government manufacture of all the necessary equipment for national defense, first, because it will remove the sinister influence of the war trust in the determination of our policy of national defense; and, second, it will enable us to secure a dollar's worth of preparedness for a dollar, instead of 60 or 70 cents' worth of preparedness for a dollar.

NEED NOT SUBMIT TO HORRORS OF WAR IN PEACE TIMES.

When a nation is fighting for its existence it may be compelled to yield to the greed of steel barons, Army contractors, munition makers, and even politicians who gamble for leadership. These are a part of the horrors of war. But this country is under no such compulsion. We are at peace and should protect the people from added burdens in the form of profits to those who make munitions and build ships in preparation for war.

PEOPLE'S VIEWS ON PREPAREDNESS.

Mr. Chairman, I am a new Member of this House. I come from the far Northwest. Owing to the great distance, I can not go home for a few days at a time to mingle with my constituents, as many Members who live near the Capital can. This question of national defense having become a burning issue since I was elected, I have been anxious to know what the people of the district I represent think about preparedness. I have wanted at all times to consider these great questions, so far as possible, from the standpoint of the individual citizens rather than from the standpoint of officials here in Washington.

Of all the places I have ever lived I have never known any place where it is so difficult to learn what the sentiments of the people really are as right here in Washington. I shall not take the time at this point to explain why this is so, but simply desire to call attention to the fact.

HOW MORE THAN 12,000 VOTED.

Because I could not go home, and because it was so difficult here to know what the people are thinking, I decided to write the voters of my district for their views. I sent a list of questions to every man and woman who voted in the fifth congressional district of Washington in 1914, and I received literally thousands of replies. These replies came from every class of people in every part of the district, both city and country. The first question I asked was whether or not they favored increasing the appropriations from $250,000,000 to $500,000,000 for preparedness. In reply I received a majority of 300 in favor of the big preparedness program.

CITY PEOPLE FAVOR AND COUNTRY PEOPLE OPPOSE.

Mr. EMERSON. What was the total vote?

Mr. DILL. The total vote was 12,517. Those in favor were 6,412 and those opposed 6,105. And the striking thing about it was that in Spokane, a city of 140,000 people, my home town, the vote was nearly 3 to 2 in favor of this program, while in the country districts surrounding Spokane, in the outlying counties, it was nearly 3 to 2 against the program. I have segregated the vote by counties in order that the RECORD may show exactly what the results are.

SUPPORTING THE PRESIDENT.

Now, I happen to live in a district that is normally overwhelmingly Republican, and I asked two questions, the results of which are interesting from a political standpoint. I asked whether or not they were in favor of supporting the President's policy as to Mexico and as to the European war, and the answers show that by a vote of more than 3 to 1 they support the President's policy in Mexico and by a vote of more than 2 to 1 they support him in his European policy. [Applause.]

OPPOSE COMPULSORY SERVICE.

Another question to which the replies may be of interest was whether or not they favored compulsory military service. Now, it happens that in Spokane one of the leading newspapers is continually trying to educate the people in favor of compulsory military service; yet out of the more than 12,000 replies on that question I found that 4,560 were in favor of it and 6,544 were opposed to it, or a vote of 3 to 2 against it. They were strongest against it in the country districts, but every county in my district was opposed to it, the majority against it being 2,000, although I counted all votes registered in favor of the Swiss system on the side of compulsory service.

FAVOR FEDERALIZATION OF NATIONAL GUARD.

The answers show an overwhelming preference for federalization of the National Guard and an opposition vote to the proposition of an embargo by a ratio of 7 to 5. They indorse the tariff board by more than 3 to 1 and the Government ship-purchase bill by nearly 4 to 1. On the question of withdrawing from the Philippines the vote is 3 to 2 in favor of withdrawal. Most of those who answered the questions understood "withdrawal" as meaning immediate withdrawal. Not more than 1 in 10 favored retaining them permanently. The questions and replies were as follows:

Do you favor increasing appropriations for the Army and Navy from $250,000,000 to $500,000,000?

	Spokane County.		Stevens County.	Chelan County.	Lincoln County.	Okanogan County.	Douglas County.	Pend Oreille County.	Ferry County.	Total.

	5,652	1,072	1,381	794	.....	932	294	399	390	10,914

NOTE.—The reason for blanks under Lincoln County is that I sent the questions to the people there a few weeks earlier and did not include all of the questions sent to the remainder of the voters of the district.

Now, these figures are interesting as coming from the people, and the most striking thing to me as I read these thousands and thousands of letters—and I read every one of them myself—was the continual repetition of the expression, "We do not care how much money is spent if you will take the graft out of it," "Spend the money, but take the profit out of it," "Cut out the pork, that is what we object to." And I believe that much of this "graft" and "profit" to which they refer is to be found in the contracts to manufacturing establishments which manufacture armor plate and other munitions of war. [Applause.]

TWO KINDS OF NATIONAL DEFENSE.

There are two kinds of national defense, Mr. Chairman. One is defense against the foes from without; the other is against the foes from within. I have no fear but that eventually the American people would successfully defend themselves against any and all foreign foes, but I have grave fears that this Nation may some time be destroyed by foes beneath our own flag. It can always appeal to the magnificent patriotism of the people to prepare and, if need be, to fight against a foreign foe. But the foes from within sometimes wrap the flag about themselves to arouse patriotic enthusiasm and then try to use that enthusiasm to induce the people to establish certain systems and institutions and to adopt certain policies which would ultimately destroy the Republic.

PEOPLE FAVOR PREPAREDNESS.

I believe that the American people are in favor of national defense. Because Members on this floor believe that this Congress will appropriate the most stupendous sums of money for preparation for war in time of peace ever appropriated for a similar purpose by any Government in the known history of the world. This Congress has already passed an Army bill to double the standing Army and to provide military training for the young men on a greater scale than ever before attempted in this country. Congress will pass this naval bill, which will carry the greatest increases in the Navy ever provided by any Congress. As the representatives of the people we do this because of the agitation for a greater national defense. In other words, we are already preparing ourselves for defense against the foes from without. This armor-plate bill will provide not only an addition to our facilities for preparation for defense against foreign foes, but at the same time will be a blow to those domestic foes which now confront us, namely, those who profit by war and preparation for war. As I have said before, I am ready and anxious to vote for measures which will make it impossible for anybody to make any profit whatsoever out of preparation for war.

At this point I shall insert in the RECORD a table showing the appropriations for military and naval purposes made by this Government during the past 15 years.

Naval and military appropriations of United States, 1900 to 1915, inclusive.

Fiscal year.	Appropriations for Navy.	Appropriations for Army.	Appropriations for coast defenses.
1900-1901	$61,721,695	$117,841,998	$8,740,001
1901-2	68,438,301	116,912,716	7,232,646
1902-3	82,977,641	95,930,488	7,181,139
1903-4	104,126,192	73,815,653	7,333,748
1904-5	116,655,826	76,704,343	6,821,426
1905-6	109,725,059	70,509,011	172,826
1906-7	98,392,144	76,930,157	11,788,697
1907-8	117,353,474	82,053,390	9,264,273
1908-9	120,421,579	98,665,550	8,301,573
1909-10	122,247,365	102,830,774	114,341
1910-11	111,791,980	96,811,477	5,653,378
1911-12	133,559,071	91,671,087	5,534,191
1912-13	129,787,233	95,167,711	9,391,325
1913-14	136,858,301	99,008,845	109,680
1914-15	141,872,786	98,704,814	11,804,072
1915-16	149,661,864	96,639,267	6,060,216
Total	1,805,590,511	1,490,197,281	105,403,532

Grand total of appropriations, 1900 to 1916, inclusive, $3,401,191,324.

This year we shall appropriate between $400,000,000 and $500,000,000 for preparation for war, and if we get a dollar's worth of preparedness for a dollar, this should, indeed, be a substantial increase in our national defense.

WHO WILL PAY THE BILLS?

But we should not be forgetful of the fact that somebody must pay the bills for the increases which we are making. If I have my way, those bills will be paid by those who can best afford it, namely, those who possess great wealth and those who are growing richer because of profits from the world war, particularly the munition makers. If I have my way, every dollar necessary to pay the added expenditures for the increases in the Army and Navy will be raised by an increased tax on large incomes, a Federal inheritance tax, and a tax on all munitions of war manufactured in this country.

PROFITS BY MUNITION MAKERS.

The profits American munition makers have made during this European war are so great as to be almost beyond belief. The Standard Financial Digest for January 12, 1916, gives the following figures:

Contracts for war materials said to be held by 25 leading companies.

Corporation name.	War orders, contract value.	Total outstanding stock.	Estimated earnings on war orders.[1]	Quotations on common stock—			Annual rate of dividend common stock.
				July, 1914.	High, 1915.	Dec. 20, 1915.

[1] At arbitrary rate of 25 per cent profit.
[2] Company incorporated in November, 1914.
[3] Officially confirmed.
[4] Not including extra dividend.
[5] Old stock.
[6] New stock.
[7] Company reorganized.
[8] Submarine boat closed at 45½.

Those are the figures for the first 15 months of the war. They do not include the orders and profits since December 15, 1916, which have been enormous. It is estimated by the Wall Street

Journal that these profits now amount to more than $2,000,000,000. Now, when the war in Europe shows signs of burning out, they look to this Government for a new market. They agitate for a preparedness which will bring more profits rather than a preparedness which will give us all the possible protection which can be secured for the money appropriated.

GOVERNMENT MANUFACTURE A SUCCESS.

That Government manufacture of munitions will give us more preparedness for the same amount of money is not a mere theory. It is based on facts and experience. Hon. Josephus Daniels, Secretary of the Navy, says:

Experience has demonstrated that it has been sound public policy for the Government to be able to manufacture smokeless powder. A few years ago the Government paid 80 cents a pound to the private company from which it purchased its supply. [The du Pont Powder Trust.] At the first session of the Sixty-third Congress I recommended an appropriation to add to the plant at the naval proving ground, the appropriation to be large enough to enable the Navy to manufacture all the powder for its ordinary needs. This year the product was nearly 4,000,000 pounds.

Congress made the appropriation and the Navy will soon be manufacturing in its own plant at Indianhead all the powder it needs at a cost of 25 cents per pound, instead of 53 cents it had been paying to private manufacturers. The cost of manufacturing in our own plant has steadily decreased. If the 3,984,978 pounds manufactured had been purchased it would have cost, at 53 cents per pound, $2,112,038.34. Inasmuch as the actual cost to the Navy was 25 cents, the cost was $996,244.50, or $1,115,793.84 less than the price charged by the private manufacturers. This saving is for one year only.

The Secretary then renews his recommendation of last year for a Government armor-plate factory to eliminate the private-profit graft from armor contracts.

It has been demonstrated beyond controversy—

Says Mr. Daniels—

that the prices charged by the armor-plate plants have no reference to competition and little reference to the cost of production. It is estimated that if our Government should establish a plant with the capacity of 10,000 tons, armor plate could be manufactured at $262.79 per ton, or a factory with 20,000 tons capacity at $230 per ton. The price charged the Government for the last armor plate purchased was $425 per ton, and the price in 1913 was $454 on contract let March 3, 1913, and $440 per ton on contract let November 17, 1913, and in 1912, $420 per ton. This shows that a very large saving can be effected if the Congress makes an appropriation in accordance with my recommendation for the erection of an armor-plate plant.

What is true of powder and armor plate is true of guns and aeroplanes and mines and submarines and ships.

WHY NOT SECURE ALL THE PREPAREDNESS POSSIBLE?

As one who believes in preparedness, I can not see why we should not get just as much preparedness for the money we spend as possible. I can not understand why anyone who wants preparedness for the protection of the country instead of for the enrichment of private manufacturers of munitions, should be opposed to this policy.

ATTITUDE OF NEWSPAPERS.

Yet, what do we find? We find that those great newspapers which print most about preparedness print least about the Government making its own munitions and building its own ships. Most of what they do print is designed to show it would be a mistake for the Government to attempt such work except in a limited way as it is now doing. But I am not interested in what these great newspapers want except as their attitude gives an explanation of their policies.

SPOKANE NEWSPAPERS ATTACK ME.

I have tried at all times to consider this question from the standpoint of the millions and millions of everyday men and women who make up the rank and file of our people. I desire always to consider their needs, their desires, and their welfare, remembering that they produce the wealth with which in the end the bills must be paid. I have tried all through this session of Congress to keep my mind open, remembering always that those who will profit by war preparations are preaching preparedness for a purpose, and that that purpose primarily is the filling of their own pocketbooks. Because I have taken this position, an opposition press in my home town of Spokane has branded me a pacifist. They have declared me a traitor to the interests of my country, and particularly to the interests of the great Northwest.

HAVE DONE WHAT I BELIEVED TO BE RIGHT.

But, Mr. Chairman, I have never changed my purpose nor have I taken time to reply to their unfounded attacks. I have been too busy with my daily work here looking after the interests of my constituents and the district I represent, as well as studying the larger national questions. I have preferred to do my duty as I saw it, and at the proper time go home to the thousands of fair-minded men and women who sent me here and let them know the truth as to my position on these great questions. I have stood at all times for a preparedness in the interests of the country as a whole, rather than in the interests of those who while covering themselves with the cloak of patriotism and talking much about the national honor, proceed with plans for operating on the pocketbook of Uncle Sam. I have disregarded the ridicule and the attacks of this powerful Spokane daily, because I feel certain that the great mass of those who read these news articles and editorials will understand the political animus which inspired them. In my judgment, a Member of Congress who changes his position because he is criticized either lacks the courage of his convictions and is therefore a coward, or has no convictions at all and changes from one position to another with every shifting change in the surface indications of public opinion.

HOPE WORLD WAR WILL END TRAFFIC IN WAR MATERIALS.

I have not the time to discuss the details of a national-defense program, but before I close I want to express the hope that this war will put an end to private trading in the implements of war. I hope one of its results will be to close down the business of the great world-wide war trust forever, because just as long as men can make enormous profits by furnishing armaments, it will be impossible to put a stop to great wars or even to limit armaments. The close connection of the Kaiser and the Krupps explains much of the German militarism. When Philip Snowden two years ago published a list of British public men who owned stock in armament firms, he explained the chiefest cause of England's continually increasing burdens of preparedness, and the conditions in France are said to have been equally bad.

WE WANT AMERICAN PLAN OF PREPAREDNESS.

I want this Government armor-plate factory built as an announcement to those who profit by preparedness and to the world that as this Nation increases its national defense it will decrease the opportunity for private individuals to make money out of those preparations. We all know that public opinion on the subject of national defense is still in a state of change. We are just forming our preparedness policy, and there are all sorts of conflicting opinions. Some of our people are so horrified by the bloodshed and suffering of this world war that they are for peace at any price. They are honestly patriotic in their views and entitled to consideration. Others are so filled with fear of attack by some of the warring nations when this struggle ends that they want to turn this Nation into an armed camp. They are honestly patriotic in their views and entitled to consideration. Still others are making so much money out of war orders and war stocks that they care for nothing except a preparedness policy which will enable them to continue their joy riding with the "war brides." They are patriotic for profit, and whatever defense policy we eventually adopt should be so framed that it will be impossible for them to make a dollar.

PREPAREDNESS POLICY SHOULD NOT CHINAFY NOR PRUSSIANIZE OUR PEOPLE.

The easiest way to determine upon a preparedness policy would be to imitate some European or oriental country, but it would also be the most dangerous. It would be a misfit, and has always led to war. I believe we should work out a national-defense policy for ourselves, remembering that ours is a democratic form of government. But if we are to do this, we must take our minds off of profits and pocketbooks and fix them firmly upon the principles that underlie our Government and our free institutions. Our people should not be Chinafied nor Prussianized by a preparedness policy. They should be Americanized. [Applause.]

Mr. DAVIS of Texas. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BUTLER. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, my interest in the question now discussed is confined almost entirely to a tendency of this House and of the country. The paternalism that is so apparent in the last two Congresses, expressed in the phraseology, the language of the socialist, is to me a very significant fact. I take the position that the Government should not do anything that private enterprise can do as well, and certainly it should not undertake anything that private enterprise can do better; and when the announcement is made here that the Government must go into this business because the country has been held up in price I reply the course to pursue is to correct the wrong that has been done. Correction does not demand destruction. If it is true that the Government has been held up—the figures quoted by the gentleman from Pennsylvania [Mr. STEELE] and others quoting from the hearings before the committee, throw a doubt upon the accuracy of that statement—then that wrong ought to be corrected; but it will not be corrected by the method now suggested by the majority of the House. It will be corrected by the Butler amendment which offers to let the Gov-

ernment itself, the only customer of these manufacturers, fix the price it is to pay. That is certainly as much as anyone could ask. It gives the Government the complete control of a contract to be made by it. You who say that the Government can manufacture more cheaply than private enterprise are saying it upon the basis that the Government must not suffer the outlay that the private enterprise must suffer. Private enterprise must suffer the cost of insurance. You say the Government does not need to suffer that cost, because if the property is destroyed we can resort to the Treasury of the United States to rebuild it. Private enterprise must suffer the cost of interest upon the money required to build, and you say that the Government need not do that, because it will take the money out of the Treasury which will preclude the necessity to issue bonds and therefore there will be no interest charge. You say that the private enterprise must pay the taxes to the Government, but that the Government need not pay the taxes, because if it wants to run the affairs of the Government all it has to do is to start the printing press to work, because we have the ink and the paper and the printing establishment down here on the Mall—start it to work and make the money.

There are a lot of Members on the Democratic side of the House who do not believe in that wild-eyed theory, but the soft-money, fiat-currency craze, which insists that you can easily account for the money necessary without cost to the people, is most prevalent on the majority side of the House. You can not vote one single dollar out of the Treasury of the United States which you do not take out of the pockets of the American people—money that came to the Treasury in the form of taxation upon the labor of the people. You can not vote money out to take the place of taxes, the place of insurance, the place of interest without laying a tribute on the people, who ultimately must pay the bill. [Applause on the Republican side.]

Private enterprise must estimate the depreciation of its establishment, to supply new machinery and other repairs; the Government need not do this, since all this needed equipment will come as an additional appropriation from year to year. Private enterprise must consider the necessary additions to its plants in the way of new requirements. The Government does not consider this, since this will be forthcoming for the asking. The overhead charges must be estimated in every industry, and in such large establishments this element is large. But the Government is exempt from this charge.

Here are numerous items that cost extensively, but are all ignored in Government estimates, upon the theory that all these losses which are made up by direct appropriations are not losses, but deficiencies, which do not cost the people anything, simply because it comes out of the Treasury and can be supplied by a deficiency appropriation bill. The fundamental fallacy of such reasoning lies in the assumption that since the Government does not take these items of cost into consideration in making up the estimates of construction it saves to the people that amount in the program. These items must be paid some time and somehow, and the mere fact that they are omitted in the original estimate does not mean, except to the theorist perhaps, that they are permanently excluded.

The proponents of this measure press it on the basis that the Government has been held up in price. Concede the accuracy of this statement. It does not prove that the Government will save in the end. There is no better-established fact than a well-regulated private enterprise will produce the finished article in shorter time, at less cost and greater efficiency, than the Government will. This is established in a hundred ways before our eyes.

Secretary Meyer, knowing the facts, urged the dismantling of several of our navy yards as an actual saving in time, efficiency, and expense.

Here is a reason for great caution against launching the Government into such enterprises. When once inaugurated it will be impossible to discontinue, no matter at what loss the continuing of the enterprise entails. The campaign already in motion to secure the location of the proposed armor plant is but a suggestion of the local interest which, when once established, will continue, no matter what loss may be entailed on the Government. The navy-yard situation is but a suggestion. The Army post is another striking illustration. This feature of local influence should not be overlooked in the character of control exerted over legislators whose duty is to guard the public weal. It is difficult to stop the leaks when to do so means to discontinue some local interest. The individual excuses his opposition on the ground that it comes out of the Government Treasury, which will not feel it because it is negligible. If it is argued that the Government can save the overhead charges because the proposed plant will require but one organization, while the private plants now existent require three separate organizations, the answer is that three could be made into one provided the Sherman law would permit private business to do what the Government proposes to do.

Mr. Chairman, "that government is best which governs least." This dictum of Democracy has been a rallying cry to the hosts ever since it was first announced by its author, Thomas Jefferson, in the early promulgation of his political theory. Expressed most frequently by leaders of Democracy in a negative form, we have it "that system of government is best where the largest individual freedom of opportunity and effort is respected." The fundamental contention expressed throughout all the years by leaders on the stump and in platform was against any governmental interference with individual initiative of the citizen. True, here and there, and now and then, fugitive spurts were made by inconsequential members of the Democracy to commit the party to paternalistic doctrines. Many of these efforts at various times assumed the proportions of propaganda, but usually of short duration. Since the war the socialistic tendency of Democracy expressed itself in various campaigns against a sound-money basis of our currency, in which the inevitable attempt was made to array one group of our citizenry against another. The man without money owes his situation to the man with money. They assumed the rôle of the monitor of the mass as against the class. The remedy proposed, of course, is to reorganize society. The Greenback craze back in the seventies was one instance of the headliner type. The free and unlimited coinage of silver in 1896 was the most historic instance. The public mind has never been totally free of the nostrums. The propagation of the Populist movement is another historic chapter. There always has been and quite probably always will be this element in our electorate. It feeds upon the misfortunes of men from whatever cause. The enthusiastic contention for populistic doctrines was never so apparent as to-day as disclosed in the discussion of the Federal Reserve System of two years ago, the bitter assaults upon the amendment I offered and which, adopted, to preserve the parity of the two metals, declared by Democrats of the unlimited-coinage belief to be an "insult to three-fourths of the Democracy in this country; the wild proposals in the Sixty-third Congress to take over by Federal authority the cotton crop, to hold until a certain price could be secured; the equally wild proposals on the rural-credit legislation, just passed through the House; all these perennial spasms demonstrate the strength of this element in the Democratic Party.

This paternalistic trend is not confined to a particular line of legislation. While the money issue is a favorite field for its advocates, it reveals itself in almost every statute written by this Congress. It is easy to explain. The human race is made up of various types. Some love to work, other do not; some will succeed, others hesitate to pay the price. Vast distinctions exist. Then, modern life is of modern social as well as industrial organization. So much of the utilization of discovery and invention in modern science has depended upon the union of effort under the law in the form of corporations. This means organization—leaders and followers, employers and employees. The railroad system could not have been developed by isolated individual action. It demanded collective energy and creative power, both directive and administrative. Men whose genius enabled them to do either should be commended. The world is reminded of this by the yesterday's papers announcing the death of the empire builder, James J. Hill. His was the mission of the organization and direction of the energies of others. Our country honors herself by respecting his achievements. The modern world, in whatever direction observed, demanded some sort of organization. Many of these utilities serve a public function and are consequently subject to public scrutiny. It is perfectly proper that, since owned by individuals who are subject to all risk, they should operate them; but, since they must affect the public, the public should have some say in the exercise of the functions for which organized—that is, some control not inconsistent with ownership. Hence public regulation of public utilities is justified; hence the regulation of transportation by an Interstate Commerce Commission; the regulation of our currency by the Federal Reserve Board; the regulation of methods of trade by the Federal Trade Commission; the regulation of rural credit by the farm-loan board; the regulation of water transportation by the shipping board. These boards, which have under their control most of the great industries, with billions of privately owned wealth, conducted in the main for profit, find justification of their creation in the conceded right of the public to secure at reasonable rates the benefits made possible by genius of invention, organization, and management. But when these commissions were created their function was strictly such regulation as will concede a reasonable profit; limited to regulation, not operation. However, the

trend is rapidly toward operation in this Congress. The Socialist element of the country insistently urge it. Their cause is not infrequently aided by the unwisdom of various industrial organizations in refusing to meet reasonable demands from the public. It often induces the populace to become militant. The express companies, for example, ignoring the public call, gave ground for the parcel-post law. The law was justified by the attitude of the companies. In this way the Government exercised a regulatory influence by becoming a competitor, in a sense. To this degree the public was justified, but not in the degree of the propagandist who desires the Government to take steps to monopolize this transportation activity by driving out of existence under an unfair competition all private enterprise engaged in this line because of his desire to make the Government chief employer.

The contention of Bryan and his many followers for Government ownership of the telegraph and telephone business of the country, which will doubtless take place in time, is but a step to the ownership and operation of the railroads of the Nation, to which he publicly committed himself some years ago upon his arrival from Europe, and to which the party as now led is approaching with no uncertain purpose. Every official act, including the recent legislation on railway mail pay, points to but one result. The constant heckling of the railroads of the past few years can have but one explanation, as it will have but one result if it continues, that is it will force the giving up of private ownership for Government ownership and operation. When that stage is reached the political activity of the lobbyist of to-day will be mild as compared with the new régime. Those now in power are influenced not by their party's former philosophy but by modern paternalism, and they are committing the country rapidly to universal Government ownership and operation of all public utilities; in a word, to socialism.

Mr. Chairman, every piece of legislation which has admitted of it reveals this trend. The party now in power in the various appropriation measures proceeds upon the theory that the Government is a reservoir of wealth to be drawn upon for various needs. There is no hesitation to make demands and to answer them. Note the Agricultural appropriation bill, with the thousand and one demands upon the Treasury of the Nation. Note the $43,000,000 for rivers and harbors, with many projects indefensible. I believe in internal improvements, but not such as here proposed, which passed the Senate on Monday of this week. Note the proposal to spend $85,000,000 out of the Treasury for building the roads of State and county. If money is to be taken from the Treasury, I admit this is justified since it is specifically for the public and will be accomplished under contract, not in competition with private enterprise. Note the $45,000,000 voted into the mouth of the Mississippi River under the scheme of flood control. This, in my judgment, was not justified and can not be defended. Note the $20,000,000 to build a Government nitrate plant over an obsolete method, proved out of date by the demonstration of more modern methods now in operation in Germany in full blast. This I denounce as an assault upon the Treasury that is shameful. Note the $50,000,000 to put the Government into the shipping business which passed the House last week. Professed to be an emergency, it will become the custom. Now comes the armor-plate factory, after a campaign of months by a Democrat of well-known paternalistic philosophy; a companion piece to the Government ownership of all munition plants as directed by the Democratic caucus.

Mr. Chairman, the real significance of any movement is not in the length of the step so much as in its direction. But this country has reached the stage where most legislation is in one direction and the chief concern is the extent to which it will carry us. The most alarming feature in it to me is the ease with which men embrace a policy, even men who until recently had been stalwart in their opposition to it. Twenty years ago State or national socialism was fugitive; a European doctrine born out of European conditions not yet heard in America. Ten years ago the forum resounded against its tenets as promulgated by the imported leaders. In the last Congress, when we authorized the building of the Alaskan Railroad, I being among those who preferred the Government to do it rather than to make the necessary concessions to private capital in the light of our concessions to the transcontinental roads, loud protests were heard from most of us against our vote committing us to the policy of Government ownership, as the construction of the Panama Canal did not commit its supporters to Government ownership of transportation.

The advocates of modern paternalism embrace every opportunity to remind the Congress and the country of these votes as evidence of their growth, and there is no doubt that many who at that time withheld support view the progress with small concern. That vote will continue to be quoted in support of many measures to come.

In the last two Congresses paternalism has been the dominant note. But nothing in all the past is equal to this present Congress. Members in this House who call themselves Democrats never lose a chance to further their chief theory, paternalism, the inevitable end of which is socialism. The most outspoken paternalist of the present House save one is able upon his record to enter the Democratic primaries of his State and win the race for Senator. When he speaks to his colleagues and when his paternalistic philosophy scintillates in every paragraph, he always has the attention and interest of his hearers. This indicates the response this House gives to it. Democratic candidates for governor enter the lists upon paternalistic platforms. This is done this very year of 1916. Men who but two years ago soundly inveighed against socialistic legislation, then proposed demurely, support the same thing this year; and when questioned why the change, some answer the "Government-ownership element is negligible," while others excuse it by saying, "Well, the people seem to want it." Both answers indicate how complete is the surrender. This progression reminds us forcibly of the familiar words of the poet:

> Vice is a monster of so frightful mien,
> As to be hated needs but to be seen;
> Yet seen too oft, familiar with her face,
> We first endure, then pity, then embrace.

Mr. Chairman, the Democratic passion for Government ownership, once so denounced by the leaders, is best shown in this determination to provide the Government armor-plate factory. The claim that the Government has been held up by these factory owners will not now explain. If that were now the case, the issue would be different. Whatever has been done in the past, the proposition of these owners now before us, and the proposal we are now considering in the Butler amendment, nullifies such statement. It is not a question of the past. It is a question of the present and the future. What is the necessity of a Government-owned plant as here proposed in the light of the offer of the armor companies to furnish the needed armor for an indefinite period at the price fixed by our Government agent, the Federal Trade Commission. Mr. BUTLER offered the following amendment in committee, which was rejected:

> The Federal Trade Commission is hereby directed, immediately after the passage of this act, and annually thereafter, upon the request of the Secretary of the Navy, to investigate and inventory the armor-plate plants of the United States, and to estimate and determine the average full cost of producing armor plate at said plants under the four following conditions, to wit:
> (a) Plants running at full capacity.
> (b) Plants running at two-thirds capacity.
> (c) Plants running at half capacity.
> (d) Plants running at one-third capacity.
> After so determining the full cost of producing armor plate at said plants the said Federal Trade Commission shall, at once, report to the Secretary of the Navy a fair and reasonable price the Government should pay for its armor plate. Upon receipt of such report the Secretary of the Navy is hereby authorized to enter into a contract or contracts for armor plate to meet the needs of the Government, now or hereafter, at or below the price per ton so reported as the fair price for the proportion which the tonnage awarded bears to the aggregate capacity of the plants, and the appropriation hereby made for the erection or purchase of an armor-plate plant shall not be used for that purpose until the said report has been made to the Secretary of the Navy and the manufacturers of armor plate have failed, within 30 days after notice of such report, to accept the same and to enter into a contract for the manufacture of said armor plate at or below the price per ton so reported by said commission.

There can be no more desirable proposal than this. It will be acceptable to all the country, except that portion of it that has a passion for Government ownership and operation of all utilities and wish to add this one more triumph over private ownership.

What is the real armor-plate situation to-day? There are now three factories in the United States that manufacture armor plate—Bethlehem Co., Carnegie Co., and the Midvale Co. These companies built the armor factories upon the recommendation of the Government, as it is the only real customer. These companies have a capacity of 32,000 tons annually. The estimated needs of the Government are not over 24,000 tons. This means these factories will be employed to three-fourths of their capacity if allowed the contract.

The Government-owned plant is not necessary to supply our wants, for the plants already exist and are capable of such needed extension as emergency may demand. What are the facts in regard to cost? Figures officially compiled for the Senate Committee on Naval Affairs from the Naval Yearbook show that under conditions prevailing just before the present European war the chief naval powers were paying these prices for armor: England, $503 per ton; France, $460; Germany, $490; Japan, $490; United States, $425.

What has been the price paid in the past? The Bethlehem Steel Co., according to its statement to the committee, has since 1887 supplied to the United States 95,072 tons of armor, at an

average price of $432.62 per ton. During the same period its aggregate sales to foreign countries amounted to 5,331 tons, about 6 per cent of the total, and out of that amount 3,967 tons were sold at a higher price than was charged in the United States. The fact is that for 20 years the United States has obtained a higher grade of armor and paid less for it than any other great naval power, and that in the face of the fact that wages paid in the United States are very much higher and costs here would naturally be greater. The fact is that the price charged is much lower.

But, Mr. Chairman, I am not so much concerned about what we did in the past. We must not allow the remedy to be worse than the disease. I am therefore concerned about this proposal now before us to erect an armor-plate plant, at an initial cost of $11,000,000, with no suggestion of how much more. To do this of course means to destroy the three plants now in existence. According to the proposed naval program now before us, a Government armor plant of 20,000 tons capacity will more than supply the armor for the program in the proposed bill. When the Government plant is built, the private facilities will therefore become valueless. They are of no use for any other purpose. Not only will a private industry then have been crippled, but an important reserve factor in national defense will have been destroyed. The dismantling of these plants would be a national misfortune in case of emergency.

The Secretary of the Navy in his annual report estimates that the Government can make armor at $262.79 per ton in a plant of 10,000 tons running at full capacity. The prevailing price is $425 a ton. He estimates the difference as the advantage of Government over private manufacture. Here we have the erroneous contention of the paternalist. The estimate is absolutely fallacious. The Secretary's estimate covers mere shop work; it omits many important items which must enter into actual cost. His estimate makes no provision for administration and general expense, for insurance, taxes, and depreciation of plant, for interest on investment, and working capital. The omission of these items enabled the Government to underbid the private yards in the construction of *No. 43* and *No. 44* dreadnaughts and they must be paid in one way or another by either Government or private manufacturer. Secretary Daniels's estimate assumes that the Government plant will be run at full capacity. The award of a contract large enough to keep any plant running full would make possible equally great, if not greater, economies in a private plant.

Mr. Chairman, I hold no brief for any individual or group of individuals. I simply desire to impress the country with the meaning of this propaganda. It is not and will not be confined in this debate to the armor-plate item. The manufacture by the Government of aviation equipment will be pressed, in face of the immature and undeveloped stage of the art of air transportation, which now, under individual initiative, is rapidly approaching the stage of absolute reliance. If any Member had a doubt of the advantage of private as against Government ownership and operation, in economy, efficiency, and speed, let him view the miserable fiasco of a building program under the Government of our present Navy Department, as disclosed Tuesday by Mr. BRITTEN, of Illinois. Let him interpret the significance of the majority vote on the same day against a speeding-up program.

Did the armor-plate situation demand the Government operation, I would not protest. But the Bethlehem Steel Co. made the following statement of its position with reference to armor contracts with the United States Government. When I oppose this proposed armor-plate factory, I am not concerned, save my desire to see the Government pursue the policy to leave individual effort free in all cases where it is possible to do so.

The statement follows:

First. We are urging no plan of preparedness. We have advocated no policy involving increased expenditures by the Government for any purpose. We are attempting to show, in the frankest and most open manner, that it would be unnecessary and unwise for the Nation to spend $11,000,000 to build a Government armor plant, because existing facilities can supply every need, and the Government can buy armor at least as cheaply as it can manufacture it for itself.

Second. If the United States should become involved in war or threatened war, the Government of this country can have any product we manufacture—armor plate or anything else—at any price it chooses to pay; and under such circumstances, and regardless of price, our entire plant will run 24 hours a day with every pound of energy behind it.

Third. It has been stated that this company has realized enormous profits from the manufacture of armor plate. The fact is that armor is the least profitable article we manufacture. In our armor plant, which is useless for any other purpose, we have invested $7,100,000. That same amount of money invested in a steel rolling mill would have earned profits of $1,400,000 a year. Yet that investment in armor plant has produced only average annual gross receipts of $1,418,993. In other words, the same amount invested in a commercial plant would have produced as much profit as the total receipts (covering expenses and profit) for armor supplied to the Government.

Fourth. The profits realized by this company in 1915 were not from armor plate. Our total sales in 1915 were about $200,000,000, of which the gross amount received for armor plate amounted to but $3,000,000—not 2 per cent of our total business.

At the present time we can obtain in Europe almost any price we choose to ask for our products; but we have not since the war began raised the price of any ordnance products to the American Government.

We now offer to reduce the price of armor plate for the United States from $425 to $395 a ton.

The price paid now—$425 a ton—is less than that paid by any great naval power.

It is said that if our offer is accepted, and the Government plant not built, the price of armor will soon begin "soaring." That there is no danger of any such contingency, and as an earnest of our policy—

We will agree to make armor at the reduced price named for at least five years; or

We will agree for an indefinite period to make armor at any price which the Federal Trade Commission may name as fair.

The fact is that armor manufacture is and has been the least profitable branch of steel making.

Japan has a Government plant. She pays wages very much lower than are paid in this country. Her people are known for efficiency, yet the actual cost of her armor plate (according to official data) is $490 per ton. Is there any reason to suppose the American Government could do any better?

We have offered to reduce our price, not because the present price is too high.

The shop cost of producing armor was found by Senator TILLMAN'S committee to be about $262 a ton. Those figures represent our own experience, if our plant ran at full capacity.

The report in 1906 of the committee of naval officers, headed by Capt. Kossuth Niles, estimated that the manufacture of armor costs 10 per cent more for a plant running at only two-thirds capacity, and 30 per cent more when running only one-third capacity.

Senator TILLMAN'S production cost of $262 a ton, running at full capacity, did not include administrative expenses; it did not allow any interest on the value of plant or working capital; it did not provide for insurance, taxes, or depreciation. Such items would in one way or another have to be met by the Government, just as much as by a private manufacturer.

The naval estimates call for 24,000 tons of armor per year for the next five years. If we receive orders for 8,000 tons per year, we can run our plant at two-thirds capacity and reduce our price.

In the past our plant has run at an average of one-third capacity. That is why $425 has been a low price. If we could have run at two-thirds capacity, as is now possible, we could have made a reduction then.

To provide for all items of cost with our plant running at two-thirds capacity, would make the total cost about $399 a ton. This covers merely shop cost plus the carrying charge on the plant; it covers no allowance for profit.

We offer the reduced price named or we agree to accept the findings of the Federal Trade Commission as to what a fair charge would be.

Is it likely that we would suggest, as we have done, an investigation by the Federal Trade Commission if we feared their findings would show extortion in the past?

Our situation is easily set forth:

We have a plant now built which cost us $7,000,000. If a Government plant is built, ours is rendered useless and valueless. The whole of our investment will then be sacrificed.

Any return, however small, on the cost of our plant, any payment toward taxes, insurance, and depreciation, any contribution toward the administrative expenses, is better than the loss of the whole plant.

The passion of this Congress for Government ownership as represented by the majority in both wings is simply alarming. In the light of what this and the last Congress has actually done, and what it attempted and failed to do, I am justified in my statement that the Democratic Party will not only be dominated but will be owned and controlled by the socialistic element within the next score of years. Here is a show-down of your much boasted Jeffersonian individualism. It is a proposal to follow your policy on the nitrate proposition and the shipping bill to place the Government in competition with private enterprise to build an armor-plate plant at an initial cost of $11,000,000 when not needed, thereby dismantling by force of superior power in the Government three plants with a capacity of 32,000 tons, the very plants erected at great cost and at the suggestion of the Government. This proposal is made by this Democratic Congress with the company's counter proposal submitted in writing to supply the Government the needed armor for an indefinite time at a price to be fixed by the Trade Commission, our Government's own agent.

This counter proposition will be rejected, if at all, in the interest of a principle that dominates this Congress, a principle that has become a passion.

In the light of this probability it is pertinent to ask, What will be the next step? It will not suffice these paternalists to make armor plate. The iron ore must be secured and blasted and the steel must be manufactured. Is it easy to understand why already agitation is heard for Government ownership of the ore mines, of freighters, and furnaces to procure the material for armor. The same hatred aroused against the armor manufacturer because he sold at a profit will be aroused at other producers, who can not operate without some profit. It will be said the Government must not be subject to pay the owner's price of the raw material and be compelled to make the armor at a price greater than we can now purchase. Hence, Government ownership of the raw material is necessary.

This is the trend to-day. Already we hear of the Government's duty to take over the oil production, own the pipe lines,

and manufacture gasoline. That is but one demand of many. The same is heard about the price-fixing function of the Government. There is a persistent propaganda now at work to stifle competition by governmental decree that an article must not be sold except at such a price. How far this will extend no one knows. It most probably will extend to the price of meat in due time. Do we propose to purchase cattle ranches, erect packing houses, and own transportation lines—in a word, to raise cattle, slaughter them, pack them, and retail the meat by Government decree? What will be the function of the small farmer in time? This is, of course, the paternalist idea, and judged from the Democratic drift of this Congress it is a Democratic idea. The old Democratic doctrine that the individual should be encouraged by the Government's security of his freedom to initiate and compete has given way to the idea that the Government should assume control of the productive forces and citizens should be its pensioners. In spite of the powerful influence of Mr. Gompers, the great labor movements are rapidly being committed to this propaganda, which is but another straw to indicate the subtlety of the movement. The next step, which is exceedingly popular in certain quarters, is the nationalization of the lands, where all will be tenants in Uncle Sam's domain. Already many Government employees look to the Government to take care of them in old age out the General Treasury as its wards. Members of Congress are flooded with letters and petitions. While a retirement system should and must be devised, it should not be allowed to feed upon the General Treasury, but from a fund created by reasonable contribution of those to become its beneficiaries. When we reach the stage to which the policy of this administration is rapidly tending the Government will be everything and the individual will be nothing save a pensioner. Under such condition we may understand how a German soldier serves his country for 9 cents per day.

This is the party of Thomas Jefferson, whose political philosophy was best expressed in his famous dictum "that government is best which governs least," and who never failed to denounce governmental interference with individual enterprise as pernicious intermeddling. This is the party of James Monroe, who vetoed an act of national aid to internal improvement. It is the party of Andrew Jackson, who by the aid of Calhoun, successfully inveighed against a Government-aided national bank to its destruction. It is the party of Thomas H. Benton, popularly known by his nom de plume as "Old Bullion," because of his hard money views. It is the party of Horatio Seymour and Samuel J. Tilden, both widely known for their sound positions upon governmental questions. This is the party of Allen G. Thurman, John G. Carlisle, Grover Cleveland, and CHAMP CLARK, all known to the world for their rugged common sense. But the party of these leaders has given way to a new school of political thinkers. I can not better express the real significance than was done by our colleague, Mr. SAUNDERS, of Virginia, two years ago, when he delivered himself on the then pending shipping bill:

> This shipping bill has been hailed with delight by Debs, Berger, and other leading Socialists in the United States, and why not? It is a concession that their main contention is fundamentally sound. Enact this bill and the Socialists, not the Democrats, will have occasion to rejoice. Its passage may be a victory for the forces behind this measure, but the fruits of that victory will attach to an opposing organization, since our indorsement of their main contention will give an impetus to the development of their propaganda that nothing else would afford to the same degree.

No one will doubt the accuracy of the distinguished Member's utterance. In the following statement he allows the wish to be father to the thought; in less than two years later he voted for a measure which involved the same principle:

> The Socialist contention that Government ownership and Government operation should replace private ownership and private operation has not found favor in the Democratic Party, at least not up to the present time. For one I am opposed to it. I believe in individual initiative ownership. Hence my opposition to the pending bill which provides for Government-owned and Government-operated ships in the field of foreign trade. The Democratic Party has always favored the development of a privately owned merchant marine. Our last platform calls for such a marine, and the legislation of August, 1914, was intended to lay the foundation on which private capital could build. The amount carried in this bill, great as it is, and capable of being applied to very great advantage in many directions of domestic utility, would buy a comparatively small fleet of merchant ships. Still they would be sufficient to chill the spirit of private initiative, and discourage and deter private capital from the effort to establish such a merchant marine as our platform contemplates.

This trend is not confined to the legislative branch of the Government. It is extremely pronounced in the Executive orders. So far as the public knowledge extends, all of this legislation is heartily approved by President Wilson. His appointments display this warmth of conviction toward Government ownership and operation of the paternalistic coloring. His head of the Industrial Commission will be answer to all such queries. His recent selection of the distinguished Ohioan, Single Taxer Tom Johnson's first lieutenant, as the head of an important executive department at a critical moment indicates his sympathy with the Henry George theories. His recent appointment to the highest tribunal of the country of another brilliant figure well known for his views on economic questions reaffirms the current opinion. His earlier attitude toward business men and business organizations is quite in keeping with his appointments referred to. While it will be asserted that all these appointments and many others were made in the interest of political strategy, the most significant fact is the undoubted and complete control of a refined socialism of the present-day Democracy. The Federal Reserve Board and Federal Trade Commission appointments give this administration the most partisan character since the days of Jackson's spoils régime.

Mr. Chairman, this armor-plate proposition of itself may not be important. I am not deeply concerned about it, except as an indication. Its proof of an incontestable fact is the enormity to me. I am willing to be looked upon as an out-of-date thinker. I am inviting the charge that I refuse to look forward. But I shall accept the chastisement most willingly and will continue my contention that this land is yet the place of opportunity. I desire to hold to the old doctrine that every man is the architect of his own destiny. I will use what influence I may exert against this which I call vicious teaching that we must look to the Government for the satisfaction of our wants. I hate with all my being that poisonous doctrine which declares that if a boy succeeds it was mere accident and if he fails the fault is due to the Government or even, if you please, to society. What we need in America is a revival of the common-sense view that if anyone is willing to pay the price of industry, frugality, devotion to the duty at hand, he will as surely as the night follows the day be rewarded by a reasonable success. On the contrary, success will no longer be a term in the language of our people if self-reliance is eliminated and governmental reliance substituted. This growing doctrine, that has already become a habit of mind with many, that we must milk the Government for every purpose, individual and collective, is not only unwise, but it is un-American, and will sooner or later disclose its real results in the loss of individual initiative, of personal ambition, all lost in the common dependence upon your Uncle Sam, who, we are told, is rich enough to give us all a farm.

MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having resumed the chair, a message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed with amendments the bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, had asked a conference with the House on the bill and amendments, and had appointed Mr. CLARKE of Arkansas, Mr. RANSDELL, and Mr. NELSON as the conferees on the part of the Senate.

The message also announced that the Senate had passed without amendment joint resolution of the following title:

H. J. Res. 214. Joint resolution increasing the number of sheets of customs stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing during the fiscal year 1916.

NAVAL APPROPRIATION BILL.

The committee resumed its session.

Mr. BUTLER. Mr. Chairman, I yield to the gentleman from New York [Mr. HASKELL].

Mr. HASKELL. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BUTLER. Mr. Chairman, I now yield 10 minutes to the gentleman from Illinois [Mr. MADDEN].

Mr. MADDEN. Mr. Chairman, I know no man who is interested in the manufacture of armor plate, and I have but a slight speaking acquaintance with any person who is interested in the manufacture of steel. I have no interest in this question except the public interest, and I want to call to the attention of the House for a moment the extravagant waste of public money indulged in by the Democrats of this House. We have just passed a river and harbor bill appropriating more than $20,000,000 which is a plain waste of money.

Mr. GORDON. Mr. Chairman, will the gentleman yield at this time?

Mr. MADDEN. No; I will not yield at all. Within the past two years the Democratic Party has levied a so-called war tax amounting to $200,000,000 upon the people of the country, and it has done so because of the extravagance of the Democratic Party. Within the last week or two we have proposed an appropriation of $3,000,000 more to be added to the $50,000,000

for the extension of the Alaskan Railway. We have just appropriated $50,000,000 for flood control, and the Flood Control Committee has just made a trip to Texas to see if it could discover another river upon which to make further appropriations. We have appropriated $20,000,000 for a nitrate plant in the name of war, when there is no necessity for it. We have appropriated $15,000,000 to be loaned to the rural-credit banks without interest. There is a bill pending, just come from the Senate, appropriating $75,000,000 from the Public Treasury for road building—an activity that belongs to the States; and now we propose, after having just appropriated $100,000,000 for the purchase of ships, to appropriate $11,000,000 more to construct an armor-plate plant. This amounts in all to $524,000,000 charged against the Public Treasury, at a time when there is not a dollar in the Treasury, at a time when not one dollar of it is needed for the proper conduct of the Government, and when every dollar of it could be saved. We are in a period when the people of the Nation are looking to us to prepare for the protection of our institutions, and instead of conserving the finances of the country for the purpose of enabling us to meet the demands of the people, we squander their money on useless nothings, in order to employ additional men upon a Democratic pay roll. Thirty thousand new places have been created within the last four years, at a cost of $44,000,000 a year to the taxpayers of America. I do not know whether we have been paying more money for armor plate than we ought to pay, but if we have a remedy is proposed, and that remedy will be found in the amendment of the gentleman from Pennsylvania, Mr. Butler, which authorizes the Trade Commission, every man of whom has been appointed by the President of the United States, to examine the books of the armor-plate companies to ascertain what it costs to make armor plate, and to furnish that information to the Secretary of the Navy, with the right upon his part to propose the payment of a price to be ascertained by the Trade Commission, and in the event of the refusal of the armor-plate companies to accept that price, then authorizing the Government of the United States to enter upon the manufacture of armor plate. Can anything be more fair? Do you want the Government to drive every business out of existence? You want the people of the United States to pay the taxes and yet every day propose measures here to put the men of the United States out of business in order that you may enter into competition with them at the expense of the taxpayers.

The time has come when the people of the Nation will call a halt to your extravagant waste of public money. The time has come when the people of the Nation will demand that they as the Government shall be permitted to pursue their activities in peace, willing to pay the taxes to maintain the Government, to defend its rights; they will demand their right to pursue their legitimate calling without interference from you or anyone else. The Congress of the United States and the President of the United States combined are not the Government of the United States. The people are the Government of the United States. They have rights that you as their servants are bound to respect and the day is not far distant when they as your masters will call upon you for an accounting of your stewardship and demand to know the reason why in season and out of season you have persisted in embarrassing them in their legitimate pursuits. The time is here now, and on the 6th or 7th day of November the people will speak through the ballot box, and they will speak in no uncertain terms, and when they have spoken you will discover once more that all of this Government ownership embarrassment to the business activities of the American people will be repudiated. I am not in sympathy with any monopoly. I believe that all persons engaged in business under the protection of the American flag ought to engage in that business along legitimate lines, and I believe that they are entitled to the protection of those they elect and those who are supposed to speak for them and not to be embarrassed in every way within the power of those who are but their servants by taking their business away from them and taxing them in time of peace in the name of war, so that you may continue in your extravagant, reckless waste of public funds. You will answer; they will call you to account, and this purpose to enter upon the manufacture of armor plate at the expense of the Treasury in the name of economy will disclose the fact, if you are given the power, that instead of paying $395 a ton for armor plate the Treasury, when you have control of its manufacture, will be charged with double that amount. There will be no way to discover what it costs when the Government makes it. There will be no bookkeeping that will disclose the facts, because the power of taxation is in your keeping and you will cover up the facts in order that you may be able to levy new taxes and have a continuation of your iniquities, your extravagance and lack of wise business judgment. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. Cox].

[Mr. COX addressed the committee. See Appendix.]

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman and gentlemen of the committee, I listened to the distinguished gentleman from Chicago, State of Illinois [Mr. MADDEN], when he spoke about economy, and I want to say to the gentleman I have been in this House ever since the 4th of March, 1913, and every time there is a proposition for the American people to save money I have found the gentleman from Chicago and his Republican cohorts voted against it. [Applause on the Democratic side.]

He is opposing the Government establishing an armor-plate factory at a cost of $11,000,000, which would yearly save many millions of dollars to the American people.

He opposed the establishment by the Government of a nitrate plant to make powder and fertilizer.

The gentleman from Illinois [Mr. MADDEN] offered the amendment to reduce parcel-post packages to 50 pounds. He rails at the Democrats for passing the rural-roads bill. Everything the people need the gentleman opposes.

Every time there has been an amendment offered to add more appropriations on, to bear down on the taxpayers of this country, I have seen the gentleman from Chicago march through the lines to bear down on the people and put additional burdens on them. [Laughter.] Every time the American people have had a proposition pending in this Congress to save money the gentleman from Chicago goes against it. He stands with the great organized capitalists of this country to bear down upon the man who labors.

Here you have a provision offered in this naval bill to give to the American taxpayer dollar for dollar for what goes into armor plate. There is not a man on the floor of this House, there is not 1 per cent of the reading people of this Republic, who do not know that the American people have been robbed by the manufacturers of armor plate ever since we have been building battleships. There is not a reading man in the American Republic who does not know that all these manufacturers of war material, the manufacturers of guns and cartridges, have been robbing the American public; and here, the first time the committee has ever brought out a provision to protect the taxpayers from a further robbery, in so far as armor plate is concerned, the gentleman from Chicago raises his eloquent and able voice against the people for the thieves who have been all these years robbing the people. [Applause.]

Of all the disgraceful scandals that have ever been tried before the American public on the floor of this Congress and through the Department of Justice, the worst resulted in the prosecution or attempted prosecution of the Armor-Plate Trust when they bored holes in the armor and put defective material in the battleships, upon which rested the safety of the commerce and the lives and liberties of the American people; and for that trust this gentleman rises up to-day and says we must not establish a plant to manufacture armor plate. Who is it that opposes the Government manufacture of armor plate for our battleships and battle cruisers? The great steel corporations and the trusts engaged in the manufacture of armor plate. The proof shows that they charged three prices to the American Government; and now is it because our Government proposes to go into this little branch of manufacturing armor plate that our friend opposes it or is it for the benefit of the great trust that manufactures that material? It is plain to me that the people who oppose the Government manufacturing this war material want to continue in the same old rut of allowing the American people to be exploited and plundered.

I want to say to the gentleman from Chicago, in reply to his argument, that the rifles that the Government manufactures cost $16 and those that they have been buying from private factories cost $27—identically the same gun. This machine gun which you have read about, that weighs 32 pounds, cost $1,200, purchased from private factories. As to the little tripod and the harness or braces that go on the mule's back, to carry the gun and ammunition, great statesmen on that committee inquiring about it discovered that a tripod that Sears & Roebuck, of the gentleman's own town, would supply for about 30 cents, is supplied by this gun manufacturer at $300, and that the little carry harness that goes on the mule's back costs the Government $500 at the hands of a private factory. Any man who ever used a shotgun and who is a judge of arms knows that the machine gun, weighing 32 pounds, and a little tripod or pair of tongs to hold it up, is worth about $75, but, manufactured by these people and sold to Uncle Sam, it costs the taxpayers of this

Republic $1,200! Mr. Chairman, the failure to pass this provision in the bill would be a reflection on the integrity of this House. We must take the profit out of war—guns, ammunition, and armor plate. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. BUTLER. Mr. Chairman, I will say to my friend from Tennessee that I wish he would consume a little of his time. He is away ahead of us.

Mr. PADGETT. Mr. Chairman, I will yield 20 minutes to the gentleman from Colorado [Mr. KEATING].

The CHAIRMAN. The gentleman from Colorado [Mr. KEATING] is recognized for 20 minutes.

Mr. KEATING. Mr. Chairman, this has been a very interesting debate. I never thought I would live to see the day when a Republican from Pennsylvania in the American House of Representatives would insist that the so-called "high-priced" labor of the United States could undersell the so-called "pauper" labor of European and Asiatic countries. And yet one of the gentlemen from Pennsylvania assured us to-day that the Bethlehem Steel Co. and the Carnegie Steel Co. and various other companies were selling armor plate to the United States Government for less than the Governments of Asia and Europe were paying for the same kind of armor plate, and the gentleman did not deny that those concerns made money out of the transaction.

Now, my friends, unfortunately the facts do not entirely bear out the contention of the gentlemen. The fact is, we do not know what foreign governments are paying for armor plate. If you will turn to the hearings before the Committee on Naval Affairs, you will find that Mr. BROWNING, one of the gentlemen who spoke this morning, examined Secretary Daniels on this very point. I read from page 3683 of the hearings:

Mr. BROWNING. Mr. Secretary, you are just speaking of exorbitant prices which have been charged the United States for armament. Are we not buying it here cheaper than the countries abroad?

Secretary DANIELS. Nobody knows what the countries abroad are paying.

Mr. BROWNING. It was testified here what they were paying. Even Japan, with her own armor-plate plant, and cheap labor—it costs them more than we have ever been charged.

Secretary DANIELS. That information does not come from any reliable source.

You noticed, when my friend from Michigan [Mr. KELLEY] was addressing the House and the distinguished gentleman from Alabama [Mr. OLIVER] attempted to interrupt him, that Mr. KELLEY did what is very unusual for him—he fled from the attack.

Mr. KELLEY. Mr. Chairman, will the gentleman yield?

Mr. KEATING. But there was good reason for it, and if the gentleman will bear with me I will tell the House why he ran away.

Mr. KELLEY. That is what I would like to know.

The CHAIRMAN. Does the gentleman yield?

Mr. KEATING. He ran away, because he felt that the gentleman from Alabama was about to fire the same shot at him that he had fired at one of the witnesses before the Naval Committee, and that he would tell this House why it was that these steel manufacturers were not selling their surplus products in foreign lands. The reason is, as testified to by the distinguished Secretary of the Navy, that an international agreement exists between these armor-plate manufacturers, and that the American manufacturers can not sell in a foreign country without provoking the foreign manufacturers to cross the ocean and sell in America. Our friend from Alabama [Mr. OLIVER] made that quite clear in the hearing. On page 3690 Mr. OLIVER said, questioning Secretary Daniels:

Is it not a significant fact and in support of the report of Secretary Herbert—

And the report of Secretary Herbert, Secretary of the Navy in the second Cleveland administration, was that there was an international agreement, an international trust, of which the American manufacturers were a part—

that at this time the armor-plate men inform us that this Government, even at the price they were charging for armor plate, to wit, $454, was paying much less than foreign Governments had been paying—I repeat, is it not rather significant that though other Governments were paying and were willing to pay prices greatly in excess of what this Government was paying, still we find no soliciting of sales abroad at high prices; and does not such fact support the finding of Secretary Herbert that there was an agreement between home and foreign armor-plate manufacturers not to interfere with one another?

Secretary Daniels replied:

I think that is true.

Mr. OLIVER. May I ask the gentleman, Is it not a further significant fact that at the time Secretary Herbert made that finding suddenly those home companies all withdrew from the foreign market, although they claimed at that time—in 1895—that they were securing a higher price for armor abroad?

Mr. KEATING. Oh, I will say to the gentleman that the evidence is overwhelming to show that there was an international combination among the makers of armor plate.

Another of our friends from Pennsylvania [Mr. GARLAND] had much to say about the "patriotic Republican boys" working in the steel mills of Pennsylvania who furnished the Government with information which led to the exposé of the blowholes in the armor plate furnished the American Government by the Carnegie Steel Co. Mr. GARLAND told you that he was a representative of organized labor, and I believe he has won the unique distinction of being the only representative of organized labor who ever attempted to defend the Steel Trust on the floor of the American Congress. [Applause on the Democratic side.] The gentleman told you that the information was furnished by the "Republican boys." He did not tell you that those "boys" furnished the information to a Democratic committee of this House and that that committee prosecuted an investigation which resulted in the imposition of a fine of $600,000 on the Carnegie Steel Co. He tried to leave the impression with you that none of that fine was paid. According to the figures of the Navy Department, the fine was reduced by President Cleveland to $140,000, of which $35,000 was paid to those "patriotic Republican boys" in the mills in Pennsylvania and $105,000 to the Government.

Mr. KELLEY. Will the gentleman yield?

Mr. KEATING. I have not much time, but I will yield to the gentleman, because he is always courteous.

Mr. KELLEY. Referring to the question of selling armor abroad, I should like to call the attention of the gentleman to the fact that on page 3751 of the hearings there is a reason given why they do not sell abroad. Secretary Daniels, in reply to a question by myself, said:

You ought to recollect that in most countries the Government is a partner or controller.

Then I asked the question that if that be the case, that if the Governments are partners or controllers, how he could expect the armor makers of the United States to go into foreign countries to sell their products?

Mr. KEATING. I trust the gentleman will not contend that it is impossible for the armor-plate manufacturers of the United States to sell abroad. You may search the hearings from one end to the other and they will sustain the contention that there is absolutely nothing to show that there is a condition abroad which prevents our manufacturers selling there.

Mr. KELLEY. If, as the Secretary of the Navy says, the Governments abroad are interested in the factories, how would the gentleman expect our armor-plate makers to get the opportunity to sell to the Governments abroad?

Mr. KEATING. The Governments abroad are not interested in all the factories.

Mr. KELLEY. The Secretary so stated in his testimony.

Mr. KEATING. I think the gentleman is putting a rather broad interpretation on the remarks of the Secretary.

Mr. KELLEY. I have quoted his statement exactly.

Mr. KEATING. I have no doubt of that. I would not for a moment imagine that the gentleman would not quote it exactly if he quoted it at all, but the gentleman knows that according to the quotation which he has just read that Secretary Daniels does not say that all the European Governments are interested in the domestic armor plants. What the Secretary said was that "most of the countries" were so interested. The Secretary all through these hearings has contended that there was an international armor-plate combine, and time after time, in response to questions propounded by the gentleman from Michigan, made it perfectly clear that, in his judgment and in the judgment of Secretary Herbert, there was an understanding between American and foreign manufacturers, and that it was that understanding which prevented American manufacturers selling abroad. [Applause on the Democratic side.]

The CHAIRMAN. The time of the gentleman has expired.

Is there any further time to be used? If not, the Chair will put the question.

Mr. BUTLER. Mr. Chairman, will the chairman of the committee permit me to have a little colloquy with him? The demand on this side for time to express views upon the subject now before the committee is very great. Would it be agreeable to the gentleman that we extend the time for general debate 15 or 20 minutes on each side so as to accommodate gentlemen who wish to speak. I will admit that the gentleman has been generous, but I can not refuse to submit the request, because there is great pressure on me for more time.

Mr. PADGETT. I am willing that the gentleman should submit the request to the House. I will not offer any objection to an extension of 15 minutes on a side, if the House is willing.

Mr. BUTLER. Will the gentleman object to a request for 20 minutes on a side?

Mr. PADGETT. Say 15 minutes on each side.

Mr. BUTLER. Mr. Chairman, I ask unanimous consent that the time for general debate be extended half an hour—one half to be controlled by the gentleman from Tennessee [Mr. PADGETT] and the other half by myself.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that debate on this amendment and all amendments thereto may be extended 30 minutes—one-half to be controlled by himself and one-half by the gentleman from Tennessee [Mr. PADGETT]. Is there objection?

There was no objection.

Mr. BUTLER. I yield four minutes to the gentleman from Kentucky [Mr. POWERS].

Mr. POWERS. Mr. Chairman, President Wilson has again changed that changeable "single-track mind" of his. He now favors, at least for election purposes, a tariff commission. Formerly he was opposed to it. Formerly he was in accord with the views of his party and the well-known Democratic doctrine on this question. It was the Democrats who opposed the organization of a tariff commission in 1865; also in 1883, as well as in 1910. All three of the commissions to which I have referred did good work, but in each case Congress paid little heed to their labors and reports and all of them passed quietly out of existence. It was the Senate Democrats who opposed and voted against the creation of a permanent tariff board in 1909 and the House Democrats who filibustered it to death during the closing hours of the Sixty-first Congress, 1911; and but for a provision in the Payne tariff law of 1909 authorizing the President to employ such persons as might be required "to secure information to assist the President" in knowing whether or not any trade discriminations were being made by foreign countries against our exports, President Taft never could have appointed his tariff board.

The Democratic Party has fought the creation of such a board all along the line. Pressing political necessity has forced President Wilson to change his position on this vital question. He now asks the Democratic Party to change its position. He had his son-in-law, Secretary McAdoo, to draw up an administration tariff commission bill. The majority leader, CLAUDE KITCHIN, I understand, refused to stand sponsor for it; so that job has been undertaken by Representative RAINEY of Illinois, one of the Democratic heavyweights of the House. He has introduced the McAdoo bill, which is now known as the Rainey tariff commission bill. It is the administration measure and the one which the President will try to force through this Congress.

It provides that the tariff commission "shall be composed of six members, who shall be appointed by the President," and that each commissioner shall receive a salary of $10,000 per year.

Section 3 of the bill makes it the duty of the commission—

> To investigate the administration and fiscal effects of customs laws of this country now in force, or which may be hereafter enacted, the relation between the rates of duty on raw materials and finished or partly finished products, the effects of ad valorem and specific duties, * * * and it shall investigate the operation of the customs-tariff laws, including their relation to the Federal revenues.

Section 5 provides:

> That the commission shall have power to investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, the effect of export bounties and preferential transportation rates, the volume of importations compared with domestic production, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including cost of production and dumping.

These sections set out the powers and duties of the proposed tariff commission, except it is to make its reports to Congress, to the Ways and Means Committee of the House, the Finance Committee of the Senate, and the President. It is to investigate the "effects" of customs duties. Why the "effects" and not the facts? Why investigate the "effects" at all? Did not the Baltimore platform tell us all about the effects? Was not the effects the high cost of living, the existence of trusts, unwarranted extravagance, and were not the many robbed to enrich the few? The people do not need any tariff board to tell them about the "effect." They understand the nightmare of hard times that swept over this country following the enactment of the Underwood tariff law. They know about the idle factories, the closed workshops, the suspended traffic, the 5,000,000 jobless men, the closed mines, the bread lines and soup houses that sprang up overnight and remained to plague the authors and advocates of the free-trade measure. This commission is to investigate the "relations," between "the rates of duty on raw materials and finished or partly finished products." Why? It shall investigate the operation and effects of the customs laws. What is the purpose of that? "It shall have power to investigate commercial treaties." Why investigate them? It shall have power to investigate preferential provisions. And what is that for?

Why not abolish them at once, in so far as lies in the power of the commission and a Democratic Congress? The commission shall have power to investigate the volume of importations compared with domestic production. And what do the Democrats want that done for?

The commission shall have power to investigate all conditions, causes, and effects relating to unfair competition of foreign industries with those of the United States, including dumping. And what can be the purpose of all that from a Democratic viewpoint? Why are they concerned about conditions, causes, and effects of unfair competition of foreign industries with those of the United States? What has that got to do with the manner in which they are to levy tariff duties and collect revenues? Has not it always been the theory of the Democratic Party that their only purpose in imposing tariff duties upon goods shipped into this country is to raise enough money to run the affairs of the Government when economically administered? They do not care how tariff duties affect American industry and American wage. All they want to know is whether it will produce revenue. Has not it always been their theory that they levy tariff duties not for the purposes of protection but for the purposes of revenue and for no other purpose? Did not Senator SIMMONS, joint author of the Underwood-Simmons tariff law, say in the Senate?—

> We are not trying to give protection in the duties we impose here.

And yet the only purpose of a tariff commission is to ascertain facts upon which a protective tariff can be based. There can be no other reason assigned for its existence. Has not it been the Democratic position all along that tariff duties levied for the purposes of protection were unconstitutional? Did not they say this in the platform upon which President Wilson was elected? It reads as follows:

> We declare it to be a fundamental principle of the Democratic Party that the Federal Government, under the Constitution, has no right or power to impose or collect tariff duties except for the purpose of revenue.

The Supreme Court of the United States has decided in the case of Champion *v.* Ames (181 U. S., 321) and in the case of McCray *v.* The United States, reported in One hundred and ninety-fifth United States, page 27, and in other cases, that Congress does have the power to legislate to protect American industries and that such legislation is not unconstitutional; but that does not feaze the Democratic Party or interfere with their ridiculous platform declarations.

If it be true, as claimed by the Democrats, that to levy tariff duties for the purpose of protection is unconstitutional, how can they consistently advocate the creation of a tariff commission to investigate the "effects" of customs duties or even the facts in regard to them? Why are the Democrats now concerned about the "effects"? What have the "effects" got to do with it if it is unconstitutional to levy duties for the purposes of protection? If it is unconstitutional to levy tariff duties for the purposes of protection, what does the Democratic Party want with a tariff commission "to investigate all conditions, causes, and effects relating to unfair competition of foreign producers with those of the United States, including dumping"? If tariff duties can be constitutionally levied only for the purposes of revenue, why create a permanent tariff commission at a cost of $300,000 annually to investigate conditions and wrongs, which could not be constitutionally righted, even though they should be found to exist? What use, pray tell me, has the Democratic Party for a tariff commission since tariff duties, according to its theory, can be levied only for the purposes of revenue?

If the Democrats are right in their contention, the creation of a tariff commission empowered to investigate the various things provided for in this bill, at an annual expense of $300,000, is unwise and foolishly extravagant. If the Democratic theory of levying tariff duties merely and only for the purposes of revenue is the correct one, all the data and information they need for that purpose is easily accessible now in the proper departments here in Washington. All they need is a few statistics from the Treasury Department as to imports and exports, especially imports, and a little expert advice as to how these would be affected by the raising or lowering of the duties and an estimate as to the amount of money needed to defray the expenses of the Government and the tariff bill is ready. That is partly the reason why the Democrats paid no attention to the arguments used by the business world in shaping the Underwood tariff law.

It was partly on the theory that they did not need the data furnished by a tariff board, and partly on the theory that the Taft Board's reports were partisan, that the Democrats refused to either use its reports or to appropriate money for its maintenance.

The Democrats said that the unanimous reports of this board were partisan and declined to consider them in drafting the Underwood tariff law. The reasons why the Democrats refused to use or be in any way guided by the reports of the board, were that the facts found in them failed to support their theory of "a tariff for revenue only." The three Republicans and the two Democrats on the board made able reports on print paper, crops, and farm animals, wool and cotton. Each of the reports were agreed to by all the Democratic as well as all the Republican members of the board, nevertheless they were rudely repudiated by the Democrats of the House in shaping their tariff legislation.

They said that the report of a tariff board was useless; that all the data needed was easily accessible; that it was the duty of Congress to frame tariff legislation independent of the advice of other bodies or boards; that the maintenance of the tariff board was a useless expense. So they put it out of existence June 30, 1912. And besides did not President Wilson, both in his letter to ex-Gov. Cox, of Ohio, and in his Indianapolis speech, say that a tariff commission was unnecessary and that the Federal Trade Commission was already clothed with all the functions of a tariff commission? And if these things be true it is nonsensical—it is worse than that, it is positively criminal—to tax the people of this country the enormous sum of $300,000 each year to obtain data not needed by Congress, or, if needed by it, easily accessible in the Treasury Department. No, gentlemen; your thinly disguised purpose and feverish haste to create a tariff commission at this particular time will fool nobody. Do not be deceived about that. President Wilson hopes to capitalize for himself, and you hope to capitalize for your party, a sentiment that exists in the country for a tariff commission. Your motive is to turn that sentiment to your own political ends. You hope to give us the name, but not the substance. How could you give us the substance without overturning your Democratic teachings and beliefs of a lifetime?

The President knows that the Underwood tariff law is anathema in all parts of the United States, and that the voters are more than anxious to pay their respects to its real author, the President himself. He now attempts to becloud and confuse the situation and the issue by his belated advocacy of, and conversion to, a tariff commission. He hopes to raise a fog and make the voters believe that through such a commission the tariff blunders of the Democratic Party can be rectified and the sufferings of the people relieved. President Wilson knows that the Underwood tariff law is an utter failure; that it has neither protected American industry nor raised the requisite revenues to pay the running expenses of the Government.

He says he has changed his mind about the necessity for a tariff commission, but adds in his letter to the Democratic majority leader, Mr. KITCHIN:

> I have had in this change of mind no thought whatever of a change of attitude toward the so-called protective question.

It is plain to be seen that the President is a free trader still. He says he has not changed his mind about "the so-called protective question." He is as much of a free trader now as he has always been. He is the same bitter opponent to the American doctrine of protection that he has been in the past, and neither by act nor word will he give encouragement to it. It is the duty of the President to recommend such legislation as will fulfill the platform pledges of his party. He will want a tariff board that can be relied upon—a board in full accord with his own and his party's views. This Rainey tariff commission bill provides that the President shall appoint the six members of the tariff commission for terms of 2, 4, 6, 8, 10, and 12 years, respectively. The Democrats, of course, will be appointed to the long terms.

When Representative BARNHART, of Indiana, went down to the White House and proposed to President Wilson that Congress name five members of the commission and the President one, no doubt Mr. Wilson felt like showing him the door. The President emphatically disapproved the idea. He wanted to appoint them all. The bill provides, as I have said, that he shall do so. He will appoint a tariff commission that believes as he does.

He will put upon that board no man who is a protectionist, no man who believes in giving assistance to American capital or American labor. From such a body there will come neither sympathy nor assistance to any American manufacturer or American wage earner. No effort will be made by it to equalize conditions here and abroad. The voice of the business world will not be heard. Such a body would start its investigations with the predetermined belief of a lifetime that protection is a form of robbery and that only in free trade can the masses get a square deal. All their collection of data, all their investigations, all their conclusions would be directed to that end.

In the very nature of things any tariff board appointed by President Wilson would be a partisan free-trade body, notwithstanding the bill provides that not more than three of the members of the board "shall be members of the same political party." Upon more than one occasion President Wilson has made known to the world what his notions of a nonpartisan board is. He seems incapable of appointing a nonpartisan board of any kind. And, too, it should be remembered that the Rainey bill provides that the President may remove any member of the commission for inefficiency or neglect of duty. It will be the purpose of the President to appoint pencil-marked instead of engraved Republicans, should he appoint a Republican at all; but if in this he should make a mistake and appoint a real Republican, who would undoubtedly balk at Mr. Wilson's instructions, he would be relieved of his job on the charges of "inefficiency and neglect of duty."

The law provided that the Federal Reserve Board should be nonpartisan, but when President Wilson got through making his appointments the board stood six Democrats to one Republican, with his son-in-law, McAdoo, and John Skelton Williams, another violent partisan, ex officio members of it.

The law provides that the Federal Trade Commission should be nonpartisan. After President Wilson made his appointments it was found that there was not a Republican on it. A tariff commission appointed by the President will be equally partisan. The Democrats accused the tariff commission appointed by President Taft of being partisan and refused to use its findings of facts.

Would not the Republicans be able to use the same argument against the findings of facts of the board appointed by President Wilson, if such a board there should be?

It should be noted, however, that it is not the purpose of the Wilson tariff board to report findings of facts; it will be empowered merely to express opinions, to investigate the "effects", of customs laws, not to find the facts concerning them, and report them to Congress.

Congress is the body that will finally have to pass upon the rates of tariff duties, whether there is one tariff commission, a hundred, or none. The Constitution provides that Congress shall do this. What Congress wants are the facts and not the expressions of opinion of any board or body.

A tariff commission's report on the "effects" would be merely an expression of opinion by the members of the board in conformity with their respective party beliefs—nothing more. And, mind you, the tariff board originally proposed by the President was neither required nor empowered to report to him or to Congress its findings of facts or even its opinions. It was merely to report its opinions to the two tariff-making committees of Congress—the Ways and Means Committee of the House and the Finance Committee of the Senate.

Representative GEORGE W. FAIRCHILD, of New York, a member of the Ways and Means Committee, said concerning this feature of it:

> Each of these committees is absolutely partisan, appointed for the purpose of reporting tariff measures that reflect the tariff policy of the party in power. Republican members of the committee were not permitted to share with the Democratic members in drafting the Underwood bill, and this is the custom usually followed.

The new tariff commission bill approved by the President and introduced by Mr. RAINEY on March 27, 1916, differs from the first bill in some respects. Among other things, it provides that the commission shall report to the President and to Congress, as well as to the two committees heretofore mentioned; but it will, in effect, be the same as reporting to these two committees, since the reports of the commission will be referred to them.

In practice the majority of neither of these committees permits the minority to share in drafting a tariff bill. A majority of these committees would obtain from a majority of the tariff commission a report in favor of the policy favored by their party. The minority on these committees would obtain a report from the minority of the commission equally partisan. The result would be that instead of the tariff board taking the tariff out of politics, it would, in a way at least, be dragging it further in. The intention and purpose of the reports of the majority and minority of the board, respectively, would be either to foster and fortify the Republican position of protection or the Democratic theory of free trade. Free traders do not need a tariff board at all; protectionists do. Protectionists need it to report the facts showing the difference in the cost of production and wage here and elsewhere, to the end that such tariff duties may be levied as will adequately protect both from

the low-priced labor and cheaply produced products of other countries, and yield a fair and reasonable profit to the American producer.

When another tariff commission is created it needs to be created and its work outlined by the party that gave the idea birth and not by the party that saw no virtue in it and that consistently opposed it, until they saw an opportunity to turn their advocacy of it to political account.

The President is playing a gigantic game of politics in his quick conversion to the tariff-commission plan. He saw condemnation and defeat staring him in the face. It caused him to turn turtle. The public was demanding the repeal of the Underwood tariff law, which gave the President so much pleasure to sign. Something must be done by the President to check adverse sentiment. Create a tariff commission and take the tariff out of politics was the plan devised, but it will fail to work. The people want the tariff revised, but they want it done by its friends, not its foes. If a revision of it depended upon the creation and investigation of a tariff commission, it would be at least five years before it could be done. The Democrats are satisfied with the Underwood law. They do not want revision. They want delay. They want to lull the American people, and especially the protectionist voters, into a sense of safety until the November election is over.

Unless a protective tariff is put on the statute books of our country restoring protection to our home markets, home products, home industries, home capital, and home wage earners before the war in Europe is ended, industrial death and want await us.

God pity the bleeding, death-strewn countries of Europe until this fearful war is over, and God pity us afterwards unless protection is restored.

Mr. PADGETT. Mr. Chairman, I yield eight minutes to the gentleman from Wisconsin [Mr. REILLY].

[Mr. REILLY addressed the committee. See Appendix.]

Mr. BUTLER. Mr. Chairman, I yield as much of five minutes as he may desire to the gentleman from Pennsylvania [Mr. MILLER].

Mr. MILLER of Pennsylvania. Mr. Chairman, the bill under consideration appropriates the gross sum of $241,449,151. It is the largest naval appropriation bill ever presented to Congress. It is an increase of $91,787,000 over the appropriation for the year 1916.

If the amendment offered by the chairman of the Naval Committee [Mr. PADGETT] authorizing the building or purchase of a plant to manufacture armor plate prevails, it will increase the appropriation $11,000,000, making a total of $252,449,000.

The building program of the bill provides for an expenditure of $160,000,000, but this bill only provides for $59,000,000 to be expended during the year 1917. The other $101,000,000 is to be appropriated for in the next session of the Sixty-fourth or a succeeding Congress.

The bill provides, among other expenditures, for the building of the following:

5 battle cruisers, at a cost not to exceed	$75,000,000
4 scout cruisers, at a cost not to exceed	18,000,000
10 torpedo boats, at a cost not to exceed	10,000,000
20 submarines, at a cost not to exceed	34,000,000
1 fuel ship, at a cost not to exceed	1,265,000
1 ammunition ship, at a cost not to exceed	2,600,000
1 hospital ship, at a cost not to exceed	2,250,000

Although the bill provides for a large amount of money, I will support it, but I hope the amendment of the chairman of the Naval Committee [Mr. PADGETT] to appropriate $11,000,000 to build or purchase a plant to manufacture armor plate by the Government will be modified by the amendment of the gentleman from Pennsylvania [Mr. BUTLER] authorizing the Federal Trade Commission, after a full investigation as to the cost of armor plate, to make a report to the Secretary of the Treasury as to what would be a reasonable price per ton, and in the event that the owners of the existing armor plants refuse to accept such price, then the proposed appropriation of $11,000,000 shall be available to enable the Government to build an armor plant or factory.

Mr. Chairman, so far as my district is concerned, although it is an iron and steel manufacturing district, it does not mean a button to any citizen residing in it whether the Government builds an armor-plate factory or whether it does not. Nor do I regard this as a political question. It is purely a business one. This country needs armor plate, and some one must make it. If we were buying it abroad, or if there were no manufacturing establishments in the country that produced it, and we had the bill before us that we now have appropriating $160,000,000 in the next two or three years for a naval-building program, I would say, let the Government build an armor-plate factory. What have we got? We have three armor-plate factories in the United States with an annual capacity of 32,000 tons. In the last 28 years the Government has never but once exceeded that amount in contracts—not that much was built in any one year, but in one year—1900—there were contracts made for a little more than 37,000 tons, which were made in that and subsequent years. In the year 1912 contracts were made for 15,343 tons; in 1913, for 15,876 tons; in 1914, for 24,384 tons; and in 1915, for 16,021 tons, but the average annual amount in the last 28 years has been a little over 8,000 tons. What do we propose? We have three factories in this country with an annual capacity of 32,000 tons, and this bill proposes to use about 24,000 tons annually, every ton of which can be made by the three establishments. Somebody says that it costs too much, but the amendment of the gentleman from Pennsylvania [Mr. BUTLER] proposes that the Federal Trade Commission appointed by President Wilson, composed of fair men, a majority of them Democrats, shall fix the price at which it shall be made. Is not that fair? Can the Government do better than that?

But there is another matter. The program that is provided for in this bill, if followed out, will provide for more armor plate annually than the Government can build with this proposed plant, which is to have a capacity of not exceeding 20,000 tons a year. Where are they going to get the other 4,000 tons? Does any man of sense presume for one moment that the three armor-plate factories, that have a capacity for 32,000 tons, will keep their plants ready for operation to make 4,000 tons annually? That is absurd. The factories are of no use for any other purpose; they can not utilize them for any other purpose, and the result will be, if this bill is passed, that they will be dismantled, and then what? Does any man know what it will cost to make armor plate if the Government makes it? Not a man in this House, not a man in the United States, knows what it will cost the Government to make it. It is admitted that the Government of the United States to-day is getting armor plate cheaper than any other country in the world. It is conceded that it is getting the best armor plate manufactured in the world, and it is conceded that it is getting it always and all of the time when it is wanted. Why build a factory? Why make an experiment when you can not make it any cheaper than you can get it under the amendment offered by the gentleman from Pennsylvania? [Applause on the Republican side.]

By unanimous consent Mr. MILLER of Pennsylvania was granted leave to extend his remarks in the RECORD.

Mr. BUTLER. Mr. Chairman, I yield three minutes to the gentleman from Michigan [Mr. SMITH].

Mr. SMITH of Michigan. Mr. Chairman and gentlemen of the committee, I think we should approach this question in the same manner that we would approach a business proposition of our own. I want to submit whether or not any gentleman in his own enterprise who thought of making an investment of $11,000,000 in a business when another institution stated to him that it would manufacture the product for him and let him name the price at which it would be manufactured? I would like to know whether or not he would be warranted in going into that business? I want to say that as a general proposition it is the history of the manufacturing institutions of this country that the Government can not successfully compete with private enterprise in the cost of manufacture of any product it undertakes to make. You are simply throwing away the $11,000,000 you are putting into this enterprise in order to manufacture armor plate. Private enterprise and individual effort has made this the greatest manufacturing country on the globe. I am not afraid that we will not be prepared for any conditions that are going to confront us. This country will never suffer from any attack of any foreign power. We are perfectly safe with Canada on the north, for the day that England would strike out for this country she would lose that great colony, and what little there is left to us of the Panama Canal, after what we gave to England, both countries can defend. If this country and England can not, then let Germany come over and take it for a little while until we set our house in order and we will go down and blow her out of the sea.

Why, we are perfectly safe. You can put Belgium, Holland, and ancient Greece down in the State of Arkansas, and you can put Japan over in California——

Mr. STEPHENS of California. No; you can not.

Mr. SMITH of Michigan. Well, the World's Almanac gives the area of California at 158,297 square miles and of Japan at 147,000 square miles. You can almost put Italy into Florida, and they look a good deal alike. But I base this preparedness not upon a fright that we are in danger of being wiped out, but I put it upon the proposition that it is our duty and only a good business proposition for us to keep up with the prosperity of our country. [Applause].

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Mr. Chairman, will the gentleman from Tennessee use a portion of his time?

Mr. PADGETT. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. OLIVER].

Mr. OLIVER. Mr. Chairman, this debate seems to have proceeded on the idea that the only purpose to be accomplished by the building of a Government armor-plate plant is to secure a cheaper price than has heretofore been paid. While the extravagant prices charged may have first suggested the inquiry that finally led to this proposed legislation, yet economy is only one of the many good reasons that can be assigned to show the necessity and importance of making this appropriation for a Government armor-plate plant.

I will briefly state some of these other reasons and later discuss more at length the question of price. Many believe that the item of profit should be removed and thereby lessen the incentive that some think has existed on the part of armor-plate manufacturers to unwisely insist on the type of ships that should, from time to time, be added to our Navy. The amount of armor plate necessary for a battleship is about 8,000 tons and the amount necessary for that other important class of capital ship, known as the battle cruiser, is only about 3,000 tons. It is rather significant that our Navy to-day is admittedly unbalanced, because we have emphasized heretofore the building of battleships and have failed to build any battle cruisers. England laid down her first battle cruisers in 1905 and Germany laid down her first in 1907, and now all of the naval officers who have appeared before our committee point out the imperative necessity of adding at once a number of battle cruisers to our fleet in order to make it efficient. A further reason has been assigned by the Manufacturers' Record and other publications of recognized force and authority that an armor-plate plant owned by the Government should be established at some point in the interior, and that for strategic reasons it is a great mistake to concentrate all these factories in a narrow area.

Naval officers have further called the attention of the committee to the fact that it would be wise to maintain as secret those processes that may be adopted for the making of the best and highest type of armor plate, and in this connection I will say that we have not yet reached the limit in improving the quality of armor plate. Reference has been made in this discussion to the fact that the quality demands of our naval officers are wisely made more exacting from time to time. Now, to advert to the question of price and to answer the claims made by the gentleman from Pennsylvania that an injustice would be done the private plants located in that State if the Government should now establish an armor-plate plant, for the reason that some, at least, of the present plants, back in the year 1887, were requested by some Secretary of the Navy to go into the business. Taking up this last claim first, it is probably sufficient to say that the committee appointed by Secretary Herbert to investigate the cost of armor plate reported in 1896 that the profits realized by the Carnegie and Bethlehem companies up to that date had repaid practically the entire amount invested by said companies in their plants.

Much complaint was heard at that time as to the high price charged by these two companies, and in 1898 Congress passed a bill limiting the price to be paid for armor plate to $300 per ton; later, in the year 1899, a limit of $400 was fixed as the maximum price to be paid, and a few months later a bill was passed by Congress appropriating $4,000 for the purpose of beginning the construction of an armor-plate plant for the Government, provided the Secretary of the Navy could not secure a satisfactory price for armor plate. Now, in the face of this adverse legislation and the probability of the Government establishing a plant of its own, we find that both the Carnegie and Bethlehem companies made valuable additions to their plant about the year 1902, and that in 1903 a new company, known as the Midvale Co., evidently aware that the Government was demanding cheaper armor plate, and recognizing the large profit, no doubt, that the two companies then engaged in this business had been making, undertook to construct an armor-plate plant in competition with these two that had secured up to that time all Government contracts for armor. The Midvale Co., before the final completion of their plant, offered to submit bids on armor and to furnish approved security that if any part of the contract was awarded them they would be prepared to comply with the terms within the time fixed. This offer was rejected; and not until after the Midvale Co. had completed its plant do we find that there were any real competitive prices submitted for our armor needs.

The Midvale Co., however, submitted a bid of $398, as opposed to a bid by the Bethlehem and Carnegie companies of $420, in the latter part of the year 1903, and, while a small part of the armor order was awarded to the Midvale Co. at its low bid, yet more than two-thirds of the award was made to the Carnegie and Bethlehem companies at the advanced price of $420. In 1905, the Midvale Co. submitted a bid of $346 and the other two companies a bid at the same price that had been formerly awarded them. Only a part of the armor was awarded to the Midvale Co., notwithstanding its low bid, the rest being awarded to the other two companies; so in 1907 we find that all competition disappeared and that the armor requirements of the Government, from that year until March, 1913, when the present Secretary of the Navy came into office, were divided equally among the three armor-plate plants, to wit, the Carnegie, the Bethlehem, and the Midvale companies. The price to each was fixed at the same basic sum of $420, and afterwards, when the eight-hour law was passed, this basic price was raised to $454, and yet these three companies insist that there was no understanding or agreement that they would submit the same bids.

The CHAIRMAN. The time of the gentleman from Alabama has expired .

Mr. PADGETT. Mr. Chairman, I will yield to the gentleman five minutes more.

The CHAIRMAN. The gentleman from Alabama is recognized for five minutes more.

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield now?

Mr. OLIVER. Let me first finish. The present Secretary of Navy, Mr. Daniels, when bids were submitted for armor plate for the *Arizona*, called the attention of these companies to the singular similarity in their bids and refused to accept the same, demanding a resubmission. On the contract for armor for that one vessel he saved, by demanding competitive bids, more than $100,000, and later, on the armor purchased for other battleships since he became Secretary, he has saved a million dollars or more. I will add, if we should now accept the maximum price that the Midvale and Bethlehem companies offer to sell armor plate in any quantity to the Government for, to wit, $395, we would save, in round figures, on every battleship hereafter built, in the cost of its armor plate alone, about one half million dollars. Yet, in the face of these facts, the Midvale and Bethlehem companies still insist that they have not in the past charged this Government an excessive price for armor plate.

We have had three reports made by committees, appointed under different Secretaries of the Navy, as to the cost of manufacturing armor plate. One of these reports was made about the year 1896, one about 1906, and one to the last Congress. In the main, all three of these reports agree as to the cost of manufacturing armor plate; and the amount, shown by these reports as a reasonable price for manufacture, is about $262, some placing it as low as $230.

Mr. KELLEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Alabama yield to the gentleman from Michigan?

Mr. OLIVER. Not just now.

Mr. KELLEY. I yielded pretty generously to the gentleman.

Mr. OLIVER. I will gladly yield to the gentleman a little later.

We find a remarkable statement made by the manager of the Bethlehem Co. to the effect that during the 29 years, since that company began making armor plate, they have only realized a profit of 1¾ per cent on their investment. It is a little surprising that, notwithstanding this small profit, they were willing in 1902 to make valuable additions to their plant and that another company—the Midvale Co.—should have come into the market. Attention is called to the further fact that notwithstanding the claim of the Bethlehem Co. that they have only received 1¾ per cent on their investment, yet we find no complaint offered by them to the price of $420, which they submitted and readily accepted contracts for. Is it not passing strange that with a large business, paying only 1¾ per cent, some complaint was not offered against the price of $420, which was the price down to the time, when it was increased to $454, simply to meet, as they insisted, the actual additional expense entailed by reason of the eight-hour law? It is very evident to anyone who will carefully read the facts submitted to the committees and who will analyze the report of these committees that the Government has been paying large and excessive prices for its armor in the past and that the only way to now determine what is a fair and just price for armor plate is for the Government to build a plant of its own and undertake to supply partially, at least, its needs.

Attention should also be called to the fact that in the report of 1906, submitted to Secretary Herbert, the committee found that the Bethlehem and Carnegie Cos. had united with foreign armor-plate factories and had withdrawn, as a result thereof, from the foreign field. It is a singular fact, in this connection, that about two years before this report was filed,

one of the armor-plate factories in this country had been soliciting foreign business and had secured it, according to their statement, at a satisfactory price, higher even, so they claim, than they were receiving from this Government. Yet, when the committee appointed by Secretary Herbert went abroad to make investigation as to the cost of armor plate and reported that an international agreement had been formed, whereby foreign companies withdrew from this market and the companies in this country no longer solicited business in foreign lands, we find in support of such report that no effort has been made by either the Bethlehem or the Carnegie Cos. to sell or solicit orders from abroad since such date, nor any by foreign companies to solicit business here.

These companies, in recent hearings before the committee, made bold to assert that the prices paid by foreign Governments for many years past had been in excess of what this Government was paying for armor, and yet these same companies, now complaining of lack of business and pointing out that during many years their plants have been shut down for want of business, have made no efforts to secure contracts abroad. Does this not show that the report made in 1897, to the effect that a combination had been formed, whereby these companies would not compete longer for foreign orders was true?

If the companies had only been making 1¾ per cent on their investment, it is very strange that after the bill proviiding for an armor-plate plant passed the Senate, they now express an entire willingness to supply the needs of the Government in any quantities that they may decide at not exceeding $395. This reduction of $59 is offered at a time when these companies state that it now costs more to make armor plate than at any time in the history of their business. The question arises, What will become of even the 1¾ per cent after this reduction is made?

Mr. SMITH of Michigan. Mr. Chairman, will the gentleman yield?

Mr. OLIVER. Yes.

Mr. SMITH of Michigan. Will the gentleman kindly tell us whether or not he or the committee made any figures, and figured out just what it was worth and what it would cost the Government to make that armor plate?

Mr. OLIVER. We found that had been done so thoroughly and satisfactorily on three different occasions by nonpartisan boards, appointed under Democratic as well as Republican administrations, that we accepted their findings. These reports fixed the maximum cost of manufacturing armor plate at about $262, as I now recall. The accuracy of these reports was not questioned by the Bethlehem and Midvale Cos., and representatives of these companies, on the recent hearings before the Naval Committee, admitted that the reports were substantially correct at the times made. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. I yield two minutes to the gentleman from Oklahoma [Mr. FERRIS].

Mr. FERRIS. Mr. Chairman, I hope the House will indulge me a moment while I digress for the purpose of correcting an erroneous statement that I made while the so-called nitrate-plant amendment was being considered. During the running debate when the nitrate-plant amendment was up in the House I used this language in reply to a speech made by the gentleman from Wisconsin [Mr. LENROOT]:

> I am getting letters—so are you—from the Du Pont Co. and other munition people, urging us not to adopt a Government-owned plant. As the gentleman from Wisconsin says, the power people are here. So they are, and they have been here for two or three years; but, on the other side, so are the Du Pont and munition people here, too, by letter, if not in person.

That was my statement. I have a letter here from the Du Pont Powder Co. calling attention to my statement made in debate, in which they say that they never authorized anyone to write a letter for them about this business, and that they did not write any letters themselves to me on the subject. I have caused my files to be looked up and find that I received only two letters from the Du Pont people, and they were about other matters independent of this nitrate plant. They were about water power, but were simply requests for copies of the bills and hearings before my committee, which were in all things proper. So to the extent that I stated that I had received letters from the Du Pont Powder Co. urging us not to adopt a Government-owned plant that statement was erroneous, and I am glad to make hasty correction of it. What was in my mind at the time was that I had been receiving communications almost daily from the Bethlehem Steel Co. and other munition concerns presenting their views and their claims and their rights as they appeared to them, and I had confused in my mind the letters from the Bethlehem Co. and others with the two letters that I had received from the Du Pont Co. asking me for copies of bills, hearings, and so forth. I do not desire to take more time, and I am glad to make this correction, because I do not want to misquote anyone or do anyone an injustice.

Mr. MOORE of Pennsylvania. The gentleman refers to having received letters from the Bethlehem Steel Co. Does he mean the circulars that have been coming to all Members?

Mr. FERRIS. Yes; numerous communications.

Mr. MOORE of Pennsylvania. Not private letters?

Mr. FERRIS. These circular letters stating their claims. I do not mean to insinuate anything wrong about the Bethlehem Co.

Mr. MOORE of Pennsylvania. They have been coming to all Members.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. PADGETT. I yield five minutes to the gentleman from Indiana [Mr. CULLOP].

Mr. CULLOP. Mr. Chairman, I shall support this amendment, and hope it will be adopted. In the movement for preparedness now going on in this country, it seems that some of the most enthusiastic advocates of the preparedness policy are opposed to any economies for carrying it out. If the policy is to be adopted, those who are most enthusiastic for it should be the first who would be willing to incorporate an economic policy into the preparation. Under the proposition contained in this amendment there would be a great saving. The armor plate necessary for the construction of a great battleship is 8,000 tons, which, at $425 a ton, cost $3,400,000. For one of the battle cruisers it would require 4,000 tons of armor plate; at $425 a ton, it would cost $1,700,000. Five battle cruisers, the number required by this bill, would cost $8,500,000.

The investigations that have taken place concerning the manufacture of armor plate by the Government show that if this amendment is adopted there will be a saving of more than 40 per cent on each one of these battleships and battle cruisers. Therefore for the program as provided for in this bill there would be a saving on this one item of $3,400,000. Yet gentlemen so enthusiastic for preparedness are unwilling to protect the taxpayers of this country who have the bills to pay in order to enable a few engaged in making armor plate to realize unreasonably large profits.

Fearing Government ownership competing with private business, they in their enthusiastic movement for great preparedness are unwilling to give the people the benefit of economy in the policy proposed by this amendment. If this amendment is adopted and the Government does not manufacture a ton of armor plate, the authorization for construction of this plant will convince them there is danger of real competition and that will bring down the price, and the people will be benefited. The investigation of this matter by a disinterested committee showed clearly that the armor plate could be manufactured at from $230 to $260 a ton by the Government. Yet these patriots in their zeal and enthusiasm for preparedness are unwilling to give to the people of the country who have the bills to pay the advantage of this economy in constructing these great ships for the purpose of preparedness.

In the expenditure of public money due regard should always be had for the welfare of the people, who must bear the cost, and if that regard is not kept in view, necessarily complaint will be heard when the bills are to be paid. If this Government can manufacture armor plate for the construction of battle cruisers for about one-half of what it has to pay for it to the great steel companies, then is it not a wise policy for it to manufacture it and save the people the great difference in cost, even though the Government does go into a business which competes with private business in this country?

A few great steel plants have a monopoly of this business and it is about time to bring them to time or strike this monopoly down.

This step would not have become necessary if this monopoly had not elected to oppress the people by charging enormous prices for its product. It has by its unreasonable policy provoked this issue and made necessary this measure in order to relieve the people from its exorbitant demands.

Monopoly is blind to reason, and by its arbitrary course enlists opposition which sooner or later works its undoing.

Through an ostensible spirit of patriotism it has agitated the building of a larger Navy, advocated the construction of dreadnaughts and other great ships to defend our country against foreign nations, which are now powerless to assail or attempt to invade it, with the real object in view of selling the material with which to build these great sea monsters. It has never displayed sufficient patriotism to reduce the price of the materials used for their construction. It would have been commendable patriotism on its part, if it was really sincere in its fears ex-

pressed for our national safety, to have offered to reduce the price of manufacture to a reasonable-profit basis on all materials it manufactured for the construction of our defense.

This magnanimity on its part has been withheld and the price of such materials has soared higher and higher as each authorization was made by the National Congress. Knowing as it does the monopoly it has, it is here heroically working with all its forces to defeat this amendment. It denounces Government ownership; it criticizes every man who stands here between it and the raid it proposes to make on the Public Treasury; it pleads in eloquent words for the continuance of its monopoly in order that it may realize enormous profits from expenditures made for patriotic purposes.

Its attitude is the more open to criticism because of the arrogance it displays in its indefensible position. If it was sincere in asking that these preparedness measures be adopted for patriotic purposes; if it was unselfish in its course and believed it really necessary for the safety of the country, then, Mr. Chairman, it would not oppose the adoption of this amendment, but would gladly support it or any other measure which would reduce the cost of these great instruments of national defense. Such a position would demonstrate its sincerity, its real patriotism.

In this respect its patriotism is of the dollar brand. The possibilities of enormous profits stimulates its selfish ardor. Eliminate this feature from its vision and it would oppose the entire preparedness program. Lured by the hope of great profits, its patriotic zeal has reached a lofty pitch and its vision of dangers magnified.

By adopting this amendment the cost it entails will approximately be saved in this one program. Let us then do it and save this great cost to the people of this country. Eliminate the monopolistic features from the program and then we will see whether it dampens the patriotic ardor of certain interests which have this year and on previous occasions manifested so much zeal in our national defense.

Read the hearings on this bill, consult the experts who have devoted the best years of their lives to this subject, who have nothing but the best welfare of our country at heart, who believe in "safety first," a safety that will protect us, protect our country from the invasion of any foreign foe, come from where it may, and they all tell us we are invincible and this program is ample in every respect. These opinions come from the men who would have in charge our defense in the event we should be attacked.

The responsibility for our defense would be upon them. They well knew this fact and how it affected them when they stated its condition and the extent of our ability. They have no material to sell to build battleships, no munitions of war to unload on the people, the visions of great profits do not warp their judgment or cloud their view of the situation, but their lives would be imperilled if an attack was made and hence they are not partisans but bear witness against their own interests when they tell us our means of defense is sufficient. This being true, how much more reliable is their statements for us to base our course upon.

It is asserted by the large-navy advocates that in order for us to preserve peace we must be fully prepared for war. Such a doctrine is most dangerous and is more likely to precipitate war than to preserve peace. I challenge those who make this statement to point to a single example to sustain their charge.

Peace thus secured is done so either by force or from fear and can never be either permanent or harmonious. Examples in support of this doctrine are numerous. Every example for a thousand years refutes the contention of those who assert such a doctrine. England has the greatest navy in the world, and yet she has written her history in blood. She is now with her boasted navy, the pride of that great kingdom, engaged in the bloodiest war that ever darkened the pages of history. Germany has boasted for years of her imperial standing army, the largest, the best equipped, the finest disciplined in the world, and yet Germany is engaged in the awful war now raging in Europe in which 11 of the great nations of the world are involved, nations containing one-half of all the population of the earth. Of France and Russia the same can be said. These standing examples do not sustain, but, on the contrary, refute the doctrine of these apostles of a big army and navy.

They can not point to a single example in the world to support their theory. A peace predicated upon either fear or force will not endure. The coerced will retaliate and from muffled tongues mutterings will be heard that will arouse the impatient and they will rise, harass, and vex the power that restrains and stifles them. Prepare for war to preserve peace is a dangerous doctrine. Let no one think if we furnish the sinews of war they will not be used as sure as night and day follow each other. Some one will desire to test these implements of warfare, and will find it much easier to provoke combat with them than without them. It is a dangerous thing to do. Some ambitions will take advantage of the opportunity and bring down upon us such a calamity as is now visited upon the well-prepared for war European nations, and then there will be needlessly sacrificed the best manhood of our country to pay the penalty of an unwise policy.

History will repeat itself. If we sow the wind we will reap the whirlwind. Widows and orphans, desolation and distress, will bear witness to such an improvident course. Think of the type of civilization that will follow in the wake of such a cataclysm. It is amusing to hear our Republican friends speak so disparagingly of our preparedness. Who commissioned them to condemn their own administration? For 16 years, prior to March 4, 1913, they were in control of all branches of the Government. What did they do with the large appropriations made for the Army and Navy? Did they waste it? If we are not prepared it is their fault, not ours, because they had both the power and opportunity. They are in no position to criticize conditions in this respect. If they do they condemn their own administration. Were they unable or incapable to prepare for the national defense? They are asking a return to power. It would seem this fact which they openly confess stigmatizes them as incapable to handle the situation while passing through this great crisis. By their own admissions they are incapable and unworthy for the great responsibility. Look at the situation as the record discloses it; in the first two years of the present administration of President Wilson there were authorized $70,000,000 to be spent on the chief fighting force of the Navy, as against $26,000,000 authorized during the last two years of the Taft administration. In that time the Wilson administration ordered five deadnaughts as against two in the Taft administration, which in effectiveness will mount 36 more 14-inch guns than the two authorized under Mr. Taft. The guns are better in every respect. The Democratic Party has mapped out a program of national defense which will be ample to protect our Nation from the attacks of all foreign foes, able to raise the means to pay the expense, and willing to furnish every requirement essential to carry out the great responsibility and preserve the honor and dignity of our great Nation, and promote the welfare of our people. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. I yield four minutes to the gentleman from Pennsylvania [Mr. VARE].

Mr. VARE. Mr. Chairman, I am one of those who believe that every facility should be placed in the hands of the Government for the purpose of ascertaining what is the reasonable price for the Government to pay for armor plate; and it seems to me that the Butler amendment furnishes the Government every protection and every opportunity for ascertaining what is the reasonable price for the Government to pay.

But, gentlemen, I want to confine myself particularly to an amendment which I propose to offer in the event that the Butler amendment failed. The committee sought to make inquiry into the different plants of Pennsylvania, and a commission consisting of Mr. PADGETT, Mr. TILLMAN, and Admiral Strauss reported that the best place in the country to construct an armor plant, if one was to be constructed, was at the Philadelphia Navy Yard. There are 900 acres of land; and, if a Government plant is to be constructed, it seems to me that the House ought to avail themselves of the opportunity to obtain a place that the Government already owns. It was said by the gentleman from Kentucky that he proposed to perfect a bill by making provision for the purchase of a site. Why purchase a site when the Government owns 900 acres of land where there are skilled mechanics, where the experts live, where they can work at least 11 months in the year, where the heat would not preclude an efficient naval plant? It seems to me that if I was in favor of entertaining this proposition from the Democratic standpoint I would insist that we should build a plant somewhere where it could be effective. As the matter stands now, my vote will be in favor of the Butler amendment, because, first, it furnishes every means of ascertaining the legitimate cost of armor plate, and, second, it insures the protection of the workmen of Pennsylvania. [Applause.]

The purpose of my amendment is to carry out a suggestion made by the congressional committee, composed of Senator TILLMAN, chairman of the Senate Committee on Naval Affairs; Chairman PADGETT, of the House Committee on Naval Affairs; and Rear Admiral Strauss, of the United States Navy, who after an exhaustive investigation of the private armor-plate plants,

and the question of finding a suitable location for a Government plant, said in their report to Congress:

The price of the land necessary for the plant and certain other items are so indefinite as to be only the roughest approximation. The location and local conditions will bear largely on the cost of the various buildings and the installation of the machinery therein. The committee calls attention to the fact that the Government now owns, at the Philadelphia Navy Yard, ample land for the erection of an armor factory and therefore no land would have to be bought. Philadelphia is an ideal place for the erection of such a plant, as it is accessible both by deep-water transportation and railroad facilities, is near coal and iron, and has a fine labor market. However, the Navy Department itself will select the location and construct the plant if Congress orders one, and the committee only mentions that no expense for land will be necessary. Besides the navy yard has facilities for assisting in the construction of this plant, which will largely reduce the expense of erecting it.

This report was made before there was any pressure for the selection of a site in any special locality. There was nothing sectional in the report. Senator TILLMAN is one of South Carolina's most illustrious sons. The distinguished chairman of the House Naval Affairs Committee is a son of Tennessee. Rear Admiral Strauss was born at Mount Morris, N. Y., and to my knowledge has never served at the Philadelphia Navy Yard. Yet these three men, after a careful investigation, mentioned but one logical site, and that was the Philadelphia Navy Yard.

There is no need for further investigation. It was not chance or accident that caused the three existing armor-plate plants to locate in Pennsylvania. They located there because it was good business for them to be there, near the iron ore and coal supply; in the midst of the best labor market; where ample raw materials are available, and the water and rail transportation is the best available.

The question that is raised by this amendment is whether we are going to make certain that the Government's venture into the armor-plate business is to be a success, or whether we are going to leave it to chance.

We do not need naval officers to tell us that the success of this venture will depend upon the kind of employees the Government is able to engage, the economy with which raw materials can be purchased, and the facilities of transportation. The considerations that led all the private plants to locate in Pennsylvania can not be ignored. One company might have gone there and another to some equally advantageous locality, but the fact is that there was no equally advantageous locality.

As the joint congressional committee pointed out, the Philadelphia Navy Yard is near coal and iron and has a fine labor market. It is accessible both by deep-water transportation and railroad facilities. If we are going to be businesslike about this new venture of the Government's, we will specify the site, so that there will be no chance of failure.

The congressional committee has estimated that it will cost $11,000,000 to erect the kind of a plant we have in mind. That estimate was based upon the cost of operating the three existing plants in Pennsylvania. It was based upon the wages that are paid in the Pennsylvania labor market. It was based upon the cost of materials in Pennsylvania.

If this Government plant were to be located anywhere else, an entirely new estimate of the cost of construction and operation would have to be made. There would have to be a revision of the estimates with reference to getting building materials for the new plant, for hiring the necessary employees to run the plant, for buying coal and iron and all the raw materials.

Not long ago I went to the Navy Department to bring about a readjustment of the wages paid to mechanics in the Philadelphia Navy Yard. I learned there that our mechanics were getting lower wages than those employed in the Brooklyn yard. I asked why. I was told that it was because wages at the different yards were adjusted in harmony with the wages paid in private plants; that the labor market in Pennsylvania was so excellent that it was unnecessary for the Government to pay as much there as in the Brooklyn yard.

Since all these estimates of the joint committee—the estimate, for instance, that we can build a Government plant for $11,000,000—were based upon Pennsylvania conditions, I say that unless we build the Government factory there we will not be able to be certain that the plant will not cost $13,000,000 or $15,000,000.

We know now that the cost of manufacturing is different in different localities. In Pennsylvania there are men who are working in the armor-plate business whose fathers worked there before them. They will not leave their homes to follow a Government armor-plate plant; nor will the raw materials follow the Government. It is true that the Government can get the raw materials, probably, wherever it goes, but at greatly increased prices.

If the Government is to go into this business the right sort of start must be made, or the entire venture will prove a failure. If we disregard the experience of the private factories, if we disregard the natural conditions which caused the plants to locate in Pennsylvania we will find ourselves with a very expensive proposition on our hands.

Unless the Government locates its plant where it can get raw materials, labor, and transportation as cheaply as the private plants it will find itself in an absurd position, compelled to admit that it was cheaper to buy from the private plants at their own rates. Unless we are going to make certain that the Government plant will be a real competitor in the same field as that occupied by the private plants, it would have been better to accept the Butler compromise. And entirely aside from the cost of operating the plant in some locality outside of Pennsylvania, where the calculations of expense were made, what assurance have we that the plant itself will not cost one-third as much more than the $11,000,000 estimated if constructed elsewhere, where materials and the cost of transporting them, and the labor charges will be higher?

The amendment which I have offered to this bill is simply in line with the suggestion of the joint congressional committee. It is simply designed to prevent the whole structure on which the bill lies from going to pieces. The estimate that an adequate plant can be built for $11,000,000 was based upon the cost of construction and operation in Pennsylvania. If the Government plant is to be built elsewhere, there will need to be an entirely new investigation to determine what such a plant will cost, what it cost to operate it, and transport the raw materials to it. [Applause.]

Mr. BUTLER. Mr. Chairman, I yield four minutes to the gentleman from Pennsylvania [Mr. FARR].

Mr. FARR. Mr. Chairman, the statements made on the floor would indicate that armor plate made by the Bethlehem Steel Co. comprises nearly all of their products. As a matter of fact, it comprises 2 per cent of their output. Ninety-eight per cent of that great industry's product goes into other lines, and yet men on this floor—I hope not deliberately, but very kin to it—endeavor to mislead the House in that direction.

I am surprised at the statement of the gentleman from Alabama [Mr. OLIVER] in talking about the profits which come from armor plate enlarging the capacity of that great mill, when only 2 per cent of the products are armor plate. The armor-plate part was established at the urgent instance of this Government, and has been kept going but one-third of the time since its establishment, making less than 2 per cent of the Bethlehem Steel Co.'s products. There has been no question about the fact that the Government got its orders delivered to them when they wanted them. How important that is. And, again, the quality was the best in the world. That is another very important fact. The only question is as to the price of armor plate. The Butler amendment will settle that by authorizing this Government through the Federal Trade Commission to fix the cost that the armor plate companies shall charge the Government for armor plate.

The armor plate companies, all of which are located in Pennsylvania, have $20,000,000 invested—money of their stockholders. A Government plant means the closing of those industries. Naturally they are greatly concerned about this large investment. They do not want their industries destroyed. They say to the Government, "You asked us to establish this for the benefit of the country; we have given you the best we could, and we want to save that industry to-day for our stockholders, and we will get down on our knees to this great country in order to protect our stockholders."

The gentleman from Alabama would do the same. If he had $7,000,000 invested in an industry he would scrape the ground to prevent this great Government from destroying his plant and putting it out of existence.

You are going to deprive 3,000 men in Pennsylvania of the opportunity to earn a living. Brushing aside all the arguments for and against this proposition, is this the time to destroy industries which we shall need in case of war? Would this be preparation for possible war—let us say possible war? With the tremendous equipment we have to-day of turning out munitions as a result of the demand on this country from England and other countries, all that we have sent into England is 10 per cent of what that country has used, and not one American shell, the Committee on Naval Affairs was informed several weeks ago, had been fired by France. The English people have been working two years to mobilize their industries and get them into shape to supply the necessary munitions. The cry there is more munitions, more munitions. British authorities say they were 10 years behind Germany in industrial effectiveness. We are 20 years behind Germany in the industrial organization and mobilization of forces that we will need if we are unfortunate enough to have war.

The administration wisely has invited the aid of leading engineers, scientists, and men skilled in large affairs to formulate plans for the mobilization of our industries and getting them into effective shape in preparation for possible trouble. "Danger is at arm's length from us" the President says, and we must be prepared. And yet with one fell blow we are going to destroy great industries, that provide the defensive armament for the splendid ships upon which we must depend to prevent invasion and our possible destruction. Are we not to heed the warning of the great tragedy of the war in Europe? Do we fail to see the colossal task of preparation involved in that fearful cataclysm? A thousand things would have to be done to equip ourselves for any such conflict. Germany, with her energy, skill, and effective organization, has demonstrated what a nation can do. Yet with all her wonderful preparation her soldiers have used more than four times the ammunition she expected to. More munitions have been expended at Verdun than were used in all the modern wars, including our own Civil War. Is this not warning enough? Are we at this dangerous period, with the world afire, going to destroy industries we may need or build them up and organize in preparation for the defense of the lives, liberties, and interests of our 100,000,000 people?

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. HARDY].

Mr. HARDY. Mr. Chairman and gentlemen, as a purely business proposition, as well as one that has its political bearings, I wish briefly to discuss the Butler amendment. That amendment seemed so fair and favorable to the Government that I took it and read it over very carefully. It was being presented as an offer by the private armor plants to furnish armor plate at a price to be fixed by the Government. I read it carefully so that I need not be mistaken in its purport. All the evidence taken by the committee shows that the armor-plate manufactories in the United States work in perfect harmony. As I understand, also, the threat of a Government armor-plate factory has reduced their proposed prices of armor plate in no small amount. They have now offered to furnish armor much cheaper than before it was proposed to build a Government armor plant. The committee amendment appropriates money to build that plant. The Butler amendment to the committee amendment provides that before this appropriation goes into effect a Government board may ask the right to examine the books of the private armor-plate plants and determine from that examination what the actual cost of making the armor plate is. It gives the companies the right to grant or refuse to permit such examination, as they see proper. If the companies do refuse it, then this appropriation will go into effect; but if the companies agree to have their books examined, and they do examine them, then the board make their estimate as to the cost, and the Secretary of the Navy shall offer to buy the armor plate from the companies at a fair price, as shown by the investigations. He makes the offer at a price fixed by him. The point I am making is this: That then these companies are not required and can not be required to take the price offered, but that they then may say they will or will not furnish the plate at the price fixed by the Secretary of the Navy.

Mr. KELLEY. Does the gentleman think that the appropriation lapses?

Mr. HARDY. No; on the contrary. If the companies refuse to let the board examine their books or refuse to accept the offer made by the Secretary of the Navy, the provision of the committee amendment making the appropriation comes in; but in the meantime what may happen? This: This Government, having taken no steps to establish its plant, comes right up to the precipice where it must have battleships built, and then this estimate is made and the fair price fixed by the Secretary, and the attempt made to secure armor plate from the private plants at the fair price fixed by the Secretary, and the united and combined armor-plate manufacturers, knowing they have the Government in a close place, say no, they will not sell at the price fixed; and then they have the Government where they want it. In other words, the Butler amendment provides, first, delay and then the opportunity for the same companies that, according to the evidence, have held up the Government in times past to hold it up once more.

Mr. KELLEY. Suppose we pass this bill, this armor plant will not be ready for some three years, and what would prevent the armor-plate companies from holding up the Government at this period instead of the other?

Mr. HARDY. I am aware that the armor-plate companies, whether we build or not, may hold us up, and if we were forced to build and build at once, and at any cost, and if public odium and condemnation of the American people did not hold them down, there is nothing to prevent them from holding up the Government; but if the people knew that the armor plate cost $250 to $290 to build, as they would know, after they built their own plant, and that the American manufacturers were attempting to hold the Government up to $450 as they have in the past, odium would be their portion, as odium has been their portion in the past.

One more suggestion: The amendment of the committee authorizing a Government armor-plate factory is deserving of support for one reason, if for no other. It places in the keeping of the Government alone the secrets of the manufacture that properly belong to the Navy Department. We have had illustrations in the past of how these great private makers of battleships and munitions peddle the information they should hold sacred for this Government all over the world. I believe the secrets of the manufacture of the weapons of defense of this Government ought to be in the keeping of the Government alone, and a Government armor-plate plant will help put them there. [Applause on the Democratic side.]

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Iowa [Mr. GOOD].

Mr. GOOD. Mr. Chairman, this is not a political question. It is purely a business proposition that we are considering. Personally I do not believe in Government ownership. I believe that in the production of all articles of commerce and trade the people of the United States and not the Government should be the manufacturers. Where, however, the Government is the only user of a commodity or an article, the Government ought to be the only manufacturer. [Applause on the Democratic side.] The gentleman from Wyoming [Mr. MONDELL] on the 29th placed in the RECORD some comparative figures of the cost of the various navies of the world. The average annual cost in Great Britain for a 12-years' period has been $166,000,000; in the United States, $110,000,000; in France, $66,000,000; in Germany, less than $30,000,000; and yet gentlemen in this House say that Germany, spending less than $30,000,000 a year for 12 years, has a navy superior to ours, while we have been expending during the same time more than $110,000,000 a year. This condition requires our candid and deliberate consideration. If our Navy is inferior to that of Germany, the fault is not with Congress. The fault is with those who have had charge of the expenditures of the appropriations of Congress.

Gen. Crozier, Chief of Ordnance of the Army, appeared before the Subcommittee on Fortifications and placed in the hearings some comparative costs in the matter of procuring material, field artillery, ammunition, and other war supplies. This comparison gives the cost to the Government under contract with private concerns and the cost of production at the arsenals of the United States; and let me say here that the same contracts were made with the very concerns that have been making armor plate, that are claiming that they are making but 1¾ per cent on Government contracts for armor plate. Gen. Crozier placed in the record this comparative statement:

Machining and band, 3-inch common and 3-inch H. E. shrapnel case forgings, contract per unit, $1.49.

It will be seen that under that contract, made with the very concerns from which we have been buying armor plate, the cost was $1.49 each. The cost at the arsenal, after allowing for depreciation, for repairs, for overhead charges, and 3 per cent interest on the cost, was only 45 cents each. [Applause on the Democratic side.] But that is not all. There are several pages of this comparison. Let us take limbers, for instance. We have been buying them from the Bethlehem Steel Co. and have never paid less than $1,608.30 each, and at the same time it has never cost the Government of the United States more than $722 to manufacture them in the arsenals, and yet gentlemen say that we should continue to buy the material from these large concerns.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. PADGETT. Mr. Chairman, I yield the gentleman five minutes more.

Mr. GOOD. Mr. Chairman, I am in favor of preparedness. This side of the House is in favor of preparedness, but if we want real preparedness, let us have it without quite so much profit. [Applause on the Democratic side.] Three hundred per cent, I repeat, is too much, and while I was inclined to support this death-bed repentence of these steel corporations and vote for the Butler amendment, I would have done so had the concerns permitted an answer to be made as to what it was costing them to make armor and armor plate. They absolutely refused, and yet the gentleman from Pennsylvania, coming from that State where these concerns operate, says that the Government of the United States is the only purchaser of armor plate. If the Government is the only purchaser, in heaven's name what harm could come from a full and frank disclosure to Congress as to what it was costing these concerns to make armor and armor plate? [Applause on the Democratic side.]

Mr. Chairman, the same argument was made when we established the powder plant for the Government. I saw some figures the other day that led me to believe that the Du Ponts to-day are making powder for about 25 cents per pound and then selling it for a dollar and a quarter a pound to European powers. The same argument is made every time there has been an attempt on the part of Congress to enlarge our arsenals and thereby retain all of the secrets that we ought to retain in the manufacture of our ammunition, and of all of the weapons of defense.

In view of these facts, and in view of the record that we must face, I for one can not vote to continue to give to these concerns the exclusive privilege of supplying all our armor plate on its statement that it is only making 1¾ per cent and then refuses to state what it is costing them to manufacture armor and armor plate, when the record shows that these same concerns are charging the Government for other war supplies about 300 per cent more than it is costing the Government to produce the same equipment in Government arsenals. I shall vote for the amendment. [Applause.] I yield back the balance of my time.

The CHAIRMAN. The gentleman yields back two minutes.

Mr. PADGETT. Mr. Chairman, how much time have I now?

The CHAIRMAN. The gentleman has 16 minutes and the gentleman from Pennsylvania has 19 minutes.

Mr. BUTLER. Mr. Chairman, I yield six minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, the gentleman from Tennessee [Mr. PADGETT] has offered an amendment making an appropriation of $11,000,000 for the construction of an armor-plate factory or factories, or purchase, or both. There are now three armor-plate plants in the United States. The gentleman from Pennsylvania [Mr. BUTLER] has offered as an amendment to the other amendment this proposition: That the Federal Trade Commission shall make an investigation of the cost of making armor and recommend a reasonable price to be paid by the Government, with the provision that if armor-plate factories refuse to permit the Federal Trade Commission to examine their books and their plants and everything necessary under their control, then the Government shall proceed with the construction of its factory or factories. If the armor-plate plants permit an examination by the Federal Trade Commission, then we will have ascertained by competent authority what is the actual cost of producing armor plate. When that is done the Secretary of the Navy is authorized to enter into a contract with these plants for the armor plate necessary for Government use at a price not above the price fixed by the Federal Trade Commission, the price to be fixed by the Secretary of the Navy. He can fix the price below the price fixed as a fair price by the Federal Trade Commission. The Secretary of the Navy then, having fixed the price which he is willing to have the Government pay for the armor plate, tenders contracts to the armor-plate plants. If they decline to enter upon the contracts, then the Government proceeds with the erection of Government plants.

It is conceded, I believe, that it will not be practicable for the Government to construct a plant inside of three years. Probably a longer time will be required. I think it may well be assumed that the Federal Trade Commission can make its examination and report inside of three months. That provision of the bill if enacted will become the law as soon as the bill becomes a law and takes effect. The Federal Trade Commission will be able to make a report this summer or in the early fall as to the cost of producing armor plate, and the Secretary of the Navy under this amendment will be enabled to tender contracts this summer or fall at which the armor-plate factories shall furnish armor plate to the United States. There will be no great delay. As a matter of fact the Secretary of the Navy could proceed with the drawings and the investigation for the actual construction of a plant if he desires to in the meanwhile.

Now, what would we accomplish by this amendment? In the first place we will get armor plate for the next three years with a very large building program at our price if it goes through. If we do not, we will pay the price of the armor-plate manufacturers for the next three years in spite of high water. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROWNING. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey? [After a pause.] The Chair hears none.

Mr. BUTLER. Mr. Chairman, I have but one speech.

Mr. PADGETT. We have two over here. Mr. Chairman, I shall consume 6 minutes myself and will reserve 10 minutes for Mr. SHERLEY. I have 16 minutes, I believe.

The CHAIRMAN. The gentleman from Tennessee.

Mr. PADGETT. Mr. Chairman, I only wish to call the attention of the committee to one or two matters. Some years ago when bids were asked for armor plate the Midvale Co. came in and submitted bids very largely and materially below the bids submitted by the other two companies. The department said that they were not prepared to build. The Midvale Co. answered that they would give a bond, that they would at once construct their factory, and that they would carry out the contract and be ready within the stipulated contract time. Notwithstanding those assurances they were not awarded any part of the contract, and it was given to the other two at a much higher figure than was offered by the Midvale Co. In the meanwhile the Midvale Co. proceeded to erect their factory; and the succeeding year bids were advertised for and the Midvale Co. again submitted bids very largely below the price of the other two companies. Thereupon the department said, "We will not give you all of it, but we will give you a little less than one-third and give the other two-thirds to the other two companies at your bid." Ever since then those companies have said there was no use in fighting against each other, and since that time they have submitted identical bids. There has been no competition; there has been no claim of competition; and the same thing happened a year ago, when all three of those companies submitted identical bids to the dollar and a cent—and yet they say there was no conference, understanding, or agreement between them. [Laughter.] Now, an investigation was made by a commission appointed by the Congress consisting of Senator TILLMAN, myself, and Admiral Strauss. We submitted a long list of questions to the officers of all of those companies, and they very respectfully but firmly declined to answer them or to give any information. We reported that fact. We administered to them oaths, put them upon the stand, and again asked them questions. They answered such as they saw fit to answer, without giving any material information, and declined to give answers to any questions that would elicit information. However, we made investigation as best we could from all other available sources and reported that a factory with a capacity of 20,000 tons could manufacture at $230 a ton at full capacity and a factory of 10,000 tons capacity running at full capacity could manufacture at $262.79 per ton. These figures include:

	Repairs and maintenance of 20,000-ton plant.	
(a)	Coal, 100,000 tons, at $2.80	$280,000.00
	Tools, lubricants	210,000.00
	Ingot molds and materials for repairs other than below	174,500.00
	Repairs to equipment press house, machine shop, cementing shop, materials only	100,000.00
	Yard, laboratory, offices, materials	50,000.00
	20,000 tons	814,500.00
	Per ton	40.72
(b)	Upkeep of plant and buildings, and extensive overhaul repairs of furnaces and machinery, 2 per cent of installation cost, $10,331,907	206,638.00
	20,000 tons, per ton	10.33
	Total annual cost of maintenance and repairs, 20,000-ton plant	1,021,138.00
	Repairs and maintenance of 10,000-ton plant.	
(a)	Coal, 70,000 tons, at $2.80	$196,000.00
	Tools, lubricants	140,000.00
	Ingot molds and materials for repairs other than below	116,000.00
	Repairs to equipment press house, machine shop, cementing shop, materials only	65,000.00
	Yard, laboratory, offices, materials	35,000.00
	10,000 tons	552,000.00
	Per ton	55.00
(b)	Upkeep of plant and buildings, and extensive overhaul repairs of furnaces and machinery, 2 per cent of installation cost, $6,635,107	132,702.00
	10,000 tons, per ton	13.27
	Total annual cost of maintenance and repairs, 10,000-ton plant	684,702.00

The CHAIRMAN. The gentleman has consumed six minutes.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. BUTLER. Mr. Chairman, I yield the balance of the time remaining on this side to my colleague [Mr. GRAHAM].

The CHAIRMAN. The gentleman from Pennsylvania [Mr. GRAHAM] is recognized for 13 minutes.

Mr. GRAHAM. Mr. Chairman and gentlemen, my attention was called a few minutes since to a bill pending in this House, the bill H. R. 14303, reported from one of its committees, by my learned friend from Kentucky [Mr. SHERLEY] wherein, on page 11, provision is made for an appropriation "For plans and

for the installation of such material in private plants in the United States under such contract and agreement as may be made by the Secretary of War, $1,000,000: *Provided*, That not exceeding 25 per cent of said sum may be used in obtaining from plants so equipped such war material as may be desired: *Provided further*, That not exceeding $50,000 worth of such material may be purchased from any one person or company, and in making such expenditures the laws prescribing competition in the procurement of supplies by purchase shall not govern."

The committee, upon its own initiative, has recommended an appropriation of $1,000,000 for equipping private plants with the machinery and fixtures requisite to enable them to supply various kinds of war material. It seems to me, "Consistency, thou art a jewel." On the one hand, a committee of this House is reporting a measure under which they provide for putting money into private plants in order to develop the manufacture of munitions of war for the benefit of the Government, and authorizing the purchase of products without competition from these private plants, and, on the other hand, a committee of this House is now recommending an amendment to this bill which is intended to destroy and extirpate the industries that are now in existence for the supply of armor plate in the building of warships. What a contrast and what a commentary this is.

I have listened to-day to many arguments that seem to be largely aside from what a discussion such as this ought to be. Here we ought to meet as patriots, banishing from our minds every idea of tactical or party advantage, which, while producing party victory to-day, would tend to impede or sink the interest of our country only because of an opportunity, seemingly, to seize some party advantage. We ought to consider this question purely as a question of business. What should our action be, viewed from our standpoint as patriotic business men, with reference to this question of having an armor-plate plant built and owned by the Government?

One man rises in his place and speaks about Christ and His saying concerning Himself that He had no place where to lay His head, and utters the strangely exaggerated statement that 60,000,000 of our 100,000,000 people are homeless, and he likens them to the homeless condition of the Christ. What place has such a statement in the consideration of this question? Another man rises here, who usually speaks with power and influence upon questions, and he simply says, "I heard that there were holes blown in this armor which these men manufactured and attempted to sell to the Government." An answer most complete and thorough was given to this statement by my colleague from Pennsylvania. All steel is porous. This was investigated under a Democratic administration. Justice, we must presume, was meted out and the corrections made. But when the argument was advanced without a word of explanation it appealed to prejudice and not to reason. It was calculated to stir up antagonism and not make men think as to what is best to be done under existing conditions.

What have you before you to-day? A proposition to amend this Navy bill by adding an appropriation of $11,000,000 for the building of an armor plant. My colleague from Pennsylvania has presented an amendment to this amendment, providing a method by which the price shall be fixed by the Government and regulated by the Government in all our future relations with these armor plants now in existence. By this amendment, if adopted, we are relieved from discussing many of the things that have been interpolated in this debate. When we consider this amendment of the chairman of the committee, Mr. PADGETT, adopted but perfected and graced by the amendment of the gentleman from Pennsylvania [Mr. BUTLER], the evils of combinations, excessive prices, and trusts that you complain of are removed and the power of this Government is placed over the existing plate-armor plants of this country without the expenditure of a single dollar.

Think of it! The gentleman from Texas said, "Oh, we are spending the poor man's money, we are giving the people dollar for dollar, and these gentlemen upon the Republican side think of nothing but of questioning the expenditures and voting for them." What? "They talk for saving the taxpayers' money, but do not vote as they talk." Why, this amendment is intended to spend and not to save. While you gentlemen on the Democratic side are hunting for ways and means out of which to meet the additional expenditures by the vast sums you have authorized, and put upon us war and other taxes, why do you put your hands into the Treasury and take $11,000,000 out of it to use for building an armor plant when you can, by this amendment, without the expenditure of a dollar, take the existing armor plants and make them the willing subjects and servants of your Government? [Applause on the Republican side.] By this amendment you preserve the great capacity of these plants as a reserve against all emergencies.

What patriotism is there in such a movement? What protection to the taxpayers?

It is, as I gathered from reading all these reports and examinations and investigations, a conceded state of facts that the Government of the United States gets to-day the best armor plate manufactured in the world; that the Government of the United States gets that armor plate at a price to-day which, according to these statistics, is lower than the price paid in Europe for armor plate by any of the Governments of Europe.

One gentleman attempted to show that it was impossible to get figures upon this subject, and he quoted the Secretary of the Navy. I prefer to take the statement of Admiral Niles. In the report of his investigation of this subject, he said:

> It is true there is no public bidding invited in those countries, and it is difficult to get at the exact figures; but we have arrived at figures that we believe to be substantially correct, and in every instance, even in Japan, with their Government-owned plants, the figures compare favorably to the United States.

In other words, you are getting armor plate made to-day at a price that is less than that paid by the Governments of Europe, and in addition to that you have three great plants.

Remember also, my friends, that the first one of these plants to enter this business entered it upon the invitation of your Government. They put their money in on a venture and exposed to the peril of an experiment at the invitation of your Government, and the second did likewise. The third came in under competitive conditions, desiring to "butt in" and get some of the business.

The chairman of the committee [Mr. PADGETT] referred to the Midvale Steel incident, which amounts simply to this: They were endeavoring to get some business, and while they had not any plant at all, they made a bid; and the vice president of that company, in this report, in his testimony under oath, shows that what was done was done at a sacrifice to themselves, because they wanted to break in upon this business.

No plant, but only a naked bid, and that is the testimony of the vice president of the Midvale Steel Works in the examination before the committee, illustrating that in that one instance the change in price from a higher to a lower was due to a competitive condition and not due to the existence of extravagant prices charged to and being paid by the Government.

What has this incident to do with this question now? What has the charge that at one time Secretary Herbert is alleged to have found that there was a collusion or combination between the foreign manufacturers and those in the United States to do with it? I ask most earnestly the attention of every thoughtful man in this Chamber, and especially of my friends upon the Democratic side of this House, to the language and force and purpose of the amendment that is offered. If that is adopted, what care you for combinations or trusts here or elsewhere? The price is fixed by the Government, and the price so fixed, or a lower one, will be the one at which the armor plate must be furnished. Get the great benefit of these established plants. You do not have to wait three years to build one. Do all this, and retain the right to build the Government plant as a rod to compel obedience.

Mr. HARDY. Will the gentleman yield for a question?

Mr. GRAHAM. When I am through; not now. If I have any time left, I shall be glad to answer all questions until my time is exhausted.

I happen to know from personal contact with the subject how this operated in another department of our Government.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GRAHAM. I ask unanimous consent simply for time to finish this sentence.

The CHAIRMAN. The gentleman asks unanimous consent to proceed for one minute. Is there objection?

There was no objection.

Mr. GRAHAM. I only want to say that this question of fixing prices was determined as to smokeless powder, in the case of the International Smokeless Powder Co., one of the companies that furnished powder to the Government. The cost was ascertained at Indianhead by the Government, and the head of the bureau fixed the price and apportioned the quantity to be furnished among the companies that were in existence, a share to be furnished by each at that price. The policy was to keep this enormous reserve of munition-making power in existence for use in case of emergency, and have it as a national reserve sustained by private capital, just as you must keep this enormous armor-plate-making capacity as a national preparedness reserve. Keep it in existence, and do not destroy it by defeating this amendment of the gentleman from Pennsylvania [Mr. BUTLER]. [Applause on the Republican side.]

Mr. PADGETT. Mr. Chairman, I yield 10 minutes to the gentleman from Kentucky [Mr. SHERLEY].

Mr. SHERLEY. Mr. Chairman and gentlemen, my friend, the gentleman from Pennsylvania [Mr. GRAHAM] who has just preceded me, undertook to criticize what he thought to be a conflict of policy as reflected by the views in the report of the Committee on Appropriations in reporting the fortifications bill, and that which seems to be the policy as represented by the Committee on Naval Affairs. I think if he had thought a little bit longer about the matter—for he says that it had but recently been called to his attention—he would have found that there was no conflict, but an absolute harmony. It is true that my committee recommended an appropriation of a million dollars to equip private plants so as to enable them to manufacture war matériel, and a mighty good provision it is. There is also provision in the sundry civil bill from my committee for increasing the capacity of Government arsenals for manufacturing such matériel. There is nothing inconsistent in this, as I shall show.

There are three views touching this subject. There are those like many of the gentlemen from Pennsylvania—except when the Frankford Arsenal is concerned—who are opposed to the Government manufacturing anything. There are those, some of them on my side of the House, who believe that the Government should manufacture everything that it uses in the way of war matériel.

For myself I have always believed that the true policy lies between these two extremes. I believe that the Government should make some portion of everything of which it is the sole user, and I submit that proposition to this House as representing common sense, both from the standpoint of economy and of efficiency of the Army and of the Navy. And it is this view that is carried out in the fortification and sundry civil bills, and is, I hope, to be carried out in this naval bill. I repeat, the Government should make something of everything of which it is the sole user, and it should do that in order to guarantee the very highest character of matériel. By familiarity with manufacturing processes it will be able the better to inspect and to guarantee obtaining that degree of high-grade material that is so important in armor and in all of the things that go into the making of war matériel.

The second great advantage will be that it will be able to determine by actual experience what is the legitimate cost of making it, and thereby to regulate, in the only effective way that it can regulate, the price which it shall pay to private manufacturers for purchases.

The gentleman from Pennsylvania [Mr. GRAHAM] has been pleased to refer to powder. I can speak with a little more detailed knowledge of that than I can of armor, because I have conducted some hearings touching the cost of powder. Some time back we were paying 67 cents a pound for powder other than small-arms powder, and when I brought in a provision on the floor reducing the price to 64 cents, the RECORD will show that the debates followed very much the line taken to-day, with the charge that I was destroying the powder companies, that the Government would be unable to get powder at that price, and would be without powder in its hour of need. Notwithstanding that the House fixed the price at 64 cents. I wanted to be conservative. I believed I could have gone much lower, but I put the price at 64 cents. We conducted hearings subsequently, as a result of which we reduced the price again. To-day we are buying powder for 53 cents, and we are making powder for something over 43 cents a pound, and that is the history of the legislation touching the cost of powder within the knowledge of men serving in this House. [Applause.]

Now, what is the situation in regard to armor plate? I am not going to indulge in abuse of the Bethlehem people. I have never yet undertaken to win a case by abuse of any party or of any section. I believe I am cosmopolitan enough to have no prejudices against Pennsylvania, notwithstanding one gentleman from Pennsylvania seems to think that only he was broad enough to look at the matter from a national standpoint. But the fact remains that we have not had competition in the making of armor plate, and I believe that we have paid excessive prices. I know that is true as to other war material furnished by the Bethlehem Co., as was well shown by the gentleman from Iowa [Mr. GOOD].

The fact remains that you now have the Bethlehem Steel Co. making extreme and heretofore unheard-of offers to the Government. Let me say in passing that I would rather accept their offer than the amendment offered by the gentleman from Pennsylvania [Mr. BUTLER], because it is a better offer. The Bethlehem people are outbidding you. They say without legislation that they will let you come in and make a contract and fix the price after an investigation, and your proposal is unnecessary, even if you are not going to have an armor-plate plant. There is no use of passing your proposal, because you have the Bethlehem proposal publicly made, which is in terms more favorable than yours. But the fact remains that the Bethlehem people never did make offers anything like this, or comparable to it, until there came the imminence of competition by the Government. I would have more respect for that company, more respect for their disinterested patriotism that they are so emphasizing now, if they had showed some disposition to tell the committee that undertook to investigate the cost of armor plate what it was costing them to make it. [Applause.] What did they do? They denied any look into the books. They denied any sort of information.

Now they are coming in at the last moment and saying if you will not build we will do all the things that we ought to have done in the past and so strenuously refrained from doing. I want to have the Government make its armor plate. I do not believe that you are going to have any tremendous saving. At first you may have a loss—I am going to be perfectly frank, for the making of armor plate is not an easy proposition. Blunders may be made, but successes also will be made. I believe that the Government by going into the manufacture of armor plate will help to guarantee the highest quality of that armor plate. I believe it will teach us, and that is the only way we can learn the real cost. You can not learn it by the examination of books, and if you could it would not necessarily remain true the year after you had the examination, as any man who has been in the manufacturing business knows. You will learn by actual doing of the thing, and you can give your officers the experience that will be of value. You will have added to the capacity of the country to make armor plate. Do not be scared about the Bethlehem people; they are not going out of business whether we build this plant or not. There are a good many concerns in my legislative experience that were going out of business at the threat of competition, but I find them still in business at the same old stand.

You will have added to the capacity of the country in making armor plate. I repeat that the only policy that is wise is to make some of everything of which the Government is the only user, because it is the only way it can protect itself. [Applause.] All other relief will be temporary and illusory.

I think it is of value in another way. I am one who believes in the need of this country for a great Navy and an efficient Army. I am tired of hearing all of the arguments and the pleadings in this direction discounted by men simply charging that the propaganda is the propaganda of a limited number of people who are making unusual profits out of it. I do not believe that is true, but the way to prevent the charge being made is to know what it will cost you to make the various articles necessary in building up the Army and the Navy, and then you will know what to pay when you buy from private manufacturers, and you will have taken, in a legitimate sense, the profits out of munition making. [Applause.]

So, to promote this broad policy, the policy of having an efficient Army and an efficient Navy, it is important that the amendment offered by the gentleman from Tennessee should be agreed to. If it was a total failure as a manufacturing plant, I would still think that in the long run the investment would be worth while. [Applause.] Now I am making no foolish statement. I realize that $11,000,000 is a great deal of money, but I also realize that we not only have spent in the past, but in the future will spend, many millions in armor plate. Men who think that building battleships has gone by are mistaken; we have just begun, and it is well to prepare ourselves. This plant will reduce cost of purchase price from private manufacture more than we spend on it, aside from the advantages I have named. [Applause.]

The CHAIRMAN. The time of the gentleman has expired; all time has expired. The question is on the amendment of the gentleman from Pennsylvania [Mr. BUTLER] to the amendment of the gentleman from Tennessee [Mr. PADGETT].

The question was taken; and on a division (demanded by Mr. BUTLER) there were 120 ayes and 155 noes.

Mr. BUTLER. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chair appoint as tellers the gentleman from Tennessee [Mr. PADGETT] and the gentleman from Pennsylvania [Mr. BUTLER].

The committee again divided, and the tellers reported that there were 125 ayes and 180 noes.

So the amendment to the amendment was rejected.

Mr. PADGETT. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

After the word "act," in line 1, page 2, of the printed amendment, insert "and if the United States owns no suitable site or sites authority is hereby given to acquire by purchase, condemnation, or gift, such site or sites as may be necessary."

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Tennessee to the amendment.

The question was taken, and the amendment to the amendment was agreed to.

Mr. VARE. Mr. Chairman, I have the following amendment.

The Clerk read as follows:

Strike out the words "in places approved by the General Board of the Navy with special reference to consideration of safety in time of war" and insert in lieu thereof "the Philadelphia Navy Yard, the particular site therein to be selected by the Secretary of the Navy."

The CHAIRMAN. The question is on agreeing to the amendment to the amendment offered by the gentleman from Pennsylvania [Mr. VARE].

The question was taken, and the amendment to the amendment was rejected.

Mr. FOSTER. Mr. Chairman, I ask for a division.

The CHAIRMAN. The Chair thinks the demand comes too late. The question is on the amendment offered by the gentleman from Tennessee as amended.

Mr. BUTLER. Mr. Chairman, I have an amendment that I would like to offer.

Mr. PADGETT. That is an amendment to the amendment?

Mr. BUTLER. Yes.

Mr. PADGETT. First, I have a formal amendment to offer.

Mr. FOSTER. What became of the request for a division?

The CHAIRMAN. The Chair announced that the gentleman was too late. By unanimous consent the gentleman can obtain a division.

Mr. CULLOP. Mr. Chairman, I demand the regular order.

Mr. MANN. Mr. Chairman, I think the gentleman from Illinois asked for a division at once.

The CHAIRMAN. The Chair had announced its decision.

Mr. MANN. The Chair possibly did not hear the gentleman in the confusion.

The CHAIRMAN. The Chair has no desire to take advantage of the gentleman. Without objection, the Chair will permit a division.

There was no objection.

The committee divided; and there were—ayes 14, noes 255.

So the amendment to the amendment was rejected.

Mr. MOORE of Pennsylvania. Mr. Chairman, I desire to offer a substitute for the amendment so that the farce may go on. I move to substitute the words "Rock Island, Ill.," as the place at which this armor-plate factory is to be constructed. That apparently is the plan.

Mr. FOSTER. The House has just decided that it will not put it at Philadelphia.

Mr. MOORE of Pennsylvania. I move that as a substitute Rock Island, Ill., be designated. Then you will have your way.

Mr. FOSTER. They could not find a better place.

The CHAIRMAN. The committee will be in order. All gentlemen will take their seats.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to amend the amendment by inserting "Rock Island, Ill.," at the proper point.

The CHAIRMAN. The gentleman will be in order. If the gentleman has any amendment to submit, he will reduce it to writing and send it to the desk.

Mr. MOORE of Pennsylvania. If that is necessary, Mr. Chairman, I will withdraw Rock Island.

Mr. PADGETT. Mr. Chairman, I offer to amend, on page 2 of the printed amendment, line 1, by striking out the word "act" and substituting in lieu thereof the word "paragraph."

The CHAIRMAN. The question is on agreeing to the amendment to the amendment offered by the gentleman from Tennessee.

The amendment to the amendment was agreed to.

Mr. BUTLER. Mr. Chairman, I offer the following amendment to the amendment of the gentleman from Tennessee.

The Clerk read as follows:

That expert chartered public accountants shall be employed to open a set of books, which shall exhibit every item of expense, direct and collateral, which may properly be charged against the preparation of the plans, the selection and purchase of a site, the construction and equipment of the proposed plant, and the cost per ton of the output for each month of the operation of the plant.

The CHAIRMAN. At what point is this amendment to be offered?

Mr. PADGETT. Mr. Chairman, I make the point of order that it is not germane.

Mr. BUTLER. It is at the end of the second paragraph.

The CHAIRMAN. The Chair overrules the point of order. The question is on agreeing to the amendment to the amendment offered by the gentleman from Pennsylvania.

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question now is on agreeing to the amendment offered by the gentleman from Tennessee as amended.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 165, noes 91.

So the amendment as amended was agreed to.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I move to amend, on page 98, line 17, by striking out the word "seventeen" and inserting in lieu thereof the word "forty-seven."

The CHAIRMAN. The gentleman from Massachusetts offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 98, in line 17, by striking out the word "seventeen" and inserting in lieu thereof the word "forty-seven."

Mr. PADGETT. That is correct.

Mr. ROBERTS of Massachusetts. Mr. Chairman, that motion is made to fill in an omission that the chairman neglected to put in this morning to carry out the action of the committee yesterday.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Massachusetts.

The amendment was agreed to.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I have another amendment.

Mr. BORLAND. Mr. Chairman, I have an amendment.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. MANN. Mr. Chairman, I submit that until the minority is through the gentleman from Massachusetts ought to be recognized.

Mr. ROBERTS of Massachusetts. The understanding was, Mr. Chairman, that the list of amendments which I sent to the desk would be dealt with first.

The CHAIRMAN. The Chair thinks not. The gentleman is not the leading member of the committee, and he can not be recognized indefinitely.

Mr. MANN. But he is taking the place of the gentleman from Pennsylvania [Mr. BUTLER] in offering the amendments of the minority. I think they will be through very soon, and it will expedite matters.

The CHAIRMAN. If these are the amendments of the minority, the Chair will recognize the gentleman.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 6, line 2, strike out "$2,000,000" and insert in lieu thereof the figures "$3,500,000."

Mr. ROBERTS of Massachusetts. Mr. Chairman, this amendment is designed to increase the amount of money available for aviation for the fiscal year 1917. In some way, without pronounced authority behind it, the statement crept into the hearings of the committee that the life of the engine of an airship was only 80 hours, the impression carried by that statement being that at the end of 80 hours the engine was useless. Since that statement was made I have been looking for information along that line, and I find that to a limited extent, and to a limited extent only, the statement is correct. The life of the engine is from 80 to 100 hours, and then it must be taken out of the flying machine, taken apart, the bearings readjusted, the carbon scraped out, and the engine reassembled; and then that same engine is good for another 80 to 100 hours, and so on for many, many periods of overhauling. That is why it has been found necessary in the European armies to have from three to five engines with each airship or flying machine, in order that as soon as one was taken out to be overhauled and cleaned the machine could be used by substituting another, and in that way the flying machine that has three to five or more engines would be in continuous use. I have only to-day received information from an expert aviator, who has been flying for 8 or 9 and possibly 10 years, that he is using and has been using an engine that was constructed in the latter part of 1909. It must be overhauled after about 80 to 100 hours of service. There are many engines in use to-day built in 1910 and 1911, but they must be taken care of just as the engine of your automobile must be taken care of and overhauled and carbon eliminated.

Mr. KEATING. Will the gentleman yield?

Mr. ROBERTS of Massachusetts. I have only 10 minutes, if the gentleman will excuse me. That has been, I think, one of the potent factors in determining the action of the committee against putting money into aircraft to-day, because they say we have not a reliable engine. I admit we have not a perfectly reliable engine any more than we have a perfectly reliable automobile engine. There may be something better developed later on, but that is true of every piece of machinery in operation, whatever it may be, whether in commercial life or in war use;

we have not attained perfection, and we never will attain perfection as long as there is a working brain in the head of a human being; there will always be something a little better developed later on than the thing we now have, but if we do not start on aviation we never will have anything. As I stated to this committee the other day, it is a shame and a disgrace to this Nation that we, having the first seaplane in our Navy, ahead of all other countries in the world, are now lagging behind even the smallest European nation in the development of aircraft, and $2,000,000 is too trifling an amount to be expended for that purpose. If we do not add a single flying machine, if we expend every cent of the increased appropriation, it would be the best investment of a million and a half of money that this Government could possibly make. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SHERLEY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. KEATING. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Colorado asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. HARDY. Mr. Chairman, I make the same request.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. PADGETT. Mr. Chairman, the committee, as I explained the first day we had this appropriation bill up, recommends an appropriation of $2,000,000 for aviation for this year. This amendment is to increase it to $3,500,000. It does not occur to me it is necessary that there should be a prolonged discussion of the matter, and I would like to have a vote upon it. The committee thought $2,000,000 was an abundance as an appropriation for the coming year.

Mr. WILSON of Florida. Will the gentleman yield?

Mr. PADGETT. I will.

Mr. WILSON of Florida. This aviation school of the Navy is at my home town. What does the Secretary of the Navy recommend in reference to it?

Mr. PADGETT. He has not made any specific recommendation.

Mr. WILSON of Florida. He made the statement that $2,000,000 was the minimum, did he not?

Mr. PADGETT. I do not know of any minimum.

Mr. WILSON of Florida. Yes; he made the statement before the gentleman's committee.

Mr. PADGETT. It may be; but $2,000,000 is all we thought necessary for the appropriation.

Mr. STAFFORD. Will the gentleman yield?

Mr. PADGETT. I do.

Mr. STAFFORD. Can the gentleman furnish the committee with the number of seaplanes now in the Navy and how many this $2,000,000 authorization will buy?

Mr. PADGETT. The $2,000,000 will provide about 75. That is what Admiral Benson said in his tabulated statement.

Mr. STAFFORD. How many have we at the present time, or how many have we altogether at this time, with this authorization for seaplanes?

Mr. PADGETT. I think we have 16.

Mr. GARDNER. Will the gentleman yield?

Mr. PADGETT. I will.

Mr. GARDNER. How many aeroplanes in the Navy of all sorts have we actually finished at the present time?

Mr. PADGETT. I think 16.

Mr. GARDNER. Finished?

Mr. PADGETT. I think so; that is my recollection.

Mr. GARDNER. How many have we in operation; how many have we that we could operate?

Mr. PADGETT. I do not know; that changes from time to time.

Mr. GARDNER. I am told it is 9; is that correct?

Mr. PADGETT. I do not know.

Mr. GARDNER. Can the gentleman state approximately?

Mr. PADGETT. I understand we have 16, but they might not all be operating to-day; there may be something done on them in the way of repairs.

Mr. GARDNER. Was not the testimony before the gentleman's committee 9?

Mr. PADGETT. I do not recall at that particular date.

Mr. GARDNER. The gentleman from Massachusetts [Mr. ROBERTS] says 9.

Mr. PADGETT. Mr. Chairman, I move that all debate upon this amendment do now close. I will change that, and ask unanimous consent that debate close in five minutes.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on this amendment close in five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. BENNET. Mr. Chairman, I hope that this amendment for the larger amount will prevail. Of the two new instruments of naval warfare discovered recently, the submarine and the aeroplane, the aeroplane has developed by far the greatest possibilities. The submarine is limited in its efficiency by its lack of speed and its lack of armor. The aeroplane is protected against the attacks of all other agencies by its speed and the fact that it rises to immense heights. I will tell you what an aeroplane can do to a battleship under a recent invention, an invention by Admiral Fiske, of our own Navy, and improved upon by an Italian. An aeroplane can drop a torpedo so as to strike a quarter of a mile or more from a battleship, aimed when it drops, and proceeding toward the target at the rate of 90 miles an hour.

Now, imagine what would happen to a fleet of battleships if four or five hundred aeroplanes—Germany has 9,000—if four or five hundred aeroplanes came out in one of these naval engagements, each equipped with two or three torpedoes, and made the battleships the target of their torpedoes. My own impression is that the development of the airship, which has reached the point where the airship has a capacity of 21 tons—and those now being built in our own country can cross the ocean in 30 hours with a crew of five men and armament—imagine, with the development that will come, what is going to be the future of naval warfare.

We ought to have these aeroplanes. They can do one thing even more hellish to the battleships than the thing I have described about a torpedo, but that particular description that I have given has been printed and published, and therefore I am not assuming any new responsibility in giving it to the world. I have been told by experts of something even worse or more deadly that they can do, but that has not been published, and no Member of the American Congress ought to assume the responsibility of making it public.

Mr. WILSON of Florida. Mr. Chairman, will the gentleman yield there?

Mr. BENNET. Yes.

Mr. WILSON of Florida. I wish to hand to the gentleman a statement contained in the hearings.

Mr. BENNET. Yes. The gentleman from Florida merely reinforces what I said when he calls my attention to Secretary Daniels's statement as to the extreme importance of this aeroplane proposition. I will not read it all. We ought to have that extra million and a half dollars to experiment with. What is a million and a half dollars alongside of what we are voting for these other craft, submarines, and craft of other sorts for this developing branch of naval warfare? I hope that our friends on the majority side will join with us in putting this American invention—that is what it is—again where it ought to be in connection with the American Navy, not in first place but alongside of what we ought to do.

Do you know how many raids have been made on Great Britain by air craft in this war? There have been over 200, and one of them destroyed $15,000,000 of property, including three of the guns of the *Queen Elizabeth* that were being relined in the Woolwich Arsenal, and in connection with that raid 150 people were killed. That was done by one single raid by an aircraft.

This is the startling point to that thing: The only effective thing against aircraft is aircraft. [Applause.]

The CHAIRMAN. The time of the gentleman from New York has expired. The question is on agreeing to the amendment offered by the gentleman from Massachusetts [Mr. ROBERTS].

The question was taken, and the Chairman announced that the noes seemed to have it.

Mr. ROBERTS of Massachusetts. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 114, noes 106.

Mr. PADGETT. I demand tellers, Mr. Chairman.

The CHAIRMAN. The gentleman from Tennessee demands tellers.

Tellers were ordered, and the Chairman appointed Mr. PADGETT and Mr. ROBERTS of Massachusetts to act as tellers.

The committee again divided; and the tellers reported—ayes 129, noes 103.

So the amendment was agreed to.

Mr. ROBERTS of Massachusetts. Mr. Chairman, on page 36, line 21, I move to strike out the words "sixty-one thousand five hundred," and insert in lieu thereof the words "sixty-five thousand."

The CHAIRMAN. The gentleman from Massachusetts offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 36, line 21, by striking out "sixty-one thousand five hundred" and inserting "sixty-five thousand."

Mr. ROBERTS of Massachusetts. Mr. Chairman, the purpose of this amendment is to provide during the fiscal year 1917 the number of enlisted men which the General Board tell us will be required in 1917 to keep in full commission the Atlantic Fleet of 21 battleships, with a reserve crew of 50 per cent upon the other 14 or 15 battleships that will then be and are now in reserve, together with the minimum number of enlisted men required for duty in the Navy at shore stations.

Now, if this committee is to consider any degree or measure of preparedness, the least and smallest they can consider is to provide enough men to keep the present Atlantic Fleet of 21 battleships in full commission, with a reserve complement of 50 per cent on our reserve ships.

Mr. TRIBBLE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Georgia?

Mr. ROBERTS of Massachusetts. No; I must decline. I have only five minutes under the rule. We will be derelict in our duty if we provide any smaller number of men than that minimum number recommended by the General Board for the year 1917.

I want the members of this committee to have in mind a few figures that I propose to give them. The enlisted strength of the Navy to-day is 48,000 men plus 3,500 apprentices, or boys under instruction. The majority of the committee have recommended an addition of 13,500 men. If that were the law, we would then have 48,000 plus 13,500 men, or 61,500 men, in the Navy.

But, mark you, under the provisions of this bill you are going to take out of that 61,500 men, and remove them from what we consider the fighting strength, 3½ per cent of the combined authorized strength of the Navy and Marine Corps. Now, the strength of the Marine Corps would be 13,000 men plus the authorized strength of the Navy, including apprentices, or 65,000, and that is 78,000. Three and one-half per cent of that will give you in the neighborhood of 3,000 men, who must be taken out of your efficient fighting Navy in order to provide this Hospital Corps. These men are necessary aboard ship; they are necessary in our hospitals; but they are in no sense fighting men in the Navy; and if you conform to the majority report of the committee, taking those 3,000 men out of the 61,500 effective fighting men would leave you only 58,000 effective fighting men in the Navy, when the General Board says we want 67,000.

And so I say this amendment is the least and the shortest and the most halting step that we could take toward preparedness, and I believe it is one that if we omit to take will bring this Congress under the unmeasured condemnation and censure of the country for failing in this emergency which confronts us, in the unsettled world conditions, to provide the men needed on a peace basis. [Applause on the Republican side.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. Mr. Chairman, I hope that this amendment will not be agreed to, for the reasons that I shall state, and I want to state at the beginning that it is my purpose to offer an amendment on page 33, under the Hospital Corps, providing that the Hospital Corps shall be in addition to the enlisted strength, which would add 2,730 men to the Navy, and would make the Hospital Corps an addition to the enlisted strength and be 3½ per cent of the authorized strength of the Navy and the Hospital Corps.

Mr. BRITTEN. Mr. Chairman, does the chairman of the committee indicate that the enlisted personnel now provided in the bill will be increased an additional 2,700 by some amendment he is going to offer?

Mr. PADGETT. Yes; it will increase the enlisted strength 2,730 men. If this amendment is voted down, the amendment that I am going to offer will be to strike out, on page 33, lines 2, 3, and 4, as follows: "Hereafter the Hospital Corps of the Navy shall constitute 3½ per cent of the authorized enlisted strength of the Navy and Marine Corps," and substitute "Hereafter the authorized strength of the Hospital Corps of the Navy shall equal 3½ per cent of the enlisted strength of the Navy and Marine Corps and shall be in addition thereto," which would increase the enlisted force of the Navy 2,730 men.

Now, as I said in the outset, on the 30th day of July the General Board said that the number of men required for the next year was 11,000; that this number would provide for the needs of the present ships of the Navy, including those nearing completion. On November 9 they submitted a report saying that for peace requirements in the fiscal year 1917 the General Board regard as inadequate any smaller force than 67,000 men for the Regular Navy. When Admiral Badger appeared before the committee he was asked to give an exact statement, and he said 67,865.

Now, with the amendment that we have here, that I propose to offer, the number will be 67,850 plus 2,730, which will make 70,580.

I have concluded to offer this amendment for the reason that on careful estimates we wanted to make the number of the enlisted men upon the reserve ships 50 per cent instead of 40 per cent. The increase heretofore provided in the bill of 13,500 would not quite do that, but the 2,730 will take care of that amply.

If the amendment offered by the gentleman from Massachusetts [Mr. ROBERTS] is agreed to, the next provision would be to necessitate an increase of the Marine Corps of 700 men, whom we do not need in the Marine Corps; but to keep it on a proportion of 20 per cent of the Navy would mean an increase of the Marine Corps of 700. But if the amendment that I am proposing to offer is agreed to, it will not be necessary to increase the Marine Corps under this provision, because they will be in addition to and separate from the authorized strength upon which the strength of the Marine Corps is based. For that reason I hope that this amendment will be disagreed to, and then I will offer the amendment that I have suggested.

Mr. TRIBBLE. The gentleman's amendment will furnish all the men that the Secretary of the Navy desires?

Mr. PADGETT. Yes; and in pursuance of a recommendation from the Secretary of the Navy as per a letter which I have received from him.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GARDNER. May I ask the gentleman a question before he sits down? I ask unanimous consent——

The CHAIRMAN. The gentleman asks unanimous consent that the time of the gentleman from Tennessee be extended one minute. Is there objection?

There was no objection.

Mr. GARDNER. Is it not true that a year ago in the hearings the Secretary of the Navy and Admiral Blue said that we did not need any more men to fully man the ships in the existing current year?

Mr. PADGETT. At that time he said that according to the proportion of the allotments that were made, and upon the basis that at that time prevailed with reference to the reserve ships.

Mr. GARDNER. That he did not ask for any more, and that is why the House voted down the amendment to increase the personnel last year.

Mr. PADGETT. I think there was an amendment offered last year for an increase of 5,000.

Mr. GARDNER. I think Mr. Hobson offered an amendment for 10,000.

Mr. PADGETT. I thought it was 5,000.

Mr. GARDNER. Were the Secretary of the Navy and Admiral Blue anywhere nearly correct as the facts turned out? Did not Admiral Fletcher report within a month that the Atlantic Fleet alone was 5,000 men short?

Mr. PADGETT. I am reminded that Admiral Blue stated that there was a shortage of 4,000, but that it was not necessary to make an increase at that time for the ships that were not then completed, and that this year they would make a recommendation for an increase.

Mr. GARDNER. But, as it turned out, within two months there was a deficit of 5,000 men, according to the report of the commander of the Atlantic Fleet.

Mr. PADGETT. Admiral Fletcher has reported——

Mr. GARDNER. Not his later report. I am speaking of his report in January, 1915.

Mr. PADGETT. Yes; he reported a shortage of 5,000, but that was based on a very large increase over the allotment made to ships that had always prevailed theretofore.

Mr. GARDNER. Was it not based on an absolute necessity for manning the ships?

Mr. PADGETT. That depends upon the basis that is taken——

Mr. GARDNER. That is what Admiral Fletcher stated, that they were needed to man his ships.

Mr. PADGETT. No; he said that was what was recommended.

Mr. BRITTEN. Mr. Chairman, replying very briefly to the suggestion of my good friend from Massachusetts [Mr. GARDNER], I would like to call the attention of the House to the fact that a little more than a year ago, in December, 1914, directly before our distinguished Secretary of the Navy came before the Committee on Naval Affairs, the General Board recommended an increase in the enlisted personnel of 19,600 men. That was in December, 1914. Now, this matter of personnel for the Navy can certainly be treated on a nonpartisan basis, if anything can. We may have our disagreements regarding battleships, or destroyers, or battle cruisers, or submarines, but certainly there can be no difference of opinion as to the desirability of keeping our ships in the Navy fully manned and prepared. It is all right enough for the chairman of the committee to say that ship for ship and man for man we have the greatest Navy in the world. That is mighty fine to send to the folks at home, especially if he will just add a little of Old Glory, but you are not giving them the facts. Experts who came before the committee said that man for man——

Mr. CALLAWAY. Mr. Chairman——

Mr. BRITTEN. I can not consent to be interrupted. I have only five minutes. Experts who came before the committee said that man for man and ship for ship our Navy was not as efficient as the German Navy or the Japanese Navy. And is it not perfectly natural that that should be so? Those navies are in constant practice. They have mobilizations every year, not of a section of the navy but of their entire navy. Do you gentlemen know that we have not had a mobilization of our Navy since the Spanish War purely because we have not the personnel to put on our ships?

When Admiral Fletcher came before the committee this year, he told us that the battleships that comprised the Atlantic Fleet were 15 ships. You and I know that three or four destroyers should accompany each battleship for maneuvering purposes and war-play purposes and in actual war. Accompanying the 15 or 16 battleships he had 18 destroyers. I asked the admiral why he did not have more. He said, "Well, there are 19 of them tied up at various docks available and in good condition, but you could not take them out to sea because we have not the men." There can be no disagreement as to the desirability of having men; we all agree to that. Our Navy could not go into war play if the 10,000 men and 3,500 boys under 21 years of age, recommended in this bill, were enlisted to-day. We can not have a mobilization of the Navy. There is no question about that, and yet they say man for man and ship for ship we have the greatest Navy in the world. Ship for ship, the *Pennsylvania* and the *Oklahoma* are probably superior to anything that floats, but they can not go out without seasoned men. Men must be trained. You can not take a crew of green men and put them on a battleship with all of the complications, the aviation, the wireless, and the intricate engineering system and multitudinous duties and expect them to go out to fight. Man for man and officer for officer we have the finest type of men in the world, but it is just like taking the all-star football team selected each year by my friend Walter Eckersall from Harvard and Cornell and Yale and other college teams as the star players of the season, and call them the greatest team in the country. Do not you gentlemen realize that a scrub team could beat the all-star team unless they had daily practice?

Now, as I say, we have not had a mobilization of our Navy since the Spanish War.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. BRITTEN. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. BRITTEN. I want to call the attention of the House to the fact that the enlisted personnel of the Navy has not been increased one man since August 22, 1912. It is four years ago, and the increase at that time was 4,000. I want to call attention to the number of dreadnaughts commissioned since that small increase was made in the second session of the Sixty-second Congress. We have commissioned six dreadnaughts—the *Arkansas*, the *Nevada*, the *New York*, *Oklahoma*, *Texas*, and *Wyoming*—requiring more than 5,300 men on those ships. And when I say 5,300 men, I mean enlisted men, irrespective of petty officers and warrant officers, and so forth, and exclusive of marines.

We have commissioned 22 destroyers, 13 submarines of the G, H, and K type, 3 torpedo tenders, 1 gunboat—the *Sacramento*—and 5 fuel ships.

In addition to the ships commissioned and in service, we have 7 dreadnaughts building, and the *Pennsylvania* is 99.3 per cent complete, and will be completed in the next 30 days; 13 destroyers in the course of construction and 2 fuel ships, 1 supply ship, 1 transport, and 37 submarines. All of that is exclusive of the tremendous building program that we have to-day.

Man for man and ship for ship we have a wonderful aggregation, but as a compact fighting mass they could not deliver the goods, and experts will tell you so.

With the exception of three experts who came before the committee, every one of them, including the commander in chief of the Atlantic Fleet and the commander in chief of the Pacific Fleet, said that we ought to have from 20,000 to 25,000 men added this year. The three who said that we should have less than 20,000 are directly under the daily glance of the Secretary of the Navy in the department. Every one, with the exception of the three from the department, said 20,000 or 25,000. Now, 25,000 additional men is not a serious matter, particularly when you consider that 3,500 authorized in the bill are boys under 21 years of age.

Mr. PADGETT. Oh, no; they are all men.

Mr. BRITTEN. I am talking about the apprenticed seaman.

Mr. PADGETT. We do not authorize any apprenticed seamen.

Mr. BRITTEN. Thirty-five hundred.

Mr. PADGETT. No; they were all authorized years and years ago.

Mr. BRITTEN. Then if they were authorized years and years ago, they are now men, and they are in the fighting force and we need more of them. The situation is right here. Our Navy can not carry on a war game. We carried on one war game last October—the Atlantic Fleet; a portion of our Navy, with skeleton crews, and it was a farce—not an aeroplane. They called themselves the blues and the reds, or something like that, and I have it from expert authority that the play was a farce. We can not maneuver, we can not mobilize, we can not carry along our destroyers. We have millions and millions of dollars tied up in ships in reserve at the various navy yards. The commander of the fleet will tell you that we can not take those ships out because we have not the men, and that is all there is to it. The chairman says we are going to increase this number now by 2,700 in the Hospital Corps. I should say that we need them in the Hospital Corps, and besides that number we want some more fighting men on the fighting ships so that we can go out and maneuver and mobilize. [Applause on the Republican side.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, I move to strike out the last word.

Mr. PADGETT. Mr. Chairman, before the gentleman begins, I ask unanimous consent that debate upon this amendment and all amendments thereto close in 10 minutes, the gentleman from Massachusetts to have 5 minutes and I to have 5 minutes in reply.

Mr. MANN. I may want five minutes.

Mr. ROBERTS of Massachusetts. The gentleman means 10 minutes after the 5 minutes for which I have already been recognized?

Mr. PADGETT. No; I was including that.

Mr. ROBERTS of Massachusetts. I have already obtained 5 minutes, and I will agree to the proposition for 10 minutes after my 5 minutes have been used up.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that debate on this amendment and all amendments thereto close in 10 minutes. Is there objection?

Mr. BUTLER. Mr. Chairman, my colleague, Mr. FARR, would like two or three minutes, and I would be obliged to the gentleman if he would add five minutes.

Mr. MOORE of Pennsylvania. I would like to offer an amendment to the paragraph, and I presume this arrangement will not interfere with that?

Mr. PADGETT. I ask that all debate on this amendment and all amendments thereto close in 15 minutes.

Mr. ROBERTS of Massachusetts. After my five minutes expire?

Mr. PADGETT. No; 10 minutes after the gentleman's 5 minutes expire, 5 minutes to the gentleman and 5 minutes to the gentleman from Pennsylvania [Mr. FARR]; and do I understand that the gentleman from Illinois desires 5 minutes?

Mr. MANN. I did, but if the gentleman is so anxious I will let it go.

Mr. PADGETT. Very well, and five minutes for myself.

Mr. BROWNING. Make it 20 minutes.

Mr. ROBERTS of Massachusetts. Mr. Chairman, this will virtually close the minority amendments and it will enable us

to dispose of them to-night if we get 20 minutes after I am through. That will let us finish our program at 5 o'clock or a few minutes after.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments thereto close in 20 minutes after the expiration of the gentleman's time, 10 minutes to be controlled by myself and 10 minutes by the gentleman from Pennsylvania [Mr. BUTLER].

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate on the pending amendment and all amendments thereto close in 25 minutes, 5 minutes to be occupied by the gentleman from Massachusetts, and 10 minutes to be controlled by the gentleman from Pennsylvania [Mr. BUTLER], and 10 minutes by the gentleman from Tennessee [Mr. PADGETT]. Is there objection?

There was no objection.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I am very glad indeed to hear the chairman of the committee state that he will later offer an amendment that will take the 3½ per cent of the authorized strength of the Navy and Marine Corps out of the effective authorized strength of the Navy and put them on a separate status.

Mr. PADGETT. I said that I was going to offer that in the event that this was voted down.

Mr. ROBERTS of Massachusetts. Oh, the gentleman has not fully come over then?

Mr. PADGETT. No; I said in lieu.

Mr. ROBERTS of Massachusetts. The gentleman has not come over to the opinion that the nonfighting men should not be included among the authorized fighting strength. We thrashed that out in committee.

Mr. PADGETT. Take them out of the 54,000 that we have, and that will leave that many——

Mr. ROBERTS of Massachusetts. If the gentleman is going to offer his amendment on condition that we do not increase the authorized strength under that motion made by myself, I want to point out wherein his amendment, if adopted, would still leave the Navy 3,500 men short of the requirements on a peace basis. The trouble is the chairman of our committee loses sight of the fact that the authorized strength of the Navy to-day in men is but 48,000. He tells us about the strength of the Navy authorized by law—51,500. That is true, but 3,500 are boys—apprentices. If you called for a plumber to go to your house, and he brought his helper along with him, you would not say that you had two plumbers in the house; you would have a plumber and a boy under instructions. So when you figure 51,500 as the authorized strength of the Navy to-day it means 48,000 men, because the law says that explicitly, and 3,500 more are to be trained as seamen; and the General Board is not asking now at this time for additional apprentices. They do not figure in the 67,000 needed in the Navy a single apprentice. They do not want them. So far as the General Board is concerned, the provision of law providing 3,500 apprentices to-day is ample to meet all the requirements of the Navy. They are asking for men. Now, you take the basis of 48,000 men, which is the law, add to that the 3,500 recommended, plus 2,700, which the chairman says is the strength of the Hospital Corps, and you will have an addition this year of 16,200 men. Add that to the 48,000 and you will have 64,200 men in the Navy, and the General Board says 67,000 is the minimum number needed.

I have some information here I wish I had had the other day. Here is a document I have in my hand, prepared in the Navy Department, in the Bureau of Navigation, for their own information, never intended to come to Congress or be read by the committee or on the floor of this House. I have the permission of the Secretary of the Navy to keep this copy, and I have been reading it through. This gives in great detail just where all our men are who are now in the Navy, on what ships, beginning with the *Wyoming* and running down, how many allowed, how many on board, how many vacancies. It goes right straight on down through every battleship down to the most insignificant of our ships, and the most illuminating thing to me is that to-day we have but 13 battleships in full commission in the Atlantic Fleet. I stated on the floor the other day that the Atlantic Fleet since September, 1914, had shrunken from 21 capital ships down to 16 because they had not men enough to put on them; but I find we have only 13, for the same reason—lack of men.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent to extend my remarks by inserting in the RECORD this document. I do so for the reason that many Members say there is no other means of getting information as to the personnel and where located.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

The matter referred to above is as follows:

EMPLOYMENT OF ENLISTED PERSONNEL.

(Quarter ended Mar. 1, 1916.)

Bureau of Navigation quarterly statement of vacancies, Apr. 5, 1916.

ATLANTIC BATTLESHIPS—ACTIVE STATUS—14 SHIPS.

Ships.	Allowed.	On board.	Vacancies.	Remarks.
Wyoming, flagship	978	971	7	
Yankton	75	80	5	Over.
Arkansas	957	949	8	
Delaware	830	819	11	
New York	902	904	2	Do.
Texas	902	897	5	
Florida	851	843	8	
Michigan	707	749	42	Do.
Kansas	844	835	9	
South Carolina	707	715	8	Do.
Utah	828	796	32	
New Jersey	819	798	21	
Rhode Island	798	793	5	
Louisiana	862	885	23	Do.
Nebraska	798	766	32	
Total	11,858	11,800	58	

ATLANTIC BATTLESHIPS—RESERVE STATUS—15 SHIPS.

Connecticut	338	312	26	
Minnesota	338	283	55	
New Hampshire	338	306	32	
Virginia	319	442	123	Over.
Vermont	338	350	12	Do.
Georgia	319	351	32	Do.
North Dakota	320	307	13	
Maine	280	191	89	
Missouri	280	253	27	
Ohio	280	249	31	
Wisconsin	245	240	5	
Alabama	245	158	87	
Illinois	245	129	116	
Kearsarge	256	224	32	
Washington	326	370	44	Do.
Total	4,467	4,165	302	

ATLANTIC CRUISER SQUADRON—ACTIVE STATUS.

Dolphin, flag	144	135	9	
Kentucky (Sp)	309	302	7	
Montana (Sp)	446	473	27	Over.

Asiatic, active status	1,773	1,779	+ 6
Asiatic, torpedo division, active status	376	362	— 14
Asiatic, submarines, active status	354	326	— 28
Asiatic, auxiliaries	61	63	+ 2
For March, 1916	42,067	39,714	—2,353
For December, 1915	40,752	39,072	—1,680
For October, 1915	42,671	39,580	—3,091
For July, 1915	40,919	39,001	—1,918

The totals for the last four quarters of the column headed "Allowed" in summary of this report, when compared with the corresponding vacancies existing, indicate the impracticability of employment of more than 40,000 men in the organizations given herein. This report indicates that action will be necessary very shortly to again relieve the personnel situation in order that ships listed in the "fitting out" and "unassigned" classes may be properly manned.

SOLUTION OF PROBLEM.

Mr. PADGETT. I will ask the gentleman from Pennsylvania to use some time. I want to close.

Mr. BUTLER. Mr. Chairman, not hearing but very little that is said, I do not suppose it is a matter of great importance whether I should or not, but it is important that I should know whether or not the gentleman from Tennessee has put the distribution of time in my hands.

Mr. PADGETT. Yes, sir; the gentleman had 10 minutes and I had 10.

Mr. BUTLER. I have not heard it until this moment. I am very glad to yield five minutes to the gentleman from Illinois [Mr. MANN].

Mr. CALLAWAY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by printing from the hearings a comparative statement of our naval expenditures with those of other countries, covering a period of 10 years back.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas? [After a pause.] The Chair hears none.

Mr. MANN. Mr. Chairman, the ships we add to the Navy will not be floating to-morrow. It takes time to construct these ships. They may be necessary several years from now.

I think it is advisable to provide for them and have them then, but in this emergency in the world, in this time when all the world nearly is war mad, and even those in favor of peace want to fight about it, when no one knows what may happen six months or a year from now, it looks like good sense to sharpen our tools, take the rust off them, and teach the people how to use them.

Why, those gentlemen here who are opposed to providing a sufficient number of enlisted men in the Navy to man the ships we now have are like a farmer who lets his farm implements lie out in the weather, rust, and become dull, and gives no care to them until fair weather comes and they ought to be used at once. We can at least provide the men and train them so they can man and fight the ships we now have. That is common sense. It does not require statesmanship, it only requires a little common sense, and it does not require much common sense. We either ought to have no addition to the Navy at all or else just now we ought to provide men enough to completely man the ships we have.

What is the use? You can not take a green hand and put him on board one of these electrical plants—a naval vessel, filled from top to bottom with machinery, operated no longer by human muscle but operated by trained brains. You can not put green men there and expect them to do any good. You must have trained men. Many people believe you can make a soldier over night, but no man believes that you can make a sailor over night. Much less can you make a mechanic or an electrician over night; much less you can train men to fire guns in the Navy over night. We ought to have all the men that the Navy can use and have them trained, ready for trouble if it comes, praying that it does not come. [Applause on the Republican side.]

Mr. BUTLER. Mr. Chairman, I yield the remaining five minutes given to me to distribute to my colleague from Pennsylvania [Mr. FARR].

The CHAIRMAN. The gentleman from Pennsylvania [Mr. FARR] is recognized for five minutes.

Mr. FARR. Mr. Chairman, it takes years to prepare a seaman to perform his duties properly. There is no use in having ships unless you are going to man them with men competent to run them. It would be a waste of money.

Great Britain on July 1, 1914, had in her navy 150,000 officers and sailors. To-day she has 417,000 active men on her ships. Take Japan. People say Japan has a smaller navy than we have, but I am somewhat suspicious about the size of Japan's Navy. I am frank to say that. The Japanese Navy has 56,000 on the active list and some 30,500 on the reserve list, making 86,500 in all. Now, as I understand it, we have an active list of 54,500 men and a reserve of 11,000, making 65,500, as against 86,500, the active and reserve personnel in Japan.

We are building hundreds of ships, small and large, but we are not providing men to man them. To repeat, what is the use in building ships unless we provide efficient men with which to man them? It is nonsensical to try to mislead our people by saying, "Ship for ship and man for man, we have the best Navy in the world." We might say that if we had but one ship. It would be like a candidate for Congress saying, "I have 1,000 votes; man for man and vote for vote, they are the best in the world." If his opponent had 2,000 votes, where would he be?

I think, my friends, we have made two good steps in increasing the number of submarines and increasing the appropriation for airships. Now let us fill the Navy with men. Let us give our Navy an abundance of men, so that in case we have war we will be able to utilize every ship we have. Let us be influenced by what has happened in Great Britain. She had 150,000 active personnel in her navy on July 1, 1914, and has 417,000 to-day. What could England have done to protect herself but for the great power she has on the sea? Our dependence for protection must be the Navy. Nothing but the highest efficiency should satisfy us, and we should provide a full complement of men to make this possible.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. BUTLER. Mr. Chairman, have I any time remaining?

The CHAIRMAN. The gentleman has one minute and a half remaining.

Mr. BUTLER. I yield a minute and a half to the gentleman from California [Mr. STEPHENS].

The CHAIRMAN. The gentleman from California [Mr. STEPHENS] is recognized for one minute and a half.

Mr. STEPHENS of California. Mr. Chairman, I understood the chairman of the Naval Committee to say that he proposed to offer his amendment because he wants to increase the personnel of the ships in reserve to 50 per cent instead of 40 per cent, as he thinks it is.

In his testimony before our committee Admiral Winslow gave the personnel now aboard the cruisers in the reserve fleet on the Pacific coast as 2,009 men. The Navy Yearbook for 1915 shows that the complement of those ships is 7,247 men. Therefore the personnel of the reserve ships on the Pacific coast is only 28 per cent instead of 40 per cent, as the chairman thinks it is, and his amendment will not bring the total of the enlisted force for the whole reserve fleet up to 50 per cent.

Mr. PADGETT. Mr. Chairman, you can not determine the reserve force in the fleet by picking out a few vessels here and there. That is determined by the aggregate of our Navy.

The General Board adopted a general policy with reference to our fleet, and they say this, that legislation be asked for, providing for an active personnel, officers and enlisted force, keeping in full commission all battleships under 15 years of age from date of authorization, all destroyers and submarines under 12 years of age from date of authorization, half of the cruisers and all gunboats, and all necessary auxiliaries that go with the active fleet and furnish the nucleus of the gross fleet, all the ships of the Navy that would be used in time of war and necessary for training and other shore stations.

Now, that is the policy outlined for the whole fleet. You take any part of the cruisers on the Pacific coast, and the complement may not be full. For instance, you will find that the cruiser service in the Atlantic, down in the South Atlantic, has been extraordinary, and we have been taking men from those other fleets and putting more than half of the cruisers in full commission, instead of half of the cruisers in full commission and half on reserve commission, as recommended by the General Board, to meet the particular exigencies that have arisen at this time.

Now, the gentleman from Pennsylvania [Mr. FARR] referred to England and the United States. England, of course, is in a state of war, and her fleet complement is upon a war basis and not on a normal basis as in time of peace. But what were the conditions in time of peace? On the basis of the number of men per thousand tons, England had 65.34 per thousand tons on her fleet. The United States has 79.04 per thousand tons on our fleet.

Mr. GARDNER. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. GARDNER. Is it not true that Great Britain also had a reserve navy which we do not have?

Mr. PADGETT. That is true; but I am talking about what is in the active fleet. They have 65 per cent and we have 79.

Mr. GARDNER. But we have not the men.

Mr. PADGETT. Now, then, we have in the Naval Militia, in the Coast Guard, and in the reserve something more than 11,000 men in our reserve, available for the fleet in case of war or emergency.

Mr. GARDNER. Mr. Chairman, will the gentleman yield again?

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Massachusetts?

Mr. PADGETT. Yes.

Mr. GARDNER. How many actual men have we in the United States Navy Reserve?

Mr. PADGETT. Four hundred and something.

Mr. GARDNER. And the Secretary of the Navy testified that the legislation proposed would bring us 6,500 the first year.

Mr. PADGETT. I do not remember as to that.

Mr. GARDNER. I put his testimony in the RECORD.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield for a question?

Mr. PADGETT. No; I can not yield.

Mr. MOORE of Pennsylvania. Very well.

Mr. PADGETT. Now, then, at the present time we have an actual enlistment of 54,000. We have provided in the bill for 13,500 additional men. The amendment which I have proposed to offer would increase it 2,730, which would make 70,230, and that does not include 13,000 marines, which, if added, would make 83,230 for the manning of our ships—70,230 in the Navy and 13,000 marines that serve on the ships.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. MOORE of Pennsylvania. Will the gentleman state what is the pay of the enlisted men in the Navy?

Mr. PADGETT. Oh, I can not take up time to do that. I am talking about the number of the men now. In July the General Board said that an increase of 11,000 men would meet our requirements for the year 1917. This amendment that I am proposing will give us 16,230. The General Board stated in their November report that 67,000 men in the service would be sufficient. Take the figures that I have given you, 54,000, 13,500,

and 2,730, would make a total of 70,230, or 3,230 more than the General Board in November said would be needed for the service in the next fiscal year.

Now, Admiral Badger, a member of the General Board, when he came before our committee in February, was asked to give the matter careful attention, and he stated that we would need 67,865. The provision that I propose would give about 2,500 more than he stated.

Mr. BUTLER. I do not want to interrupt the gentleman, but I will ask to have his time extended, because we would like to hear his statement. But why now let us immediately break the compact which we have made, that the Marine Corps shall be 20 per cent of the size of the enlisted force of the Navy?

Mr. PADGETT. Of the authorized force.

Mr. BUTLER. Why should we make an agreement here one minute simply for the purpose of violating it the next?

Mr. PADGETT. I am not doing that.

Mr. BUTLER. As I said to the gentleman the other day, I have made my last agreement.

Mr. PADGETT. I am not violating the agreement. If the provision stays as it is, 13,500, the authorized strength of the Navy would be 65,000 men and the Marine Corps would be 13,000 men, or one-fifth, which we have provided. The provision that I am putting in takes the Hospital Corps out of the authorized strength and puts it as an independent corps, which would give that many more men in the authorized strength, available to take the place of the 2,730 that go into the separate corps.

Mr. ROBERTS of Massachusetts. Does not that 65,000 authorized strength include 3,500 apprentices?

Mr. PADGETT. Yes; and those apprentices are young men from 18 to 21 years of age, just as valuable young men as you could get in the service, and they are just as good material as you could hope for; and it does not do any good to come here and say that boys from 18 to 21 years of age are not valuable and can not perform the service.

Mr. BUTLER. We have got somewhat mixed upon the figures here, and the chairman of the committee will be able to put it straight. The gentleman from Massachusetts [Mr. ROBERTS] insists upon having an amendment adopted here which will increase the fighting force of the Navy by 3,500 men.

Mr. PADGETT. And I am proposing to increase the number by 2,730.

Mr. ROBERTS of Massachusetts. That is not the difference. I am proposing to increase the fighting force by 3,500 men—not apprentices.

The CHAIRMAN. The time of the gentleman has expired. All time has expired. The question is on the amendment of the gentleman from Massachusetts [Mr. ROBERTS].

Mr. MANN. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. The clock in front of the Chair seems to have stopped. Is the Chair going by the clock in front of him or the clock behind him?

The CHAIRMAN. The Chair does not go by any clock that has stopped.

Mr. MANN. That is the official clock for the Chair to go by.

The CHAIRMAN. All time has expired.

Mr. BUTLER. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. BUTLER. To ask unanimous consent of this committee that I may have one minute for myself. When I get time gentlemen take it away from me.

The CHAIRMAN. The gentleman from Pennsylvania [Mr. BUTLER] asks unanimous consent that he may proceed for one minute. Is there objection?

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object——

Mr. ROBERTS of Massachusetts. Mr. Chairman——

Mr. PADGETT. If they are going to propose to consume the time, I object.

The CHAIRMAN. Objection is made.

Mr. MOORE of Pennsylvania. The gentleman from Tennessee is entirely mistaken. There is no desire to consume time. We would like to get information.

The CHAIRMAN. Objection is made. All time has expired. The question is on agreeing to the amendment of the gentleman from Massachusetts [Mr. ROBERTS].

Mr. ROBERTS of Massachusetts. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ROBERTS of Massachusetts. Did not the gentleman from Pennsylvania [Mr. BUTLER] have one minute yielded to him by unanimous consent?

The CHAIRMAN. He did not. The question is upon agreeing to the amendment of the gentleman from Massachusetts [Mr. ROBERTS].

The question being taken, on a division (demanded by Mr. ROBERTS of Massachusetts) there were—ayes 80, noes 87.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I demand tellers.

Tellers were ordered.

The committee again divided; and the tellers reported that there were 83 ayes and 99 noes.

So the amendment was rejected.

Mr. PADGETT. Mr. Chairman, on page 33, lines 2, 3, and 4, I move to strike out the following words: "Hereafter the Hospital Corps of the Navy shall constitute 3½ per cent of the authorized enlisted strength of the Navy and Marine Corps, and as soon as the" and substitute therefor the following: "Hereafter the authorized strength of the Hospital Corps of the Navy shall equal 3½ per cent of the authorized enlisted strength of the Navy and Marine Corps, and shall be in addition thereto."

The CHAIRMAN. The gentleman from Tennessee offers an amendment which the Clerk will report.

The Clerk read as follows:

Page 33, lines 2, 3, and 4, strike out the following words: "Hereafter the Hospital Corps of the Navy shall constitute 3½ per cent of the authorized enlisted strength of the Navy and Marine Corps," and substitute therefor the following: "Hereafter the authorized strength of the Hospital Corps of the Navy shall equal 3½ per cent of the authorized enlisted strength of the Navy and Marine Corps, and shall be in addition thereto."

The CHAIRMAN. The question is on the amendment.

The question was taken, and the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, this will necessitate the changing of the totals in one or two places, and I ask permission to bring in in the morning the corrected figures.

The CHAIRMAN. The gentleman can offer the amendment at a subsequent time.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 36, line 22, after the first word, "men," insert the following: "And the President is hereby authorized to enlist, in his discretion, and from time to time, such additional men as the needs of the Navy may require not to exceed a total authorized strength of 82,762 men."

Mr. GARDNER. Mr. Chairman, I ask unanimous consent to share my time with the gentleman from Illinois [Mr. BRITTEN]. I only need a half a minute to read something into the RECORD.

The CHAIRMAN. The gentleman from Illinois can get recognition in his own right.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that all debate upon this matter close in 10 minutes, 5 to be controlled by the gentleman from Illinois [Mr. BRITTEN] and 5 by myself.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate on the pending amendment close in 10 minutes, 5 to be controlled by himself and 5 by the gentleman from Illinois [Mr. BRITTEN]. Is there objection?

There was no objection.

Mr. BRITTEN. Mr. Chairman, it is not probable that I will take four and a half minutes, but if I do I desire to be notified at the end of that time. I hope that this amendment will be agreed to. It does not provide for any expenditure, it merely authorizes the President to enlist more men if he so desires in order to provide a full complement for the various ships in the service.

Mr. GORDON. How can he enlist men without it costing anything?

Mr. BRITTEN. This does not provide any expenditure, but authorizes the President to use his own judgment. Do not get nervous, I will say to my friend from Ohio. Now, I want to call the attention of the House to the fact that notwithstanding our tremendous shortage in the enlisted personnel we have no reserve force. France has a naval reserve of something like 93,000 men and the United States has a naval reserve of 320 men.

Mr. PADGETT. A reserve of over 11,000 men made up of the Coast Guard——

Mr. BRITTEN. Oh, I am not talking about the Coast Guard or the State militia, I am talking about the Naval Reserve as enlisted under the Naval Reserve act of the last Congress. Now, there is no question about that, and that on the 1st of March of this year we had 303 men in that reserve.

Mr. GARDNER. Will the gentleman yield?

Mr. BRITTEN. Certainly.

Mr. GARDNER. Did not I ask the gentleman from Tennessee a few minutes ago how many men there were in the reserve, and the gentleman from Tennessee said there were only 400 men.

Mr. PADGETT. That was under the Naval Reserve act proper, but under the militia act there are eight thousand and something and they are Naval Reserves.

Mr. GARDNER. The gentleman means the State militia?

Mr. PADGETT. No; the Naval Militia, organized and acting under the acts of Congress.

Mr. GARDNER. Are they not the State militia that the gentleman is speaking about?

Mr. PADGETT. They are organized and subject to the call of the President.

Mr. GARDNER. Is not the gentleman talking about the State militia?

Mr. PADGETT. Not the land militia.

Mr. GARDNER. The State Naval Militia?

Mr. PADGETT. Yes; they are a part of our Naval Reserve under the act of Congress.

Mr. BRITTEN. Mr. Chairman, I am not talking about the Coast Guard nor the State Naval Militia. I am talking about the Naval Reserve of former enlisted men; and on the 1st of March we had 303 men. If the gentleman is correct—and I assume he is—when he replied to the gentleman from Massachusetts he said we had something less than 400 now. They are coming in faster in the last month than they have at any time in the previous year. France, England, Germany, and Japan all have tremendous naval reserves, so that when it becomes necessary to have mobilization of their navies they call on the trained reserves, and they have mobilization, and they carry on war games, and that is the reason their navies are an efficient fighting force and in trim all of the time. We have 303 men in the Naval Reserve, and they would not man all the rowboats we would need around the Potomac River in time of war.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. BRITTEN. Yes.

Mr. MOORE of Pennsylvania. Have we not provided in this bill for five separate and distinct kinds of reserves?

Mr. BRITTEN. Yes; if you will call them reserves.

Mr. MOORE of Pennsylvania. Has the gentleman time to tell us what those five different branches of volunteers are going to be?

Mr. BRITTEN. No; but the chairman will be glad to enlighten the gentleman on that.

Mr. MOORE of Pennsylvania. I have asked him several questions, but he does not answer.

Mr. BRITTEN. Perhaps he is ashamed to say that the Naval Reserve act created in the last Congress was such a howling farce that he does not dare to talk about it—303 men enlisted in two years is surely a great Naval Reserve. The Secretary came before the committee and said that we would enlist 10,000 men under that act before you gentlemen voted for it.

The CHAIRMAN. The gentleman from Illinois has used four and a half minutes of his time.

Mr. BRITTEN. Mr. Chairman, I yield one-half minute to the gentleman from Massachusetts [Mr. GARDNER].

Mr. GARDNER. Mr. Chairman, in the colloquy a few minutes ago the gentleman from Tennessee said that there were 400 men in the Naval Reserve. There are 8,000 amateurs, admirals mostly, in our Naval Militia. We have a few Coast Guard men and life-savers that we call the Coast Guard Service, and of past Navy men we have about 400. When you passed the Navy Reserve legislation last year, what did you tell us we were going to have? I hold in my hand a letter from the Secretary of the Navy, in which he describes this Naval Reserve which is going to be built up by the legislation which he proposed and which we passed. On page 1235 of the hearings he said that 6,500 men would be enlisted in that Naval Reserve during the first year; 6,500 men, and all we have is about 400.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. PADGETT. Mr. Chairman, the folly of the provision offered by way of amendment is apparent from the statement of the gentleman from Illinois [Mr. BRITTEN]. He said that it would not cost anything. In other words, it gives the President of the United States authority to enlist ten or twelve thousand men and makes no provision for their payment. How could he enlist them unless he had the money appropriated to bear the cost of enlistment and to pay for the services of the men when they have enlisted?

Mr. BRITTEN. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. No; I have not the time.

Mr. BRITTEN. I would like to call the attention of the gentleman to the amendment.

Mr. PADGETT. The amendment simply gives authority without making any appropriation.

Mr. BRITTEN. In his discretion.

Mr. PADGETT. Yes; and there is no occasion for exercising that discretion, and there is no need for it as the House has just recently voted. The gentleman from Massachusetts [Mr. GARDNER] said that we had something over 8,000 amateur militia, mostly admirals. Out of eight thousand and something there are about 606 officers and 7,706 enlisted men. It shows the accuracy of his statement, and, in addition, I want to say that every naval officer who appeared before the committee and testified this year and last year with reference to the Naval Militia, testified to its availability and good character, and on it Congress has appropriated several hundred thousand dollars a year to train and develop these men.

Mr. GARDNER. Will the gentleman allow me to correct my remark and say they are men most competent to be admirals?

Mr. PADGETT. I will accept so far as the competency of these men is concerned for the duties which they expect to perform. They are good men. I hope this amendment will be voted down. Now, the gentleman said we had 403 in the Naval Reserve. We have three sources of Naval Reserves by three acts of Congress. A year ago we passed an act for a Naval Reserve of ex-enlisted men. Under that we had 403, the last notice I had. Now, as to the Naval Militia, another act of Congress makes the Naval Militia subject to the call of the President in national emergency or in case of war as a reserve. There are 8,300 there. Then, there is another law of Congress, creating the Coast Guard, with 255 commissioned officers and 3,886 warrant officers, petty officers, and enlisted men, most valuable men, making between 11,000 and 12,000, and under those three laws they are available as a Naval Reserve, and yet gentlemen, when they come to talk about it, want to talk about the last law we passed, that applies to ex-enlisted men and leave out 11,000 of the others.

Mr. MANN. Will the gentleman yield for a question?

Mr. PADGETT. Yes.

Mr. MANN. How many in the Coast Guard would be enlisted?

Mr. PADGETT. A little over 4,000.

Mr. MANN. Does that include the Life-Saving Service?

Mr. PADGETT. Yes, sir; the Life-Saving and Revenue-Cutter Services by an act of Congress which we passed at the last session, which was reported from the Committee on Interstate and Foreign Commerce——

Mr. MANN. I know what the law is.

Mr. PADGETT. Which in time of war were turned over to the Navy Department. They are not under the Treasury, but are under the Navy Department and are a part of the naval service.

Mr. MANN. Does the gentleman contemplate that these men would take the place of enlisted men of the Navy on board naval vessels?

Mr. PADGETT. They would take the place of enlisted men and perform duties in the Navy which if we did not have them we would have to get other men to perform.

Mr. MANN. Oh, no; the Life-Saving Service will guard the coast as they are doing now and as they did during the Spanish War. They will not add a single man on board a vessel, but the men on the vessels of the Coast Guard Service will remain on those vessels. The vessels will be turned over to the Navy.

Mr. PADGETT. And do naval duty.

Mr. MANN. But they will not add a man on board a vessel of the Navy.

Mr. PADGETT. But they will take the place of men they would have to have in the service to perform that necessary function.

Mr. MANN. But the Coast Guard Service or the Revenue-Cutter Service in time of war has always helped the Navy, but they do not add any number of men to the vessels of the Navy.

Mr. PADGETT. Not to the warships, but we have an immense number of auxiliary vessels, and it would take in two or three hundred auxiliary vessels in the Navy in time of war.

Mr. MANN. But the Coast Guard will not add anything——

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendment offered by the gentleman from Massachusetts.

The question was taken, and the Chair announced that the noes appeared to have it.

On a division (demanded by Mr. ROBERTS of Massachusetts) there were—ayes 62, noes 82.

So the amendment was rejected.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FITZGERALD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R.

15947) making appropriations for the naval service for the fiscal year ending June 30, 1917, and for other purposes, and had come to no resolution thereon.

WITHDRAWAL OF PAPERS.

Mr. HUSTED, by unanimous consent, was granted leave to withdraw from the files of the House, without leaving copies, the papers in the cases of Bridget M. Cleary, Sixty-second Congress, H. R. 28032, no adverse report having been made thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. DAVIS of Minnesota, indefinitely, on account of important business.

To Mr. KEY of Ohio, for 10 days, on account of urgent business.

EXTENSION OF REMARKS.

Mr. BORLAND. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of the achievements of the Democratic administration.

The SPEAKER. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD on the subject of the achievements of the Democratic Party.

Mr. BORLAND. I will say that I will not state them all.

Mr. MANN. It will not be long, then. [Laughter.]

Mr. ADAMSON. Replying, Mr. Speaker, to the suggestion of the gentleman from Illinois [Mr. MANN], I want to suggest that if it can not all be put in one issue it can be run along in serial form from day to day. [Laughter.]

The SPEAKER. It is not debatable. Is there objection?

There was no objection.

Mr. BENNET. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of aeroplanes.

The SPEAKER. The gentleman from New York [Mr. BENNET] asks unanimous consent to extend his remarks in the RECORD on the subject of aeroplanes. Is there objection?

There was no objection.

Mr. EMERSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the naval bill.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SIEGEL. Mr. Speaker, I make the same request.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. TAGUE. Mr. Speaker, I make the same request.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. CRAMTON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the gentleman's request?

There was no objection.

Mr. SLOAN. Mr. Speaker, I make the same request.

The SPEAKER. On what subject?

Mr. SLOAN. On the naval bill.

The SPEAKER. Is there objection?

There was no objection.

Mr. FERRIS. Mr. Speaker, I have a little emergency matter here——

Mr. MANN. Not to-night.

Mr. FERRIS. The gentleman shakes his head; so I will not press the matter.

ENROLLED JOINT RESOLUTION SIGNED.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title, when the Speaker signed the same:

H. J. Res. 214. Joint resolution increasing the number of sheets of custom stamps and of checks, drafts, and miscellaneous work to be executed by the Bureau of Engraving and Printing during the fiscal year 1916.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 32 minutes p. m.) the House adjourned until to-morrow, Thursday, June 1, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, a letter from the Acting Secretary of War, transmitting draft of proposed amendment to section 22 of the act to regulate commerce, to make reduced rates for transportation of the military forces of the United States when the travel is performed on transportation requests and paid for by the United States or State Governments (H. Doc. No. 1185), was taken from the Speaker's table, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. NEELY, from the Committee on the Judiciary, to which was referred the bill (H. R. 15807) to provide for holding sessions of the United States district court in the district of Maine and for dividing said district into divisions, and providing for offices of the clerk and marshal of said district to be maintained in each of said divisions, and for the appointment of a field deputy marshal in the division in which the marshal does not reside, reported the same without amendment, accompanied by a report (No. 788), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills were severally reported from committees, delivered to the Clerk; and referred to the Committee of the Whole House, as follows:

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 1975) for the relief of C. E. Anderson, reported the same without amendment, accompanied by a report (No. 784), which said bill and report were referred to the Private Calendar.

Mr. EDMONDS, from the Committee on Claims, to which was referred the bill (H. R. 11843) for the relief of Charles E. Knickerbocker, reported the same with amendment, accompanied by a report (No. 785), which said bill and report were referred to the Private Calendar.

Mr. CAPSTICK, from the Committee on Claims, to which was referred the bill (H. R. 11661) for the relief of Patrick Burns, reported the same with amendment, accompanied by a report (No. 786), which said bill and report were referred to the Private Calendar.

Mr. YOUNG of North Dakota, from the Committee on Claims, to which was referred the bill (H. R. 4626) to reimburse the Farmers Savings Bank, of Brandon, Iowa, for currency destroyed by fire, reported the same without amendment, accompanied by a report (No. 787), which said bill and report were referred to the Private Calendar.

Mr. STEPHENS of Mississippi, from the Committee on Claims, to which was referred the bill (S. 1288) for the relief of Simon M. Preston, reported the same without amendment, accompanied by a report (No. 789), which said bill and report were referred to the Private Calendar.

Mr. STEAGALL, from the Committee on Claims, to which was referred the bill (H. R. 9335) for the relief of Mrs. W. E. Crawford, reported the same without amendment, accompanied by a report (No. 790), which said bill and report were referred to the Private Calendar.

Mr. PRICE, from the Committee on Claims, to which was referred the bill (H. R. 10624) to appropriate a sum of money to pay Rhoda Menz, W. W. Christmas, and James M. Christmas, heirs of Myra Clarke Gaines, for certain lands in Louisiana, reported the same with amendment, accompanied by a report (No. 791), which said bill and report were referred to the Private Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 16123) granting a pension to Mrs. Julia McFarland, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills and resolutions were introduced and severally referred as follows:

By Mr. MURRAY: A bill (H. R. 16142) to prohibit the operation of trains of more than one-half mile in length in interstate traffic and in the District of Columbia or any Territory of the United States; to the Committee on Interstate and Foreign Commerce.

By Mr. BUCHANAN of Texas: A bill (H. R. 16143) to standardize the barrel of lime; to the Committee on Coinage, Weights, and Measures.

By Mr. MORRISON: A bill (H. R. 16144) authorizing the Secretary of War to donate condemned cannon and balls; to the Committee on Military Affairs.

By Mr. RANDALL: A bill (H. R. 16145) to establish rates of postage on second-class matter; to the Committee on the Post Office and Post Roads.

By Mr. ADAMSON: A bill (H. R. 16146) for adjustment of relative rank of officers of the Army Medical Corps; to the Committee on Military Affairs.

By Mr. MUDD: A bill (H. R. 16147) for the relief of mechanics employed at the proving ground at Indianhead, Md., during the fiscal years 1914 and 1915; to the Committee on Claims.

By Mr. HEATON: A bill (H. R. 16148) authorizing the President to appoint fourth-class postmasters and to pay them a salary of $800 per annum; to the Committee on the Post Office and Post Roads.

By Mr. ABERCROMBIE: A bill (H. R. 16149) to provide for the interchange of teachers of the District of Columbia with other school systems in the United States; to the Committee on the District of Columbia.

By Mr. LOBECK: A bill (H. R. 16150) to amend section 7 of an act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1913, and for other purposes (vol. 37, Stat. L., p. 555); to the Committee on the Post Office and Post Roads.

By Mr. EMERSON: Joint resolution (H. J. Res. 232) granting consent to the Ralph T. Staniforth Airship Line to operate between Cleveland, Ohio, and Detroit, Mich.; to the Committee on Interstate and Foreign Commerce.

By Mr. HEATON: Concurrent resolution (H. Con. Res. 41) that the people of the United States cooperate in the economical use of paper supplies of all kinds; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 16151) granting an increase of pension to George W. Russell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16152) granting an increase of pension to George Butterbaugh; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 16153) for the relief of Denny Costello; to the Committee on Claims.

By Mr. DEWALT: A bill (H. R. 16154) granting an increase of pension to Amelia Grosscup; to the Committee on Invalid Pensions.

By Mr. GREGG: A bill (H. R. 16155) granting an increase of pension to Martha Ann Jones; to the Committee on Pensions.

By Mr. HILL: A bill (H. R. 16156) for the relief of Miss C. R. Orricks; to the Committee on Claims.

By Mr. HUMPHREY of Washington: A bill (H. R. 16157) granting a pension to Edward K. Wilson; to the Committee on Pensions.

Also, a bill (H. R. 16158) granting a pension to Hugh W. Garber; to the Committee on Pensions.

By Mr. LANGLEY: A bill (H. R. 16159) granting an increase of pension to Mary Jane Thornbury; to the Committee on Invalid Pensions.

By Mr. McANDREWS: A bill (H. R. 16160) granting a pension to James Prŏsek; to the Committee on Pensions.

By Mr. NEELY: A bill (H. R. 16161) granting an increase of pension to David Rine; to the Committee on Invalid Pensions.

By Mr. OLDFIELD: A bill (H. R. 16162) granting an increase of pension to Minerva J. Gardner; to the Committee on Invalid Pensions.

By Mr. OLNEY: A bill (H. R. 16163) granting a pension to Lois F. Godwin; to the Committee on Invalid Pensions.

By Mr. RICKETTS: A bill (H. R. 16164) granting a pension to Malissa Ann Lett; to the Committee on Invalid Pensions.

Also, a bill (H. R. 16165) to correct the military record of Benjamin Jadwin; to the Committee on Military Affairs.

By Mr. ROWE: A bill (H. R. 16166) granting a pension to Anna L. Lomelino; to the Committee on Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 16167) granting an increase of pension to John M. James; to the Committee on Invalid Pensions.

By Mr. SCHALL: A bill (H. R. 16168) granting a pension to Mrs. Ann E. Sterling; to the Committee on Invalid Pensions.

By Mr. SISSON: A bill (H. R. 16169) for the relief of the widow and heirs at law of George H. White, deceased; to the Committee on Pensions.

By Mr. THOMAS: A bill (H. R. 16170) granting a pension to Sallie F. Oates; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ANTHONY: Petition of Mrs. Kate E. Mayer and others, of Leavenworth, Kans., against compulsory Sunday observance bill for the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Katie E. Mayer and others, of Leavenworth, Kans., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. BAILEY: Petition of Rothert & Co., Leopold & Bigley, S. J. Lambour, S. Dembert, L. C. Lambour, Ammon M. Lauver, R. B. Replogle & Bro., John H. Luckett, and H. C. Stultz & Bro., all of Altoona, Pa., favoring the passage of an act placing a tax on mail-order houses; to the Committee on Ways and Means.

Also, petition of D. M. Bare & Co., J. B. Miller, J. P. Martin, S. H. & W. J. Garber, George W. Snyder, I. G. Kagarise, the Snively Grocery, B. Dughi, R. A. Lambert, and Carper Bros., all of Roaring Spring, Pa., for a tax on mail-order houses; to the Committee on Ways and Means.

By Mr. CAREW: Petition of the Columbus (Ohio) Chamber of Commerce, favoring passage of Pomerene bill-of-lading bill; to the Committee on Interstate and Foreign Commerce.

By Mr. DOOLING: Petition of the Aero Club of America, relative to aeronautical needs of the Army; to the Committee on Military Affairs.

By Mr. FOCHT: Evidence in support of House bill 13403, for relief of Arthur V. B. Souders; to the Committee on Invalid Pensions.

By Mr. HEATON: Petitions of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

Also, petitions of 21 citizens of Wade, Pa., against House bill 652, compulsory Sunday-observance law; to the Committee on the District of Columbia.

By Mr. HILL: Memorial of Stamford Lodge, No. 899, Benevolent and Protective Order of Elks, of Stamford, Conn., in favor of House bill 6915, to retire superannuated postal employees; to the Committee on the Post Office and Post Roads.

By Mr. HUMPHREY of Washington: Petition of citizens of the State of Washington, against Sunday-observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. LAFEAN: Memorial of Colonial Dames of America, favoring national defense; to the Committee on Military Affairs.

By Mr. MEEKER: Memorial of Colonial Dames of America, favoring national defense; to the Committee on Military Affairs.

By Mr. NOLAN: Petition of National Association of Civil Service Employees, favoring Nolan minimum-wage bill, House bill 11876; to the Committee on Labor.

By Mr. NORTON: Memorial of New England Business Men's Association and Mott (N. Dak.) Commercial Club, against a proposed strike by the Brotherhoods of Railway Engineers, Firemen, Conductors, and others; to the Committee on Interstate and Foreign Commerce.

By Mr. RANDALL: Memorial of Epworth League, First Methodist Episcopal Church, Alhambra, Cal., favoring national prohibition; to the Committee on the Judiciary.

By Mr. ROWE: Petition of National Automobile Chamber of Commerce, relative to collection of data regarding production of petroleum, etc.; to the Committee on Mines and Mining.

By Mr. SCULLY: Memorial of citizens of Metuchen, N. J., favoring amendment relative to polygamy; to the Committee on the Judiciary.

Also, petition of National Automobile Chamber of Commerce, relative to collection of reliable data in regard to petroleum, etc.; to the Committee on Mines and Mining.

By Mr. TIMBERLAKE: Memorial of Fort Collins (Colo.) Commercial Club, favoring readjustment of postal rates; to the Committee on the Post Office and Post Roads.

Also, petition of 18 citizens of Fort Collins, Colo., against war with Europe; to the Committee on Foreign Affairs.

Also, memorial of Denver Trade and Labor Assembly, favoring woman-suffrage amendment; to the Committee on the Judiciary.

SENATE.

THURSDAY, *June 1, 1916.*

(Legislative day of Wednesday, May 31, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

PUBLIC BUILDING AT TAYLOR, TEX.

Mr. CULBERSON. I ask leave, out of order, to submit a report from the Committee on Public Buildings and Grounds.

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. CULBERSON, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 5447) providing for the erection of a public building at Taylor, Tex., reported it with amendments.

TREATMENT OF TUBERCULOSIS (S. DOC. NO. 453).

Mr. FLETCHER, from the Committee on Printing, to which was referred Senate resolution 206, submitted by Mr. OVERMAN on the 20th ultimo, reported it without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the manuscript submitted by the Senator from North Carolina [Mr. OVERMAN], entitled "Animal Experiments Upon the Acquirement of Active Immunity by Treatment with Von Ruck's Vaccine Against Tuberculosis," by Frank J. Clemenger, M. D., Asheville, N. C., and Dr. F. C. Martley, A. M., M. D., Cambridge, England, be printed as a Senate document.

LOUISVILLE & NASHVILLE RAILROAD CO. (S. DOC. NO. 461).

Mr. FLETCHER, from the Committee on Printing, to which was referred Senate resolution 207, submitted by Mr. LEA of Tennessee on the 31st ultimo, reported it without amendment, and it was considered by unanimous consent and agreed to, as follows:

Resolved, That the manuscript submitted by the Senator from Tennessee [Mr. LEA] entitled "Hearings Before Interstate Commerce Commission Relative to Financial Relations, Rates, and Practices of the Louisville & Nashville Railroad Co., the Nashville, Chattanooga & St. Louis Railway, and other carriers," be printed as a Senate document.

MILITARY TRAINING IN PUBLIC SCHOOLS (S. DOC. NO. 452).

Mr. FLETCHER, from the Committee on Printing, reported the following resolution (S. Res. 208), and it was considered by unanimous consent and agreed to:

Resolved, That the manuscript submitted by the Senator from Washington [Mr. POINDEXTER] on May 17, 1916, entitled "Outline of Plan for Military Training in Public Schools of the United States," prepared by the War College Division, General Staff Corps, War Department, together with the Wyoming plan of military training, be printed as a Senate document.

COMMITTEE ON PUBLIC HEALTH AND NATIONAL QUARANTINE.

Mr. LEA of Tennessee. I ask unanimous consent for the present consideration of Senate resolution 114, authorizing the Committee on Public Health and National Quarantine to hold hearings.

Mr. CHAMBERLAIN. If it does not lead to discussion, I shall not object.

Mr. LEA of Tennessee. It is merely a formal resolution to allow the committee to hold hearings.

There being no objection, the resolution was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Committee on Public Health and National Quarantine, or any subcommittee thereof, be, and hereby is, authorized during the Sixty-fourth Congress to send for persons, books, and papers, to administer oaths, and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recess of the Senate.

COMMITTEE ON THE CENSUS.

Mr. LEA of Tennessee. I ask unanimous consent for the consideration of Senate resolution 176, to permit the Committee on the Census to employ an additional clerk.

The Senate, by unanimous consent, proceeded to consider the resolution, which had been reported from the Committee to Audit and Control the Contingent Expenses of the Senate, with an amendment, in line 4, after the word "period," to strike out the words "of 90 days from and after May 10, 1916," and insert "lasting until the end of the present session of the Sixty-fourth Congress," so as to make the resolution read:

Resolved, That the provisions of the resolution of the Senate of March 9, 1916, authorizing the Committee of the Census to employ an additional clerk for 60 days, are hereby extended for a period lasting until the end of the present session of the Sixty-fourth Congress.

The amendment was agreed to.

The resolution as amended was agreed to.

Mr. LEA of Tennessee subsequently said: I move to reconsider the vote by which the Senate agreed to Senate resolution 176, extending the resolution of March 9, 1916, authorizing the Committee on the Census to employ an additional clerk.

The motion was agreed to.

Mr. LEA of Tennessee. I move the following substitute as an amendment, and I ask unanimous consent for its present consideration.

The VICE PRESIDENT. The question is on the substitute proposed by the Senator from Tennessee.

The substitute amendment was read, considered by unanimous consent, and agreed to, as follows:

Resolved, That the Committee on the Census be, and it is hereby, authorized to employ an additional clerk, at the rate of $100 per month, to be paid out of the contingent fund of the Senate for a period lasting until the end of the present session of the Sixty-fourth Congress.

ADDRESS BY SECRETARY M'ADOO.

Mr. TAGGART. Mr. President, I have in my hand a copy of a speech delivered by Secretary McAdoo before the Chamber of Commerce of Raleigh, N. C., Wednesday night, May 31. Instead of reading it, I ask unanimous consent that it may be printed in the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The speech referred to is as follows:

"The United States is enjoying the greatest era of prosperity in its history, and the outlook for the future of the country was never so bright. Unlike all previous periods of great business activity, the present ascendancy in all lines of industrial endeavor possesses all the elements of permanence, provided we avail of the opportunities which are being literally thrust into our hands, with that intelligence, energy, and enterprise so characteristic of the spirit of the American people.

"Prosperity has permeated every corner of the country. Every line of business is pulsating with it. Every industry is driving at top speed of profitable activity. Labor is employed throughout the land at the highest wages ever known, and the demand for labor in all parts of the country seems to be in excess of the supply. Never in American history have conditions been so favorable to American business and American industry. We have not alone the full dinner pail, but the overflowing dinner pail.

"Agriculture, which is the basis of all prosperity, is experiencing a most wholesome growth. The farmers of the United States never in their history have enjoyed such splendid rewards for their toil, and never before have the economic conditions and the laws already enacted by a Democratic administration so justly favored them. The rural-credits bill, which will soon be passed and approved by the President, will emancipate the farmer from many of the most serious ills he has so long endured and provide the long-time credits, at low rates of interest, so essential to the remunerative and productive development of the farming industry.

"Money and credit are abundant; the ghost of panic has been securely laid. In the midst of a war-torn and war-worn world, with adversity crumbling the economic foundation of almost every other great power, the financial, commercial, and industrial conditions in the United States are phenomenally sound and exceptionally strong. This is due not to transitory war orders or ephemeral trade, but to the amazing economic strength of the United States.

"The Federal reserve act, which is now generally conceded to be the most constructive measure placed upon our statute books in a half century, is the greatest contributing factor in this happy condition. The Federal Reserve System has been in operation less than two years, during which time the Nation has passed through the greatest crisis and strain the world has ever seen. We have successfully withstood the shock of the European cataclysm, and have rebounded into the most unexampled prosperity any nation has ever known. The Federal Reserve System has provided the elastic and responsive credit resources required for the expansion and growth of the business and the development of our country.

"The straight-jacket in which the business and industry of the United States have been cramped and limited by the old financial laws of the Republican Party has been shattered, and the country may grow without restriction to the full limit of healthful and legitimate expansion. Not only has the reserve system provided ample credit resources and strengthened the financial structure of the country immeasurably, but it has caused a more equitable diffusion of credits, has reduced rates of interest, and has mitigated already, and in great measure, the abuses of usury in those parts of the country where usury has been a serious handicap to business and enterprise. What this means to the business men and all classes of our people is too obvious to describe.

"It is a significant fact, and it is an achievement of which the administration may well boast, that when the country was on the verge of appalling panic at the outbreak of the European war in 1914, it was the decisive and adequate measures taken by the Government at Washington that prevented this panic and laid a secure foundation for the great prosperity we are now enjoying. It was the leadership and action of the Government at Washington that saved the country in this great crisis. This is said in no spirit of depreciation of the important cooperation the leading bankers and business men of the country gave to the Government in that critical time.

"What a contrast this is to the ineffectiveness of the Republican administration at Washington during the panic of 1907, which left the country prostrate for many years and brought immeasurable disaster upon the American people.

"Nothing is more indicative of the amazing growth of the country than the condition of the banks. The Comptroller of the Currency states that in March, 1916, the resources of the national banks amounted to $13,838,000,000, exceeding by $370,000,000 the greatest resources ever shown in the history of the national banking system. The resources of the national banks were $2,271,000,000 greater in March, 1916, than in March, 1915.

"This marvelous increase in one year exceeds, the comptroller states, the entire resources of the Reichsbank of Germany, as reported in February, 1916.

"The aggregate resources of the national banks of the United States now exceed by approximately $3,000,000,000 the combined resources of the Bank of England, the Bank of France, and the Bank of Russia, the Reichsbank of Germany, the Bank of the Netherlands, the Swiss National Bank, and the Bank of Japan. The total deposits of the National banks in March, 1916, amounted to $10,790,000,000, an increase in three months of $411,000,000 and an increase over March, 1915 (one year), of $2,198,000,000.

"These figures are so prodigious as to be almost unbelievable. They reflect infallibly the degree of prosperity as wide and deep as it is amazing and gratifying. One can not speak of this record without superlatives. Even the infallible and sanctified Republican Party could not have done better. Perhaps it is heresy to say this, but may the Democrats not reasonably claim that since the Republican Party has never done anything like so well for the country when for many years it had control of the Government it would not have done better than the Democratic Party has shown by these impressive figures and by the results which are visible to every man, woman, and child in America to-day? Has the Republican Party ever done even as well?

"Judge Gary, head of the United States Steel Trust and a leading Republican statesman, in a recent speech in New York had bewailed the fact that the high protective tariff, which is the sanctified doctrine and cure-all remedy of the Republican Party, has not been in force at this time, and he almost weeps as he appeals to the country to restore this Republican system of subsidies, conferring upon the great manufacturers of this country the right to tax the people for their own benefit. If this is a sample of Republican statesmanship, then it may well be asked whether or not the Republican Party could have handled the affairs of the country so well as the Democratic Party has during the past three years.

"In the face of the greatest prosperity ever known in the history of the iron and steel industry—the prosperity brought about under the Democratic tariff law enacted in 1913, and with the coffers of every iron and steel industry in the country overflowing with plenty, Judge Gary seriously asks the people of this country to restore the high protective policy and subsidy system of the Republican Party. What is there in the present conditions to justify such an appeal? How can the people be convinced that the iron and steel industry should be given new advantages and additional subsidies in the light of the huge profits they are now earning?

"The present tariff law—the Underwood-Simmons Act—made a reasonable reduction in the customs duties, transferring a part of the burdens of taxation from the backs of the masses of the people to the ample shoulders of wealth, which has never under the Republican system borne its just proportion of the burdens of government. The Democratic system is the just system. The Republican system is the privilege system. The people will not repudiate the former and deliberately readopt the latter in view of the demonstrated fallacy of the claim of protected industries that they need to tax the people for their own benefit in order to make a profit. Every reasonable man wants industry to thrive and prosper, and every reasonable American citizen is willing that enterprise shall have a just and fair opportunity, but while conceding this to enterprise and business, democracy claims that like treatment should be accorded to the masses of the American people.

"The prosperity of the country is strikingly reflected in the surplus reserves of the national banks. These reserves are now so great that they give the national banks a further loaning power of three to four billion dollars. If we add to this the loaning power of the State banks and trust companies of the country, we have an aggregate approximating the astounding total of $6,000,000,000.

"These great resources carry with them both opportunity and responsibility—opportunity to serve the Nation's needs in the highest degree and to extend assistance to our splendid neighbors of South and Central America, who are suffering severely for the resources needed for their own development; responsibility to so use these resources that they will be employed in legitimate and wholesome enterprise and development, and not for speculation or inflation.

"The duty devolves upon the bankers of the United States, because the responsibility rests primarily upon them to curb speculation and to restrain inflationary tendencies. The Federal Reserve Board, at Washington, will use its great power to assist in the wholesome use of the great credit resources of the country and to prevent unhealthful tendencies; but the banks themselves have the chief power and responsibility; the Federal Reserve Board can only contribute toward this result to the extent that the law gives it the necessary authority.

"When I speak this word of caution about speculation and inflation I must at the same time express my lack of sympathy with the views so strenuously put forward, and I think for selfish motives primarily, by some people and by many partisans for political purposes, that the United States must face a period of serious depression, if not possible disaster, upon the conclusion of peace in Europe. Some people are undoubtedly honestly impressed by these claims and are genuinely apprehensive about the future. Aside from the partisan purpose of this propaganda, unreasonable fear alone seems to me to be at the basis of all honest apprehension on this score.

"An analysis of the conditions in the United States and of the possible economic effects of the war in Europe does not, in my opinion, give the slightest justification for any fear for our prosperity. A Democratic Congress, however, out of deference to any honest apprehension that may exist in the minds of business men, will enact legislation against the dumping of cheap European goods in our markets, and will prohibit by law unfair competition by foreign competitors with American business men and manufacturers. While I do not believe these measures are essential, I favor them simply as a precaution and as an assurance to the timid and hesitating.

"When I contrast the enormous financial and economic strength of the United States, and the extraordinary skill and creative genius of its people, with the depleted resources and the weakened economic power of the great European nations, and the destruction of so much of their skilled labor and manhood, I feel somewhat ashamed of the fright and timidity manifested by some people of the United States whom we have been accustomed to regard as really strong.

"When peace is restored to Europe the belligerent nations will find themselves burdened with an almost insupportable load of debt. Taxation, both oppressive and excessive, must be borne to pay the interest on these debts. Taxation is an important factor in the cost of production and adds materially and will seriously affect the competitive capacity of Germany, France, England, and the other industrial nations of Europe. Many of their skilled workmen have been lost and new ones must be created; many of their industries have been destroyed and must be reconstructed. Their credit resources are seriously impaired. Other serious difficulties must be overcome if they are to regain their foreign markets. Against these formidable handicaps and terrible conditions is it believable that the American people, with their highly developed industries and skilled labor, matchless resources, exceptional creative genius and productive capacity, are unable to sustain themselves in a fair contest for their share of the world's markets? Can it truthfully be said that our economic safety and prosperity will have to face any real peril? It is almost discreditable to our intelligence to have to argue such a proposition.

"There are those who say that the loss of war orders after peace comes in Europe will seriously affect the industries of our country. This is absurd. The percentage of war orders, as contrasted with the entire domestic and foreign commerce of the United States, is insignificant. When war orders cease—and God grant that the necessity for them may cease soon—we shall receive orders, even from Europe, for the restorative pur-

poses of peace, for the reconstruction of ruined industries and cities, and for the relief of the stricken markets of Germany and Austria, which have been closed to us for the full period of the war. Our trade to Austria and Germany alone for the last year prior to the outbreak of the war amounted to $367,500,000. All this trade will be regained, and in addition to that, if we are in the least intelligent and enterprising, the great markets of South and Central America, which have been clamorously seeking us for the past two years, will more than offset any possible loss of war trade. The total imports of South America alone, exclusive of those received from the United States during the last year of available statistics prior to the outbreak of the European war, were something like $700,000,000.

"Here is a great field for American enterprise and business; a field which we would already have securely occupied if it had not been for the disastrous action of the Republican Members of the Senate, aided, I regret to say, by a few Democrats, in filibustering to death the bill introduced by the administration in September, 1914, for the purchase of $40,000,000 of merchant ships to be used by the Government of the United States for the protection of our commerce with all the nations of the world. The failure to buy these ships was a fatal and irretrievable mistake. It is a striking example of narrow partisanism. If we had bought in the fall of 1914 or the early days of 1915 $40,000,000 worth of merchant vessels, which could have been had at that time at the low prices of from $40 to $60 per gross ton, those same vessels to-day could be sold by the Government for at least $80,000,000. In one year these same vessels could have earned fifty to one hundred million dollars of net revenue, while at the same time carrying American products for the farmer, the manufacturer, and the business man at one-third of the existing extortionate ocean freight rates.

"When the historian of the future studies this period he will say that the failure of the United States Government in the fall of 1914 to buy merchant vessels for the protection of American commerce was one of the monumental and inexplicable blunders of the time.

"The necessity for the creation of an American merchant marine, for the regulation of ocean freight rates, and for the establishment of a shipping board is just as imperative now as it was then. A Democratic House has passed such a bill, carrying with it an appropriation of $50,000,000 for the construction and purchase by the Government of a merchant marine to be utilized both as an essential naval auxiliary in time of war and for the uses of our commerce in time of peace. If we are going to have any genuine preparedness, about which there is so much talk on the part of our Republican friends, how can they be justified in voting against this measure, which is just as essential to a strong and effective navy as the guns on the decks of the battleships or the coal which must be put in the bunkers of our war vessels? And yet most of them have voted against this essential measure.

"I believe this bill will soon pass the Senate of the United States and receive the approval of the President. When this happens another great constructive measure for the prosperity and prestige of our great country, second only in importance to that of the Federal reserve act itself, will have been secured for the American people. The Stars and Stripes will again be seen upon the high seas. The safety of our commerce will no longer be jeopardized by reliance upon foreign flags. The lives of American citizens who must travel upon the high seas will no longer be endangered upon the ships of belligerent flags because there are no American ships to protect them; and the efficiency of our Navy will no longer be imperiled for want of the necessary naval auxiliary to supply our fighting units with the coal and provisions and ammunition which can not be supplied to them in case of war except through an efficient auxiliary merchant marine.

"The flag of our country, whether we wish it or not, has a meaning beyond our own territorial limits. By the decree of God and by destiny we have been thrust into a position of power, carrying with it world-wide responsibilities and forcing upon us in all probability a measure at least of world-wide dominance. That flag must never stand for a failure to meet any domestic or world-wide responsibility; that flag must forever continue to represent the true spirit and courage and genius and ideals of the American people, and above all, it must stand for truth and justice and fair dealing with all the world. It must stand for peace—peace which reflects the heaven-given light of truth and justice; a peace we shall never be willing to disturb except in a cause whose shield is truth and honor, emblazoned by a light of such radiance and purity that every American citizen will be eager for the glorious privilege of shedding his blood in defense of it."

OREGON & CALIFORNIA RAILROAD LAND GRANTS.

The Senate as in Committee of the Whole resumed the consideration of the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes.

Mr. NORRIS. Mr. President, I rise for the purpose of making some remarks on the pending bill. I will yield, however, if there is any other Senator who wishes to present routine business.

The VICE PRESIDENT. The morning business has closed.

Mr. NORRIS. Mr. President, the real contention in this bill is whether or not the Senate will pass the bill substantially as it passed the House, or whether it will approve the amendments proposed by the Committee on Public Lands. The effect of those amendments, if agreed to, will be to liberalize the bill, as far as any payments are concerned to the State of Oregon.

Yesterday the senior Senator from Oregon [Mr. CHAMBERLAIN], at considerable length, reviewed the situation, and I have no intention of repeating the history surrounding this proposed legislation. I think the Senator from Oregon stated it very fairly, and, although at the time, because I wanted the bill to go over until to-day in order that I might examine into it somewhat, a request that I made not only on my own behalf but for several other Senators, he was impressed with the idea that I was opposed to the legislation. I want to say, Mr. President, that, like the Senator from Oregon, there are some things in the bill, even as it passed the House, that I would like to have changed if I thought under the decision of the Supreme Court we could enact legislation along those lines that to my mind would give justice to all persons interested. But we are hedged about somewhat by the legal situation and by the construction placed upon the original act by the Supreme Court of the United States. It is conceded, as far as I know, by every person who has given the question any examination that the railroad company in this case failed to comply with the spirit and the letter of the law as passed by Congress by which the Government gave quite a number of years ago to this railroad company several million acres of public land in the State of Oregon.

I wish simply to note in passing that the district court, in the case on behalf of the Government seeking to have a forfeiture declared in regard to these lands, agreed with the position taken by the Attorney General, and rendered a decree forfeiting the lands to the United States because the railroad company had failed to comply with the law, and the circuit court of appeals affirmed this decision, but the Supreme Court of the United States reversed it, and this legislation has been necessary because of that reversal.

I can not help but notice, too, that notwithstanding the failure of the railroad company to comply with the law has caused all the difficulty and trouble, the immense amount of loss in a financial way to the Government of the United States, to the State of Oregon, and to a great many citizens of the State of Oregon; but in order to stay within the limits prescribed by the Supreme Court the bill as it passed the House, notwithstanding this fact, gives to the railroad company the payment of $2.50 an acre for all the land involved. I presume that is necessary on account of the legal situation in which we find ourselves.

So I am just as much in favor of legislating on this subject and bringing the delayed and needed settlement to a final determination as is the Senator from Oregon. The only difference between us is as to just how the State of Oregon should be treated in the legislation. It is perhaps natural and perhaps laudable that the Senators representing the State of Oregon should desire to obtain just as liberal treatment as possible; and yet it seems to me that the Senate of the United States, representing the Federal Government, and being as such representative in part the custodian of the public funds and the public land, ought not to go further than justice and liberal treatment would demand.

When this bill is enacted into law there will be several million acres of land now claimed by the railroad company that will become public land of the United States. The bill as passed by the House, after providing for the payment of all the expenses and the taxes that are unpaid on this land, all the taxes

going to the proper authorities in the various counties in the State of Oregon, divides up the remainder as follows: It gives 20 per cent of the remainder to the State of Oregon for school purposes. It gives 30 per cent to the counties in which the land is situated for roads and bridges. That makes 50 per cent of the net proceeds. But we must remember that even out of the gross proceeds, before this division is made, the State of Oregon gets $1,565,458 for taxes now standing against the land and unpaid.

Then, after that 50 per cent of the proceeds has been given, either directly to the State or to the counties in the State, 40 per cent is paid into the reclamation fund. It must be borne in mind in this connection that Oregon shares with the balance of the country in whatever benefits may be derived from the increasing in this way of the reclamation fund.

Mr. CLARK of Wyoming. It is the bill as passed by the House that the Senator is speaking of?

Mr. NORRIS. It is that bill that I am speaking of. That accounts for 90 per cent of the proceeds of these sales. The other 10 per cent is given to the United States. This other 10 per cent will not much more, if any more, than pay the expenses, directly and indirectly, to which the United States has been put on account of the difficulties of the situation. There have been several suits, and there perhaps will be several more that it will be necessary for the United States Government to prosecute. Special agents have been sent by the department, and they have made a careful investigation of the land and of all the other conditions surrounding it.

It seems to me, Mr. President, that this distribution of the fund is extremely liberal to the State of Oregon. Ordinarily the State would have no such claim. The public lands, or the proceeds from the sale of the public lands, are not divided up ordinarily under the general law in that way. So, Oregon is getting 50 per cent directly, and her interest in the reclamation fund of 40 per cent more, besides being paid, before any of these per cents are reckoned, a little over a million and a half dollars for taxes.

Mr. CLARK of Wyoming. Mr. President——

Mr. NORRIS. I yield to the Senator.

Mr. CLARK of Wyoming. Has the Senator made any estimate as to the value of this land and the amount that will go to the State in bulk?

Mr. NORRIS. Yes; I am coming to that.

Mr. President, what claim can the State of Oregon have that would exceed that treatment? Under what possible construction of all the circumstances in the case could Oregon demand a more liberal treatment? No public land anywhere that I am aware of has been disposed of where the State has been treated as liberally as the House treated Oregon in this particular instance.

I can conceive of but one claim, and that is not a legal one. I can conceive of but one circumstance that would give to Oregon even any equitable right to claim any of this money, and that is that these lands that have been taxed by the State of Oregon, while they were claimed to be owned by this railroad company, will not be taxable after this bill becomes a law, because the lands become public lands again and will not be taxable until the lands are disposed of as provided for in the bill.

I can see how there will necessarily be on at least a portion of the land several years perhaps before the State would be able to tax some of the land. As soon as the bill becomes a law the provisions of it will be effective and the land will be disposed of, and as fast as disposed of it will be again taxable; but for all the years that Oregon has been taxing these lands the amount of tax will be nowhere near the amount of money that she would get under the terms of the bill as passed by the House.

Now, what do the amendments proposed by the committee do? There are one or two amendments having nothing to do with the amount of money that will be disposed of, and I am not speaking of those. I am speaking now of the Senate committee amendment which provides for a different distribution than the one I have outlined as being provided by the House. If the Senate committee amendments are agreed to on that subject, this will be the disposition of the fund.

Ten per cent will go to the United States Government. That is just the same as goes to the United States Government under the bill as passed by the House. Ten per cent will go to the reclamation fund, whereas the House bill gives 40 per cent to the reclamation fund. The Senate committee amendment, giving only 10 per cent to the reclamation fund, provides further that all of that 10 per cent must be spent in the State of Oregon. So that 10 per cent in reality goes to Oregon.

Then it provides that in counties having port districts 30 per cent shall go to those counties for the purpose of building roads and bridges and 20 per cent directly to the port districts in such counties; that in counties having no port districts 35 per cent shall be given for roads and bridges; and the balance of the fund shall be paid to the State of Oregon for school purposes.

Eliminating the 10 per cent that goes to the reclamation fund, the State of Oregon gets 80 per cent of the money, but inasmuch as the amendment provides that the 10 per cent which goes to the reclamation fund must be spent in Oregon, it follows that 90 per cent of the proceeds of these lands goes to the State of Oregon and 10 per cent to the United States. I say the State of Oregon, but perhaps I ought to modify that. It goes either to the State or to the counties in which the land is located and where the port districts are situated.

I want to say just a word about these port districts. It is said that these port districts have bonded themselves for the purpose of improving harbors within the port districts, and that, therefore, they are sadly in need of assistance because some of this land will not be taxable while it remains Government land.

In the first place, when this bill is passed we shall pay one million and a little over five hundred thousand dollars in taxes, most of which will go into these counties. In the second place, under the House bill, 30 per cent of the entire amount will be paid to these counties for roads and bridges. That certainly will relieve from taxation those counties to the extent of the money that is paid there from this fund.

I might digress here to remark that in reading the record of the proceedings when this bill was under consideration in the other House, one of the members of the Committee on the Public Lands, in referring to these port districts, offered, if the Representatives from Oregon preferred it, to have this 30 per cent paid directly to the port districts instead of to the counties. They did not avail themselves of that offer. So far as I am concerned here, if the Senator from Oregon [Mr. CHAMBERLAIN] would say that he preferred under the provision of the House bill that this 30 per cent which it is provided shall go to the counties for bridges, should be paid to the counties or to the port districts, I should have no objection to that kind of an amendment, and I do not believe any other Senator would.

Mr. CHAMBERLAIN. May I interrupt the Senator for a moment?

Mr. NORRIS. Yes.

Mr. CHAMBERLAIN. On what page of the hearings is found the statement to which the Senator has referred?

Mr. NORRIS. That statement was made on the floor of the House of Representatives. I can give the Senator the page of the RECORD on which it appears.

Mr. CHAMBERLAIN. Then, I shall be glad to have the Senator refer to the page of the RECORD.

Mr. NORRIS. It is on page 8599 of the CONGRESSIONAL RECORD of May 24, 1916, in the right-hand column, near the top of the page.

Mr. SUTHERLAND. Mr. President, may I interrupt the Senator from Nebraska?

Mr. NORRIS. I yield to the Senator from Utah.

Mr. SUTHERLAND. Mr. President, unfortunately I was detained from the Senate yesterday while this bill was under consideration, but the analysis of its provisions in so far as the disposition of the fund arising from the sale of these lands is concerned to my mind is perfectly astounding. Does the Senator from Nebraska mean to say that this bill in substance donates to the State of Oregon 90 per cent of the proceeds of the sales of these lands?

Mr. NORRIS. It would do so if the Senate amendments are agreed to, with the exception, the Senator from Utah must remember, that of that 90 per cent 10 per cent goes to the reclamation fund, which, however, an amendment provides must be spent in Oregon.

Mr. SUTHERLAND. But it is equivalent to the complete donation to the State of Oregon of 90 per cent of these valuable public lands.

Mr. NORRIS. I think so. I call it a "donation." Of course the Senator from Oregon does not call it a donation; but that is what the bill provides.

Mr. CHAMBERLAIN. Mr. President——

Mr. NORRIS. I yield to the Senator from Oregon.

Mr. CHAMBERLAIN. Let me say to the Senator from Utah that, based on the analysis of the matter as made by the Senator from Nebraska [Mr. NORRIS], it does look large; but I have not interrupted the Senator from Nebraska to correct the statement he has made. I shall be able to show, however, to the Senate that the United States has already received very large sums, and that under the House provision the Government of the United States, while on the face of the bill is advancing the taxes, yet an analysis of the bill will show that the Government of the United States does not pay the taxes at all.

Mr. NORRIS. Perhaps I had better review the bill just a little. The bill provides that this land shall be sold, and it provides how it shall be sold. That is in the House bill, and there is no amendment to it and no controversy over it. The bill divides the land up into classes and provides that out of the proceeds, after paying the expenses, consisting in part of $2.50 an acre for the land, which must be paid to the railroad company from whom the land is taken, the United States then pays the taxes that are now unpaid on the land which the railroad company has not paid.

Mr. SUTHERLAND. Let me understand, as the Senator from Nebraska proceeds. Out of the funds arising from the sale of the land the railroad companies are first to be paid $2.50 per acre?

Mr. NORRIS. Yes.

Mr. SUTHERLAND. Then, how is the remainder of the fund to be disposed of?

Mr. NORRIS. Then the taxes are paid; and I think that accounts for about all the expense there is. Then the balance is divided up, as I have stated.

Mr. BORAH. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. NORRIS. I yield to the Senator from Idaho.

Mr. BORAH. Mr. President, what better use does the Senator from Utah think could be made of this money than to donate it to the uses which are specified in this bill within the State where the land is situated. If we should put the money into the National Treasury, we would appropriate it for some other ports, or for an inaugural ball, or soldiers, or something of that kind. This is all proposed to be donated to purposes which will have to do with the welfare of the people of the State of Oregon. It is directed in its application in such a way that it must necessarily inure to the public welfare and to the public benefit within that State.

These lands are situated within the State of Oregon; they are, according to my contention, a part of the natural resources of the State of Oregon, which ought to be applied to the upbuilding of the State of Oregon. It seems to me that we could not make any better use of the money than to direct its use so that it will really reach the people. If it gets into the National Treasury, there is a grave doubt whether or not it ever will reach the people at all in any way which will be of benefit. As I have observed, the appropriations for the last few weeks, I conclude that our capacity to waste is only limited by our capacity to find the money with which to carry on the waste. I think this money is so appropriated that it will help the people of Oregon, and I am willing for them to have it, since it is derived from lands intended in the original grant for the benefit of Oregon.

Mr. NORRIS. Well, Mr. President, I have no doubt that if this money were given to the State of Oregon for the purpose of building roads and bridges it would be used for that purpose and would do the people lots of good. If, however, the argument of the Senator from Oregon is good, then we must repeal all our land laws, and we must begin with the repeal of the reclamation act, because the House bill provides that 10 per cent of this money only goes into the Public Treasury; 40 per cent of it goes into the reclamation fund, and under a general statute creating the reclamation fund and the Reclamation Bureau all the proceeds of the sales of public lands in the United States, with some little exceptions, are declared by law to be sacred funds for the purpose of keeping up the reclamation fund. That is where this money ought to go. It will be the proceeds of the sales of public lands; and under the general statute, if no other provision were made for it, that is where it would go.

Mr. WORKS. Mr. President——

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from California?

Mr. NORRIS. I shall yield in just a moment.

Mr. President, if this controversy had never arisen and this land were now put on the market and sold to actual settlers, as the law provided that the railroad company should sell it, the proceeds, under the general statute, would go into the reclamation fund. That is the principal difference between the House bill and the Senate amendments. The Senate amendments give practically all the money to the State of Oregon, while the House bill gives 50 per cent of it to Oregon and puts 10 per cent of the 40 per cent into the reclamation fund.

Mr. BORAH. I desire to say that if the National Government would release to the settlers, under such laws as the settlers could make settlement and live, the other lands which have been tied up for an indefinite period in the State of Oregon, the State of Oregon could well afford to turn all this money into the National Treasury in compensation for it; but there are counties in the State of Oregon, the same as there are in my State and in other States of the West, where they have been compelled to go down into their individual pockets to maintain their schools, to maintain their courts, and their other public institutions, because they have no property within those counties to tax. It is reserved and dedicated to eternal silence. For this reason it is absolutely necessary that the Western States have some method of raising money, and this is the only method it seems practicable under these conditions to work out to give them anything in compensation for this denial.

Mr. NORRIS. Mr. President, this is not a question of reserving these lands from settlement. The House bill itself provides—and there has been no attempt to amend that provision—that this land shall be disposed of, and it provides a method for its disposal.

Mr. BORAH. Exactly.

Mr. NORRIS. And that must be done. There is no way out of that, as I understand. We could not give this land away to settlers, unless the Government itself paid the lien which, under the decision of the Supreme Court, the railroad company has.

Mr. BORAH. I was speaking of the large acreages which have been and are withheld under forest reserves, so called.

Mr. NORRIS. That has not anything to do with this bill.

Mr. BORAH. It has this to do with it, that the withholding of those lands has prevented the development of a large area of country in the Western States, has prevented taxation, and has imposed upon the western people an extraordinary burden, and therefore there should be some compensation coming back to them, to enable them to take care of their bridges and their ports and their county expenses and their schools, and so forth, as this bill in the case of Oregon undertakes to do.

Mr. NORRIS. Mr. President, the House bill gives them 50 per cent for those purposes, and I do not believe the Senator can cite a single instance in the United States where the Congress, in the disposition of public lands, has been as liberal with the States where the land is located as the House bill is in this case to the State of Oregon.

Mr. SUTHERLAND. Mr. President——

Mr. NORRIS. I will yield first to the Senator from California, who wanted to interrupt me a while ago.

Mr. WORKS. Mr. President, I merely wanted to ask the Senator from Nebraska if he realized that a very large proportion of the reclamation fund, which he says is a sacred trust, is being used for the irrigation of private and not public lands?

Mr. NORRIS. I take it that under the law it is not illegal to use it for the irrigation of private land.

Mr. WORKS. I am not so sure about that, but does the Senator know that there are some of these projects which are devoted entirely to the irrigation of private lands?

Mr. NORRIS. I do not think that any of them are devoted entirely to the reclamation of private lands.

Mr. WORKS. In some instances there is not a foot of public land under the project.

Mr. NORRIS. That may be; but I know that in practically every project, at least every one of which I have personal knowledge, there is a large amount of land that is privately owned, and that will necessarily be so. We can not refuse to use the fund for the irrigation of private lands unless we confine the operation of the law entirely to localities where there are no private lands, which would be a practical impossibility; but the owners of the private land have to pay just the same as a man who takes up public lands under an irrigation project.

Mr. WORKS. Does the Senator think a project of this kind for the sole purpose of providing for the irrigation of private lands is legal?

Mr. NORRIS. Yes; but that question has not anything to do with this matter.

Mr. WORKS. It has a good deal to do with it, in view of the fact that the Senator is referring to the irrigation fund as "a sacred fund" in the remarks he is making to the Senate.

Mr. NORRIS. I do not think it has anything to do with it. The only possible thing that it can have to do with it, is that out of the proceeds of the sale of these public lands the House bill gives 40 per cent to the Reclamation Service, when, under the general law, 100 per cent would go there, less 5 per cent, I believe, for educational purposes, which goes to the State.

Mr. SUTHERLAND. Mr. President——

Mr. CHAMBERLAIN. Mr. President, may I interrupt the Senator?

Mr. NORRIS. I yield first to the Senator from Utah.

Mr. SUTHERLAND. I simply want to say to the Senator that the position of the Senator from Idaho [Mr. BORAH] with reference to the disposition of public lands for the benefit of the States in which they are situated would have my hearty

concurrence if the observations were made with reference to a bill which proposed to treat all the public-land States alike; but I ask the Senator from Nebraska what justice there is in permitting Oregon to have 90 per cent of the proceeds of the sales of the public lands of that State for her especial benefit when no other public-land State is given the same privilege?

Mr. NORRIS. I see no justice in it whatever, I will say to the Senator.

Mr. CHAMBERLAIN. Mr. President——

Mr. SUTHERLAND. In other words, if the Senator will permit me to finish my thought, the public lands in the State of Idaho are sold, and the proceeds are paid into a common fund for the benefit of all the arid-land States, while the proceeds of these public lands in Oregon are dedicated to the especial and sole benefit of the State of Oregon to the extent of 90 per cent.

Mr. CHAMBERLAIN. Mr. President——

Mr. NORRIS. I yield to the Senator from Oregon.

Mr. CHAMBERLAIN. Mr. President, on the statement of the Senator from Nebraska [Mr. NORRIS] there is much reason in the argument of the Senator from Utah [Mr. SUTHERLAND], but let me call attention to this fact: These lands occupy a different position from any public lands in the United States, as I undertook to show on yesterday. The United States gave them away once and then took them back, and received large sums of money before this bill was introduced, and is going to receive a large sum of money now.

Let me call attention to what I mean. The House bill provides that the United States shall pay the taxes. They have done that as a sort of an act of charity, because the suits have bankrupted the counties involved. It will be seen that, while the Government of the United States advances this $1,500,000, approximately, to pay the delinquent taxes, yet when it comes to settle with the railroad company it deducts the taxes it has advanced and receives them back. That is one proposition.

Mr. NORRIS. Does the Senator see anything wrong in that?

Mr. CHAMBERLAIN. No; but the Senator is claiming that Oregon is getting the taxes.

Mr. NORRIS. Well, Oregon is getting them.

Mr. CHAMBERLAIN. I say that, while Oregon gets the taxes by direct appropriation out of the Government funds, the Government gets them back from the railroad company. The State does not get any benefit from them.

Mr. NORRIS. The State gets the taxes.

Mr. CHAMBERLAIN. The State would get the taxes anyhow.

Mr. NORRIS. What does the Government get out of that? Where does the Government make anything?

Mr. CHAMBERLAIN. It advances the taxes and collects them from the railroad company when it pays the company $2.50 an acre.

Mr. NORRIS. And the Government pays the amount so collected to the State or to the counties of the State.

Mr. CHAMBERLAIN. Let me call attention to another proposition. I want to show the Senator from Utah that the Government is not faring so badly. The Government of the United States has received $928,840.18 under the act passed by Congress in 1912, which authorized the Department of Justice to compromise with illegal purchasers at $2.50 per acre, so that the men who had bought in excess of 160 acres of land at a price in excess of $2.50 per acre got title from the Government of the United States on payment to the Government of $2.50 an acre. That realized to the Government $928,840.18, which it has already obtained. In addition to that, while this suit was pending, a receiver was appointed, and he sold lands to the extent of about $190,000, and the House bill appropriates that to the Government fund.

That is not all, Mr. President. I am trying to show, if the Senator will excuse me for a moment, that these lands occupy a different position from any public lands in the United States. When this grant was made, public land was selling at $1.25 an acre. Just as soon as the railroad company was permitted to charge the double minimum price of $2.50 an acre for the odd sections within the limits of the grant the Government of the United States raised the price of the even-numbered sections to the double minimum price and got $2.50 an acre for them.

Mr. NORRIS. Does the Senator object to that?

Mr. CHAMBERLAIN. I am not complaining; I am showing that by virtue of the terms of this grant the United States has already received more than it usually receives from the sale of public lands in any other State in the Union.

Mr. SUTHERLAND. Will the Senator from Nebraska permit me to ask the Senator from Oregon a question?

Mr. NORRIS. Yes.

Mr. SUTHERLAND. Let me ask the Senator from Oregon——

Mr. CHAMBERLAIN. Just one moment further. I want to show another amount the Government is going to get. Section 7 of the House bill, and of the Senate bill also, so far as that is concerned, authorizes an accounting between the Government of the United States and the railroad company for the excess price charged. For instance, the railroad company has received large sums from purchasers on illegal sales in excess of 160 acres to an individual, and for a price in excess of $2.50 per acre. The Government of the United States under the bill gets that excess payment.

Mr. SUTHERLAND. Mr. President, may I ask the Senator——

Mr. NORRIS. First, let me say something in regard to the question of excess payments which the Senator from Oregon has mentioned. It is still a question whether the Government will ever get anything because of the excess payments. In order that the Senator from Utah may get the idea right, I will state that the law giving this land to the railroad company provided that the railroad company should sell it to actual settlers in amounts not exceeding 160 acres at a price not exceeding $2.50 an acre. As a matter of fact, they sold the land in larger quantities than 160 acres, not to persons who were actual settlers on the land, but to timber companies, and got higher prices than $2.50 an acre. This bill provides that there shall be an accounting through the medium of litigation, which is provided for, to determine the excess amount for which the railroad company sold this land above $2.50 an acre, and the Government is to be given credit for that amount in computing the amount which the Government under this bill must pay to the railroad company at $2.50 an acre for the remaining land. So that the question will arise at once, and will undoubtedly go to the Supreme Court and finally be passed on—admitting those facts, and they are undisputed, that the railroad company did get sums in excess of $2.50 an acre for the land—whether the Government is entitled to that land or whether the people who purchased the land are entitled to that surplus. It is a question that will yet have to be determined—whether the Government will get a penny of that money or whether, if it is due to anybody, it will not be due to the men who bought the land and paid the railroad company more than $2.50 an acre for it.

Mr. SUTHERLAND. However that may be, all of this deprived the State of Oregon of nothing.

Mr. NORRIS. Oh, no; nothing whatever.

Mr. SUTHERLAND. If the land had never been forfeited to the Government at all, but had remained in the ownership of the railroad company, subject to its disposition, the State of Oregon would have gotten nothing out of it.

Mr. NORRIS. Nothing whatever.

Mr. SUTHERLAND. Except the taxes on the land.

Mr. NORRIS. Except the right to tax the land.

Mr. SUTHERLAND. The State of Oregon is deprived of nothing, because the Government of the United States takes over the land.

Mr. NORRIS. No. I do not see why the State of Oregon has any right to complain even though the Government made some money out of the transaction, if they did not take any of that from the State of Oregon or keep any money that ought to go to the State of Oregon.

Mr. SUTHERLAND. As I understand the situation, the only thing that the State of Oregon possibly has been deprived of is the right to tax the lands.

Mr. NORRIS. She has not been deprived of that yet. She will be if this bill becomes a law.

Mr. SUTHERLAND. At any rate, the State has not received the tax.

Mr. NORRIS. She has received a good many taxes, some two or three millions of taxes, but there is some that is unpaid.

Mr. SUTHERLAND. That is what I meant.

Mr. NORRIS. The railroad company has not paid any taxes.

Mr. SUTHERLAND. It is to that extent only that the State of Oregon can be said to be deprived of anything, and for that the United States proposes to reimburse her.

Mr. NORRIS. That the United States is going to pay her.

Mr. LANE. Why, Mr. President, the State of Oregon was deprived of every opportunity of opening the territory, the business that would result therefrom, and the prosperity and increased taxation owing to increased values of the land. The State of Oregon has been shut up like a corked bottle. The heart of the country west of the Cascade Range was held away from settlers, from people who would have lived there and builded homes and reared families to the third generation.

Mr. SUTHERLAND. So have we all, under the forest-reserve system.

Mr. LANE. Not by a contract whereby you agreed with another person that they would allow it to be opened up for settlement, and for the promise on their part and the pledge that they would open it up for this prosperity, and for this population which the country required you gave way and granted and agreed to part with your land.

Mr. NORRIS. The contract to which the Senator refers, I suppose, is the contract that in effect was made by the railroad company when it accepted the grant.

Mr. LANE. Yes.

Mr. NORRIS. And which provided that the railroad company must dispose of this land to actual settlers only, in quantities not exceeding 160 acres, and at a price not exceeding $2.50 an acre.

Mr. LANE. Yes.

Mr. NORRIS. And of course the railroad company did not do that.

Mr. LANE. No.

Mr. NORRIS. Now, the Government of the United States has been doing the best it could to compel the railroad company to do that, and this legislation is the result of that attempt.

Mr. LANE. Mr. President, the Government has done nothing. It slept on its rights for 40 years, when it should have been busy forcing the carrying out of the contract, compelling the railroad company to throw that land open for settlement. Instead of doing that, it slept on its rights, until it has become a question whether it has any rights at all or not.

Mr. NORRIS. Mr. President, there is a good deal in what the Senator says, I know. Perhaps the Government has not been as diligent as it ought to have been.

Mr. LANE. It has not been.

Mr. NORRIS. But at least this bill is an attempt on the part of the Government, and those who represent the Government, to do the right thing.

Mr. LANE. A tardy effort.

Mr. NORRIS. It is true that suits were commenced against the railroad company by individuals, a great many of them, attempting to compel the railroad company to give them this land at the price of $2.50 an acre. A great many people settled on the land under the law, and then went into court to compel the railroad company to give them a deed, and tendered the money at $2.50 an acre; but the courts held that that could not be done. I remember that several years ago a good many people in my State were interested in these lands. I think some of them invested money. There was a good deal of fraud perpetrated. There were a good many real estate agents who advertised that they could get this land, and they sold it around at various places, or at least got a commission or a fee, and they made application to the railroad company, and they had a suit pending. They perhaps intended and believed that they would win it, but they did not. They lost; and however much we may regret those conditions—I do as much as anyone—they can not be helped, so far as I can understand. The courts held with the railroad company, and we must obey the mandate of the courts.

Mr. BORAH. Mr. President, it would be more fair to say, would it not, that the courts interpreted the law?

Mr. NORRIS. Well, they did; yes. I am not saying that the court was corrupt, or anything of that kind. I presume that would be a better statement; they interpreted the law. There is not any doubt that when Congress passed the law they supposed that actual settlers would occupy these lands, or I presume they did. It was a good many years ago. I presume they supposed that actual settlers would occupy this land and pay the railroad company $2.50 an acre for it. While, as the Senator from Idaho said, the court was interpreting the law, I never believed that it interpreted it right; but what I thought about it does not make any difference.

Now, Mr. President, coming to the amount of money, of course that is an estimate only. The records show that this land was taxed in some instances as high as $40 an acre by the taxing authorities of Oregon. I believe the average was from $8 to $10 an acre. Here is another equity that the Senator from Oregon has not discussed, and that I want to call to the attention of the Senator from Utah, who has shown an interest in it.

The railroad company under that law never had an interest in that land in excess of $2.50 an acre. That has been the contention of the Government all the time. The original law provided that they could not sell it for more than $2.50 an acre; so that if you were going to tax the railroad company it seems to me that as a matter of law you could not tax it in excess of its real interest in the land, which was $2.50 an acre. The railroad company was interested in having the State tax it higher, because it was claiming that it had the land, and could sell it for any amount it saw fit. So that there were paid, while the railroad company was paying taxes to the State and counties of Oregon, taxes on a valuation of more than double what the railroad company owned in these lands; and under the House bill we are paying a little over a million and a half of taxes to the State of Oregon on that kind of a valuation. So that I think again we are extremely liberal with the State of Oregon. I do not believe, as a matter of law, that the State of Oregon ever had the right to tax the railroad company to a greater extent than the value of $2.50 an acre for the land; but that is all away, and the payment is based on the valuation that the taxing authorities put on the land.

Mr. LANE. Now, I should like to ask the Senator, with the railroad refusing to sell the land at $2.50 an acre or any other price, and surrounding land, adjoining sections, being worth $40 an acre, what was the State of Oregon to do? What could it do but tax it at the higher valuation?

Mr. NORRIS. I can answer that question by saying this: Suppose the adjoining land was worth $100 an acre——

Mr. LANE. It was, some of it.

Mr. NORRIS. And the Government of the United States owned this land. They could not tax it. They would not own any taxes in it.

Mr. LANE. No; but here was an agreement to sell it at a certain price.

Mr. NORRIS. Suppose the Government of the United States sold to the Senator a half interest in a certain quarter section of land, and the taxing authorities should come along and say, "Why, the adjoining land is worth $100 an acre, and as you have a half interest or a third or a tenth interest in that land, we will tax you on the full value of that land." I do not believe any court would sustain that.

Mr. LANE. Mr. President, I do not think that is a fair comparison. Here was land, the price of which was settled at $2.50 an acre under an agreement that the railroad company would sell it to people for $2.50 an acre, and let them make it worth the $100 or $1,000 an acre, as they did in the case of adjacent land, some of them—$1,000 an acre, if you please. I have seen it sell for more than that an acre. With a corporation sitting tight on other similar land, under a pledged agreement that it would sell it for $2.50 an acre, withholding it from sale, would you then still tax it at $2.50 an acre?

Mr. NORRIS. Yes. Now, the Senator's contention is——

Mr. LANE. It is not a contention; it is a fact.

Mr. NORRIS. The Government, under the House bill, is paying the taxes at the figures that the taxing authorities of Oregon put on it. I only mention that to show that, in my judgment, it is a liberal payment to the State of Oregon of these taxes. It seems to me that when the State of Oregon claims it had the right to tax this land at $40 an acre, and on the other hand is demanding of the railroad company that it sell it for $2.50 an acre, it is occupying a position that can not be sustained in any court of law; but that is all away. I only mention it in passing.

The value, of course, is a matter of speculation. I believe it was stipulated in the litigation that the value of these lands in dispute that are left was $35,000,000. I do not know that that is entitled to any particular weight, because it was not a material proposition in the litigation, so I suppose they were not careful about putting a value on it. But the valuations run up as high as $50,000,000; and I think, from what little examination I have made of the record—I have not had time to go into it fully—that the great preponderance of the estimates made by men who have made examinations of it put it away beyond $35,000,000. Assuming that it is $35,000,000, let us see what, in money, the State would get.

Under the Senate bill, after getting its taxes—now, they are not counted in that; we pay them as part of the expenses—if the Senate amendment were agreed to, the State of Oregon, either directly or through its counties, would get $26,325,000.

Mr. SUTHERLAND. On a valuation of what?

Mr. NORRIS. On a valuation of $35,000,000, and I think that is low. Taking the same valuation, under the House bill the State of Oregon would get $14,625,000. In each case the taxes are in addition to that amount which they get, because the taxes are paid before there is any distribution made of the fund.

Mr. President, I do not want to be unfair. I want to be liberal. I have always thought that we ought to be liberal with all the States in dealing with the public-land question; and it seems to me that the House bill is extremely liberal with the State of Oregon. We can not relieve a great many individuals who have suffered on account of this condition. If you gave to the State of Oregon all of the money, you would not relieve a great many individuals who have suffered and who honestly went upon the land and spent money in litigation trying to get title.

The House bill gives a preferential right to those who settled on the land. That is another thing that, it seems to me, is very just. It fixes the date at the time of the decree of the lower court when, as I remember, it declared a forfeiture of these lands; and all those who had settled up to that time, who had made applications for homesteads, are entitled to a preferential right over the ordinary person.

Mr. LANE. I should like to ask the Senator, before he goes further, if he does not consider, as an element in equitably disposing of this property or settling this case, the fact that the State of Oregon during all this time gave police protection to the property of the company? They helped them protect their holdings by fighting fires. They gave them protection to life and every protection that they gave to every other citizen; and yet at the same time the company were refusing to sell the land at the price which they had agreed upon, the price limited in the act of Congress.

Mr. NORRIS. I am not defending the company. I have always said that in my judgment the court erred in not compelling them to sell it. I think it erred again in not declaring a forfeiture. It seems to me the violation of the law was so plainly admitted that the railroad company was not entitled to any consideration. But the same thing is true everywhere in this country. The police authorities, if any protection is demanded, give it. They do that all over the United States. They do that regardless of the ownership of property, regardless of the payment of taxes, regardless of anything. Other western States having public lands that are disposed of, where the proceeds all go into the reclamation fund, do the same thing. They have the same police protection, and protect people and corporations the same as Oregon has done. Oregon in this case, under the House bill, gets 50 per cent of the proceeds of all this land.

It is said that in the case of some of the land that was sold a number of years ago Congress passed an act validating the sale, and that the Government got some money out of that. Why, that has not anything to do with those remaining lands. The Government has never received a single penny that I know of from the lands that are in issue in this bill—not a cent from any source. It has been a continual expenditure on the part of the Federal Government, as far as these lands are concerned.

There is another amendment that I want to mention briefly. It will save some time when the amendment comes up. There is another Senate amendment providing for the sale of these lands which changes the provisions of the House bill. The House bill provides that the timber on these lands may be sold on time. It is conceded, I think, by everybody that it will take large corporations, or men of large means, to handle economically the timber on these lands, the same as most other lands where they are taking off the timber. The House bill provides as nearly as it can, it seems to me, for giving the poor man a chance to buy the timber. It provides for the sale of the timber on 10 years' time, and the deferred payments are to draw not to exceed 6 per cent interest.

The Senate committee bill provides that this land shall be put up for sale and sold for cash. I do not believe it will bring as much, in the first place, as if it were sold on time and in payments with interest at not to exceed 6 per cent. If it is put upon the market and sold for cash, it means that no one except men of immense wealth will have any opportunity to buy any of the timber, and for the same reason, there being fewer bidders, necessarily the tendency would be to sell it for a less price. If we sell it on time and let the deferred payments draw interest at some rate that the Secretary of the Interior will fix—not exceeding 6 per cent—in the first place, we will get a larger bid for the timber, and, in the next place, that interest will bring in an income that will be profitable itself, because it will be higher than the State would have to pay if it were in the market and borrowing money directly.

Now, Mr. President, I do not care to proceed further.

Mr. SUTHERLAND. May I ask the Senator before he takes his seat——

Mr. NORRIS. I yield to the Senator.

Mr. SUTHERLAND. It is contemplated, I understand, that the timber shall be sold separately from the land; that it shall be taken off the land and the land shall be swept clear of the timber.

Mr. NORRIS. Yes.

Mr. BORAH. And after the timber is cut off, I understand, those lands will be subject to homestead entry.

Mr. SUTHERLAND. I merely wanted to understand the situation.

Mr. NORRIS. They sell the timber.

Mr. SUTHERLAND. The idea is to clear the land of timber and turn it over to agricultural uses?

Mr. NORRIS. Yes. The testimony shows, and, as far as I know, it is uncontradicted, that the timber on this land is already overripe and it is not worth now as much as it was a few years ago; it ought to have been cut before. There was read yesterday—and it appears in the RECORD to-day—a long report, made by Mr. Williams, of the Department of Justice, who went out and inspected the land and went all over it. He calls attention to the fact, and it appears at several other places in the reports, that the timber is overripe.

Mr. SUTHERLAND. The land, I take it, is far more valuable for agricultural uses than it possibly could be as a reservation to grow timber for the future.

Mr. NORRIS. Some of it is; but it is all kinds of land. There is land that is not worth anything and land, as the Senator from Oregon stated, that is probably worth $100 an acre. The bill as passed by the House provides—and there is no Senate committee amendment which changes it—that the lands and the water-power sites shall be classified by the Department of the Interior. There are some valuable water-power sites on some of this land, and I understand they will be classified, then the timberland and the agricultural land. Then it provides that the timber shall be sold. The bill as passed by the House provides that it shall be sold on bids, and that 10 years' time, as I remember the provision, shall be given for the payment of the money.

Mr. SUTHERLAND. There are to be 10 years within which the timber is to be removed.

Mr. NORRIS. I do not know that that is fixed. I am not sure as to whether that is in the proposed law, or whether the Secretary of the Interior in the contract will fix that.

Mr. POINDEXTER. It prohibits the removal of the timber until after patent is issued.

Mr. NORRIS. After patent is issued for the timber. Let me explain it to the Senator. The bill as passed by the House provides that the Secretary of the Interior shall sell it in quantities that in his judgment will bring the most money, and then the purchaser has 10 years' time. He has payments to make and interest to pay. He takes a 40-acre tract out of his entire purchase and pays for all that 40-acre tract, and he is then allowed to take all that timber, and he gets a patent when he pays that money for the timber, and when the timber is taken off, then the land becomes subject to entry.

Mr. SUTHERLAND. He can not remove any timber before he has paid for the land?

Mr. NORRIS. Not the land, the timber.

Mr. SUTHERLAND. The timber, I mean.

Mr. NORRIS. Yes. He must pay for the timber before he can remove it.

Mr. SUTHERLAND. So it may be that cases will arise where the timber is bought and none of it can be taken off for a period of 8 or 10 years, and none will be taken off.

Mr. NORRIS. I doubt whether the Secretary would make that kind of a contract. He would provide that they could take a certain portion of it off every year.

Mr. TOWNSEND. Mr. President——

Mr. NORRIS. I yield to the Senator from Michigan. He has the amendment before him.

Mr. TOWNSEND. The Senate committee amendment provides that the "timber thus purchased may be cut and removed at any time within the discretion of the purchaser."

Mr. NORRIS. That is the Senate committee amendment?

Mr. TOWNSEND. That is the Senate committee amendment.

Mr. NORRIS. Mr. President, I do not see that there is any disposition on anyone's part to do any injustice. I regret that I have felt compelled to take a view of the situation that is different from that of the Senator from Oregon. It does seem to me as I read the bill and the Senate committee amendments that the bill as passed by the House is liberal. I do not believe it is any defense here to say that because there is a large forest reservation in a State like there is in Oregon, and this land is not included, with no attempt to put it in a forest reservation, therefore we should deal with these public lands any different than though we were dealing with them if they were in some other State. In all other States practically all the money that is paid for public lands goes into the reclamation fund, and we ought to do that with Oregon, or at least we ought to do it to the extent of 40 per cent, as provided in the bill as it passed the House.

Mr. President, let me say if we commence now to prevent the money received from the public lands from going into the reclamation fund we might just as well repeal the law providing for the Reclamation Bureau. If we are going in this case to turn all the money over to the State of Oregon, and that is what the amendment of the committee practically means, keeping it all out of the reclamation fund, then we will have

established a precedent that in all cases in every other State where there are public lands demands will be made that they be treated as liberally as Oregon, and that means the end of the reclamation business in this country.

Mr. WALSH obtained the floor.

Mr. O'GORMAN. Mr. President, will the Senator yield to me for a moment?

Mr. WALSH. I yield to the Senator.

FOREIGN-BUILT DREDGES.

Mr. O'GORMAN. In behalf of the Senator from Louisiana [Mr. RANSDELL] I ask unanimous consent to submit a favorable report on a bill and to ask unanimous consent for its immediate consideration. It is substantially a bill which was passed here a week ago and a motion entered to reconsider it. At the suggestion of the Senator from Rhode Island [Mr. LIPPITT] a modified bill was introduced. We have made the modification so as to meet the view of that Senator.

The PRESIDING OFFICER (Mr. HITCHCOCK in the chair). Is there any objection? The Chair hears none, and the report will be received.

Mr. O'GORMAN. For the Senator from Louisiana [Mr. RANSDELL], from the Committee on Commerce, I report back favorably with an amendment the bill (S. 6239) authorizing the Commissioner of Navigation to document as vessels of the United States two dredges built of American material and owned by James Stewart & Co. (Inc.), a citizen of the United States, and I submit a report (No. 514) thereon. I ask for its present consideration.

The PRESIDING OFFICER. Is there objection?

Mr. GALLINGER. I should like to know what the amendment is that has been agreed upon.

The SECRETARY. The amendment is, in line 6, to strike out the word "as" and insert "a," so as to read "James Stewart & Co. (Inc.), a citizen of the United States."

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. SUTHERLAND. Let us hear the bill read.

Mr. CHAMBERLAIN. If there is going to be any discussion upon it I must object, because the pending Oregon and California land-grant bill will have to be disposed of to-day or to-morrow.

Mr. LIPPITT. I do not believe there will be any discussion on the bill. It will not take more than a minute or two.

The PRESIDING OFFICER. The Secretary will read the bill.

The Secretary read the bill as proposed to be amended, as follows:

Be it enacted, etc., That the Commissioner of Navigation is hereby authorized and directed to cause to be documented as vessels of the United States two dredges built of American material and owned by James Stewart & Co. (Inc.), a citizen of the United States.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The PRESIDING OFFICER. The question is on the amendment proposed by the committee.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

OREGON & CALIFORNIA RAILROAD LAND GRANTS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes.

Mr. WALSH. Mr. President——

Mr. CLARK of Wyoming. Mr. President, a parliamentary inquiry. What is the business now before the Senate?

The PRESIDING OFFICER. The pending bill is House bill 14864.

Mr. CLARK of Wyoming. Another parliamentary inquiry. How does it happen that the bill is before the Senate at this time?

The PRESIDING OFFICER. It is before the Senate for the reason that the Senator from Alabama [Mr. BANKHEAD] permitted the Post Office appropriation bill to be temporarily laid aside for the purpose of considering this bill.

Mr. CLARK of Wyoming. But have we not considered another bill, which displaces the bill which was before the Senate?

The PRESIDING OFFICER. By unanimous consent that was done. The Senator from Montana will proceed.

Mr. WALSH. Mr. President, it is exceedingly unpleasant for me to find myself obliged to differ from my esteemed friend the Senator from Oregon, who has charge of this bill, and particularly so to find myself differing with him concerning the disposition of public lands in his own State. But the provision of the bill which has given rise to so much of the discussion as has thus far taken place is, in my humble judgment, wholly indefensible, and is so palpably unjust to my own State as well as to every other public-land State that I should not feel that I was discharging my duty here to my constituents if I did not register a protest against the distribution of this fund as it is provided in the bill.

I trust the bill will pass, and pass speedily. In its general aspects it is in every way, it seems to me, a commendable measure. But the reasons that condemn that distributive provision of the bill are so altogether persuasive and unanswerable, as it appears to me, that I find it a little strange that any Senator from the western country should feel that a provision of this kind ought to be asked from the United States Senate. I hope the Senators from Oregon will be prevailed upon to withdraw this amendment and allow the House provision at least to stand.

Mr. President, if we were considering here a question of general policy as to whether all the avails and proceeds of the sales of public lands, or the major portion of such proceeds, should go to the States, respectively, from which they come, I might not be heard to object. Indeed, I have no doubt that a measure of that kind would receive quite general concurrence from the western Senators. But, Mr. President, a rule is established by law quite contrary to that, namely, that all of the proceeds and avails of the sales of public land shall go to the general reclamation fund for the purpose of constructing works wherever it may seem desirable to construct them. Money derived from the sales of lands in the State of Montana are used for the purpose of constructing reclamation work down in the State of Arizona and in the State of New Mexico and in other States throughout the Union, and eventually such money will be used for the construction of reclamation works in the State of Oregon. So moneys derived from the sale of public lands in the State of Colorado are employed for the purpose of constructing works on reclamation in the State of Montana.

Now, it is proposed that Oregon, as to a considerable portion of her lands, and lands of very great value, running from $30,000,000 to $50,000,000, shall be exempted from the operation of that general rule, and that while the rest of us shall still be compelled to put all of the avails of the sales of public lands in our various States into the general pot, that the moneys derived from the sale of these lands in the State of Oregon shall be devoted practically in their entirety to the State of Oregon itself.

Mr. President, I might say in this connection that a more or less general misapprehension exists concerning the advantages which the State of Montana has derived from this act. The balance is still in our favor. We contributed upward of $10,000,000 to the general fund. We have had expended in our State something over $9,000,000. We have still a balance of $1,000,000 to our credit. So we have no particular fault to find. Now, the fact about the matter is that the State of Oregon up to the present time has contributed very much more to the reclamation fund than she has derived from it, the aggregate contributions being in the neighborhood of $12,000,000, while only somewhere between $2,000,000 and $3,000,000 have been expended in that State.

But, my friends, the law provides that every 10 years this thing shall be equalized, so that hereafter we shall not be able to get appropriations for further reclamation works in the State of Montana until Oregon balances us up. In other words, for the future our money is going to go to the construction of reclamation work in the State of Oregon. Let me call your attention to the provision of the law. I read from section 9 of the act of June 17, 1902, as follows:

SEC. 9. That it is hereby declared to be the duty of the Secretary of the Interior in carrying out the provisions of this act, so far as the same may be practicable and subject to the existence of feasible irrigation projects, to expend the major portion of the funds arising from the sale of public lands within each State and Territory hereinbefore named for the benefit of arid and semiarid lands within the limits of such State or Territory: *Provided*, That the Secretary may temporarily

use such portion of said funds for the benefit of arid or semiarid lands in any particular State or Territory hereinbefore named as he may deem advisable, but when so used the excess shall be restored to the fund as soon as practicable, to the end that ultimately, and in any event, within each 10-year period after the passage of this act, the expenditures for the benefit of the said States and Territories shall be equalized according to the proportions and subject to the conditions as to practicability and feasibility aforesaid.

Mr. WORKS and Mr. BORAH addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Montana yield, and, if so, to whom?

Mr. WALSH. I yield to the Senator from California.

Mr. WORKS. I should like to know whether the Senator from Montana thinks it is practicable to carry out that provision of the statute? Suppose there are States where there is no project that can be practically carried out there is no provision for dividing the funds in any way.

Mr. WALSH. I am simply anticipated by the question. I do not care to discuss the question as to what would happen with reference to the State in connection with which no feasible project can be found. The Senator from Oregon tells us that, and that is in accordance with the record, that Oregon does not stand in that situation. He tells us, and it is no doubt true, that there are a million acres of land in the State of Oregon that are capable of reclamation and that ought to be reclaimed through this fund. That means an expenditure of from $25 to $50 an acre, meaning that Oregon could justly claim eventually anywhere from $25,000,000 to $50,000,000 out of this fund for the reclamation of her lands.

Mr. WORKS. That may be true as to the State of Oregon; but this is a practical question, and one that will have to be solved at some time. I am unable to see myself how that provision of the statute equalizing the amounts to be expended in that way can be carried out.

Mr. WALSH. Mr. President, I desire to say to the Senator that the question suggested by the Senator from California [Mr. WORKS] is, of course, an exceedingly important one and when it confronts us it will probably be more or less difficult of solution. For the present, however, it is purely academic. Oregon does not stand in that situation.

Mr. CHAMBERLAIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Oregon?

Mr. WALSH. I do.

Mr. CHAMBERLAIN. The Senator from Montana read section 9 of the reclamation act of 1902 as it was originally passed. The Senator, however, will remember that that act has been repealed, and now the appropriations for irrigation purposes are made directly by Congress.

Mr. WALSH. Oh, no. The new act, Mr. President, as the Senator from Oregon will quite distinctly recall, does not affect this provision at all. All the change that has ensued with respect to the matter to which the Senator has referred is that under the old act as the funds came in they were assigned to the various reclamation projects without any action whatever on the part of Congress. Two years ago that was changed, and the reclamation extension act, which was passed two years ago, provided that hereafter no money should be assigned to any project except upon appropriations made by Congress. That is the only change, so far as I can recall.

But, Mr. President, that is the situation of affairs. The Senator has stated, however, as I have suggested, that there are a million acres of land in the State that ought to be reclaimed, and which undoubtedly will be reclaimed just as soon as there is money enough in the fund in order to carry on the work. When that time comes and we are desirous of having another project carried on in the State of Montana, and Oregon has an equally feasible and desirable project, and the two stand in other respects upon exactly the same footing, under this proposed law the Secretary of the Interior must take up the Oregon project until the expenditures in the State of Oregon reach the amounts that were contributed by that State, or at least until the proportion contributed by her is no greater than that contributed by any other State relative to the expenditure therein.

Take the State of Idaho, for instance. The State of Idaho has contributed about $5,000,000 to the reclamation fund and has had expended in that State $8,000,000. Every one of the men who have taken land under the Idaho project will be obliged to pay back the amount of the construction charge—$25 or $30 an acre, as the case may be—and Idaho, having already had more than she contributed, could not hope to compete against Oregon in the future in reference to projects. So the Idaho people will be contributing to the construction of this reclamation project in the State of Oregon every dollar that comes out of the sale of lands in that State. Under the provisions of this bill Oregon will be exempted from providing a fund as to this great extent of valuable land.

Mr. President, the State of Arizona is in the same situation. The State of Arizona has had of this reclamation fund something like $16,000,000; and, regardless of what anybody may say about the matter, I have not the slightest doubt in the world that the greater portion of these investments will eventually be returned to the fund and that the State of Arizona will be obliged to turn back into the fund that $16,000,000, and it will go to the construction of reclamation works in the State of Oregon; and yet Oregon is to be exempted under the provisions of this bill from any contribution for reclamation at all, except to the extent of 10 per cent; and that money must be expended for the construction of reclamation projects in the State of Oregon and nowhere else.

Mr. President, it is said that this case is sui generis; that these lands do not belong in the same category as do the general body of public lands open to general appropriation; but why do they not? In what respect are they different? These lands belonged to the Government of the United States. The people of Oregon contended that the railroad company to whom they were granted had forfeited its title to them, and that the title had reverted to the people of the United States. A suit was instituted with that idea in mind. It was contended that by reason of the failure on the part of the railroad company to observe conditions subsequent, they had lost their title, and that these lands had reverted to the Government of the United States. A suit was instituted, and the lower court took that view of it; but the matter went to the Supreme Court of the United States, and that court held that that was true apparently only in part; that the railroad company was entitled to get $2.50 an acre out of the land. So this bill provides that the title to all these lands shall be revested in the United States, subject, however, to the right of the railroad company to have $2.50 an acre for each acre of these lands. It is then provided that the lands shall be classified into agricultural lands, timber lands, and mineral lands. The agricultural lands are to be open to homestead entry. With respect to timber lands, the timber is to be sold off, and then subsequently the lands are to be opened to homestead entry. The mineral lands are to be open to mineral entry. In what respect, then, do these lands differ from ordinary public lands?

Why, Mr. President, it is not an extraordinary thing at all that the Government shall have parted with its title to certain public lands, and, for some reason or other, that title is vacated and divested, and the lands again drop back into the general body of the public lands.

Some years ago a suit was started in my State to annul patents secured by the Northern Pacific Railway Co. to valuable coal lands in the State of Montana to which they had obtained patent; they had held them for nearly five years; the statute of limitations had almost run against them. A suit was instituted to annul the patent to those lands, and it was annulled. Those lands have since that time been valued; they have been classified, and estimated at anywhere from $30 to $105 an acre. They are coal lands which are open to appropriation now to anybody who comes along to buy them. Some of them have been appropriated at that price, and the money has gone into the general reclamation fund. What is the difference between that case and this? None that I can see. This situation, I repeat, is not extraordinary at all.

There is hardly a State in the West in which actions have not been begun to divest grantees of the title to lands which had passed to them, and judgments have been entered, and many of those lands have been reconveyed without the institution of a suit at all; they have gone back into the general body of the public lands for disposition just exactly the same as these lands in Oregon have gone back, for such disposition as Congress may see fit to make of them.

Likewise, it was suggested, and very properly so, that this situation is different in this respect, that under this proposed law the timber upon the lands is to be sold separately, and that there is no law providing for a separate disposition of timber upon the public lands in any of the other States, except in the case of timber within the forest reserves; and in the case of timber within the forest reserves the money does not go into the reclamation fund. All that is true; but, Mr. President, what difference does that make?

Let us take coal lands. The Government has executed leases of coal lands in Alaska, or is prepared to execute such leases, and more or less of the coal may be taken out of the land by virtue of these leases. Would it be asserted for a single moment that proceeds derived from that source would not and ought

not to go into the general reclamation fund, and that it would be possible that that should be diverted, with justice to the other States, allowing the denuded land to remain for distribution to swell the reclamation fund? I apprehend that that would not be asked for.

Now, Mr. President, these lands are not included within a forest reserve because the people of Oregon do not want them included within a forest reserve. God knows there is enough land within forest reserves now. All of us feel in that way about it. There is not anybody here who wants to suggest any such disposition as that; but when they are left outside of the forest reserves for disposition under the general laws, all the avails of them ought in justice to go into the reclamation fund, just the same as the avails of sales of lands in other States.

Why, Mr. President, there is in the State of Montana a large body of the most productive farm land, I undertake to say, that can be found anywhere in the West, which has upon it a very heavy growth of timber. I suppose that probably there are 50,000 acres in the Kootenai Valley of as productive land as there is anywhere in this country. There are a series of benches in a beautiful valley, which runs all the way down that river, covered with a very heavy growth of commercial timber; and yet, Mr. President, it is not an exaggeration at all to say that, if that timber were cut off and that land put under cultivation, as it would be if it were open to sale, the crops raised from that land annually would more than equal all the value of the timber there is on it. It is a matter easily susceptible of computation.

I undertake to say that on these 50,000 acres of land there would be probably 2,000,000 feet of timber upon a quarter section. At a very high estimate that is worth $2 a thousand; in other words, there are $4,000 worth of timber on a quarter section of land. If you cut that timber off, you could sow the land to alfalfa or wheat and get more than $4,000 worth of stuff off of it every year; and yet the Agricultural Department here proposes to hold that land in just exactly that condition until eventually they get ready to sell the $4,000 worth of timber off of it, and then allow it to be homesteaded.

Mr. President, there was much in what was said by the Senator from Iowa [Mr. CUMMINS] yesterday, that there is an obligation resting upon the Government of the United States to help the man who wants to clear a piece of woodland and put it under tillage and cultivation, just as much as there is to help a man who wants to go out upon the prairie and take a piece of arid land. Why should not a man who wants to do so take that 160 acres of land with $4,000 worth of timber on it? He could not clear it for any such price as that; and why should he not be offered that 160 acres of land by the Government of the United States, timber and all, of course safely guarded, so that the law would not be used simply for the purpose of fraudulently acquiring timberland? So, the people of Oregon very wisely insist that these valuable lands should not be put into a forest reserve, but that they should be held out as an inducement to settlers to come there and take them.

Why, Mr. President, we would be exceedingly glad to have an act passed providing for the opening of the lands to which I have referred in the Kootenai Valley, and we would not ask a dollar of the money that was derived from the sale of them. We would be only too glad to allow the money to go into the reclamation fund. If we could open them up in any way, the people of Montana would be only too happy to have these lands opened up to settlement.

So, Mr. President, there is no reason at all why the amount that is available should not go into the reclamation fund, so long as the avails from other lands go into that fund. I can not understand why there should be any distinction with reference to these lands. These lands have been held in private ownership for some years, and they have been subject to taxation; taxes have been assessed against these lands, and all of that money goes to the localities under the provisions of the House bill, which is perfectly proper; but when they get that, Mr. President, I can not see any good reason at all why every dollar of the remainder should not go into the reclamation fund. Certainly on any just consideration of this measure the Senators from Oregon are asking more than the Congress of the United States ought to concede to them.

Mr. BORAH. Mr. President, I agree with very much that the Senator from Montana [Mr. WALSH] has said, and especially the latter portion of his remarks find a hearty response in my mind; but these public lands in Oregon are treated as being in a different condition and situation from other public lands. The bill itself recognizes that all the way through. The legislation is based upon the theory that these lands are sui generis. We are not undertaking to deal with them in any particular as we deal with other public lands. If we were to deal with them as we deal with other public lands, we would simply put them back in a forest reserve or would reserve them, to be disposed of as the other public lands are disposed of. We start out, if we are in favor of the bill at all, on the theory that there is a distinct and marked difference in the situation with which we are dealing as compared to the situation which relates generally to the public lands. I have felt that the difference was such that I could very agreeably support this bill.

The distributive clause of the amendment reported to the bill provides as follows:

Of the remainder 10 per cent shall be paid into, reserved, and appropriated as a part of the fund created by the act of Congress approved June 17, 1902, known as the reclamation act, to be expended on approved projects within the State of Oregon—

It is conceded that Oregon has put into the reclamation fund a very much larger sum than has yet been expended out of it for the benefit of the State. This would not equalize that. Of course, it is said—and the basis of the argument is a correct one—that the reclamation fund is held as a unit for the benefit of all the States, and equalizations are to take place every 10 years; but there is a sufficient difference and distinction in this situation to merit, it seems to me, consideration of the equity of this provision.

The amendment continues—

10 per cent of such remainder shall become a part of the general fund in the Treasury of the United States; 30 per cent of said remainder of the proceeds arising from the sales of land and timber in the counties of Coos, Douglas, Lane, Tillamook, and Multnomah, in the State of Oregon, shall be paid to the treasurers of the said respective counties for the construction of roads, highways, and bridges, and 20 per cent thereof shall be paid to the proper officer of the respective port districts within the counties named, for the purpose of reducing the bonded indebtedness of such districts and for general harbor improvement, and, where there is more than one port district in any county, the county court of such county shall determine what portion of the fund shall be credited to the several port districts therein; 35 per cent of said remainder of the proceeds arising from the sale of lands and timber within counties other than the counties of Coos, Douglas, Lane, Tillamook, and Multnomah shall be paid to the treasurers of the respective counties for the construction of roads, highways, and bridges; and the entire balance remaining in said Oregon and California land-grant fund, from whatever source derived, shall be paid to the State of Oregon for its irreducible school fund for the support of the common schools of the State

The original grant of this land, Mr. President, had for its object and purpose the development, the special benefit, and the special advantage of the State of Oregon. It was designed especially and particularly to aid in the development of that particular region of country in which the land was situated. In the first place it contemplated the building of a railroad, which was for the purpose of development; and in the second place it contemplated the sale of the lands for a small sum per acre, so that the lands would pass into settlement and into the development of the State, become subject to taxation, and contribute to the upbuilding of the different institutions of the State. Had that grant been carried out as it was intended to be carried out by Congress this bill would not be here and the State of Oregon would have received long ago far more in the way of development and advantage from the carrying out of the grant than it will receive from these donations, as they are called, to the State of Oregon in the final disposition of the lands now.

If the railroad had complied with the terms of the grant, these lands would have been disposed of to settlers at the price named in the grant and the settlers during all these years would have been upon the land, paying taxes, and helping to build up the State. These bridge funds would not be starved, and the port funds would not be starved, and the other institutions in the State so essential to the upbuilding of the State would not be starved as they are now. But that grant was not carried out in good spirit and in good purpose. The development of the State was retarded. For a longer time than some of us have lived these lands have been lying there idle by reason of the failure to carry out the purpose of the grant.

What is the result? The United States takes hold of this matter and undertakes in a measure to do equity to the situation. It undertakes in a measure to put Oregon into the position which Oregon would have occupied if the grant had been faithfully carried out in the first instance.

Does it not appeal to the Senate that that is a distinction and a situation different from that of disposing of those lands, the title to which has always been in the United States, and which were never designed to be used for any particular purpose or for the advantage of any particular State?

It has seemed to me, Mr. President, that when you go back and take into consideration the original grant, the benefit which that grant would have been to the State had it been carried out, and the advantage which the State would have derived from the carrying out of that grant, it does place Oregon in a little different position than that which Idaho occupies with reference to her public land, or that which the great State of

Montana occupies with reference to her public land. For that reason it has seemed to me that if we turn over to the State of Oregon these proceeds, as we propose to do, we shall not have done more than equity to the State of Oregon or to the situation in which we find ourselves.

Now, Mr. President, further, let me call attention to the figures which have already been referred to.

Mr. STERLING. Before the Senator passes to that point, will he allow me to ask him a question?

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from South Dakota?

Mr. BORAH. Yes.

Mr. STERLING. Does the Senator think that conditions of this kind were ever in the contemplation of Congress when it passed the reclamation act?

Mr. BORAH. No. I was going to refer to that.

Mr. STERLING. Does not the Senator think that 90 per cent of the $2.50 per acre realized from the sale of the agricultural lands by the Government will be equal to the reclamation fund herein provided—10 per cent of these proceeds? Or perhaps it would be better to put it the other way—that 10 per cent of the proceeds of sales of these lands would equal the 90 per cent which would go to the reclamation fund under ordinary conditions, where the land was sold at $2.50 an acre.

Mr. BORAH. Yes; I think there is much in the suggestion of the Senator. But, as I said a moment ago, the entire bill is founded upon the proposition that this situation is different from that which obtains with reference generally to the disposition of the public lands. The bill would not be here if we did not recognize that proposition. We would not vote for the bill at all if we did not recognize that situation. If we were not disposing of public lands which do not stand in the same relation to the National Government and the people as other public lands, we would not support the bill at all.

Mr. President, reference has been made to the supposed equalization of the reclamation fund every 10 years. Indeed, it will be a most difficult problem when we come to administer that particular portion of the law—so difficult that I have no idea in the world that it ever will be administered with any degree of accuracy as to the letter or even the spirit of the law. But let us assume, if we may, that we can approach with some degree of accuracy the administration of this particular provision of the law. Nevertheless we have a situation here with which we are dealing now; and in view of the things which have transpired or failed to transpire in the last 50 years, and the peculiar relationship of this grant to the particular State of Oregon, and of Oregon being retarded by reason of the failure to carry out this grant in this way, we have a situation which is accentuated by the figures which I will give you.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Montana?

Mr. BORAH. I yield to the Senator.

Mr. WALSH. To get at the facts, I want to ask the Senator from Idaho if it is not a fact that there were millions of acres of land in the State of Oregon in exactly the same situation as these lands prior to the time the forest reserves were created; and does not the argument which the Senator makes find its application only in the last 10 years, and not the last 50 years? In other words, there were other lands that the homesteader could go and take under existing laws, as well as these, without paying even $2.50 an acre; and is it not because there were other lands open to the homesteader that these were left during all this period?

Mr. BORAH. I do not so understand it, but the Senator may be better informed as to that than myself. I do not, however, so understand.

Mr. LANE. Mr. President, if the Senator will allow me, that was not the case. These lands were in the heart of the richest and most fertile part of the State of Oregon; and when they were taken they took the most valuable resource in the way of lands that were at that time located in Oregon. They were the only accessible lands, and the man who went beyond them went over a trail through the country, if you please, where there was no road and where he could not get out to the market with his produce nor get into his place with his provisions to open his claim without carrying them upon his back or upon a packhorse.

Mr. WALSH. I want to ask the Senator from Oregon if this was the usual grant giving the odd-numbered sections to the railroad?

Mr. LANE. It was the original Oregon & Central Railroad grant, giving every other section to the railroad.

Mr. WALSH. So that the even-numbered sections remained in the Government?

Mr. LANE. The even-numbered sections did, but they have been settled up rapidly.

Mr. BORAH. I have always understood, living neighbor to Oregon, that this grant, lying there as it has for a great number of years, has been essentially and vitally and substantially retarding the development of the State. If it had been public land in the sense that other public lands were, undoubtedly it would have been settled up.

Mr. WALSH. Let me ask the Senator a question. Was not the retardation because you had to pay $2.50 an acre for this land, when you could go right alongside of it and secure land for nothing?

Mr. BORAH. I do not so understand, Mr. President.

Mr. LANE. If the Senator will allow me, you could not buy these lands at $2.50 or any other price per acre. The railroad refused to sell them; and there is where the Government were at fault, for the reason that they slept on their rights and helped perpetrate the wrong upon Oregon.

Mr. BORAH. As I understand, the railroad ceased to sell them at $2.50 an acre, and refused to sell them for any such figure at all.

Mr. WALSH. But in comparatively modern times.

Mr. BORAH. Well, comparatively, but for the last 20 years; and, as the Senator from Montana knows, 20 years in the life of one of our Western States is equivalent to about 150 years for one of the Eastern States. We grow out there even against the tremendous handicaps which these blanket withdrawals have been.

Mr. WORKS. Mr. President——

The PRESIDING OFFICER (Mr. MYERS in the chair). Does the Senator from Idaho yield to the Senator from California?

Mr. BORAH. I do.

Mr. WORKS. I suppose one of the conditions of the grant was that this road was to be constructed?

Mr. BORAH. That was one of the conditions.

Mr. WORKS. That condition has been complied with. Does not the Senator think that has been of great advantage to the State of Oregon, and an immense aid in populating it?

Mr. BORAH. Certainly that has been an advantage; but that was only a portion of the advantage which was intended to inure to the State of Oregon under the grant. In my judgment, a great advantage to the State of Oregon was in having these lands turned over to settlers at a low figure, so that the State of Oregon could be settled up. For many, many years it was of more benefit to the people living in the East who wanted to go to the Pacific coast to have that railroad built than it was for the people of this particular portion of Oregon, which could not be inhabited.

Mr. WORKS. It might be in that immediate neighborhood; but it would not be so as to the whole State of Oregon, because the future of that State has been aided very materially, as we all know, by the construction of this railroad.

I only called attention to that because I thought, in taking account of the whole situation, the Senator was overlooking that very important feature of it.

Mr. BORAH. No.

Mr. CHAMBERLAIN. Mr. President, may I make a suggestion right there to the Senator?

Mr. BORAH. Yes.

Mr. CHAMBERLAIN. The railroad was not completed into Oregon until the seventies, so that it did not help very much up to that time. President Hayes, when he went out there in 1880, rode from Marysville, Cal., to Roseburg in a stage.

Mr. BORAH. Of course the building of the railroad did come as an advantage to the State; but that was only one of the elements of advantage which was contemplated by the grant.

Mr. WALSH. Mr. President——

Mr. BORAH. Just a moment. I do not think it is a vast amount of advantage for a State to have a transcontinental railroad running across it if that State is dedicated to the life of a desert. It is of magnificent advantage to those who want to ride from ocean to ocean and who will observe upon the western people as they pass along in their Pullman cars, and who will come back East and write the laws under which the western people are to develop their States.

I now yield to the Senator from Montana.

Mr. WALSH. I thank the Senator for giving me an opportunity to make this remark, suggested by the remark just now made by the Senator from Oregon. I think it seriously open to question whether the great grants to Pacific railroad companies expedited the construction of any of the roads by 10 years. The Northern Pacific was built through in 1882 with its great grant. It was less than 10 years thereafter—and I feel that it is proper to say it at this time—when the Great Northern Railroad, under

the superb management of Mr. Hill, whose regrettable death has just been announced, was constructed through practically the same territory without a dollar of subsidy from any source whatever.

Mr. BORAH. Yes; I agree with the Senator in that respect, too. I think if we had not made an acre of grant to this railroad it would have been built anyhow, likely within a reasonable length of time of the time when it was built.

But now let us look at the reclamation fund which this bill is designed to help in the State of Oregon; and in so far as it builds up the reclamation projects in the State of Oregon, it to a certain extent relieves the fund from a flow in that direction, so that it does aid the other States to a certain extent in that respect. In other words, if the reclamation projects in the State of Oregon are taken care of out of this fund it will not be necessary to draw upon the general fund to take care of them, and to that extent the State of Idaho and other States will have more to distribute.

Arizona has contributed $1,318,630, and there has been expended in that State $16,964,394. Now, no one regrets this expenditure. I presume no one feels envious or jealous of the fact that it has been thus expended; but it does create an equity so far as this particular grant is concerned, because, I maintain, it stands upon a different basis.

The State of Idaho has contributed $5,482,210, and has had expended in the State some $15,912,000. I do not feel that I can object to the State of Oregon having a very large portion of this fund set apart for the development of her arid lands, in view of the fact, as I say, that originally this grant was certainly intended for the special advantage of the State. I would not favor at this time, certainly, a general distribution of the public-land fund with reference to the amount which was required by each State; that is to say, confining the amount realized in the State to the amount which should be expended in the State. But if a peculiar situation should arise in my State by which some grant which had been intended specifically for the benefit of the State should revert to the National Government, I would feel that the National Government was not establishing a bad precedent to enable me to get the equity of the situation by an enlarged amount of the fund for the benefit of the State.

For that reason, Mr. President, I do not find it difficult to support the distribution which is provided for upon page 16 of the bill. I am not afraid of its becoming a precedent. I do not believe it will result in the repeal of the reclamation act, or in its practical emasculation. But there is another feature of this bill which concerns me quite as much as or more than the feature which we have been discussing, and that is found upon page 9, section 5. It provides there:

That nonmineral lands of class 3 shall be subject to entry under the general provisions of the homestead laws of the United States, except as modified herein, and opened to entry in accordance with the provisions of the act of September 30, 1913. Fifty cents per acre shall be paid at the time the original entry is allowed and $2 per acre when final proof is made.

Of course, that is necessary by reason of the conditions which, as I say, make the disposition of these lands different from the disposition of other public lands, and all those things necessitate some change.

The provisions of section 2301, Revised Statutes, shall not apply to any entry hereunder and no patent shall issue until the entryman has resided upon and cultivated the land for a period of five years.

I shall move at some time during the consideration of the bill, I think, to reduce that to three years. The supposition is, I presume, upon the part of those who urge five years that the parties will have longer in which to acquire the $2 per acre with which to pay for the land, which payment they must make when they come to make their final proof. But, Mr. President, that has not proved to be true with reference to other homesteaders. The longer a homesteader stays upon his homestead without his title as a basis for his security and standing in the credit world, the poorer he gets, nine times out of ten. He is generally better fitted to take care of any cash payment when he goes there than he is after he has been there some two or three years, and especially five years. It is practically impossible for a man, unless he has credit elsewhere, unless he has a standing in the credit world otherwise, to have any credit or standing unless he has title to the property upon which he is expending his labor or to which he is giving up his time.

If he does get credit, he must necessarily pay a higher rate of interest and must necessarily deal under conditions that make it more onerous upon him than the man who is beside him with his title in his possession. If you will make this three years, it will, I believe, bring it under taxation that much more quickly, and thereby benefit the State, but it will certainly, in my judgment, be much to the benefit of the settler. I should like to see that change made.

Again, the bill says:

The area cultivated shall be such as to satisfy the Secretary of the Interior that the entry is made in good faith for the purpose of settlement and not for speculation.

I think perhaps that provision ought to have more consideration than we are in the habit of giving these provisions which provide for such unlimited discretion with reference to what constitutes good faith or what constitutes a sufficient act on the part of a settler to get title. I do not suppose there is a man in this Chamber who would go out and expend his time and his labor, if Senators should ever indulge anything of that kind, upon the theory that we must at last submit to the unlimited discretion of some one else as to whether we have done enough to earn our title or compensation for our effort. Yet we ask the settlers to go upon these lands without law providing what they shall do and having done it know they shall have their title, but leaving it to the discretion of some one to say whether or not they have acted in good faith and whether or not they have done sufficient to satisfy the law. Congress ought not to abdicate, it ought not to give over its solemn duty of prescribing what shall constitute a sufficient compliance with the law.

Mr. WALSH. Mr. President, the suggestion of the Senator opens a rather interesting inquiry. I quite agree with him that there is not any very good reason for extending the period from three years to five years. If the Senators from Oregon prefer to have a period of three years, I should be glad to join in a suggestion of that character. Upon the measure the Senator is addressing himself to now I should like to understand exactly what his attitude is. The old homestead law reposed an absolute discretion in the Secretary of the Interior to determine what amount of cultivation would satisfy the requirement of bona fides. The new law makes an absolute requirement that one-eighth shall be cultivated.

Mr. FALL. The Senator does not mean to say that the old homestead law required any amount of cultivation?

Mr. WALSH. The three years' homestead law requires one-eighth.

Mr. FALL. The three-years' law, but the old law did not require it.

Mr. WALSH. That is what I am saying.

Mr. FALL. It did not leave anything in the matter to the discretion of the Secretary.

Mr. WALSH. Exactly; the old law left the matter entirely in the discretion of the Secretary, exactly as this proposed law provides in express terms. What provision would the Senator like to see there?

Mr. BORAH. Mr. President, I am opposed to lodging such unlimited discretion in the departments here with reference to the enforcement of public-land laws. I understand to what the Senator refers when he says that the present law requires the cultivation of a certain area. I understand perfectly the hardship of that provision, and I have understood it for some time.

I introduced a bill here some two years ago providing that in lieu of the cultivation of a certain area a certain amount of development or improvement should be made, estimated at so much an acre, 75 cents or a dollar, or whatever it was, I have forgotten. That gives the entryman a reasonable rule by which he can conduct his efforts, a rule by which he can know with some degree of certainty that when he shall have complied with it patent must issue to him. I have not been successful in getting that bill enacted into law, but it has passed the Senate.

Mr. NORRIS. Mr. President——

Mr. BORAH. I yield to the Senator.

Mr. NORRIS. I wish to say to the Senator I agree with him, and if we can change this proposed law so as to avoid giving discretion we ought to do it; but it occurred to me that possibly there might be some reason in this case. I do not know that there is. The Senator from Oregon would probably know. As far as I am concerned I think we ought to consider in these homestead matters and in regard to this particular land the fact that the homesteader has to pay $2.50 an acre for his land, and therefore we ought to be more liberal as far as the requirement of improvements and cultivation are concerned than we would if he did not pay that amount.

Mr. BORAH. I agree with that.

Mr. NORRIS. I would be glad to have the Senator or the Senator from Oregon suggest an amendment that would obviate what I think myself is a difficulty.

Mr. BORAH. If I had my way, I would give every homesteader a patent just as soon as he had shown sufficient evidence of the fact that he was there to acquire a home, with such safeguards thrown around the transaction as to prevent fraud or to prevent the acquisition of title by those who desired it for the purpose of speculation. I would give the homesteader his

patent, as I say, as soon as his good faith could be evidenced. As the Senator from Nebraska says, the payment of $2.50 an acre ought to be taken into consideration as one of the items of good faith, although not sufficient, of course, because that would leave a certain class of men able to deal with the situation because of the fact that they had the money.

We have an illustration of this rule of discretion coming up in a day or two, or shortly after this bill is disposed of, in the Post Office appropriation bill. There they are proposing to lodge a certain amount of discretion in the Postmaster General with reference to the carrying of printed matter, magazines, and so forth. I am not in favor of that discretion, but I would infinitely rather see the Postmaster General given the discretion to deal with such a subject as that than to leave unlimited the discretion of the man who is going to pass upon the efforts of a settler who is trying to make a home. Nine times out of ten the public officer has no appreciation or no conception of the sacrifices suffered and the adversities to be endured by a man who has undertaken to make a home in the arid West or upon public lands as they now exist in the United States.

The time was when settlers could go out and acquire a home easily, comparatively speaking, when the lands were available, when it did not require very much effort; but the man who goes out now for the purpose of making a home upon any part of the public land knows when he goes there that it requires sacrifice; that it requires patience and labor, such as men will not make nor undertake to make who have not that indescribable yearning for a home which nine public officials out of ten have never experienced.

I should, therefore, like to see this provision eliminated or changed, and I shall offer an amendment to that effect.

Let me read, Mr. President, a paragraph from a letter which I received only this morning, especially for the benefit of some of our eastern friends who think we have made it easy for the settler to acquire a home, as all the western Senators have had it said to them. We are giving these people 160 acres of land for going out and sitting down upon it. Let me give you a glimpse of the sacrifice which is involved upon the part of such efforts as are now required to get a home. This letter is written by a gentleman who is well known to other Senators than myself and he is entirely familiar with western conditions. He says:

> Hundreds, if not thousands of original settlers are falling by the wayside because of reclamation conditions and reclamation uncertainties, and unless something is done very soon, thousands more are going to fall.

I do not want it to be understood that I am reading this as a reflection upon the particular administration of the law at this time. I am referring to the exacting conditions which surround the settler under the laws that we have passed, assuming that they are executed in the spirit and in the letter of the law.

> I have spent thousands of dollars in my endeavors to improve the relations between the settlers and the Government and think it has been well spent, but actual results are vitiated by red tape and delay purposely brought about to force the settlers into acquiescing in matters and charges they never agreed to and are contrary to reclamation law.

That last, Mr. President, might seem a reflection upon the officers; but the officers, of course, must execute the law as they find it. They are supposed to get back this money and must at times, of course, deal harshly in order to get it apparently; but do the best we may and exercise the best judgment possible, we know that hundreds and hundreds of men who go upon these lands and undertake to reclaim them from the desert spend one or two or three years and then, as this letter says, fall by the wayside not by reason of any fault of theirs but because of the fact that in these days, to carve out of the desert a home means a vast amount more sacrifice than characterized our forebears when they had all of Illinois and Michigan and Kansas and this great and wealthy land to draw from. In this day there ought not to be put into the law with reference to the acquisition of homesteads other than that which will test the good faith of the settler. The United States could well forbear the enforcement of the payments, which are being enforced at this time until such conditions should prevail upon these projects as to enable the settlers to do so without the suffering and the hazard and the loss which must necessarily characterize them under the present law.

Mr. THOMAS. Mr. President, as I was a member of the subcommittee of the Public Lands Committee of the Senate to which was referred this measure and joined with the chairman of that subcommittee in approving the amendments, it is perhaps only proper that I should confirm what the Senator from Oregon [Mr. CHAMBERLAIN] has said regarding them, and to give in brief the reasons for my approval of the bill as it stands. That, however, has been done so admirably and so much better than I could do it myself by the Senator from Idaho [Mr. BORAH], who has just taken his seat, that my task is now comparatively easy.

I know that there is abundant material for argument on both sides of this proposition, and very much that has been urged against the amendments and in favor of the House bill in regard to the distribution of funds realized from the sale of these lands is sustained by the general spirit, so to speak, of the reclamation law and the manner of its administration, and by the tendency to cover into that fund as many as possible of the sources of revenue derived from public lands. Personally I have great sympathy with that policy and naturally want to see that fund so large that its benefits may be as widely extended as possible.

But this is a very extraordinary situation, one with which we have never before been confronted, and one which may not require congressional action again. It involves a land grant which instead of being administered by the immediate beneficiaries of the grant as required by its condition was not administered at all. It involves the execution of a decree of the Supreme Court of the United States by congressional legislation, a task which is unusual and which in some respects has been made, I think, extremely difficult by the peculiar nature of the decisions of which it is the sequel. The bill was filed originally against the Oregon & California Railway Co. to enforce a forfeiture of its grant because of the disregard by the grantee of conditions subsequent, and upon a full hearing the court below sustained the position of the Government and issued a decree accordingly.

The Supreme Court of the United States by a process of reasoning which is entirely logical reached the conclusion that there had been no forfeiture because the recitals of the grant were not conditions subsequent but were covenants which could still be enforced. Had the decree been rendered in strict accordance with the logic of the decision I do not think Congress would have had anything to say upon the subject. But the decree, while denying a forfeiture, seems to me to have proceeded upon the theory that Congress would virtually assume one and then provide for the execution of the details of the decree in appropriate legislation.

That is the first difficulty with which we are confronted. It is true the bill declares that title shall revert to the Government of the United States. That is doubtless necessary in order that the decree can be profitably covered by legislation of this character; but it also provides, which would be impossible if the forfeiture had been declared, that the original sum of $2.50 per acre for which the grantee was required to sell this land to actual settlers, should be paid into the coffers of the railroad company. We are concerned with the distribution of the remainder.

That of itself is unusual in the sale of public lands. It is unprecedented. It would be impossible if these were public lands in the strict sense of the term. It is a recognition of the fact, and a necessary recognition to my mind, that we are required by the Supreme Court of the United States to substitute the Government for the railroad company and then execute the original terms of the grant as nearly as possible in accordance with it and dispose of the fund in a way which is made necessary because of the original failure. I do not regard, and I am unable to regard, this land as being public land. I sympathize fully, as I have stated, with the spirit and with the logic which assuming it to be public land would require a different distribution of this surplus fund.

Mr. President, the fact remains that if this grant had been administered as Congress required that it should be administered when 50 years ago it enacted it, if the railroad company had sold these lands or even attempted to sell them at the maximum price of $2.50 an acre to actual settlers, it unquestionably without regard to the abundance of public lands in other parts of the State would have disposed of a great many of them, and as a result the population of Oregon would have been proportionately increased, a benefit to any Commonwealth which can not be measured in terms of money, a benefit which has been until recently perhaps it has been the object of the Government to secure, the dissemination of title to public lands among citizens anchored to the soil, and thus taking an interest and the deepest of all interests in the welfare and the perpetuation of the Commonwealth.

If that had been done doubtless thousands upon thousands of men, women, and children would long ago have been established upon these lands. The lands would have been brought into taxation according to their value and the added distribution of the resources of the State by this added population would, to my mind, be very largely in excess of all the moneys

that we now realize from these lands to be paid as provided by the terms of the Senate committee amendment.

Consequently, the attitude taken by the Senator from Oregon, who has charge of the bill, it seemed to me, and now seems to me, to be precisely that which I would take and insist upon were this grant located in my State instead of his own. I think the interests and welfare of the State of Oregon with regard to this particular body of land ought to be the first consideration in the distribution of the fund that is to be realized in excess of the amount to be paid back to the railroad company, and this bill seeks to do it. While the rest of the country may have a legal right, I do not think it has what can be termed a moral right to the distribution of this fund as provided by the bill as it passed the House.

I say that as I before intimated with the most profound respect for the views of Senators who disagree with me and with whose logic I can not quarrel, but when we consider, as the Senator from Idaho has so forcibly and clearly stated, that we are dealing with a subject that is sui generis, one in which the Government is seeking at this belated day to perform a contract which it made with other people, and which those other people ignored, it ought to be performed, as far as we can do so, in such a manner as that its effect will bring reparation and compensation to those who, if the contract had been performed by those whose duty it was to do so, would have received it.

I hope, therefore, the bill will be enacted into law.

Mr. LANE obtained the floor.

NATIONAL CAPITAL PREPAREDNESS PARADE.

Mr. SMITH of Maryland. I ask permission to introduce a joint resolution, and I ask consent for its present consideration.

The PRESIDING OFFICER. The joint resolution will be read, and then the Chair will ask if there is objection.

Mr. CHAMBERLAIN. That was done awhile ago by unanimous consent, and quite a question was raised about it among Members. I do not want to lose the place this bill has before the Senate now.

Mr. SMITH of Maryland. I will say to the Senator that I have to attend the meeting of a subcommittee, of which I am chairman. Otherwise I would wait. It is important that this joint resolution should be passed. I hope the Senator will hear it read.

Mr. CHAMBERLAIN. I will not make any objection if it is understood that it will not displace the pending bill.

The PRESIDING OFFICER. Let it be read, and then the Chair will ask if there is objection to its consideration.

The joint resolution (S. J. Res. 137) authorizing the Commissioners of the District of Columbia to make special regulations for the occasion of the National Capital preparedness parade on the 14th day of June, 1916, and for other purposes incident to said parade, was read the first time by its title and the second time at length, as follows:

Resolved, etc., That the Commissioners of the District of Columbia are hereby authorized and directed to make all reasonable regulations necessary to secure preservation of public order and protection of life and property, and to fix fares to be charged by public conveyances, and to make special regulations respecting the standing, movements, and operation of vehicles of whatever character or kind, including street cars, on the occasion of the National Capital preparedness parade on the 14th day of June, 1916. Such special regulations shall be published in one or more of the daily newspapers of the District of Columbia, and no penalty prescribed for the violation of such regulations shall be enforced until three days after such publication. Any person violating any of such regulations shall, on conviction thereof in the police court of said District, be punished by a fine not exceeding $100, and in default of the payment thereof shall be imprisoned in the workhouse (or jail) of said District for a period not exceeding 60 days.

SEC. 2. That the Secretary of War is hereby authorized to grant permits to the citizens' executive committee in charge of said preparedness parade for the use of any reservation or other public space in the District of Columbia on the occasion of said parade which, in his opinion, will inflict no serious or permanent injury upon such reservations or public spaces or statuary therein; and the Commissioners of the District of Columbia may designate for such and other purposes on the occasion aforesaid such streets, avenues, and sidewalks in said District of Columbia as they may deem proper and necessary: *Provided, however*, That all stands and platforms that may be erected on the public spaces aforesaid shall be under the supervision of the said citizens' executive committee and in accordance with plans and designs to be approved by the Commissioners of the District of Columbia.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

Mr. THOMAS. Mr. President, it seems to me that the joint resolution would be complete if it also provided for the erection of recruiting stations along the line of the parade so that we could fill up the ranks of the Army to the extent, at least, of the 20,000 provided for by the special act passed a few weeks ago.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

Mr. CHAMBERLAIN. I will say now, Mr. President, that from this time until the pending bill is disposed of I must object to anything but the regular order.

OREGON & CALIFORNIA RAILROAD LAND GRANTS.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 14864) to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866, as amended by the acts of 1868 and 1869, and to alter and amend an act entitled "An act granting lands to aid in the construction of a railroad and telegraph line from Portland to Astoria and McMinnville, in the State of Oregon," approved May 4, 1870, and for other purposes.

Mr. LANE. Mr. President, I should like to call to the attention of Senators a little of the history of this country and of this land grant which was made to what was then known as the Oregon & California Railroad. In the early days pioneers, trappers, principally the Hudson Bay Co. trappers, who were engaged in gathering furs for that great company, wandered over on the Pacific coast, and they found favorable winter quarters, where the grass grew and the trees were green all the year around; where there never was any deep snow nor any very cold weather. Thereafter they made their winter headquarters in that country.

That was the Willamette Valley. When their term of service with the Hudson Bay Co. expired many of them went up that valley, some 50 miles south of the city of Portland, in what is now called French Prairie, for the reason that these men were French Canadians. They married into the Indian tribes and settled. They were the first settlers in the State of Oregon. They sent out word to their friends and other trappers and hunters, and pioneers and adventurers came into that country. Word was sent back to St. Louis, to St. Joseph, Mo., and then on here, that there was a good country there, a rich country, a beautiful and fertile country, with a mild climate, and with the spirit of adventure which followed along after the discovery of gold in 1849 there came an exodus, a great immigration to the Pacific coast and into the State of Oregon. In 1848 my father tramped across that country over the Sante Fe trail. In 1852 my mother, a girl from Virginia, walked from Virginia behind an ox team to get into that country in order to make a home. She, with her father and mother, my father and his father and mother, made their homes there and lived and died there. They went there for the reason that it was a beautiful country with a mild and equable climate, but it was far removed from the centers of civilization and from a market for produce.

In 1865 we had but one steamer a month coming in through the mouth of the Columbia River to the city of Portland. When it came within 3 miles of the city it fired a cannon, and everybody suspended business; shops and stores were closed, and the people rushed to the lone wharf to see who had come in from the "States," as they called this eastern country.

Overland we went first on mules and horseback or on foot on the trail; then by stage through the Willamette Valley in Oregon down into California, and then worked our way east or took the steamer at San Francisco to the Isthmus of Panama, so as to get into the eastern country to buy the things that we needed. Others went around the Horn by ships.

The people who came there wanted to open up the country. There were but few settlers, and when a man came in representing a railroad company which proposed to build a railway, we were glad to see him and glad to give him large inducements to come in to help us open up the country with a ready means of transportation in order that we might build up a community and have settlers around us. Where the city of Portland now is, on the site where now is located one of the largest high schools in the country, when I was a boy I have heard the panther scream at night—scream and scream until you thought it was some one in distress, but when you went out to relieve him, or her, rather, and you got within a hundred feet of the beast and it then set up one of its yells, you found you were mistaken, and you went home promptly, and in something of a hurry. [Laughter.]

Right in the center of the city of Portland, which now has 250,000 inhabitants, I have seen bears come right up to the side of my father's house and drive the dogs under the house in an effort to capture what little live stock we had upon the place.

In the deep woods the trees were 6 feet through, and some of them were 8 feet. You gentlemen, who now want to take the proceeds from the sale of our timber and go out and open up your sagebrush country, will hardly believe that in many places the woods were so thick that the sun never shone through, and yet the timber itself had no value at all; it was a curse to the land. The trees were so big that it took you half a day to chop one down; then they were cut into lengths sufficient in size to roll into a pile and burned. Then the stumps had to be removed, and it took hard, laborious work for from five days to a week to get one of the largest out of the ground.

Another point that I want to impress upon you is that where the timber grows thickest, where it is of the greatest size, where the great firs, hemlocks, and other trees grow 6, 8, 10, and even 12 feet through, if you please, the land is the richest; while, where the timber is small or does not grow, in the country west of the Cascade Range the land is hardly fit for cultivation; it is poor land, lean land.

Those were the conditions. The railroad representatives came to us and made an offer. We concluded a bargain with them to the effect that if they would put a line of railway through the State, connecting us as soon as they could with a line then at Sacramento, Cal.—the old Central Pacific, I think, was its name—we would give them every other odd section of land remaining in the Willamette, the Rogue River, and the Umpqua Valleys, 20 miles on each side of the railway tracks. They were three consecutive valleys running right through the heart of the western portion of the State, that being the richest portion of the State, while the land which lay over in the eastern portion of the State was known as a desert. It was not supposed to be able to raise grain. Nobody would have believed it to be fit for agricultural purposes. Afterwards it proved to be among the richest of our lands and produced more grain than any other section. But it was not known at that time. It was a sagebrush country. At any rate, we made a fair bargain with the railroad company, that, if they would open up that country, we would give them every other section of land. The timber was not worth anything; it had no value at all; it did not enter into the transaction. Nobody considered it in connection with the bargain, except that it was a curse to the settlers of the country. They cut it; they labored; they got rid of it to the best advantage that they could. After putting in a hundred or two hundred dollars' worth of labor to the acre to get rid of it, to get at their land—and only by doing so could they use the land upon which to raise crops—they also set fire to it in the fall when the wind was right. After a long, dry spell, when the ferns and underbrush were dry and when the wind was right, they burned it over thousands of acres. I have seen them do it. This was done in order that sheep and cows and horses might graze upon it. To-day it is the principal source of value in a great portion of that country.

The bargain, then, was distinct and plain and simple. It was for the land. The Government land was selling at $1.25 an acre. We allowed the railroad company to charge $2.50 an acre, and they agreed to sell it for $2.50 to actual settlers. They did not keep their bargain. They may have parted with a little of it, but when the timber began to be valuable, when the adjoining lands had been opened up and had become valuable to the community and had correspondingly raised the value of the railroad land, then they refused to sell it; and the men who went and made application for the land, offering their money to pay for it, were refused title; they were refused by the company the right to pay their money and to receive a tract of land.

Right there the Government failed in its duty to the State of Oregon. If after the first refusal of the railroad company to keep the terms of its grant—its plain bargain—the administrative department of the Government had done its duty, it would have stepped right in at that time and compelled them to make the sale. If they had made the sale, this question would not be before Congress at this time; the country would have been settled; there would have been thousands, and probably hundreds of thousands, of people living there who to-day are denied the right to go upon that same property, and can not do so without committing a trespass.

That is the situation which confronts Oregon; that is why the situation differs from the public-land question generally, and the sale of lands for reclamation purposes in other States. It was a distinct grant for the benefit and for the sole purpose of opening up the Oregon country. The people consented to it with that distinct understanding, and entrusted to this body or to our predecessors, and to those in the other House and to the executive departments of the Government, the duty to see that the contract was kept by the railway company, which had secured the grant, which it failed to do. We did our duty. We builded up the country; we builded towns; we opened up our harbors; we builded roads and schools and churches; we builded up municipalities; we cleared the timber off our lands and made them tillable, and have made a good country of that region. The railroad company stalled and blocked the development, and the Government, or this body, as I have said, and other departments of the Government failed in their duty by not forcing the other party to the contract to do their duty. Those facts must be taken into consideration.

Now, when we come here and ask that the bargain be carried out to completion—under different circumstances, I will allow, under changed conditions; conditions in which the timber now has become more valuable—we expect the Government to stand on the original proposition, to carry out the original bargain—the plain, fair, honorable compact that it entered into with the people of that State.

Thirty-five million dollars for the timber and the land! The State of Oregon has lost $130,000,000 through the failure of the other party to the contract to carry out their agreement. We have lost in population. We have been marooned and have paid excessive rates for freights on account of the contract which we made with a corporation, which, if they had done their duty, would have been a blessing to us. They have kept their contract in no particular where it paid them to break it.

The State of Oregon, then, has this situation now confronting it. We have been for 50 years left in this condition. Now, we want the opportunity to use those resources for the benefit of Oregon, and Senators from other States come in and make us a counter proposition that if our timber is sold the proceeds of the sale shall go to the reclamation of the desert and barren lands of their State. They overlook the fact that where the timber grows heaviest the land is the most valuable for farming; that after the timber is removed there remain stumps upon the land, and before the land can be used for settlement, for homesteads, before it will be of value to the settler, it must have the stumps removed from it. In other words, it will cost the people of that country, the settlers, not less than a hundred dollars and from that on to $200 an acre to do that work of reclamation. The funds from the sale of this timber Senators now desire to place upon their lands, which no more need reclamation than do some of ours, and leave the lands from which the money has been derived to be reclaimed at the expense of the settlers of our State.

It is not a fair proposition. If it is a matter of reclaiming arid lands, we have such lands. These timbered lands, however, are not arid lands. If they were arid lands, they would not have this valuable timber upon them. Just east, however, just over the range, where they have an annual rainfall of but from 7 to 12 inches—and that is as little as they have in most of the arid States—we do need water. Those people need help just as much as do the people in any other State in the Union. To the west of this land-grant land the people have mortgaged themselves, they have bonded their little holdings in communities where they are completely isolated by forest reserves and by these land grants, and have opened harbors in order to reach the sea with such products as they can raise. They need encouragement. The people on the eastern slope of the mountains have in many cases put up dollar for dollar with the Government in the attempt to reclaim their arid lands. These things should be taken into consideration.

I do not want to do any injustice to this railroad company, and I do not think any will be done to it if it receives $2.50 an acre for this land; but it will be an injustice to Oregon if the money derived from the sale of these lands and from the sale of this timber, which will be needed to clear the lands and for other improvements which ought to have been made years and years ago, and which would have been made but for the loss which it has suffered because of failure to carry out the agreement on the part of the other party to the contract, is not allowed to go to the benefit of that State.

It is different from the ordinary reclamation scheme. It is different from the conditions that exist in Montana, in Idaho, in Arizona, and in New Mexico. This land would have needed no reclamation if allowed to take care of itself. It would have builded up upon its own merits; it has an abundance of water, and yet from the fact that it has been kept out of the hands of the people it has suffered to an enormous extent.

It is, then, as I have said, a question which should be viewed from a different angle; and, inasmuch as the grant was originally made for the benefit of that State, to open up that country, a country difficult in some parts to open, I see no difference between the condition which existed then and that which confronts the Senate or the Congress at this time.

I am not in favor of some of the provisions even of my colleague's amendments, and I want to have a full hearing on the amendment which the Senator from Idaho [Mr. BORAH] is

going to offer to the bill. My main interest in the question is to get for the settler more than I think he is getting at this time. The value of the timber has become the object of the contest between the differing parties. There lies the value, and upon that I wish to be heard further when the amendments are discussed.

Mr. JONES. Mr. President, I want to ask the Senator from Oregon a question or two about some of the provisions of this bill. These lands are divided into three classes. Class 1 includes the power-site lands. Class 2 includes timber lands, and timber lands are such lands that have a growth of "not less than 300,000 feet board measure on each 40-acre subdivision," which would be 1,200,000 board feet to the quarter section. Class 3 includes agricultural lands. The lands of class 2—that is, the nonmineral lands of class 2—are not to be disposed of until the timber is cut off. Section 5 provides for the disposal of the lands of class 3. It provides for their disposal by homestead entry. The second proviso on page 10 reads:

Provided further, That during the period fixed by the Secretary of the Interior for the submission of applications to make entry under this section any person duly qualified to enter such lands who has resided thereon, to the same extent and in the same manner as is required under the homestead laws, since the 1st day of December, 1915—

Where is the provision in this bill authorizing the Secretary of the Interior to fix the time for submitting applications? Does the Senator from Oregon remember any such provision?

Mr. CHAMBERLAIN. I do not recall any provision fixing the time within which applications for entry shall be filed.

Mr. JONES. I want to suggest to the Senator that in the first part of section 5 it is provided that these lands—

shall be open to entry in accordance with the provisions of the act of September 30, 1913.

That is an act authorizing the President to restore lands which have been withdrawn and provide for their entry, and he fixes the time within which those who have settled on them may acquire preference rights. There is no reference in that act—and I take it that that is the act that is really referred to here under which the period for the submission of applications is fixed—to action by the Secretary of the Interior. So it seems to me, if that is the act to which this part of the bill refers, that we ought to put in the word "President" instead of the words "Secretary of the Interior," because——

Mr. CHAMBERLAIN. At what point and to what page does the Senator refer?

Mr. JONES. Page 10.

Mr. CHAMBERLAIN. Line 6?

Mr. JONES. Yes. Because the act cited in the first part of the section, under which the President restores these lands, only refers to action by the President, and not to action by the Secretary of the Interior at all.

Mr. CHAMBERLAIN. If the Senator offers that as an amendment, I have no objection at all to it.

Mr. JONES. I wanted to make that suggestion. Here is a more important matter, however, to which I want to call the attention of the Senator. As I understand, the provision of section 5 with reference to entry only refers to nonmineral lands of class 3; but there is a provision contained in section 5 that—

any person duly qualified to enter such lands who has resided thereon, to the same extent and in the same manner as is required under the homestead laws, since the 1st day of December, 1915, and who has improved the land and devoted some portion thereof to agricultural use, and who shall have maintained his residence to the date of such application, shall have the preferred right to enter the quarter section upon which he was so residing where such quarter section does not contain more than 1,200,000 feet board measure of timber.

None of the lands covered by section 5 can, under the previous provisions of the bill, contain that amount of timber.

Mr. CHAMBERLAIN. Because the timber has been cut off?

Mr. JONES. No; whether it has been cut off or not. None of the lands entered under section 5 can have more than twelve hundred thousand feet of timber to the quarter section, because if they do have more then they come under clause 2 and are excluded from the provisions of section 5.

Mr. CHAMBERLAIN. I will say to the Senator that the bill as originally prepared and introduced by me did not have that provision in it at all. It was put in by the House committee, and I really do not know the purpose of it.

Mr. JONES. I wanted to call that to the Senator's attention, because it might make it very uncertain as to what this provision really accomplishes.

Then it goes on to say that if the quarter section contains more than 1,200,000 feet board measure, the applicant can enter and secure title to 40 acres upon which his improvements are located.

Mr. NELSON. Mr. President, will the Senator allow me to interrupt him?

Mr. JONES. Certainly.

Mr. NELSON. I think this is an exception to the general rule laid down as to the lands embraced in class 2.

Mr. JONES. That is what I wanted to get at.

Mr. NELSON. And the exception is to give title to those who are already on the land and have made homes on it. They are made an exception to the rule laid down as to lands of class 2.

Mr. JONES. No.

Mr. NELSON. Yes; I think that is the effect of it.

Mr. JONES. I want to call the attention of the Senator to the fact that under section 2 all the lands that contain 1,200,000 feed board measure to the quarter section are classified as timberlands.

Mr. NELSON. I understand that.

Mr. JONES. And no exception is made with reference to settlement on those lands.

Mr. NELSON. No; but here an exception is made.

Mr. JONES. That is the question, whether or not it is intended to protect the settlers who are already on the lands of class 2.

Mr. NELSON. I think that is the intention.

Mr. JONES. That is what I want to ascertain.

Mr. NELSON. The exception is intended to protect those who are occupying lands of class 2, except where the timber exceeds the amount described in the provision.

Mr. JONES. No; if the lands contain timber less than twelve hundred thousand feet board measure they do not belong to class 2 at all.

Mr. NELSON. No; but here a rule is laid down which, it seems to me, is perfectly clear.

Mr. JONES. I want to call the Senator's attention to the fact that section 5 starts out as applying only to lands of class 3.

Mr. NELSON. I know; but here is a proviso, commencing in line 5, page 10, which reads:

Provided further, That during the period fixed by the Secretary of the Interior for the submission of applications to make entry——

Mr. JONES. "Under this section"——

Mr. NELSON. Yes; then it proceeds:

under this section any person duly qualified to enter such lands who has resided thereon, to the same extent and in the same manner as is required under the homestead laws, since the 1st day of December, 1915, and who has improved the land and devoted some portion thereof to agricultural use, and who shall have maintained his residence to the date of such application, shall have the preferred right to enter the quarter section upon which he was so residing, where such quarter section does not contain more than 1,200,000 feet board measure of timber.

I think that would apply to all classes of land except water-power land.

Mr. JONES. I want to call the Senator's attention to this point: This section starts out by providing for the disposal of nonmineral lands of class 3. Those are the agricultural lands. Those are the lands the timber on which amounts to less than 1,200,000 feet; and then there follows the proviso:

That * * * to make entry under this section—

That is, entry of lands of class 3—

any person duly qualified to enter such lands—

That is, lands of class 3; and those are the only lands referred to. I agree that it looks as if it is an effort to protect persons who may have settled upon lands of class 2, because those are the only lands that contain over 1,200,000 feet of board measure to the quarter section.

Mr. CHAMBERLAIN. Mr. President, if I may interrupt the Senator, I recall now that Mr. Williams in his report says that there are a number of settlers who went on the land between the date of the suit and the time when the decree was rendered, and this provision is intended to protect those people who went on in good faith and who are living there now as actual settlers. He said they have homes built there, and they have been cultivating the land in good faith.

Mr. JONES. That is, they went upon lands which probably would come under class two?

Mr. CHAMBERLAIN. Yes; on lands which might come under class 2.

Mr. JONES. Does not the Senator think we ought to put that exception in section 4, possibly, so as to make it clear that we intend to protect every settler who went upon lands of class 2?

Mr. CHAMBERLAIN. When the Senator comes to the question of the settler he gets on to pretty dangerous ground, for I think that if there was any part of the bill that was studied more carefully than any other part it was that which relates to the settler. It is unnecessary to discuss it, it seems to me, but it was discussed in the House. There are 16,000 or 18,000

people who claim to be settlers. The provisions of the bill were prepared in order to protect the men who were there and had been there; but they are very few in number.

Mr. JONES. But I want to call the Senator's attention to the fact—and this is what I am trying to get at—that section 5, under which this exception is placed, purports to relate only to lands of class 3 or nonmineral, or agricultural lands. It relates only to what we have defined as agricultural lands. Then there is a provision which looks as if it were designed to protect settlers who went on lands of class 2. What I want to know is, whether or not we are trying to do that? If we are trying to do it, we ought to make it clear.

Mr. NELSON. When you come to figure it mathematically, there is no difference. Class 2 includes timberlands, "which shall include lands bearing a growth of timber not less than 300,000 feet on each 40-acre subdivision."

Mr. JONES. That is twelve hundred thousand feet on a quarter section.

Mr. NELSON. That is the same limitation as is provided in section 5, as applying to a quarter section, the limitation for a quarter section being 1,200,000 feet board measure.

Mr. JONES. I understand that.

Mr. NELSON. There is no difference in the amount.

Mr. JONES. I think the Senator is mistaken in his contention.

Mr. NELSON. Four times 300,000 would be twelve hundred thousand.

Mr. JONES. But the bill says that where the land does not contain twelve hundred thousand feet of timber, board measure, the settler shall have his preference right. Of course, where it does not contain 1,200,000 feet it is agricultural land, according to the terms of the bill. Then section 5 proceeds, and it looks as if it were designed to protect the man who has gone onto land of class 2, when all the preceding part of the section relates to lands of class 3. What I am trying to get at is, whether or not it is the intention of this bill to protect settlers who have gone onto lands of class 2. That is what I want to know.

Mr. CHAMBERLAIN. Mr. President, I think it is intended to protect those men who were on the land in good faith prior to 1915 and are living on it.

Mr. JONES. On lands of class 2?

Mr. CHAMBERLAIN. On lands of class 2 and on lands of class 3 as well.

Mr. JONES. Then we ought to put a provision in that section which refers to lands of class 2, because I doubt very much if the provisions of section 5 would protect anybody who has gone on lands of class 2. It does not purport to do so in express terms. It purports in express terms to protect only those who have entered upon lands of class 3, and then there is thrown in the provision that, if the land has more than twelve hundred thousand feet board measure, the settler can get 40 acres.

Mr. CHAMBERLAIN. That clearly indicates that the reference is to lands of class 2, because the bill provides what shall be included within lands of class 2; in other words, it protects those who have gone on lands of class 2 by allowing them to take a certain subdivision of a section.

Mr. JONES. So the Senator is satisfied that that is not only the intention of this provision but that it does protect those who have gone on lands which are previously classified as lands of class 2?

Mr. CHAMBERLAIN. I think so.

Mr. JONES. Now, I want to ask the Senator——

Mr. POINDEXTER. Mr. President, if my colleague will permit an interruption, I rather agree in my colleague's view of that matter. I will say in that connection that there are a number of people in our State who are interested in the matter in a general way on account of having made applications to purchase, and there are some who have settled upon portions of the land in our State. The report said the other day that there were only a few hundred acres. I got the impression from correspondence that it was more than that. But, however that may be, there is not any right of entry given in this bill to lands of class 2. On the contrary, the section of the bill expressly gives the right of entry upon lands in class 3. There can not be any right of entry except upon the lands in class 3, because that is what the section says.

Mr. JONES. We do not provide for the entry of any lands except those of class 3, and, although you apparently try to make an exception down here, I myself do not believe that you do it. I was just going to inquire about that, and I hope the Senator will examine into that carefully, because I know he wants to make it clear, before the bill finally passes.

I wanted to refer to what my colleague has just referred to. I have some letters from a gentleman at Vancouver, in my State, in which he states that several persons settled upon lands along the Columbia River in Clarke County, and he makes this statement:

> The settlers I refer to and have previously written about were actual settlers over 30 years ago, who, by the fear of losing their homes—

And so forth, were compelled to pay large sums to the railroad. As I understand from his letter, they were persons who settled upon lands and then went to the railroad company and made contracts with the company to purchase these lands, in many cases contracting to pay the company more than $2.50 an acre. He says here they were required to enter into contracts of that kind; they have paid more than $2.50 an acre to the railroad company, and then they paid taxes for quite a while. The burden became so great that they could not pay the additional amount. The railroad insisted upon their paying not only their contract price but the taxes that had been levied upon the land, and they were unable to do it. He says that in one case there is one of these original parties who is still upon the land; that in the case of others their heirs or assigns are upon the land. He thinks these people ought to be protected. The railroad company has already gotten out of it more than the $2.50 an acre. These people have paid that, but they are afraid now that they are going to lose all this land. Now, is there anything in this bill that would protect persons in cases of that kind?

Mr. CHAMBERLAIN. Mr. President, I do not think there is, except in a case where the individual is an actual settler. I have received a great many letters of that kind myself, and there is such a conflict amongst individuals as to their rights, either by virtue of having paid the railroad company or by virtue of having made applications to the railroad company and having those applications turned down, that I have advised most of those who have written to me that the first thing to be accomplished was the adjustment of this grant, the larger question, and those who had valid equitable or legal claims would have no trouble about getting their rights adjusted by subsequent legislation. I still think that is the only way which can be followed.

Mr. POINDEXTER. Mr. President——

Mr. JONES. I yield to my colleague.

Mr. POINDEXTER. I wanted to ask the Senator from Oregon a question. He seems to recognize equitable claims arising from applications to purchase or actual purchase by individuals of land under the terms of the act of 1870. The Senator says he has had a good deal of correspondence about it and that he has advised his correspondents that the first thing to do is to settle the larger question, and that later on their claims can be adjusted. Now, I should like to ask the Senator from Oregon how the claims are going to be adjusted later on when the entire disposition of the land is provided for in this bill? If this bill becomes a law, all the rights to the land are settled. It will be too late then for these people whom the Senator recognizes as being entitled to consideration to be considered at all. The subject matter will have been disposed of.

Mr. CHAMBERLAIN. I do not think so, Mr. President. Personally I feel that I had rather see this legislation fail than for Congress in this bill to undertake to adjust the conflicting claims of and to protect settlers. In all cases of this kind where the settlers have some defect in the title, or have failed to secure the title for one reason or another, Congress has always intervened to protect them on the public domain; and I have not any doubt but that Congress could do it and would do it here. Then there would be an opportunity to test out each case and see just what a man's claims were.

Mr. JONES. Would the Senator have any objection to a provision in substance like this, that purchasers might perfect their titles by appearing at the local land office and tendering the statutory price per acre, or showing by the usual proofs its former payment to the railroad company?

Mr. CHAMBERLAIN. Mr. President, I am frank to say that I would be unwilling to accept such an amendment without the most careful scrutiny and examination. I think the Senator, by such an amendment, would open up a Pandora's box that would appear to haunt us for a long time to come.

Mr. JONES. If we had a provision of that kind, it would not haunt us so much as it would the land-office people.

Mr. CHAMBERLAIN. Well, it might work great detriment and harm to the Government.

Mr. JONES. If we do not get something of that kind, then we are likely to be haunted with it for a good while.

Mr. CHAMBERLAIN. I had rather appear in Congress with a bill for the relief of some particular individual, such as the

Senator seems to have in mind, or set or class of individuals, than to undertake to open the door with doubt as to who might enter.

Mr. JONES. I can see the difficulties, of course, that we would be laboring under.

Mr. NELSON. Mr. President, will the Senator yield to me?

Mr. JONES. Certainly.

Mr. NELSON. I want to say to the Senator from Oregon and to the Senator from Washington that shortly after we passed the joint resolution of 1908, instructing the Attorney General to commence suit about this land grant, I was flooded with letters from my State recommending that certain land agents out there in Oregon wanted the writers to make homestead applications, asking them for a certain fee. I am satisfied from the correspondence I received that a great many people were foolish enough to send money to these agents. I have seen in a report the name of one of them of a rather unsavory memory—Mr. Puter. I see his name in the RECORD. I must have had a hundred of those letters, and in every instance I wrote to the people who wrote to me, and told them: "This matter is in litigation and controversy, and do not you invest a dollar of money or make any effort about it."

There is no telling how many of these poor victims are lying loose and may try to get in under this cover if we extend it. Therfore I think we are wiser to take the course that the Senator from Oregon indicates; for there were a lot of those people that were brought in, in one way or another, by these officious land agents.

Mr. JONES. There is not any question about that. I received a good many letters along the same line that the Senator has referred to from people in my State, and I gave the same advice that he gave. But what I have in mind here particularly, and what this gentleman writes about, is the case of persons who actually bought the land from the railroad company. He refers to some who went on these lands thirty-odd years ago and made their contracts with the company and actually settled upon the land. They paid the company more than $2.50 an acre, but were unable then to complete their contracts, some of them.

Mr. CHAMBERLAIN. The Senator will remember that the Department of Justice recommended an amendment to the section in the bill I prepared that would protect some of these executory contracts, and notably one into which the former governor of Minnesota was drawn, Gov. Lind. That was in exactly the same situation as some of which the Senator speaks. That raised a storm of protest throughout the West, and yet, I think, no one questioned the integrity of Gov. Lind. It was claimed that it opened up a door that might have been disastrous to the Government, and the House committee, after a most thorough investigation, left out of their bill this very provision which affected one man, and which the Senator proposes to make general.

Mr. NELSON. Mr. President, I am informed by a gentleman who has investigated this matter thoroughly that there are homestead applications on file for the purchase of nearly all of this timber.

Mr. JONES. Of course I am not referring to, and do not have in mind, a provision that would take care of these people who came in through the agents the Senator referred to a few moments ago, after this litigation was started, or after it was brought up, who tried to acquire the rights to these lands then. I have not those people in mind at all. I would not want any provision that could be construed as taking care of them. I remember the provision in the House to which the Senator from Oregon refers, and I know that they did have very extensive hearings with reference to that matter, and, as I understood, they finally did leave it out. I just wanted to get the Senator's views with reference to a proposition of that kind, and as to whether or not the Senate committee considered that phase of the matter and decided that it was best not to try to incorporate in this bill a provision of that kind.

Mr. CHAMBERLAIN. We thought, in view of the investigation of the House committee, and what they had done, that we had better not undertake to adjust these matters any further than they did.

Mr. JONES. Mr. President, I will ask the Senator another question or two, while I have the floor, with reference to one of the amendments proposed by the committee. The committee provides for the sale of this timber, and in the amendment on page 8 it says:

> Timber thus purchased may be cut and removed at any time within the discretion of the purchaser, his heirs or assigns.

Does the Senator think that is a wise provision?

Mr. CHAMBERLAIN. Mr. President, I discussed that yesterday to some extent, and I am frank to say that I am not entirely satisfied with the solution of it. The House bill authorizes the sale on a credit of 10 years. Under it a man can cut the timber off as he pleases and pay for it as he has cut the timber, but the land in the meantime is not subject to taxation, nor the timber, either. The Senate amendment provides for a cash sale of the timber, and immediately upon the sale of it it goes on the assessment roll. The timber is assessable, but it leaves the purchaser his own time to take it off. He may take 5 years, he may take 10 years, he may take 100 years if he wants to; but all the time this timber that he has purchased is on the assessment roll, and it is assessed up pretty well. No man can afford to hold it indefinitely, when the assessment runs up from ten to forty dollars an acre, without utilizing it in some way; and it can only be utilized by taking the timber off and selling it on a normal market.

That method was at first approved by the Secretary of the Interior. He thought that was the proper way to dispose of it, and approved of the Senate provision in the first instance. Then, after the House committee had prepared a bill that had a sort of a combination of option of cash sale or credit sale, he was satisfied with that provision. But I still think that the Senate amendment is better.

Mr. JONES. I think there is considerable force in the suggestion of the Senator. I did not hear the Senator's discussion of the matter yesterday, and I did not know it had been discussed; so I will not take any further time on it now.

Mr. CHAMBERLAIN. Mr. President, I ask for a vote on the committee amendments, if nobody desires to address the Senate at this time.

Mr. POINDEXTER. Which committee amendment is the Senator asking for a vote upon?

Mr. CHAMBERLAIN. The committee amendments to the House bill, in the order in which they appear.

Mr. POINDEXTER. All of them?

Mr. CHAMBERLAIN. Yes, sir.

The PRESIDING OFFICER (Mr. HUSTING in the chair). The order has already been made that the Senate will first consider the committee amendments.

The SECRETARY. The first committee amendment is on page 4, line 20, where it is proposed to strike out the words "withdrawal and," so that, if amended, it will read:

> Class 1. Power-site lands, which shall include only such lands as are chiefly valuable for water-power sites, which lands shall be subject to such use and disposition as has been or may be provided by law for other public lands of like character.

Mr. NORRIS. Mr. President, I shall take only a few minutes on this particular amendment.

Mr. CHAMBERLAIN. May I just suggest to the Senator the reason that was changed?

Mr. NORRIS. Yes.

Mr. CHAMBERLAIN. The reason the committee cut that out was that it was simply undertaking to add a power that I think the Government already had and place it in exactly the same category as other power sites are placed.

Mr. NORRIS. The reason why I am opposed to the amendment is for the same reason that the Senator has said that he is in favor of it. I am not sure, of course, but that he is right; but I want to leave these power sites in exactly the same condition in which every other power site on public land would be left. Under existing law, other power sites are subject to withdrawal, and I fear that if we strike out these words and make them subject to withdrawal, these particular power sites on this particular land would not be subject to the law applying to other power sites. They might be subject to homestead entry, however. Anyone could get them under any other law.

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Montana?

Mr. NORRIS. I yield.

Mr. WALSH. I think the apprehension of the Senator from Nebraska is without any foundation at all. It is true that we now have a special statute authorizing the withdrawal of power sites, but, of course, the Supreme Court of the United States has held that it is not necessary; that the power to make withdrawals exists without any statute at all.

Mr. NORRIS. If the words "withdrawal and" are stricken out it will read—

> Power-site lands, which shall include only such lands as are chiefly valuable for water-power sites, which lands shall be subject to such use and disposition as has been or may be provided by law for other public lands of like character.

I suppose that it was the idea of the Senator from Oregon, and he may be right in it, that they would be subject to withdrawal even with those words stricken out. They could not be any more than subject to withdrawal if the words were left

in; so, to avoid any difficulty, it seems to me they ought to be left in.

Mr. WALSH. Let me make another suggestion to the Senator. The act provides that they shall be classified in the first place, and every power site is set aside and put in class 1.

Mr. NORRIS. Yes.

Mr. WALSH. The act itself provides for the withdrawal.

Mr. NORRIS. These power sites are classified under this law.

Mr. WALSH. Yes.

Mr. NORRIS. Is that what the Senator had reference to?

Mr. WALSH. Yes. Every tract of land that is suitable for use as a power site is taken out of the general body of the lands and put into a class.

Mr. NORRIS. The Senator's contention, as I understand, is that these words that the amendment seeks to strike out have no effect whatever. Is that the Senator's contention?

Mr. WALSH. That seems to me perfectly clear upon two grounds. One is that the act itself is a withdrawal. The act itself puts into a separate class every power site.

Mr. NORRIS. Yes; but the act itself specifically says—

Subject to such use and disposition as has been or may be provided by law for other public lands of like character.

Now, if one of these power sites should be a homestead, if it should be held that the striking out of these words would make it impossible to withdraw them, the entryman might get a valuable power site under the guise of taking a homestead.

Mr. WALSH. Why, he could not possibly do so. The lands classified as power sites are not open to homestead entry at all. He would not be permitted to file on them.

Mr. NORRIS. Yes; but he would take a homestead that had a power site on it. He would not take a power site.

Mr. WALSH. Mr. President, the lands are all classified. Every power site is put into a certain class, and no lands in that class are open to homestead entry at all; so he could not possibly have a homestead entry on it.

Mr. NORRIS. Even if the Senator's contention is right, what is the objection to providing in the law that these power sites shall be subject to withdrawal the same as all other power sites are subject to withdrawal?

Mr. WALSH. The plain answer is that the act itself withdraws them.

Mr. CHAMBERLAIN. I have the same purpose in mind as the Senator.

Mr. NORRIS. I think the Senator does. I am not questioning that at all, and I am not even saying that the Senator is wrong about it, but it seemed to me that there could not possibly be an objection to words that would specifically give authority that everybody concedes ought to exist if the same authority exists in regard to other power sites elsewhere.

Mr. STERLING. Mr. President, I remember very well the discussion of the amendment in the subcommittee. We simply considered that these words here were so much surplusage. The bill itself classifies these lands, and excludes power sites from homestead entry; and it is obviously unnecessary to have those words in the bill. That is the sole purpose of the amendment.

The PRESIDING OFFICER. The question is on the amendment of the committee.

Mr. WALSH. I ask which is the amendment now under consideration?

The SECRETARY. On page 4, line 20, the amendment striking out the words "withdrawal and."

The amendment was agreed to.

The SECRETARY. The next amendment of the committee begins on page 6, line 10, in section 4, where it is proposed to strike out, beginning with line 10, all of the bill down to and including line 3, page 8, and to insert in lieu thereof the following:

As soon as may be after classification the timber on lands of class 2 shall be sold by the Secretary of the Interior for cash to citizens of the United States, associations of such citizens, and corporations organized under the laws of the United States or any State, Territory, or District thereof, in such quantities and under such plan of public competitive bidding as in the judgment of the Secretary of the Interior may produce the best results: *Provided*, That the Secretary shall have the right to reject any bid where he has reason to believe that the price offered is inadequate and he may reoffer the timber until a satisfactory bid is received.

Persons purchasing under the provisions of this section shall be given patents conveying to them the timber and expressly reserving the land to the United States. Timber thus purchased may be cut and removed at any time within the discretion of the purchaser, his heirs or assigns, and until it shall be removed the land upon which it stands shall be subject to the possession and control of the owner of the timber: *Provided*, That the owner of the timber shall make no use of the land except for the purpose of protecting the timber or cutting and removing it.

The sales of timber herein provided for shall be made according to the smallest legal subdivision of land upon which the timber is growing, and any bid may include one or more such tracts, but where more than one such tract is included in such bid the bid must contain a separate offer for each smallest legal subdivision included therein.

All timber sold under this act shall be subject to the taxing power of the States apart from the land.

Mr. POINDEXTER. Mr. President, there are a great number of different propositions involved in that amendment, and I ask for a separate vote on each paragraph of the motion to strike from the House bill that has just been read by the Secretary. Each one of them embodies a different question.

The VICE PRESIDENT. The Chair does not see how that can be done. A motion to strike out and insert is not divisible.

Mr. POINDEXTER. I should like to call the Chair's attention to the rule.

The VICE PRESIDENT. There is not any doubt that when a proposition contains several questions any Senator is entitled to a division of the question and a separate vote upon each question; but the Chair understands this is an amendment offered by the committee to strike out a certain portion of the bill and to insert in lieu thereof another proposal. Under the same rule there is a proviso that the portion to be stricken out and the portion to be inserted are separate questions, each of which may be amended before being voted upon, and that the portion stricken out shall be first amendable.

The Chair thinks the Senator from Washington can not have separate votes upon this question; but he can tender amendments to either the motion to strike out or the motion to insert and reach the same result in accordance with the rule.

Mr. POINDEXTER. The Chair has quoted from memory a rule to which I was just going to call attention; and my understanding of the rule was, treating the motion to strike out as a separate question, that it would then be subject to division. I should like to submit that to the Chair. If the Chair does not sustain that view, I will undertake to reach the proposition by an amendment.

I should like to call the Chair's attention to the difficulty there is in voting upon this matter as a whole. For instance, the first paragraph on page 6, which has a line drawn through it—partly on page 6 and partly on page 7—involves a separate question, the very important question of the manner in which payments shall be made for timberlands, whether they shall be sold on time, as provided in the House bill, or whether they shall be sold for cash, without any restrictions as to when the timber shall be removed, as provided in the Senate amendment, and so on through. Each one of these paragraphs contains an important question of that kind. For instance, in the second paragraph, stricken out on page 7, there is the question as to whether or not any period shall be fixed for the removal of this timber or whether or not the Secretary, in making the contract for the sale, shall fix a period for its removal. The third paragraph in this part to be stricken out is an entirely different question, providing that the timber shall not be removed until after patents for it have been issued, and the fourth paragraph proposed to be stricken out deals with the question of the taxing power of the States.

It seems to me that to vote upon all of those different questions as one amendment would deprive the Senate of an opportunity of deciding, independently of each other, each one of these important questions.

The VICE PRESIDENT. The Chair can never be responsible for the way in which a committee proposes an amendment. The reasoning of the Senator from Washington is good from a logical standpoint, but it is not good from the standpoint of the rules of the Senate. Rule XVIII clearly covers this question:

If the question in debate contains several propositions, any Senator may have the same divided, except a motion to strike out and insert, which shall not be divided,

This can not be anything else but a motion to strike out and insert, so it can not be divided. A subsequent clause gives the Senator from Washington ample protection for any views he may desire to present and any vote he may wish to have on this question.

Mr. POINDEXTER. I move to amend the amendment by excluding from the portion to be stricken out the first paragraph on pages 6 and 7, leaving the remainder, and in support of that I will say that that is the paragraph which authorizes the timber to be sold in 10 annual installments.

The only objection to that that was urged by the Senator from Oregon [Mr. CHAMBERLAIN] yesterday was that if it was sold in installments the State would be deprived of its taxing power. But that, Mr. President, is not a valid objection. This very bill itself in section 9, on page 13, provides for the payment of taxes to the State which were levied by the State upon this land while it was held by the railroad company. In the same manner that the bill undertakes to protect the State in the collection of its taxes under those circumstances it can protect

the State in the collection of taxes upon timber which is sold on the installment plan.

If it ever becomes necessary for the Government to take back the timber on account of the failure of the purchaser to pay the installments, the Government, as part of its action of recapturing the timber, can make provision for the collection by the State of Oregon of its taxes. So that objection, it seems to me, is not tenable.

On the other hand, there is an advantage to the Government and to the people to give them an opportunity to buy this timber on credit. This timber is not limited in the amount which may be sold in one sale and to one purchaser, and if cash payments are required one great lumber company can acquire it all practically at its own terms.

Mr. CHAMBERLAIN. May I interrupt the Senator for a moment?

Mr. POINDEXTER. Yes.

Mr. CHAMBERLAIN. I call attention to the fact that the small purchaser is protected by practically giving him a preference on the small subdivision. So whereas the rich timber company bids on the larger tract of land the man who bids for a smaller tract has the opportunity to take it.

Mr. POINDEXTER. How is the man bidding on the smaller tract given preference over the man bidding on the large tract?

Mr. CHAMBERLAIN. In the discretion of the Secretary.

Mr. POINDEXTER. Each one has the same privilege of bidding on any number of small tracts.

Mr. CHAMBERLAIN. I call the Senator's attention to this language in the amendment of the committee:

The sales of timber herein provided for——

Mr. POINDEXTER. On what page, Senator?

Mr. CHAMBERLAIN. On page 9.

The sales of timber herein provided for shall be made according to the smallest legal subdivision of land upon which the timber is growing, and any bid may include one or more such tracts, but where more than one such tract is included in such bid the bid must contain a separate offer for each smallest legal subdivision included therein.

Mr. POINDEXTER. That is true, but that does not put any limitation on the number of the small subdivisions which one man may purchase, and the consequence is that the company which can command any amount of cash would be the only one which would be in a position to bid upon them. It seems to me that the incentive to enterprise and the distribution of opportunities among men who want to assist at least in capitalizing a project for the cutting of this timber by putting their energies and their initiative into it along with their capital and make the business itself and the timber itself help to pay for the carrying through of their project ought to have it given them by the terms of the bill.

Mr. NELSON. Mr. President, I wish to say merely a word in connection with this matter. I think the provision of the Senate committee on this subject is a wise one. Some years ago I had occasion to look up the early history of our land laws and I found that in the early days shortly after we took possession of the Northwest Territory and at the time we adopted our present system of surveys they had a plan of selling public lands on credit. I do not remember the details, but our experience under that law proved an utter failure, so much so that in a very short time the Government felt compelled to abandon the scheme.

In reference to this timber, as the Senator from Washington well knows, living out there in that timber country, and as we all know who come from a timber country, such heavy forests are subject to destruction from wind storms and from great fires. If the timber is sold on time and a small payment is made and a forest fire goes in there and destroys it, the man will not wish to pay; he will abandon his tract, give it up and relinquish it, and the Government will be deprived of that money.

Where there is a cash sale the Government gets the money, it is sure of what it gets, and it is to the interest of the purchaser to protect that timber. If that timber is destroyed by fire or in any other way it is his loss and not the loss of the Government, whereas on time payments, as I said a moment ago, a man might make a partial payment under a 10-year contract and after he had made one or two payments and cut off a little of the timber a fire might go through it and ruin the forest, and then he would give up his contract. He would say, "There is no use for me to pay for this any more, the timber is destroyed," and he would abandon his contract; the Government would be the loser and nobody would get any benefit out of it at all.

For this reason, Mr. President, I am heartily in favor of this provision.

Mr. NORRIS. Mr. President, I wish to offer an amendment to the text, but before I do so I wish to say just a word on the Senate committee amendment. I think it is conceded here that we are all trying to do the same thing, and that is to provide a method of sale that will bring in the most money. To do that we want as many bidders as possible. In my judgment we will get more bidders and get a higher price if we sell it on time. If we sell it for cash, necessarily the bidders will be confined to people or corporations of very large means.

The State of Oregon, which is getting most of the money, will not be the loser if it is sold on time. I think it will be the gainer because, in the first place, I believe it will get a higher bid for the timber, and, in the next place, on the deferred payments it will be getting interest at a rate that will be profitable to the State; and what little goes to the Government or if the other amendment is defeated and 40 per cent goes to the reclamation fund, then the reclamation fund will be the gainer. We will undoubtedly get more money by selling it according to the House provision than by the Senate committee provision.

The Senator from Minnesota [Mr. NELSON] says, and it is, of course, very true, that there might be a forest fire which would destroy the timber, and he thinks that a man who has bought it on partial payment will not take as good care of the timber and prevent forest fires as the man who bought a large tract for cash. To my mind, the reverse is true. I believe the man or corporation that buys a large amount of timber for cash and gets it all at once will expect to get rid of that timber at the very quickest possible moment, and the tendency would be that danger from fire would not be spread over many years. He would not take the same precaution because he would expect to get the timber off. On the other hand, the man or the corporation who buys it on time, knowing that for their own protection they must protect it against forest fires, would take extraordinary precaution.

But let us assume that a man buys it for cash. He pays a large sum for a tract of timber, pays it all down, and the next day after he does it a forest fire comes along and burns it all up. What would happen? The very next thing that would happen would be a bill in Congress to reimburse that man, and the argument could be made and it would be made, and it is very plausible, too, that he had expended his money and had gotten nothing in return; that he had lost in addition to the money he had paid the expense of cutting the timber and sawing it and so forth, and the probabilities are that all of us would feel inclined to return that man's money. He was not to blame for the fire because he had paid his money and got nothing. The forest fire might destroy it in either case.

But, Mr. President, the senior Senator from Oregon [Mr. CHAMBERLAIN] made in his argument a statement which appealed to me, and I think we ought to guard against it if we can. He said that under the laws of Oregon the tax attaches the 1st of March; that the purchaser on time under the House provision would be able to buy a tract of timber, 40 acres at a time, the 1st of April, pay for it, and then being subject to the tax he would get it off before the 1st of March came around the next year. Hence there would be nothing left to tax. He could perform the same operation year after year and thus avoid taxation.

Of course, we all want to avoid anything of that kind. It is probably somewhat imaginary to think that that might occur, but I can see that it might happen as the Senator from Oregon said. I want to move to amend the text on page 8, lines 2 and 3, by striking out the following words, "patents are issued as provided for herein," and insert in lieu thereof "said timber is sold," so that it would read if amended:

All timber sold under this act shall be subject to the taxing power of the States apart from the land as soon as said timber is sold.

Mr. CHAMBERLAIN. I will state to the Senator that if that is an amendment to the House text——

Mr. NORRIS. Yes.

Mr. CHAMBERLAIN. I have no objection to it; but that does not carry with it my assent to abandon the Senate committee amendment.

Mr. NORRIS. Oh, no; I did not expect that.

Mr. CHAMBERLAIN. I think it ought to be added.

Mr. STERLING. Is not that very idea found in lines 7 and 8 on page 9 in the Senate committee amendment?

Mr. NORRIS. Yes.

Mr. STERLING (reading)—

All timber sold under this act shall be subject to the taxing power of the States apart from the land.

Mr. NORRIS. But the Senator understands the parliamentary situation is such that we can offer an amendment either to the committee amendment or to the House text, and

that before we vote on the committee amendment we can move to perfect the text.

Mr. STERLING. That is true.

Mr. NORRIS. The effect of this amendment is to put into the House text the same provision that is in the Senate committee amendment on that taxing proposition; in other words, the State authorities would have a right to tax as soon as the timber is sold, and not wait for patent to be issued on a particular part of it. I can not see any objection to it.

Mr. CHAMBERLAIN. So far as I can consent, I am willing to have that amendment made.

Mr. BORAH. Mr. President, has the amendment been disposed of?

Mr. CHAMBERLAIN. The question is on the amendment of the Senator from Nebraska.

The VICE PRESIDENT. There can be no doubt about a motion to amend the part to be stricken out having precedence, and the motion of the Senator from Nebraska to amend is in order.

Mr. CHAMBERLAIN. I have no objection to the amendment.

Mr. NORRIS. I do not understand that anyone objects to it.

The VICE PRESIDENT. The question is on agreeing to amendment proposed by the Senator from Nebraska [Mr. NORRIS].

The amendment was agreed to.

The VICE PRESIDENT. The question recurs on the amendment of the Senator from Washington [Mr. POINDEXTER].

Mr. CHAMBERLAIN. Mr. President, may I express the hope that we can finish this measure in some way before the Senate is compelled, under the unanimous-consent agreement, to go into executive session?

Mr. NORRIS. If the Senator will allow me, I should like to have a roll call on two amendments, or at least on one of them, and that will come last. The one on the distribution of the money I consider to be the most important, and I should like to have one on this question. However, I do not want the bill to go over.

Mr. CHAMBERLAIN. I may be mistaken, but I fear there may be some difficulty about getting a quorum; that is all. Otherwise I have no objection to a yea-and-nay vote.

Mr. NORRIS. There will have to be a quorum to-day after the Senate goes into executive session. There can not be any doubt about securing a quorum.

Mr. CHAMBERLAIN. I am not going to resist a demand for the yeas and nays. I am ready to follow the usual course.

The VICE PRESIDENT. The question is on the amendment of the Senator from Washington [Mr. POINDEXTER] to the amendment of the committee.

Mr. JONES. Let it be read.

The VICE PRESIDENT. It will be stated.

The SECRETARY. In the part proposed to be inserted by the committee, beginning on page 8, line 4, the Senator from Washington [Mr. POINDEXTER] proposes to strike out the first paragraph—all the matter embraced in lines 4, 5, and 6 down to and including line 14 on page 8.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Washington to the amendment.

The amendment to the amendment was rejected.

Mr. POINDEXTER. Mr. President, I move to strike out the portion proposed to be inserted by the committee on page 8, the second paragraph, beginning at line 15, down to the bottom of the page; and in support of that, without delaying the passage of the bill, which I do not want to do, I wish to point out that it involves the proposition as to whether or not the people who purchase this timber shall have to remove it in any definite time or whether they will have an indefinite period of time in which to remove it, thereby keeping it from taxation and keeping it from development, very much as many large tracts of timber are at the present time kept in my own State.

I will say to the Senator from Oregon that the power of taxation of the State, which he says he thinks would compel them, if properly exercised, to sell the timber within a reasonable time, does not operate that way. If you go across the northwest corner of that map there, where the mouth of the Columbia River is, into the State of Washington, you can find a duplication there—counties similar to the counties in the southwestern portion of the State of Oregon largely taken up by forest reserves—except that in the State of Washington they are taken up by private reserves. In the county of Pacific, in the State of Washington, a few years ago, when I had the matter examined three-quarters of the county was owned by one timber company, who refused to sell the land and used their political and financial influence in defeating the taxes levied upon the land by the State and county; and after delaying it for years they would come in and compromise. That can very readily exist under the provisions of this section if you give these people an unlimited time in which to remove their timber. I prefer the provision of the House in that regard, which authorizes the Secretary of the Interior to fix a certain reasonable, definite time in which the timber must be removed.

Mr. CHAMBERLAIN. I wish to call the Senator's attention to even a more dangerous proposition than that in the House provision. Under the Senate committee provision which the Senator is attacking they will have to pay the taxes or lose the timber. The House provision provides that the timberland may be sold at such time, in such quantities, and under such plans, and so forth, with the result that if the Secretary of the Interior, under this reserve system that they have out there, concludes that it would not be a good time to sell next year, or 5 years, or 10 years, or 20 years from now, he could postpone the sale and they would have an absolute right to withdraw this land from any sale at all.

Mr. POINDEXTER. There is no question of withdrawal involved in it. It is the question of requiring the private owner of the timber or the purchaser of the timber to sell it. It is not Government timber; it is timber which is to be sold to private parties. How can the Secretary of the Interior withdraw that? What motive would he have for withholding it from sale? It will have passed out of the hands of the Government.

Mr. CHAMBERLAIN. The Senator misunderstands me. That question is not involved in the Senate committee amendment; it is involved in the House provision, which authorizes the Secretary to sell it at such time or in such manner as he sees fit. So he may practically withdraw it by not offering it for sale on the ground that it is not the right time to sell.

Mr. POINDEXTER. That is an entirely different matter from the one which I was speaking about. That is simply whether or not the purchaser of the timber shall be required to remove it within a reasonable time. I am not speaking about the conditions which might exist if the timber is not sold. That has nothing to do with this amendment.

The VICE PRESIDENT. The question is on the amendment of the Senator from Washington to the amendment of the committee.

The amendment to the amendment was rejected.

Mr. LANE. I wish to offer an amendment. In line 6, page 8, after the word "cash," I move to insert:

or payment in not exceeding 10 annual installments, with interest on such deferred payments as the Secretary of the Interior may prescribe, not to exceed 6 per cent per annum.

In relation to this I wish to say that if we demand cash for this land we will exclude nine-tenths of the people of the country from bidding upon it for the lack of cash with which to do it. If we protect the States by allowing them to tax the land in addition to this, men of limited means will be able to put in, say, small portable sawmills and attend to the wants of the small community in which they reside and we will open the timber up to the public more generally and get a better price and do our duty by all the people instead of a few of the minority class, who will be able to go in if they desire to do so and control the situation.

Mr. NORRIS. May I interrupt the Senator? From the reading of his amendment, it seems to me the effect of it would be really to make the Senate committee amendment conform——

Mr. LANE. To the House provision.

Mr. NORRIS. To the House provision.

Mr. LANE. Yes, sir.

Mr. NORRIS. The Senator could accomplish that same thing if the Senate committee amendment were voted down.

Mr. LANE. I should like in some way——

Mr. NORRIS. Is there anything else in the House text that ought to be stricken out?

Mr. LANE. There may be. My attention was attracted more particularly to this matter. Just lately we had an experience in the sale of the lands of the Osage Indians, with which I am fairly familiar. There was no competition, practically, and the Indians suffered a great and unnecessary loss.

Mr. NORRIS. I agree with the Senator. The reason why I opposed the Senate committee amendment was because it did not contain such a provision as the text of the bill does as passed by the House. If the text of the bill is satisfactory and means the same, and we did not amend this at all, it would go from the Senate to the President and would become a law a great deal more quickly than if we amended it. If the Senator's amendment is put on, as I gather from its reading it would really make the Senate committee amendment the same as if it was stricken out.

Mr. LANE. Practically that may be, but it is a Senate committee amendment, and I wish to make an amendment to the Senate committee amendment. I thought it might have more favorable consideration for that reason.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In the committee amendment, on page 8, line 6, after the words "for cash," insert:

Or payment in not exceeding 10 annual installments with interest on such deferred payments as the Secretary of the Interior may prescribe, not to exceed 6 per cent per annum.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from Oregon [Mr. LANE] to the amendment of the committee.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as amended.

Mr. NORRIS. Upon that I ask for the yeas and nays.

Mr. ASHURST. I should like to have the amendment stated.

The VICE PRESIDENT. It is the committee amendment found on pages 8 and 9 as printed. The Senator from Nebraska requests the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. JONES (when his name was called). I have a pair for the day with the junior Senator from Virginia [Mr. SWANSON]. I do not know how he would vote on this amendment. Therefore I withhold my vote, but I ask to be counted.

Mr. OVERMAN (when his name was called). I have a general pair with the Senator from Wyoming [Mr. WARREN] and therefore withhold my vote.

Mr. SIMMONS (when his name was called). I transfer my pair with the junior Senator from Minnesota [Mr. CLAPP] to the Senator from Ohio [Mr. POMERENE] and vote "yea."

Mr. THOMAS. I have a general pair with the senior Senator from North Dakota [Mr. MCCUMBER], which I transfer to the senior Senator from Virginia [Mr. MARTIN] and vote "yea."

Mr. THOMPSON (when his name was called). I have a pair with the senior Senator from Illinois [Mr. SHERMAN]. In his absence I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Tennessee [Mr. SHIELDS] and vote "yea."

Mr. WALSH (when his name was called). I inquire if the Senator from Rhode Island [Mr. LIPPITT] has voted?

The VICE PRESIDENT. He has not.

Mr. WALSH. I have a pair with that Senator, which I transfer to the Senator from New Jersey [Mr. MARTINE] and vote "yea."

Mr. LODGE (when the name of Mr. WEEKS was called). My colleague [Mr. WEEKS] is absent from the city. He has a general pair with the Senator from Kentucky [Mr. JAMES].

Mr. WILLIAMS (when his name was called). I have a standing pair with the senior Senator from Pennsylvania [Mr. PENROSE]. From a conversation with his colleague [Mr. OLIVER], I think I am at liberty to vote upon this particular proposition. I therefore vote. I vote "yea."

The roll call was concluded.

Mr. JAMES. As has been stated, I have a general pair with the junior Senator from Massachusetts [Mr. WEEKS]. I have, however, just had a consultation with his colleague [Mr. LODGE], and I feel at liberty to vote on this question. I vote "yea."

Mr. SMITH of Maryland. I have a general pair with the Senator from Vermont [Mr. DILLINGHAM]. In his absence I withhold my vote.

Mr. CURTIS. I wish to announce the following pairs:

The Senator from Maine [Mr. BURLEIGH] with the Senator from Arkansas [Mr. ROBINSON];

The Senator from North Dakota [Mr. GRONNA] with the Senator from Maine [Mr. JOHNSON];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from Rhode Island [Mr. COLT] with the Senator from Delaware [Mr. SAULSBURY]; and

The Senator from New York [Mr. WADSWORTH] with the Senator from New Hampshire [Mr. HOLLIS].

Mr. SUTHERLAND (after having voted in the negative). Mr. President, I came into the Chamber hurriedly and voted without observing that the Senator from Arkansas [Mr. CLARKE], with whom I am paired, was absent. I now withdraw my vote for that reason.

The result was announced—yeas 44, nays 14, as follows:

YEAS—44.

Bankhead	Broussard	Fall	Harding
Borah	Chamberlain	Fletcher	Hardwick
Brady	Culberson	Gallinger	Hitchcock
Brandegee	Cummins	Gore	Hughes
James	Oliver	Simmons	Thomas
Kern	Overman	Smith, Ariz.	Tillman
Lea, Tenn.	Owen	Smith, Ga.	Underwood
Lewis	Phelan	Smith, Mich.	Vardaman
Lodge	Pittman	Smith, S. C.	Walsh
Myers	Ransdell	Sterling	Warren
Nelson	Reed	Stone	Williams

NAYS—14.

Ashurst	Husting	O'Gorman	Sheppard
Chilton	La Follette	Page	Townsend
Clark, Wyo.	Lane	Poindexter	
Curtis	Norris	Shafroth	

NOT VOTING—38.

Beckham	Gronna	Martin, Va.	Smoot
Bryan	Hollis	Martine, N. J.	Sutherland
Burleigh	Johnson, Me.	Newlands	Swanson
Catron	Johnson, S. Dak.	Penrose	Taggart
Clapp	Jones	Pomerene	Thompson
Clarke, Ark.	Kenyon	Robinson	Wadsworth
Colt	Lee, Md.	Saulsbury	Weeks
Dillingham	Lippitt	Sherman	Works
du Pont	McCumber	Shields	
Goff	McLean	Smith, Md.	

So the amendment was agreed to.

Mr. BORAH. Mr. President, will the Senator from Oregon for a moment waive the procedure which has been agreed upon in reference to the consideration of the pending bill and permit me to offer an amendment on page 9? It is not a committee amendment. I shall be compelled to leave the Chamber in a few moments.

Mr. CHAMBERLAIN. I have no objection.

The VICE PRESIDENT. Is there objection on the part of any Senator to the request of the Senator from Idaho? The Chair hears none.

Mr. BORAH. On page 9, line 21, before the word "years," I move to strike out "five" and to insert "three," so that it will read:

The entryman has resided upon and cultivated the land for a period of three years.

I move, also in line 22, before the word "years," to strike out "seven" and to insert "five."

The VICE PRESIDENT. The amendment proposed by the Senator from Idaho will be stated.

The SECRETARY. On page 9, line 21, before the word "years," it is proposed to strike out "five" and to insert "three," and in line 22, before the word "years," to strike out "seven" and to insert "five," so as to read:

The provisions of section 2301, Revised Statutes, shall not apply to any entry hereunder, and no patent shall issue until the entryman has resided upon and cultivated the land for a period of three years, proof of which shall be made at any time within five years from date of entry.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Idaho.

The amendment was agreed to.

The reading of the bill was resumed.

The next amendment of the Committee on Public Lands was, on page 10, line 11, after the words "nineteen hundred and," to strike out "thirteen" and to insert "fifteen," so that it will read:

Since the 1st day of December, 1915.

The amendment was agreed to.

The next amendment was, on page 12, line 20, after the word "In," to insert "making this determination in" so as to read:

In making this determination in the aforementioned suit or suits the court shall also determine, on the application of the Attorney General, the amount of the taxes on said lands paid by the United States, as provided in this act, and which should in law have been paid by the said Oregon & California Railroad Co.

And so forth.

The amendment was agreed to.

The next amendment was, on page 15, line 9, after the name "United States," to insert the words: "after which all other moneys received from the sales of land and timber shall be distributed as follows," so as to read:

After the said railroad company, its successors or assigns, and the lien holders shall have been paid the amount to which they are entitled, as provided herein, an amount equal to that paid for accumulated taxes, as provided in section 9 hereof, shall be deposited in the Treasury to the credit of the United States, after which all other moneys received from the sale of land and timber shall be distributed as follows:

And so forth.

The amendment was agreed to.

The next amendment was, on page 15, line 18, after the word "act," to strike out to and including the name "United States," in line 5, page 16, as follows:

Thirty per cent of the remainder shall be paid to the treasurer of the county for the construction of roads, highways, and bridges; 20 per cent shall be paid to the State in which the county is located for the establishment and support of common schools; 40 per cent shall be paid into, reserved, and appropriated as a part of the fund created by the act of Congress approved June 17, 1902, known as the reclamation act; and the balance remaining in said Oregon and California land-

grant fund shall become a part of the general fund in the Treasury of the United States.

And in lieu thereof to insert:

Of the remainder 10 per cent shall be paid into, reserved, and appropriated as a part of the fund created by the act of Congress approved June 17, 1902, known as the reclamation act, to be expended on approved projects within the State of Oregon; 10 per cent of such remainder shall become a part of the general fund in the Treasury of the United States; 30 per cent of said remainder of the proceeds arising from the sales of land and timber in the counties of Coos, Douglas, Lane, Tillamook, and Multnomah, in the State of Oregon, shall be paid to the treasurers of the said respective counties for the construction of roads, highways, and bridges, and 20 per cent thereof shall be paid to the proper officer of the respective port districts within the counties named, for the purpose of reducing the bonded indebtedness of such districts and for general harbor improvement, and where there is more than one port district in any county the county court of such county shall determine what portion of the fund shall be credited to the several port districts therein; 35 per cent of said remainder of the proceeds arising from the sale of lands and timber within counties other than the counties of Coos, Douglas, Lane, Tillamook, and Multnomah shall be paid to the treasurers of the respective counties for the construction of roads, highways, and bridges; and the entire balance remaining in said Oregon and California land-grant fund, from whatever source derived, shall be paid to the State of Oregon for its irreducible school fund for the support of the common schools of the State.

Mr. WALSH. Mr. President, I ask for the yeas and nays on that amendment.

The yeas and nays were ordered.

Mr. CLARK of Wyoming. Mr. President, I am inclined to vote for this amendment, but solely on the ground that I believe it will serve as a precedent for future general legislation along the same lines, covering our whole public-land States. I say this simply to explain my vote.

The Secretary proceeded to call the roll.

Mr. JONES (when his name was called). I again announce my pair with the junior Senator from Virginia [Mr. SWANSON] and therefore withhold my vote. I will let this announcement stand for the day.

Mr. SIMMONS (when his name was called). Making the same transfer of my pair as on the former vote, I vote "yea."

Mr. SUTHERLAND (when his name was called). I inquire whether the Senator from Arkansas [Mr. CLARKE] has voted?

The VICE PRESIDENT. He has not.

Mr. SUTHERLAND. I have a pair with that Senator, which I transfer to my colleague [Mr. SMOOT], and vote "nay."

Mr. THOMAS (when his name was called). Announcing my pair and its transfer as on the previous roll call, I vote "yea."

Mr. TILLMAN (when his name was called). Announcing the same pair and its transfer as I did before, I vote "yea."

Mr. WALSH (when his name was called). Announcing the same pair and transfer as on the previous roll call, I vote "nay."

The roll call was concluded.

Mr. JAMES. I transfer the general pair I have with the junior Senator from Massachusetts [Mr. WEEKS] to the senior Senator from Indiana [Mr. KERN] and vote "nay."

Mr. THOMPSON. I have a pair with the senior Senator from Illinois [Mr. SHERMAN]. If permitted to vote, I should vote "nay," but as the Senator from Illinois is absent I withhold my vote.

Mr. BECKHAM. I have a pair with the Senator from Delaware [Mr. DU PONT]. As he is absent, I withhold my vote.

Mr. SUTHERLAND. I announce the unavoidable absence of my colleague [Mr. SMOOT]. This announcement may stand for the remainder of the day.

Mr. WILLIAMS. I transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the Senator from Tennessee [Mr. SHIELDS] and vote "yea."

The result was announced—yeas 37, nays 22, as follows:

YEAS—37.

Bankhead	Fall	Oliver	Stone
Brady	Fletcher	Owen	Taggart
Brandegee	Gallinger	Page	Thomas
Chamberlain	Harding	Phelan	Tillman
Chilton	Hardwick	Simmons	Vardaman
Clark, Wyo.	Hughes	Smith, Ariz.	Warren
Culberson	Lane	Smith, Md.	Williams
Cummins	Lea, Tenn.	Smith, Mich.	
Curtis	Lodge	Smith, S. C.	
Dillingham	Nelson	Sterling	

NAYS—22.

Ashurst	La Follette	Overman	Sutherland
Broussard	Lewis	Poindexter	Townsend
Gore	Myers	Ransdell	Underwood
Hitchcock	Newlands	Reed	Walsh
Husting	Norris	Shafroth	
James	O'Gorman	Sheppard	

NOT VOTING—37.

Beckham	Clarke, Ark.	Johnson, Me.	Lippitt
Borah	Colt	Johnson, S. Dak.	McCumber
Bryan	du Pont	Jones	McLean
Burleigh	Goff	Kenyon	Martin, Va.
Catron	Gronna	Kern	Martine, N. J.
Clapp	Hollis	Lee, Md.	Penrose
Pittman	Sherman	Swanson	Works
Pomerene	Shields	Thompson	
Robinson	Smith, Ga.	Wadsworth	
Saulsbury	Smoot	Weeks	

So the amendment was agreed to.

The next amendment was, on page 17, line 15, after the word "fund," to strike out "hereinbefore" and to insert "in this section," so as to make the proviso read:

Provided, That none of the payments to the States and counties and to the reclamation fund in this section provided for shall be made until the amount due the Oregon & California Railroad Co., its successors or assigns, has been fully paid, and the Treasury reimbursed for all taxes paid pursuant to the provisions of section 9 of this act.

The amendment was agreed to.

Mr. POINDEXTER. Mr. President, in this bill the Oregon & California Railroad Co., which violated every provision of the grant, is protected to the full extent of the value which it was to receive under that grant; but the applicants to purchase lands under the terms provided in the grant are not taken care of; in other words, the party who violated the grant is protected, while the parties who lived up to it are entirely neglected. I see no reason why people acting in good faith, who made application to purchase the amount of land that they were entitled to purchase at a price at which they were entitled to purchase under the granting act, should not be protected in this bill which we are now proposing to pass. For that purpose I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment proposed by the Senator from Washington will be stated.

The SECRETARY. On page 11, after line 17, it is proposed to insert the following:

Any qualified homestead entryman who, prior to April 30, 1908, made application to purchase any of said land, not exceeding 160 acres, and made tender of the purchase price thereof as provided in the act of May 4, 1870, shall, during a period of six months next following the passage of this act, have a preference right to make homestead entry of the lands for which said application was made, whether the same shall be in class 2 or class 3, as defined in this act, and shall receive a patent therefor on complying with the provisions of the five-year homestead law and payment of $2.50 an acre therefor: *Provided*, That any residence or cultivation which said applicant has made upon said land shall be credited to him in making proof thereunder: *Provided further*, That all payments made to the Oregon & California Railroad Co. by such applicant shall be credited on the payments hereinbefore provided for.

Mr. CHAMBERLAIN. Mr. President, I do not care to discuss the subject of settlers on this land, because it would open up a field that might be extended over weeks of discussion. The Supreme Court of the United States in its decision held that these so-called settlers did not have any rights or equities in the matter. The very amendment which is now suggested here would open the door to 65 people of whom I know, who, it is claimed, were fraudulent settlers. I know the Senator from Washington does not intend to open a door for them; but it is a complicated proposition. All of these alleged settlers can have their rights adjudicated and adjusted later.

Not only are there these 65 claimants, but we might open the door to men embraced in a list of 16,000 or 18,000 so-called settlers. They claim, or some of them do at least, to be settlers, and they extend from Maine to the Gulf of California, and from Portland, Oreg., to Florida; they are not merely confined to this country, but are found in Canada as well. So that I hope the Senate will vote down the amendment and let these rights be adjusted in some other forum than in this bill.

Mr. POINDEXTER. Mr. President, I only have a word to say in regard to that. The amendment speaks for itself. The matter is more or less familiarly known in the country, and I have no way by which I can do more than to present the matter to protect these people. If there are 35 or 6,500 who complied with the terms of that grant, they are entitled to the benefits which the grant conferred.

So far as being "so-called settlers" or acting in bad faith, they would be compelled to comply with the homestead law and to make their proof at the land office, and if they are acting in bad faith they can not make such proof. Nobody but a settler in good faith can get the benefit of this amendment.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Washington. [Putting the question.] By the sound the "noes" seem to have it.

Mr. POINDEXTER. I ask for the yeas and nays.

The yeas and nays were not ordered.

Mr. POINDEXTER. I ask for a division.

The VICE PRESIDENT. The Senator from Washington asks for a division on the amendment. Those in favor of the amendment will rise. [A pause.] Those opposed will rise. [A pause.] Clearly the decision of the Chair was correct, and the amendment is rejected.

The bill is in the Senate, as in Committee of the Whole, and open to amendment.

Mr. JONES. I desire to offer an amendment as a new section, and I simply want to say that the amendment is in line with that offered by my colleague [Mr. POINDEXTER] except that it is made to apply only to lands in the State of Washington. According to the report there are about 200 acres, but according to some letters I have received I think there are more. I will not take further time to discuss it.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to add as a new section of the bill the following:

SEC. 13. That any actual settler who contracted with the railroad company for the purchase of any of the lands in the State of Washington covered by this act, at a greater price than $2.50 per acre, and has been unable to secure title shall be entitled to a patent upon submitting satisfactory proof to the Interior Department that he has paid as much as $2.50 per acre for said lands and has otherwise complied with the homestead laws of the United States as to settlement and cultivation.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Washington.

The amendment was rejected.

Mr. JONES. I desire to offer an amendment to section 4, page 6, after the word "class," in line 9.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In section 4, page 6, line 9, after the word "class," it is proposed to insert:

Provided, That any person duly qualified to enter such lands under the homestead laws who has resided thereon to the same extent and in the same manner as is required under the homestead laws since the 1st day of December, 1915, until the date of his application to make entry, such person may enter the 40-acre tract, or lot or lots containing approximately 40 acres, upon which his improvements, or the greater part thereof, are situated.

Mr. JONES. I want to say to the Senator in charge of the bill that I am trying to make plain the object which I understand was sought to be accomplished by the proviso in section 5 with reference to the classes of land. I do not believe that the provision in section 5 covers the point which I raised a while ago.

Mr. CHAMBERLAIN. Does the amendment of the Senator only cover applications since 1915?

Mr. JONES. It relates to the taking of land the timber upon which exceeds 1,200,000 feet board measure per quarter section, and only covers cases where the settlers have resided on the lands since 1915; and permits them to take only the 40 acres on which their improvements are placed.

Mr. CHAMBERLAIN. Personally I have no objection to the amendment.

The VICE PRESIDENT. Without objection, the amendment is agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The VICE PRESIDENT. Does the Senator from Oregon desire the preamble to stand?

Mr. CHAMBERLAIN. I have no objection to it standing, Mr. President. I think it would be an index to follow in tracing the statutes.

The VICE PRESIDENT. Without objection, the preamble is agreed to.

Mr. CHAMBERLAIN. I move that the Senate request a conference with the House on the bill and the amendments and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to, and the Vice President appointed Mr. CHAMBERLAIN, Mr. THOMAS, and Mr. STERLING conferees on the part of the Senate.

REVOLT IN IRELAND.

Mr. STONE. Mr. President, in behalf of and at the direction of the Committee on Foreign Relations, I ask unanimous consent to report back favorably Senate resolution 196, submitted by the senior Senator from Indiana [Mr. KERN] and referred to the Committee on Foreign Relations. I should like to have the resolution read as proposed to be amended.

The VICE PRESIDENT. Without objection, the Secretary will read the resolution.

The Secretary read as follows:

Whereas it is represented that at the time of the recent revolt in Ireland there were, and are yet, many American citizens in districts in which martial law was proclaimed and in which armed conflicts occurred, and whereas the relatives and friends in this country of such American citizens whose safety has been thus endangered are apprehensive lest their lives and property have been imperiled: Therefore be it

Resolved, That the Secretary of State be, and is hereby, requested to cause inquiry to be made as to the safety and well-being of American citizens in Ireland, and what steps, if any, may be necessary and proper, consistently with the recognized law of nations, for the safeguarding and protection of their lives and property.

Mr. KERN obtained the floor.

Mr. FALL. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state his inquiry.

Mr. FALL. I simply want to understand what the status of this report is. It is just a report that has been submitted, as I understand?

The VICE PRESIDENT. Yes.

Mr. FALL. Is it to be considered?

Mr. STONE. I have just submitted it.

Mr. FALL. I understand that the report has been received by unanimous consent. Is it to be considered?

Mr. STONE. It is not to be considered. The Senator can ask for its consideration.

Mr. FALL. I have no objection to the report being made at this time.

Mr. KERN. I ask unanimous consent for the present consideration of the resolution. It has been favorably reported, as I understand, by the unanimous vote of the committee.

Mr. FALL. Mr. President——

Mr. BRANDEGEE. I rise to a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. BRANDEGEE. I simply want to know what is before the Senate. Has the Senator asked unanimous consent to make this report out of order?

Mr. STONE. I asked unanimous consent to make the report.

The VICE PRESIDENT. That was granted.

Mr. STONE. That was granted, and I made the report. The report has been read by the Secretary. The Senator from Indiana rises and asks unanimous consent for its present consideration.

The VICE PRESIDENT. Is there any objection?

Mr. FALL. Mr. President, I have no objection to the present consideration of the resolution, except that the Senate, under a unanimous-consent agreement, is to consider other matters at 5 o'clock, and I shall desire to discuss this resolution, and I think there will not be time to discuss it before the Senate proceeds to the consideration of other business. Therefore I think possibly the resolution had better go over. I do not desire to make any objection to the Senator's request to take it up. [A pause.] I shall object, however, to granting unanimous consent.

The VICE PRESIDENT. There is an objection. The resolution will have to go to the calendar.

Mr. FALL. I have no desire to have it go to the calendar.

Mr. STONE. I would rather it did not go to the calendar. If the Senator desires to discuss it and would like to have it either lie on the table or to be called up to-morrow morning, I will withdraw it and present it at that time.

Mr. FALL. That was my purpose in simply asking the question. I did not desire to enter a formal objection.

Mr. STONE. I ask, then, that the report may lie on the table.

The VICE PRESIDENT. It is a report. It will either have to go to the calendar or be withdrawn.

Mr. STONE. Then I will ask to withdraw it under the objection of the Senator from New Mexico.

Mr. FALL. I object to its withdrawal, Mr. President. I think the matter is one that is deserving of consideration by this body, and I shall not object to the passage of it. In fact, I shall vote for the adoption of the resolution. The report has been made. It is in the Senate, and I can not see why it should not simply lie over by unanimous consent on the table.

Mr. STONE. Mr. President, all I care for is that the resolution may be brought before the Senate to-morrow morning. It is immaterial whether it is brought before the Senate in one way or another. I will ask leave to withdraw the report, and I will present it again to-morrow morning.

Mr. LODGE. Mr. President, a report from a committee has to lie over one day for consideration, if objection is made.

Mr. STONE. Why, to be sure.

Mr. LODGE. It does not carry it to the calendar until it has had its second day.

Mr. STONE. But this is a committee report.

Mr. LODGE. Certainly; and it would go over under the rule, upon the objection of the Senator from New Mexico, for one day, and then it comes up to-morrow on call, and then goes to the calendar if the morning hour expires before it is disposed of.

Mr. STONE. I understood the Chair to state——

The VICE PRESIDENT. The Chair would like the Senator from Massachusetts to point to any such rule which states that the report of a committee lies over on the table and does not go to the calendar.

Mr. LODGE. Senate resolutions? I did not know they went to the calendar on the first day.

The VICE PRESIDENT. They have been going there ever since the present occupant of the Chair has been here.

Mr. LODGE. But a Senate resolution——

Mr. STONE. Mr. President, is there any objection to my withdrawing the report?

Mr. FALL. I have no objection whatsoever, under the Senator's statement.

Mr. STONE. Very well. I ask leave to withdraw the report.

Mr. FALL. I have no objection, under the statement made by the Senator that he will offer this report to-morrow morning.

Mr. STONE. I expect to present it to-morrow morning; and I am doing this in the economy of time, to prevent discussion on a parliamentary proceeding.

The VICE PRESIDENT. Is there any objection? The Chair hears none.

Mr. LODGE. Mr. President, if the Chair will allow me, on page 16, Rule XIV, section 5, reads as follows:

> All resolutions shall lie over one day for consideration, unless by unanimous consent the Senate shall otherwise direct.

The VICE PRESIDENT. Yes; that is an introduced resolution. It has not gone to the committee. That is always the rule.

Mr. LODGE. But this is a resolution—a Senate resolution—and it is reported back from the committee.

The VICE PRESIDENT. Certainly; and when reported back from the committee it has always gone to the calendar since the present occupant of the chair has been here, at least.

Mr. LODGE. The rule says all resolutions shall go over one day.

The VICE PRESIDENT. Oh, certainly; but we can not pick out a single rule and decide this question by one rule.

Mr. LODGE. Mr. President, the point is made that it comes from a committee. The rule is that reports of committees shall go over one day.

The VICE PRESIDENT. Certainly. Well, where does it go? Are all these things on the table here, or are they on the calendar?

Mr. LODGE. Those are the bills and joint resolutions. This is a Senate resolution.

The VICE PRESIDENT. The rule does not say so. It says "reports of committees."

Mr. LODGE. I think a Senate resolution occupies a different place from a joint resolution. It is not named with them, and I think it is covered by section 5.

SHIPMENT OF FOOD SUPPLIES TO POLAND.

Mr. HITCHCOCK. Mr. President, I submit a report from the Committee on Foreign Relations, and I will ask to have it read, and then I shall ask unanimous consent for its present consideration.

The VICE PRESIDENT. Is there any objection? The Chair hears none.

Mr. HITCHCOCK. It is reported with certain amendments. I ask that the resolution be read as amended. That will be sufficient for the information of the Senate.

The resolution (S. Res. 148, Rept. 517) as proposed to be amended was read, as follows:

> *Resolved*, That the President be, and he is hereby, requested to furnish to the Senate information as indicated below, if not incompatible with the public interest:
>
> First. What is the present attitude of the belligerent Governments concerning the shipment of food supplies and other necessaries of life to the suffering people of Poland? Do the belligerents permit such supplies to be sent without interruption or delay from the United States to Amsterdam or any other neutral port in Europe.
>
> Second. If the belligerent Governments make limitations or conditions or require guaranties from each other, what are the conditions and restrictions, and what are the terms of the guaranties thus required.
>
> Third. What action, if any, have said belligerents taken toward giving the guaranties that may have been required.
>
> Fourth. To what committees or authority in Poland may supplies be forwarded and consigned.
>
> Fifth. To what extent is the actual work of relief in Poland being carried on and under whose supervision and control.
>
> Sixth. What are the facts at the present time as to the shipment, transportation, receipt, and distribution of supplies? Can these proceedings be taken or are they delayed by pending negotiations with the countries involved or either of them.

The VICE PRESIDENT. Is there any objection to the present consideration of the resolution?

Mr. WILLIAMS. Mr. President, when that resolution was reported from the Committee on Foreign Relations I thought it was to be amended by including Belgium and Servia and Armenia in the resolution. I finally consented to have it reported with that understanding in my own mind. I thought that was in the mind of the committee.

I do not see any reason why Poland should be singled out alone for this inquiry. The suffering in Armenia under Turkish tyranny and oppression has been infinitely worse. There has not only been starvation there, but there has been assassination; and the atrocities committed in Belgium were still worse, and the sufferings of the people of Servia have been equally as bad.

Since the resolution was reported to the Senate, however, I have seen the senior Senator from Massachusetts [Mr. LODGE], who assures me that I was wrong about the understanding that I thought the members of the Committee on Foreign Relations had with one another. I therefore shall not object to the immediate consideration of the resolution; but I do consider it a part of my duty to protest that while the condition of Poland is being examined the condition in Armenia and in Servia and in Belgium is being neglected. If the United States Senate or Congress or the United States Government is to inquire into either, it ought, in order to be absolutely impartial and neutral, to inquire into all.

With this explanation, conditioned upon my misunderstanding of what I thought was the understanding between the members of the Committee on Foreign Relations, I shall make no objection to the present consideration of the resolution.

Mr. LODGE. Mr. President, I desire to call the attention of the Chair to Rule XXVI, section 2:

> All reports of committees and motions to discharge a committee from the consideration of the subject and all subjects from which a committee shall be discharged shall lie over one day for consideration—

Now, "lying over" means leaving the subject precisely in the same position in which it was when it was reported.

The VICE PRESIDENT. Then every bill and every report and every joint resolution and everything else is lying on the table now.

Mr. LODGE. Most assuredly, if objection is made.

The VICE PRESIDENT. And if objection is not made?

Mr. LODGE. It goes by unanimous consent to the calendar.

The VICE PRESIDENT. To the calendar?

Mr. LODGE. To the calendar. That is the ordinary course of a bill or joint resolution.

The VICE PRESIDENT. Where is the rule for that? This is all an academic discussion upon the rules.

Mr. LODGE. I call the Chair's attention to a precedent.

Mr. HITCHCOCK. Mr. President, can I get the consent of the Senator from Massachusetts for the consideration of this report?

Mr. LODGE. Mr. President, I will dispose of this first, if the Senator pleases. I thought I had the reference here, but I do not find what I thought I had. I think that has been the usual practice. In Jefferson's Manual, to which Rule XXVI refers, speaking of a bill, it says:

> The chairman * * * then delivers it at the Clerk's table, where the amendments reported are read by the Clerk without the coherence; whereupon the papers lie upon the table until the House, at its convenience, shall take up the report.

Our rule says it "shall lie over one day" and then, under the other general rules, it goes to the calendar.

The VICE PRESIDENT. What general rule?

Mr. LODGE. The general rule applying to bills and joint resolutions. They go to the calendar.

The VICE PRESIDENT. Where is there any distinction in the rules between bills and joint resolutions and Senate resolutions?

Mr. LODGE. There is no need of any distinction, because this says "all reports from committees"——

Mr. STONE. Mr. President, I rise to a question of order.

The VICE PRESIDENT. The Senator from Missouri will state it.

Mr. STONE. There is a matter pending before the Senate, to wit, a resolution reported from the Committee on Foreign Relations, and unanimous consent has been given for its present consideration.

The VICE PRESIDENT. Not yet. The Chair was about to inquire whether or not there was objection to its present consideration.

Mr. STONE. Then the question is, Shall unanimous consent be given?

The VICE PRESIDENT. Yes.

Mr. STONE. And, under the leadership of the distinguished Senator from Massachusetts, we are——

Mr. LODGE. I have no objection to its present consideration, but I can not be taken from the floor.

Mr. STONE. We are discussing a parliamentary question that has absolutely nothing to do with this resolution, but re-

lates to a subject that is already passed—a report I made, and which, with the consent of the Senate, I withdraw, and which is no longer before the Senate.

Mr. LODGE. The Senator from New Mexico [Mr. FALL] objected to its withdrawal.

Mr. STONE. Well, I have withdrawn it.

Mr. LODGE. Can the Senator withdraw it without unanimous consent?

Mr. STONE. No; but I will ask the Chair what the situation is in that respect.

The VICE PRESIDENT. The Senator withdrew his objection, and the report is entirely out of the way.

Mr. STONE. The report has been withdrawn. It is not before the Senate.

Mr. GALLINGER. I call for the regular order.

Mr. LODGE. It certainly is not before the Senate.

Mr. STONE. And I can not see that a discussion of a matter of that kind has anything to do with this. I ask the Chair to put the question. I ask for the regular order.

Mr. LODGE. Mr. President, speaking to the resolution, for the consideration of which unanimous consent has been given, I suppose——

Mr. STONE. The question of giving unanimous consent is not subject to discussion.

The VICE PRESIDENT. Is there any objection to the present consideration of the resolution? The Chair hears none, and the resolution is before the Senate.

Mr. LODGE. Now, Mr. President, addressing myself to the resolution, for the present consideration of which unanimous consent has been granted, I merely wish to say to the Senator from Missouri that I appreciate the force of his objection that no one in the Senate should ever speak upon a matter not before the Senate or a matter which has been disposed of by the Senate. That is a rule that the Senate always strictly observes. My purpose was to bring a parliamentary point to the consideration of the Chair; and, now that I have done so, perhaps at some future time he and I may come to an agreement upon it.

In the meantime I have said all that I desire to say, and I accept the point of order that we are talking, as the Senate never does, about something not before it.

The VICE PRESIDENT. The question is on agreeing to the resolution as amended.

The resolution as amended was agreed to.

PETITIONS AND MEMORIALS.

Mr. PHELAN presented a petition of the Chamber of Commerce of Los Angeles, Cal., praying for the creation of a permanent tariff commission, which was referred to the Committee on Finance.

He also presented a memorial of sundry citizens of Berkeley, Cal., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented a petition of sundry citizens of San Bernardino County, Cal., praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was ordered to lie on the table.

Mr. DU PONT presented petitions of sundry citizens of Newark, Del., praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

Mr. TOWNSEND presented a memorial of sundry citizens of Gladwin County, Mich., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

Mr. PAGE presented petitions of the Woman's Christian Temperance Union of North Bennington and of the congregations of the Methodist Episcopal Church of Waterbury and of the First Congregational Church of Hinesburg, all in the State of Vermont, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. HUGHES (for Mr. JOHNSON of Maine) presented petitions of sundry citizens of Maine, praying for the enactment of legislation to grant pensions to widows and orphans of veterans of the Spanish-American War, which were ordered to lie on the table.

He also (for Mr. JOHNSON of Maine) presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also (for Mr. JOHNSON of Maine) presented a memorial of the Society of Friends of South Durham, Me., remonstrating against an increase in armaments, which was ordered to lie on the table.

He also (for Mr. JOHNSON of Maine) presented a petition of Manila Camp, No. 1, United Spanish War Veterans, National Military Home, Kans., praying for the enactment of legislation to grant pensions to certain survivors of Indian wars, which was ordered to lie on the table.

REPORTS OF COMMITTEES.

Mr. OVERMAN, from the Committee on the Judiciary, to which was referred the bill (H. R. 6097) to ratify the compact and agreement between the States of Oregon and Washington regarding concurrent jurisdiction over the waters of the Columbia River and its tributaries in connection with regulating, protecting, and preserving fish, reported it without amendment and submitted a report (No. 513) thereon.

Mr. SMITH of Maryland, from the Committee on the District of Columbia, to which was referred the amendment submitted by Mr. BANKHEAD on the 22d ultimo proposing to appropriate $4,140 to pay Thomas W. and Alice N. Keller for ground taken and damages on account of condemnation proceedings in square No. 2838 in the city of Washington, reported it without amendment and moved that it be referred to the Committee on Appropriations and printed, which was agreed to.

THE NAVY AND MARINE CORPS.

Mr. TILLMAN. On May 16 the Senator from Virginia [Mr. SWANSON] reported from the Committee on Naval Affairs the bill (H. R. 12835) to authorize and empower officers and enlisted men of the Navy and Marine Corps to serve under the Government of the Republic of Haiti, and for other purposes, and it was placed on the calendar. I move that the bill be taken from the calendar and referred to the Committee on Foreign Relations.

The motion was agreed to.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. FLETCHER:

A bill (S. 6242) authorizing the counties of Nassau, Fla., and Charlton, Ga., to construct a bridge across the St. Marys River between Florida and Georgia; to the Committee on Commerce.

By Mr. MYERS:

A bill (S. 6243) to provide for the purchase of a site and the erection of a public building thereon at Anaconda, in the State of Montana; and

A bill (S. 6244) to provide for the purchase of a site and the erection of a public building thereon at Havre, in the State of Montana; to the Committee on Public Buildings and Grounds.

By Mr. PHELAN:

A bill (S. 6245) transferring to the active list of the United States Navy John Morris Ellicott, now a captain on the retired list of the Navy; to the Committee on Naval Affairs.

A bill (S. 6246) waiving the maximum age limit fixed by law for appointment of second lieutenants from civil life in the case of Harry B. Sepulveda; to the Committee on Military Affairs.

A bill (S. 6247) to amend an act entitled "An act to provide for the lading or unlading of vessels at night, the preliminary entry of vessels, and for other purposes," approved February 13, 1911; to the Committee on Commerce.

A bill (S. 6248) granting a pension to Willis S. Harris, alias Charles E. Sanders;

A bill (S. 6249) granting a pension to Mary E. Dollard; and

A bill (S. 6250) granting a pension to Thomas G. Cockings; to the Committee on Pensions.

By Mr. OLIVER (for Mr. PENROSE):

A bill (S. 6251) to remove the charge of desertion from the military record of John F. Kelly; to the Committee on Military Affairs.

By Mr. SHIELDS:

A bill (S. 6252) granting a pension to Alfred C. Williams (with accompanying papers); to the Committee on Pensions.

By Mr. DU PONT:

A bill (S. 6253) granting an increase of pension to William H. Bradley; to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 6254) for the relief of the Adams Express Co. (with accompanying papers); to the Committee on Finance.

By Mr. TAGGART:

A bill (S. 6255) granting an increase of pension to Isaac W. Hallock; and

A bill (S. 6256) granting an increase of pension to William Hart; to the Committee on Pensions.

By Mr. LEWIS:

A bill (S. 6257) granting a pension to Bertha Pratt;

A bill (S. 6258) granting an increase of pension to Elizabeth J. Pinckard; and

A bill (S. 6259) granting an increase of pension to John Luther Skinner; to the Committee on Pensions.

By Mr. HUGHES (for Mr. JOHNSON of Maine):

A bill (S. 6260) granting a pension to Josefa Stoneman (with accompanying papers);

A bill (S. 6261) granting a pension to Aravilla Strout (with accompanying papers);

A bill (S. 6262) granting an increase of pension to Horace G. Maloon (with accompanying papers);

A bill (S. 6263) granting a pension to Archibald S. McPheters (with accompanying papers);

A bill (S. 6264) granting an increase of pension to John H. Lowell (with accompanying papers);

A bill (S. 6265) granting an increase of pension to Leroy Harding (with accompanying papers);

A bill (S. 6266) granting an increase of pension to Elden B. Maddocks (with accompanying papers);

A bill (S. 6267) granting a pension to Alphonzo Penley (with accompanying papers);

A bill (S. 6268) granting an increase of pension to Charles R. Stuart (with accompanying papers);

A bill (S. 6269) granting an increase of pension to George H. Crowley (with accompanying papers);

A bill (S. 6270) granting an increase of pension to James H. Stinson (with accompanying papers);

A bill (S. 6271) granting an increase of pension to Eliakin Byard (with accompanying papers);

A bill (S. 6272) granting an increase of pension to Maria A. Leland (with accompanying papers);

A bill (S. 6273) granting a pension to Thomas Dagnan, alias Thomas Degnan (with accompanying papers);

A bill (S. 6274) granting a pension to Hannah M. Flaherty (with accompanying papers); and

A bill (S. 6275) granting an increase of pension to Helen F. Goodwin; to the Committee on Pensions.

By Mr. JONES (by request):

A joint resolution (S. J. Res. 138) directing the Commissioners of the District of Columbia to withdraw their petition in the Supreme Court of the District of Columbia concerning the condemnation of land for the extension of Central Avenue; to the Committee on the District of Columbia.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. CUMMINS. I submit an amendment in the nature of a substitute for the committee amendment intended to be proposed by me to the Post Office appropriation bill (H. R. 10484), which I ask may lie on the table and be printed.

The VICE PRESIDENT. The amendment will be printed and lie on the table.

Mr. STONE submitted an amendment proposing to appropriate $196,641.43 for readjustment of National Zoological Park boundaries, etc., intended to be proposed by him to the sundry civil appropriation bill (H. R. 15836), which was ordered to be printed, and, with the accompanying papers, referred to the Committee on Appropriations.

ADDRESS BY PRESIDENT WILSON.

Mr. THOMPSON. Mr. President, I ask to have printed in the RECORD the eloquent and patriotic address of the President of the United States, delivered at Arlington on Memorial Day, May 30.

The VICE PRESIDENT. Without objection, it is so ordered.

The address referred to is as follows:

THE PRESIDENT'S ADDRESS.

"Whenever I seek to interpret the spirit of an occasion like this I am led to reflect upon the seas of memory. We are here to-day to recall a period of our history which in one sense is so remote that we no longer seem to keep the vital threads of it in our consciousness, and yet is so near that men who played heroic parts in it are still living, are still about us, are still here to receive the homage of our respect and our honor. They belong to an age which is past, to a period the vital questions of which no longer vex the Nation, to a period of which it may be said that certain things which had been questionable in the affairs of the United States were once for all settled, disposed of, put behind us, and in the course of time have almost been forgotten.

"It was a singularly complete work that was performed by the processes of blood and iron at the time of the Civil War, and it is singular how the settlement has ruled our spirits since it was made. I see in this very audience men who fought in the Confederate ranks. I see them taking part in these exercises in the same spirit of sincere patriotism that moves those who fought on the side of the Union, and I reflect how singular and how handsome a thing it is that wounds such as then were opened should be so completely healed and that the spirit of America should so prevail over the spirit of division.

"It is the all-prevailing and triumphant spirit of America, where, by our common action and consent, Governments are set up and pulled down; where affairs are ruled by common counsel; and where, by the healing processes of peace, all men are united in a common enterprise of liberty and of peace.

"And yet, ladies and gentlemen, the very object for which we are met together is to renew in our hearts the spirit that made these things possible. The Union was saved by the processes of the Civil War. That was a crisis which could be handled, it seems, in no other way, but I need not tell you that the peculiarity of this singular and beloved country is that its task—its human task—is apparently never finished; that it is always making and to be made.

CRISIS WHICH THREATENS.

"And there is at present upon us a crisis which seems to threaten to be a new crisis of division. We know that the war which is to ensue will be a war of spirits and not of arms. We know that the spirit of America is invincible and that no man can abate its power, but we know that that spirit must upon occasion be asserted, and that this is one of the occasions.

"America is made up out of all the nations of the world. Look at the rosters of the Civil War. You will see names there drawn from almost every European stock. Not recently, but from the first, America has drawn her blood and her impulse from all the sources of energy that spring at the fountains of every race, and because she is thus compounded out of the peoples of the world her problem is largely a problem of union all the time, a problem of compounding out of many elements a single triumphal force.

"The war in Europe has done a very natural thing in America. It has stirred the memories of men drawn from many of the belligerent stocks. It has renewed in them a national feeling which had grown faint under the soothing influence of peace, but which now flares up when it looks as if nation had challenged nation to a final reckoning, and they remember the nations from which they were sprung and know that they are in this life-and-death grapple. It is not singular, my fellow citizens, that this should have occurred, and up to a certain point it is not just that we should criticize it. We have no criticism for men who love the places of their birth and the sources of their origin. We do not wish men to forget their mothers and their fathers, their forbears running back through long, laborious generations which have taken part in the building up of the strength and spirit of other nations. No man quarrels with that.

SOURCE OF INSPIRATION.

"From such springs of sentiment we all draw some of the handsomest inspirations of our lives. But all that we do criticize is that in some instances—they are not very numerous—but in some instances men have allowed this old ardor of another nationality to overthrow their ardor for the nationality to which they have given their new and voluntary allegiance. And so the United States has again to work out by spiritual process a new union, when men shall not think of what divides them but shall recall what unites them; when men shall not allow old loves to take the place of present allegiances; when men must, on the contrary, translate that very ardor of love of country of their birth into the ardor of love for the country of their adoption and the principles which it represents.

"I have no harshness in my heart even for the extremists in this thing which I have been trying in moderate words to describe; but I summon them, and I summon them very solemnly, not to set their purpose against the purpose of America. America must come first in every purpose we entertain, and every man must count upon being cast out of our confidence, cast out even of our tolerance, who does not submit to that great ruling principle.

PURPOSES OF AMERICA.

"But what are the purposes of America? Do you not see that there is another significance in the fact that we are made up out of all the peoples of the world? The significance of that fact is that we are not going to devote our nationality to the same mistaken aggressive purposes that some other nationalities have been devoted to; that because we are made up, and consciously made up, out of all the great family of mankind, we are champions of the rights of mankind.

"We are not only ready to cooperate, but we are ready to fight against any aggression, whether from without or from within. But we must guard ourselves against the sort of aggression which would be unworthy of America. We are ready to fight for our rights when those rights are coincident with the rights of man and humanity. It was to set those rights up, to vindicate them, to offer a home to every man who

believed in them, that America was created and her Government set up. We have kept our doors open because we did not think we in conscience could close them against men who wanted to join their force with ours in vindicating the claim of mankind to liberty and justice.

WANTS NO ADDITIONAL TERRITORY.

"America does not want any additional territory. She does not want any selfish advantage over any other nation in the world, but she does wish every nation in the world to understand what she stands for and to respect what she stands for; and I can not conceive of any men of any blood or origin failing to feel an enthusiasm for the things that America stands for, or failing to see that they are indefinitely elevated above any purpose of aggression or selfish advantage.

"I said the other evening in another place that one of the principles which America held dear was that small and weak States had as much right to their sovereignty and independence as large and strong States. She believes that because strength and weakness have nothing to do with her principles. Her principles are for the rights and liberties of mankind, and this is the haven which we have offered to those who believe that sublime and sacred creed of humanity.

"And I also said that I believed that the people of the United States were ready to become partners in any alliance of the nations that would guarantee public right above selfish aggression. Some of the public prints have reminded me, as if I needed to be reminded, of what Gen. Washington warned us against. He warned us against entangling alliances. I shall never myself consent to an entangling alliance, but I would gladly asset to a disentangling alliance—an alliance which would disentangle the peoples of the world from those combinations in which they seek their own separate and private interests and unite the people of the world to preserve the peace of the world upon a basis of common right and justice. There is liberty there, not limitation. There is freedom, not entanglement. There is the achievement of the highest things for which the United States has declared its principle.

TOUCHES UPON PREPAREDNESS.

"We have been engaged recently, my fellow citizens, in discussing the processes of preparedness. I have been trying to explain to you what we are getting prepared for, and I want to point out to you the only process of preparation which is possible for the United States. It is possible for the United States to get ready only if the men of suitable age and strength will volunteer to get ready.

"I heard the president of the United States Chamber of Commerce report the other evening on a referendum to 750 of the chambers of commerce of the United States upon the question of preparedness, and he reported that 99 per cent of them had voted in favor of preparedness. Very well, now, we are going to apply the acid test to these gentlemen, and the acid test is this: Will they give the young men in their employment freedom to volunteer for this thing? I wish the referendum had included that, because that is the essence of the matter.

"It is all very well to say that somebody else must prepare, but are the business men of this country ready themselves to lend a hand and sacrifice an interest in order that we may get ready? We shall have an answer to that question in the next few months. A bill is lying upon my table now, ready to be signed, which bristles all over with that interrogation point, and I want all the business men of the country to see that interrogation point staring them in the face. I have heard a great many people talk about universal training. Universal voluntary training, with all my heart, if you wish it, but America does not wish anything but the compulsion of the spirit of America.

COMPULSION OF PUBLIC OPINION.

"I, for my part, do not entertain any serious doubt of the answer to these questions, because I suppose there is no place in the world where the compulsion of public opinion is more imperative than it is in the United States. You know yourself how you behave when you think nobody is watching. And now all the people of the United States are watching each other. There never was such a blazing spotlight upon the conduct and principles of every American as each one of us now walks and blinks in.

"And as this spotlight sweeps its relentless rays across every square mile of the territory of the United States, I know a great many men, even when they do not want to, are going to stand up and say, 'Here.' Because America is roused, roused to a self-consciousness and a national self-consciousness such as she has not had in a generation.

"And this spirit is going out conquering and to conquer until, it may be, in the Providence of God, a new light is lifted up in America which shall throw the rays of liberty and justice far abroad upon every sea, and even upon the lands which now wallow in darkness and refuse to see the light."

POSTAL SAVINGS BANK.

Mr. SHEPPARD. Mr. President, on yesterday, at the conclusion of my remarks in reference to the bill (S. 6224) to increase the utility of the postal savings bank, to encourage savings among the people, to secure the largest returns for such savings consistent with adequate security, to provide for the loans of such savings for the promotion of agriculture and other useful, productive industries, and for the promotion of home building and home improvement in the rural districts and elsewhere, I intended to ask permission of the Senate to have the bill printed in full in the RECORD. I desire at this time to ask for such permission.

The VICE PRESIDENT. Without objection, it is so ordered.

The bill introduced by Mr. SHEPPARD May 31, 1916, and referred to the Committee on Post Offices and Post Roads, is as follows:

Be it enacted, etc., That the short title of this act shall be the industrial savings act.

SEC. 2. That a board of trustees is hereby created for the administration of this act, consisting of the Secretary of the Treasury, the Postmaster General, the Secretary of the Interior, the Secretary of Agriculture, the Attorney General, the Secretary of Commerce, and the Secretary of Labor, all acting ex officio, to be known as the industrial savings board.

SEC. 3. That for the proper and efficient organization and conduct of the business of the industrial savings board, it shall appoint, under the rules of the Civil Service Commission a first chief, a second chief, and a third chief, having such powers and duties as the board may designate; also such other assistants, attorneys, and other employees as the board may consider necessary. The compensation of the persons so appointed shall be such as the industrial savings board may authorize, and shall be paid from the profits of the postal savings bank.

SEC. 4. That the industrial savings board shall, as soon as possible, take over the control of the existing postal savings bank, the details of its administration to continue in connection with the post offices throughout the country, under the direct supervision of the Postmaster General acting for the board.

SEC. 5. That as soon as arrangements can be made therefor, every post office, postmaster, and all letter carriers and other post-office employees shall hereafter be made to serve the people through the postal savings bank as they now serve them for letters, money orders, registered letters, and parcel post, without limitations as to amount of deposits, as letters and parcels are without limitation, the manner of such service being as in this act provided.

SEC. 6. That of the funds which are now or may hereafter be deposited in the postal savings bank, not to exceed 25 per cent of the balance in hand at any time, may be invested in the bonds of the United States, bought in the open market at the lowest obtainable price or bought at such price from the Treasurer of the United States. Any portion of said bonds may, in the discretion of the industrial savings board, be sold in the open market at the highest obtainable price or sold to the United States Treasurer at such price.

SEC. 7. That no other investment of the funds deposited shall be made, with the exception of a working reserve, the amount of which shall be determined by the industrial savings board; the balance of the funds shall be loaned at the highest obtainable rate of interest on what, in the discretion of the industrial savings board, is considered as adequate security, in manner as follows and in this act provided:

(a) Loans to be made only for uses provided in the title of this bill.

(b) Demands for loans being in excess of loanable funds, preference shall be given—

(1) To small loans over large loans.

(2) To short-time loans over long-time loans.

(3) Loans adequately secured by readily marketable collateral over loans on real estate or other less-readily marketable security.

(c) In accordance with the above the board shall, from time to time, fix the rate of interest to be charged according to the supply of and demand for loanable funds, the profit and security of the depositors being the basis of decision.

SEC. 8. That the industrial savings board shall give clear and ample publicity to its rulings as to character of securities required for loans and the terms of such loans under the following limitations:

(a) Loans not to exceed 95 per cent of the market value of United States bonds or the bonds of States.

(b) Not to exceed 90 per cent of the market value of such other securities as are admissible investments under the existing laws of New York or Massachusetts for savings banks, or as are estimated by the industrial savings board as of equivalent good standing.

(c) Not to exceed 85 per cent of the market value of wheat, cotton, or other nonperishable products, so-called, in safe, adequately insured public storage.

(d) And other securities and terms in the discretion of the board deemed adequate.

SEC. 9. That not to exceed 50 per cent of the balance of deposits may be loaned to an amount not exceeding one-half appraised value on unincumbered real estate in States and Territories where laws for the protection of creditors are by the Industrial Savings Board deemed adequate and fair in manner as follows:

(a) Through any national bank or other incorporated bank or corporation whose business is dealing in or guaranteeing real-estate mortgages and which is subject to the examination and control of the United States Treasury or of the banking department of any State, in the estimation of the Industrial Savings Board adequately protecting depositors, loans may be made to an amount at one time outstanding not to exceed ten times the capital and surplus of the bank or corporation, which shall be required to guarantee the prompt payment of the principal and interest of the loans made through said bank or corporation.

(b) The bank or corporation shall be entitled to a commission of 5 per cent of the interest paid on such loan by the borrower, who shall not be subject to any other charge except the necessary expense of examination of title and drawing papers, which charge may be fixed by rules of the Industrial Savings Board.

SEC. 10. That personal loans without requirement of collateral security may be made in manner as follows:

(a) The borrower to make written statement showing his assets and liabilities; the amount of loan not to exceed $1,000; the length of time, which shall not exceed one year; the purpose for which the loan is to be used, which shall be in accordance with the stated purpose of this act; which statement shall be attached to the borrower's negotiable note.

(b) The principal and interest of the loan to be guaranteed prompt payment by a bank or corporation, as in section 9, which shall be entitled to a commission of 5 per cent of the interest paid thereon, the borrower being subject to no other charge, and the total of such loans at one time outstanding not to exceed five times the capital and surplus of the guarantor.

(c) The limit of the loans specified in (a) of this section, if after two years' trial it is deemed too small for the best results, may be extended by the board from time to time to larger specified sums, the terms to be uniform throughout the United States.

SEC. 11. That to induce the largest possible savings and serve the greatest possible convenience, security, and economy of use to depositors and to the postal savings bank, the Industrial Savings Board shall cause to be prepared and issued certificates of deposit of the size and form, but different in color and appearance, of customary bank currency, the said certificates being of the following tenor and in manner indicated:

(a) "The United States Postal Savings Bank has received from (here the depositor will write his own signature and address in ink, thus identifying his signature on the back when he passes the same) $10 (or other specified sum), and will pay the same after three months from date of issue, together with interest earned hereon as estimated by the Industrial Savings Board, the interest compounded semiannually, on surrender hereof properly indorsed."

(b) This certificate to be duly executed, dated, and recorded where issued, as done in case of money orders.

(c) Certificates in this form shall be issued in denominations of $10, $50, $100, $1,000 and larger, as the Industrial Savings Board may order.

(d) Certificates similar, but payable to bearer and bearing no interest, shall be issued in denominations of $1, $2, and $5.

(e) To encourage the beginning of deposits, and also serve the convenience of those who desire them in preference to coin money, certificates payable to bearer, without interest, shall be provided in denominations of 5 cents, 10 cents, 25 cents, and 50 cents, of size and form similar to United States fractional currency issued in 1862 and later.

(f) Simple printed instructions for their use may appear on the front or back of each of the various certificates.

(g) These certificates shall not be legal tender nor in any way indicated as "money," but may pass from hand to hand by mutual agreement, as is done in the case of "certified" or other bank checks.

SEC. 12. That at the county seat of every county in the United States or similar civil divisions otherwise called, and in such larger cities as the Industrial Savings Board shall deem wise, one or more post offices shall be designated by the Industrial Savings Board as postal savings banks of issue and redemption, and shall be adequately equipped and placed in charge of competent persons qualified by sufficient bank experience.

(a) Such banks of issue and redemption shall issue and record as required by the Industrial Savings Board certificates of deposit as described in section 11 hereof in exchange for bankable funds as per regulations made by said board, and shall redeem the same whether issued by itself or by other similar banks of issue and redemption either in money or in new certificates of deposits, as the applicant may desire.

(b) Each depositor in said banks shall record his signature and address with the bank on a record provided, as is customary by commercial banks, so that indorsement of signatures on backs of certificates may be verified when desired.

SEC. 13. That the industrial savings board shall designate 12 or more districts covering the United States, in a central city of each of which shall be organized a district bank, which shall act as clearing and reserve banks for all the banks of issue and redemption within the district, in accordance with rules and regulations of the industrial savings board.

SEC. 14. That the industrial savings board shall further organize in the city of Washington, D. C., in the Post Office Department, a central postal savings bank, which shall act as clearing and reserve bank for the 12 district banks, and may have direct dealings with and oversight of all the county banks of issue and redemption as the industrial savings board shall order.

SEC. 15. That every smaller post office and every letter carrier may, in accordance with regulations made by the industrial savings board, adequate bonds for safety being required as convenient, keep in hand limited amounts of certificates of deposit, secured from the local county banks of issue and redemption, to be given to local-known applicants in exchange for bankable funds to be forwarded to the county bank of issue and redemption, and may also redeem small certificates of deposit as they can conveniently. Such post offices and letter carriers shall also give proper receipts to any applicant for bankable funds or for certificates of deposit, to be sent to the county bank of issue and redemption in exchange for money or other certificates of deposit, and deliver the same to said applicant in exchange for their own receipt originally given to the applicant.

SEC. 16. That each county bank of issue and redemption and each district bank shall keep in hand such working balance as the industrial savings board shall direct, the county bank forwarding any surplus to its district bank, and the district bank any surplus to the national central bank, and each of said banks shall make loans as authorized by the industrial savings board, the county bank also drawing on its district bank and the district bank drawing on the national central bank as the industrial savings board may direct.

SEC. 17. That existing savings banks of the United States, which desire and will submit to satisfactory examination and supervision of the industrial savings board and is found of standing satisfactory to the board, may be made agents of the postal savings bank, to receive deposits and pay certificates in accordance with regulations made by the board, and shall be allowed as compensation for such service a commission of 5 per cent of the net earnings of the deposits, as estimated by the industrial savings board, which said existing savings bank secures through its agency.

SEC. 18. That in lieu of the principal of amortization (which may be applied when the borrower desires) loans secured by real estate or other collateral may be made as follows:

The mortgage or other paper shall be drawn to secure any sum due from the borrower not exceeding the amount named therein for any time not longer than the longest time therein specified, the borrower thus being permitted to adjust the amount of his loan from time to time according to his needs and opportunities.

SEC. 19. That postmasters and other employees in service at the time of the transfer of the postal savings bank to the industrial savings board shall continue in office until the board finds from experience that any are inefficient, when such of them may be removed, according to rules and regulations which the board shall establish, with the approval of the Civil Service Commission, and their successors appointed under the rules of the Civil Service Commission.

SEC. 20. That the industrial savings board shall test the safety and practicability of making small and short-time loans to farmers and other producers in manner as follows:

(a) After the total balance of deposits in the postal savings bank shall have reached the sum of not less than $1,000,000.

(b) The board shall select not to exceed 10 counties in various parts of the United States to make the trial for a period of not less than one year, after which time, if in the opinion of the board the plan is successful, the method may be extended to many or all other counties.

(c) All persons desiring to borrow, without collateral security, any sum not to exceed $500 for a time not to exceed one year, each shall make a statement showing the amount of his assets and liabilities, with their nature, in manner approved by the board, the amount of the loan desired, its length of time, and the purpose for which it is to be used, in accordance with this act, which statement shall be attached to the applicant's negotiable note.

(d) These applications shall be referred for approval or rejection to a committee of three persons elected by the applicants, and also to a committee of three persons elected by the depositors in the postal savings bank within the county, in manner provided here following: Loans to be allowed shall be approved by not less than two-thirds of the weight of vote of each committee, and also by one or more experts appointed by the board, which may be the postmaster of the county bank of issue and redemption, or other person or persons.

(e) The two committees to be elected in manner as follows: The postmaster to prepare printed ballots and send the same with return envelope to himself, and send to each applicant and to each depositor in the county bank of issue and redemption having then and three months previously outstanding deposits at the time of $50 or more. Each elector shall be entitled to three votes, which he may cast for three, two, or one person of his choice. The persons so chosen, each having weight of vote according to the number of votes by which he is chosen, shall, upon notice of the postmaster, meet and choose three of their number to act as the committee, the electors balloting repeatedly as may be necessary to reduce the number to three. The committee thus elected each shall have weight of vote according to the cumulative number of votes by which he is chosen.

(f) The members of the committee chosen shall have compensation for services in passing on loans at the rate of 20 cents an hour, the time to be approved by the postmaster.

(g) Applicants whose loans are accepted shall give the bank their negotiable notes for the amounts and time approved, the same to be discounted by the bank at double the rate of interest current in postal savings bank for loans secured by collateral, the applicant being given the proceeds less his pro rata expense of passing on the loans. After the end of one year, when all of the loans shall have matured, any profits to the bank on the total of the loans in excess of the current rate of interest for secured loans shall be paid in rebate to those whose loans were promptly and fully paid, so that the net cost of the loan to the borrower may be reduced to approximately the same as secured loans.

(h) If after ample test such method of loaning is found safe and profitable, the amount to be loaned to each applicant may be increased beyond $500, the increase to be uniform throughout the United States. If some counties prove to be habitually unprofitable while other counties prove habitually profitable, the board may withhold, temporarily or longer, permission to make such loans from the unprofitable counties.

SEC. 21. That commercial banks may make deposits in and draw upon county banks of issue and redemption to such extent as said county banks may be able conveniently to serve them, but may, without limitation, deal direct with the district banks and national central bank as per regulations of industrial savings board, and certificates of deposit in the postal savings bank may be counted as part of the legal reserve of all national banks.

SEC. 22. That the board shall cause to be prepared and printed for the general public simple tables showing the value of $10 or larger sums at compounded interest for days, months, and years at various rates of interest, such as will be useful to depositors.

SEC. 23. That needless and expensive records and statistics shall be avoided, but the board shall provide for such as may materially serve the interests of depositors and enable the board to annually report to Congress such information and recommendations as may be of service to Congress.

SEC. 24. That to the extent that the mails shall be used in facilitating the business of the postal savings bank, either by the bank itself or by its patrons, the board shall provide special stamps for free use of the mails, keeping records so that approximately the actual cost of the Postal Service shall be paid by the postal savings bank to the Post Office Department.

SEC. 25. That the sum of $1,000,000 is hereby appropriated for any necessary expense, in the discretion of the board, in the rapid development of the postal savings bank, the sum used to be considered only as an advance and to be repaid to the Treasury, with interest thereon, from the profits of the postal savings bank, which is to be made self-sustaining, without subsidy or other charge against taxpayers.

SEC. 26. That all provisions of an act to establish postal savings, etc., approved June 25, 1910, and of amendments thereto not inconsistent with this present act, shall continue in force, and all other provisions are accordingly modified or repealed, as are all other acts of Congress inconsistent herewith.

SEC. 27. That to the extent that certificates of deposit in postal savings banks crowd out of use forms of paper money now in use, causing the depreciation of the market price of bonds of the United States used to secure their circulation, below par, the Treasurer of the United States shall purchase or redeem such bonds at par issuing, so far as may be necessary to do so, other bonds of the United States bearing higher rate of interest and marketable at or above par.

EXECUTIVE SESSION.

Mr. STONE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 30 minutes spent in executive session the doors were reopened.

NOMINATION OF LOUIS D. BRANDEIS.

The injunction of secrecy was removed from the following proceedings in executive session:

UNANIMOUS-CONSENT AGREEMENT, MAY 26, 1916.

That not later than Thursday, June 1, 1916, the majority members of the Committee on the Judiciary and the minority members thereof may file reports upon the nomination of Louis D. Brandeis to be an Associate Justice of the Supreme Court of the United States, which reports shall forthwith be printed in confidence for the use of the Senate; that, on the said day—Thursday, June 1, 1916—at not later than 4.55 o'clock p. m., the Senate shall proceed to the consideration of executive business, and that at 5 o'clock p. m., on the said day, the Senate shall proceed to vote, without debate, upon the said nomination to a final conclusion.

It is further ordered that, after the said vote, the said reports and the proceedings upon the vote shall be printed in the RECORD, and the injunction of secrecy removed from all matters in relation to said nomination.

Vote on the question of advising and consenting to the appointment of Mr. Brandeis. Yeas and nays asked by Mr. CHILTON.

Colt	McCumber	Sherman	

Announcing the vote, the Vice President stated that the resolution of confirmation had been agreed to, and announced that the nomination had been confirmed.

Mr. FALL. I have a general pair with the Senator from New Jersey [Mr. MARTINE]. I transfer my pair to the Senator from Utah [Mr. SMOOT] and vote "nay." If the Senator from New Jersey [Mr. MARTINE] were present and not paired he would vote "yea."

Mr. HOLLIS. I have a pair with the junior Senator from New York [Mr. WADSWORTH]. I transfer that pair to the Senator from Maine [Mr. JOHNSON]. If the Senator from Maine were present he would vote "yea." If the Senator from New York [Mr. WADSWORTH] were present he would vote "nay." I vote "yea."

I also desire to state that if the Senator from Minnesota [Mr. CLAPP] were present he would vote "yea." He is paired with the Senator from Iowa [Mr. KENYON], who would vote "nay."

Mr. JONES. I have a pair with the junior Senator from Virginia [Mr. SWANSON] and therefore withhold my vote.

Mr. LA FOLLETTE. The Senator from Idaho [Mr. BORAH] is paired with the Senator from North Dakota [Mr. GRONNA]. If the Senator from Idaho were present he would vote "nay," and the Senator from North Dakota would vote "yea."

Mr. THOMAS. The Senator from Virginia [Mr. MARTIN] is necessarily absent. If he were present he would vote "yea."

Mr. HUGHES. My colleague [Mr. MARTINE] is necessarily absent from the Senate. If present he would vote "yea." He is paired with the Senator from New Mexico [Mr. FALL].

Mr. OWEN. I have a pair with the Senator from New Mexico [Mr. CATRON]. I transfer that pair to the Senator from Florida [Mr. BRYAN] and vote "yea."

Mr. JAMES. I desire to announce that the Senator from Ohio [Mr. POMERENE] is paired with the junior Senator from Massachusetts [Mr. WEEKS]. If present the Senator from Ohio would vote in favor of the confirmation of Mr. Brandeis and the Senator from Massachusetts would vote against the confirmation.

Mr. SAULSBURY. I am paired with the junior Senator from Rhode Island [Mr. COLT]. I transfer that pair to the Senator from South Dakota [Mr. JOHNSON] and vote "yea." If the Senator from South Dakota were present he would vote "yea."

Mr. SUTHERLAND. I have a general pair with the senior Senator from Arkansas [Mr. CLARKE], who is absent, but I am at liberty to vote on this question and I vote "nay."

Mr. THOMAS. I have a general pair with the Senator from North Dakota [Mr. MCCUMBER]. I transfer that pair to the senior Senator from Virginia [Mr. MARTIN] and vote "yea."

Mr. LODGE. I desire to announce that my colleague [Mr. WEEKS] is paired with the senior Senator from Ohio [Mr. POMERENE]. If my colleague were present he would vote "nay."

Mr. WILLIAMS. I have a general pair with the senior Senator from Pennsylvania [Mr. PENROSE]. If present he would vote "nay" and I would vote "yea," if I had the privilege; but I withhold my vote in consequence of my pair.

Mr. THOMPSON. I have a pair with the Senator from Illinois [Mr. SHERMAN], but under an arrangement with the Senator from Illinois, if his vote is not controlling, I am permitted to vote on this nomination. I therefore vote "yea." I am requested to announce that if he were present he would vote "nay."

Mr. TILLMAN. I have a pair with the junior Senator from West Virginia [Mr. GOFF]. If I were at liberty to vote I would vote "yea."

Mr. CURTIS. I have been requested to announce that the Senator from Maine [Mr. BURLEIGH] is paired with the Senator from Arkansas [Mr. ROBINSON].

Mr. NEWLANDS (after the result of the vote had been announced). Regarding my vote, I should like to say that I have great admiration for Mr. Brandeis as a propagandist and publicist, but I do not regard him as a man of judicial temperament, and for that reason I voted against his confirmation.

On motion of Mr. CHILTON it was—

Ordered, That there be printed as part 2 of volume 2 of Senate Document No. 409 the additional evidence (part 22 of the hearings) taken before the subcommittee of the Committee on the Judiciary, and the report of the Committee on the Judiciary to the Senate, with the views of the minority, on the nomination of Louis D. Brandeis; that 1,000 extra copies thereof be printed for the use of the Senate, to be distributed through the folding room, and that 500 additional copies be printed for the use of the Committee on the Judiciary.

[Ex. Rept. No. 2, pt. 1, 64th Cong., 1st sess.]

NOMINATION OF LOUIS D. BRANDEIS.

Mr. CHILTON, from the Committee on the Judiciary, submitted the following report:

The Committee on the Judiciary, to whom was referred the nomination of Louis D. Brandeis, of Massachusetts, to be Associate Justice of the Supreme Court of the United States, vice Joseph Rucker Lamar, deceased, beg leave to report it back with the recommendation that it be confirmed.

The nomination was referred to the Committee on the Judiciary on January 28, 1916. On January 31 the committee referred it to the following as a subcommittee: Messrs. CHILTON (chairman), FLETCHER, WALSH, CLARK of Wyoming, and CUMMINS.

The subcommittee held hearings, made necessary by a protest against confirmation of the nomination, which began on February 9, 1916, and continued from time to time until March 15, 1916. On February 16 Mr. WORKS was appointed on the subcommittee in the place of Mr. CLARK of Wyoming.

On April 3 the subcommittee made a favorable report to the entire committee, recommending confirmation of the nomination. There was a minority report, however, against confirmation, made by Messrs. CUMMINS and WORKS. The majority views of the subcommittee are set out at length in the separate reports of the majority members of the subcommittee. Mr. CHILTON'S views were concurred in by Mr. FLETCHER, and Mr. WALSH filed a separate report.

All of these views of the members of the subcommittee are printed in Senate Document No. 409, Sixty-fourth Congress, first session, and your committee herewith adopts the statements and views of Mr. CHILTON and of Mr. WALSH and makes the same a part of this report, as follows:

Mr. CHILTON, from the subcommittee of the Committee on the Judiciary, submitted the following views:

To the COMMITTEE ON THE JUDICIARY,
UNITED STATES SENATE:

As heretofore announced to the Committee on the Judiciary, your subcommittee decided to have open hearings, which were begun on February 9, 1916, and continued from time to time until March 15, 1916.

Very soon after your subcommittee was organized a protest against the confirmation was filed, signed by the following-named gentlemen:

Charles S. Rackemann, Harrison M. Davis, Joseph Sargent, A. Lawrence Lowell, John Noble, Charles F. Adams, I. Tucker Burr, C. Minot Weld, Nathaniel H. Stone, Felix Rackemann, Arthur Lyman, Henry S. Grew, George P. Gardner, Roger Walcott, Pierpont L. Stackpole, Francis Peabody, Edmund K. Arnold, William B. Luther, Charles A. Williams, Moses Williams, Reginald H. Johnson, Henry Ware, J. L. Thorndike, Julian Codman, Bowditch, C. Storey, Fred C. Bowditch, W. L. Putnam, Prof. Edward H. Warren, Roger S. Warner, James M. Newell, William S. Hall, Clifton

L. Bremer, Lawrence Minot, Henry E. Edes, Hollis R. Bailey, Edward S. Dodge, F. Walker Johnson, George B. Dabney, Francis R. Boyd, J. A. Lowell Blake, Louis Bacon, Lawrence P. Dodge, George B. Harris, Eugene J. Fabens, Charles H. Fiske, jr., Harold Jefferson Coolidge, P. T. Jackson, jr., Augustus P. Loring, William W. Vaughn, Samuel D. Parker, Thomas N. Perkins, R. W. Boyden, Henry L. Shattuck, A. R. Graustein, James D. Colt, Edmund A. Whitman, William C. Indicott, Albert E. Pillsbury, William V. Kellen, and Frederic M. Stone.

Mr. Austen G. Fox, assisted by Mr. Kenneth M. Spence, appeared on behalf of those signing the petition, and the committee requested Mr. George W. Anderson to represent the committee in bringing out the facts. Quite a number of other protests and many letters of commendation of the nominee were filed before the committee in the shape of letters and telegrams, some to the committee and some to different members, all of which are made a part of the report.

As to every charge made against the nominee by the protesting committee or contained in rumor or which in any way came to the knowledge of your committee, we have sent for those alleged to have knowledge and have examined such witnesses. All the testimony of the 43 witnesses examined was taken down by a stenographer, was printed, and is contained in one volume of 1,316 pages, which is now before the committee. The evidence relates to various charges reflecting upon the professional conduct of the nominee, as well as his standing and general reputation.

On pages 884 to 887, 933 and 934, and 1225 and 1226 may be found a summary of the matters as to which the proof, outside of opinion evidence, relates. These charges will now be taken up, one at a time, and the proof relating thereto analyzed.

WARREN CASE.

It is charged that Mr. Brandeis consciously advised and assisted Samuel D. Warren in a breach of trust in fraud of his brother, Edward P. Warren. This charge is wholly unfounded, and was recognized to be by the leading counsel for Edward P. Warren in the suit concerning this trust (284, 860, 1164). The propriety of Mr. Brandeis's conduct in this case was also recognized by one of his leading opponents who was counsel for other beneficiaries of the trust (278). In May, 1888, Samuel D. Warren and Mr. Brandeis were partners in the practice of law and had been for about 10 years. In May, 1888, Mr. Warren's father, Samuel D. Warren the elder, died, leaving a widow and five children, entitled under his will to his property in their own right without the intervention of any trustees—the widow to five-fifteenths and each child to two-fifteenths.

Mr. Warren the elder owned paper mills in Maine, valued at nearly $2,000,000. These paper mills were conducted by the firm S. D. Warren & Co., composed of himself and Mortimer B. Mason, who had been with him for 18 years and a partner for 6 years. One son, Fiske Warren, was employed in the business and had been for about five years. Warren & Brandeis had been attorneys for S. D. Warren & Co. before the elder Warren's death, and were counsel for the executors of his will. They had no other connection or relation with Edward P. Warren, a son, then 20 years of age.

The Warren family was believed to be entirely harmonious at this time, and to desire to keep the mills intact as a family property. There was no member of the family fitted by temperament or desire to take the active headship of the business except Samuel D. Warren. They all lived in or near Boston except Edward P. Warren, who was in England. Mr. Mason was regarded by all as essential to the business because of his experience and ability. He was receiving one-sixth of the profits of operation of the mills, and believed that he should receive under the changed condition one-fourth of the profit. He had earned in the last two year $76,000 and $68,000, respectively, as his share of the profits. This is a larger amount than he averaged during the ensuing 20 years under the plan that was adopted. This plan was to have the real estate vested in trustees who should lease to an operating concern which should pay a fixed rental of 6 per cent and an additional amount equal to one-half the profits of the operating concern. The trustees selected were Samuel D. Warren and Mr. Mason and Mrs. Warren, the widow. The operating concern was a new partnership of Samuel D. Warren & Co., composed of Mr. Mason, with one-half interest; Samuel D. Warren, with one-third interest; and Fiske Warren, with one-sixth interest. The plan was elaborately discussed (842, 858) among the members of the family, all of whom were persons of intelligence, and was agreed to before the trust was created. The papers to give legal effect to the plan were drawn and executed the end of May, 1889, and sent to Edward P. Warren in a letter explaining these terms (844). He executed them, and the business was carried on in accordance with this arrangement for a period of over 20 years.

Full accounts were rendered annually, and they show the profits resulting to the partnership from operating the mills under this lease and the income resulting to the trust (858, 519–607).

Mr. Warren retired from the practice of law and from the firm of Warren & Brandeis in 1889. Mr. Brandeis and his firm continued to be the legal adviser of the firm of Samuel D. Warren & Co. and of the trustees throughout the ensuing 20 years. They also advised and acted for the various members of the family from time to time, and it was well known to all that they were so acting. No dissension arose until after the death of Mrs. Warren in 1901. This left a vacancy in the board of trustees. Henry Warren, next in age to Samuel D. Warren, had died. The declaration of trust provided for the appointment of a trustee, preferably from among the children of the elder Warren, and not a member of the firm. This limited the preference to Edward P. Warren or his sister, Cornelia Warren. Mr. Mason and Mr. Samuel D. Warren believed that Edward P. Warren, on account of his temperament and the fact that he was living in England, was not a desirable trustee, and it was proposed immediately after the mother's death that Cornelia Warren be appointed a trustee, but Edward P. Warren opposed this. The next year it was proposed that Fiske Warren be appointed. This was also opposed by Edward P. Warren. Fiske Warren had retired to a considerable extent from active business, and his proportion of the profits had been reduced from 16⅔ per cent to 5 per cent, and soon thereafter to 2½ per cent.

In 1903 Edward P. Warren retained William S. Youngman, who has testified in the present hearing (461–518, 1286–1296, 1306–1307). He soon after began investigations, and in 1906 rendered an elaborate report to Edward P. Warren thereon (861), approving the details of the accounts, but claiming that the plan had worked too much to the advantage of Samuel D. Warren & Co., that too much of the income of the trust had been devoted to the improvement of the properties instead of to the payment of the beneficiaries, and commenting on the division between the repair account, which was a charge of operations, and the improvement account, which was a capital charge against the trust.

The trust instrument originally provided that the trustees might retain one-third of the net income for improvements. This was found to be inadequate, and by informal agreement reached in 1890 the amount was increased to one-half. All the beneficiaries had agreed to this. The fact was recited in the reports from year to year.

The profits which the partners had received from the operation of the mill had not exceeded on the average those to be expected from the condition of the business as it had been estimated in 1889 in the estimates submitted to the beneficiaries before the plan was agreed to (842).

The division between repairs and improvements had been fairly and honestly made (862).

After 1906 negotiations continued relative to the appointment of a new trustee, but no satisfactory agreement could be reached. Edward P. Warren, after having urged his own appointment, urged the appointment of Mr. Youngman. Outsiders also were suggested.

At the end of 1909 suit was brought by Edward P. Warren against Samuel D. Warren, seeking an accounting and the removal of Samuel D. Warren as a trustee (894–933). Cornelia Warren, whose interests were the same as Edward P. Warren's, and Fiske Warren, whose interests were nearly the same, opposed the suit, as did their counsel (915). Brandeis, Dunbar & Nutter acted for Samuel D. Warren, and one of the members of the firm tried the case up to the death of Samuel D. Warren, who was the first witness. Nothing developed to the discredit of Mr. Warren or Mr. Brandeis in any way, and any lack of good faith on their part was disclaimed in the suit itself by counsel for Edward P. Warren (277, 284, 860, 1164). Some months after the death of Mr. Warren the others in interest bought out the share of Edward P. Warren in the estate at what was believed by them to be no more than the share was worth, making no allowance for any claims made in the suit (278, 867).

Samuel D. Warren was a man of high character and intelligence. The drafts of the original papers for the formation of the trust and the lease were in his handwriting (841). Mr. Brandeis advised about the matter and took part in the conveyances which were made. The negotiations between the different members of the family were conducted directly between them. Apparently all communications with Edward P. Warren were from Samuel D. Warren or other members of the family. No occasion arose for the intervention of counsel between the different members of the family at the time the trust was created or at any time up to the time that Mr. Youngman was employed by Edward P. Warren. The original agreement was a fair one (277, 278) and worked out fairly and was justly and honestly administered, and the share of Edward P. Warren increased enormously under the administration of his brother and the other trustees (867, 915).

Mr. Brandeis exerted no improper influence in the matter (881).

When what was believed to be a wholly groundless and unwarranted attack was made upon Mr. Warren and his removal as trustee sought, it was certainly the province of counsel for the trustee, who had been such during the entire administration of the trust, to support him as counsel in defending the integrity of his administration of the trust (1259). Such knowledge as counsel for the trustee and his firm had came to them from the trustee and his firm in that employment, and the trustee and his firm were entitled to the full benefit of that knowledge. If they had employed new counsel, they could rightly ask that everything known to their existing counsel should be communicated to the new counsel. It would have been virtually a desertion if the counsel for the trustee and his firm had failed to act (1259).

Three out of the four beneficiaries opposed the litigation and desired the retention of Mr. Warren as a trustee.

No claim was ever made in the case but that the defense ought to be made by Brandeis, Dunbar & Nutter on Mr. Warren's behalf (1298).

As to the transactions which led up to the suit, the leading counsel for the plaintiff said that he did not claim that the arrangement was ever gotten up, either by Mr. Brandeis or Mr. Warren, for the purpose of violating a trust (1164).

In order to condemn Mr. Brandeis for anything done in this whole matter one must emphasize every suspicion and minimize the prominent facts shown by the weight of the evidence. I agree with Mr. Whipple, the leading trial lawyer for Edward P. Warren, the complaining heir, that if Mr. Brandeis thought that Edward had assented (and how could a reasonable man assume otherwise?), "there was no violation of trust; and there was no moral wrong" (284).

NEW YORK & NEW ENGLAND RAILROAD MATTER.

It is charged that Mr. Brandeis was engaged at the instance of the New York, New Haven & Hartford Railroad to wreck the New York & New England Railroad Co. The facts do not sustain this charge.

At about the beginning of 1892 Austin Corbin, of New York, was the president and director of the New York & New England Railroad (404). The railroad was in a very bad financial condition and already wrecked. Corbin took the presidency with a view to rehabilitating it. He also got friends to invest in stock of the company and he expected them to become directors (405). Several of the directors whom he thought were acting improperly declined to resign. These directors were represented in the later litigation by Mr. Storey (405). Accordingly, Mr. Corbin decided to resign, himself, as he refused to stay on the board of directors with them. He believed they were using their position to benefit themselves at the expense of the road (405). On resigning, Mr. Corbin consulted William J. Kelly, his attorney, who is now one of the judges of the Supreme Court of New York. Mr. Kelly employed Mr. Brandeis to institute suits to have the railroad put in the hands of a receiver in Massachusetts, Connecticut, and New York. These suits were never filed, because the action of the directors necessitated other proceedings. They declared they were about to pay unearned dividends, and the suits were immediately brought and injunctions were obtained to prevent this (405). They also attempted to issue bonds beyond the legal limit, and suits were brought to prevent this. These also prevailed (405). Suits also were brought to prevent leases made to the company by these directors of railroads claimed to be owned by these directors and leased at an improper rental (409). These suits were brought on behalf of all stockholders, of whom Mr. Corbin was one, and particular stockholders were selected as plaintiffs in order to give the Federal courts jurisdiction (411). Mr. Corbin's connection with the suits was well known. The hostile directors knew it well (411). He indemnified the plaintiffs (411).

All the suits were brought between April and August, 1892 (422). It was alleged in the suits that they were brought at the expense of persons other than the plaintiffs and to depress the credit of the railroad, and this was held to be immaterial (427).

Subsequently, in an investigation before a committee of the Legislature of Massachusetts in May, 1893, it was claimed on behalf of the New York & New England Railroad Co., by Mr. Moorefield Storey, that these suits had been instigated by the New York, New Haven &

Hartford Railroad Co. or in its interests. Mr. Brandeis then testified that he had no knowledge of any such connection. Mr. Josiah H. Benton, the attorney for the New York, New Haven & Hartford Railroad Co., stated that there was no such connection (439).

Judge Kelly now says that in the latter part of 1893 he learned from Mr. Corbin that he had concluded that the chance of reorganizing the road was gone, and that the first mortgage was inevitably going to be foreclosed, and that he was disposed to give up the litigation; and later he learned from Mr. Corbin that certain men interested in the New York, New Haven & Hartford Railroad Co., which was interested in the first-mortgage bonds, had expressed a desire that litigation should not be given up and that they would reimburse Mr. Corbin for expenses thereafter (412).

Mr. Brandeis was not employed to wreck the New York & New England Railroad (406), and had no knowledge that the New York, New Haven & Hartford Railroad Co. was interested in the litigation when he testified in May, 1893. His last substantial work in the cases was done in June, 1893 (700). He was paid by Judge Kelly, who received the money therefor from Mr. Corbin (408).

It was said in the present hearing that the suits were begun at the instance of the New York, New Haven & Hartford Railroad Co. (267, 415), and that the United States, in the recent suit against the directors of the New York, New Haven & Hartford Railroad Co., had so contended. The fact is to the contrary. The Government's contention was in accordance with the foregoing statement from Judge Kelly, namely, that they were started by Mr. Corbin, and that subsequently the directors of the New York, New Haven & Hartford Railroad Co. took them over (419, 700).

There was nothing to indicate that the suits were not meritorious or brought for the purpose for which they purported to be brought. They were found to be well grounded as far as they progressed. Since it appears that the Massachusetts Legislature investigated this matter 23 years ago, and that now Judge Kelly, chief counsel, acquits him of any purpose to wreck the railroad, and that Josiah H. Benton, chief counsel of the New Haven & Hartford Railroad, testifies that that railroad had no connection with the suits brought by Mr. Brandeis, I can find neither reason nor excuse to justify anything but an unequivocal vindication of the nominee from this charge.

DINGLEY BILL WOOL DUTY.

No charge touching Mr. Brandeis appears to have been suggested in this matter.

In 1908 charges were made that William Whitman had, in 1897, secured an exorbitant duty on wool tops, to the detriment of other woolen manufacturers in the association which Mr. Whitman represented (962).

Mr. Whitman did not know Mr. Brandeis in 1897 or have anything to do with him prior to 1905 (690), and Mr. Brandeis has never acted for Mr. Whitman in any tariff matters (973).

When the charges above stated were made against Mr. Whitman in 1908, he consulted with Mr. Brandeis with reference to making an answer to these charges. Mr. Whitman stated his case to Mr. Brandeis, and Mr. Brandeis assisted him in preparing a reply (961). In view of the testimony of Mr. Whitman in the lobby investigation (of 1913), the committee, on its own motion, subpœnaed Mr. Whitman and Mr. Ingersoll in order to find out all the facts concerning Mr. Brandeis's appearance before the congressional committee having in charge the Stevens bill, and the true history of Mr. Whitman's defense to what are known as the "North charges."

I fail to find anything in either which reflects upon the nominee.

LEGISLATION CONCERNING INTOXICATING LIQUORS.

No charge has been made against Mr. Brandeis with respect to this matter. It appears that 25 years ago he appeared in opposition to certain legislation relative to the sale of intoxicating liquors, and in support of certain other legislation then under consideration before the Massachusetts Legislature, and that this appearance was in behalf of associations engaged in the sale of liquor (1055).

This was in a State that never has had a prohibitory law, but has long had laws regulating the liquor traffic. There is nothing to indicate that Mr. Brandeis's attitude was or is favorable or adverse to a prohibitory law in a community where public sentiment wants it.

There is nothing to indicate that his attitude 25 years ago was in any way favorable to the intemperate use of liquor (1057), or that the legislation which he sought was morally wrong from the viewpoints of that period.

Public sentiment upon the question of prohibition has undergone radical change in the last 10 years, not to say 25 years. The argument of an attorney 25 years ago is not even persuasive of his views now. Generally speaking, it is unfair to make one's views, within legitimate limits, the test of a vote on his confirmation as judge. The honest, capable judge only construes the law, and it should be assumed that the good lawyer, "wet" or "dry," when elevated to the bench, will not presume to legislate. Only a dishonest judge would distort a record or evade a reasonable conclusion, whether it suited him or not.

UNITED SHOE MACHINERY CO.

The United Shoe Machinery Co. has charged that Mr. Brandeis has been guilty of unprofessional conduct in acquiring information while connected with that company and using it at a later date in the interest of other clients. This charge involves a history of the company as well as the evolution of trusts and the laws applicable to them.

The tying-clause system, so called, of the United Shoe Machinery Co. was not created by Mr. Brandeis. He severed his relations with the company because of his disapproval of this system. Three and one-half years elapsed after his resignation from the company before he advised any other client on the subject. In this advice and in all subsequent action which he took he made no use of any confidential information; but, on the contrary, the facts seem to have been public property well known to the shoe manufacturers (703, 747).

The United Shoe Machinery Co. was organized early in 1899 and acquired the business and assets or a majority of the stock of Goodyear Shoe Machinery Co. (and other Goodyear companies), McKay Shoe Machinery Co., Eppler Welt Machine Co. (and another Eppler company), Consolidated & McKay Lasting Machine Co., and Davey Pegging Machine Co. (703).

About a year before the organization of the United Co. negotiations had been undertaken to bring these companies together, and Mr. Brandeis had opposed this in the belief that on the terms then proposed it was better for the McKay Co. to remain as it was (703).

The negotiations for the consolidation, which went through in 1899, were conducted principally by Mr Elmer Howe, Mr. James J. Storrow, and Mr. Winslow (703). Mr. Howe was an experienced lawyer and for all practical purposes in charge of the Goodyear Co. Mr. Storrow was of the firm of Fish, Richardson & Storrow, one of the leading firms of patent lawyers of the country. They were counsel for the Eppler Co., the Consolidated & McKay Co., and the McKay Co. Mr. Storrow had or represented a large interest in the McKay Co. (703).

The companies had for a long time put their machines out on leases containing restrictive conditions as to their uses, tying clauses, so called (174, 704, 734), similar in form to those afterwards continued by the new company.

A complete investigation indicates that Mr. Brandeis was not asked nor did he render an opinion as to the legality under the Sherman antitrust law of these clauses of the leases or of the consolidation itself at any time prior to 1906 or 1910 (704, 733, 745, 744).

Before the consolidation the matter of working agreement between the companies was considered, but Mr. Howe thought that this might be contrary to the Sherman law and that there should be a new company which should acquire a full title to the property or stock of the old companies (704).

It should be noted that after the decision in the Knight case (156 U. S., 1) in 1895, and at least until the decision of the Northern Securities case (193 U. S., 197) in 1904, and of the Wall Paper case (212 U. S., 227) in 1909, many lawyers believed that the Sherman antitrust law did not prohibit the acquisition by one company within a single State of the assets of a competitor, even if the manufacturers of both were going into interstate commerce.

Mr. Brandeis joined with the eight other directors of the McKay Co. in signing the circular to the McKay stockholders recommending that they exchange their stock (255, 704).

Mr. Howe at once became the leading counsel (182, 178, 704, 733) for the United Co., and he became also a member of the executive committee. Mr. Brandeis became a director. He never became general counsel for the company or legal or business advisor on the general policies of the company (704). He was concerned with the general policies of the company only to such extent, if any, as Mr. Winslow or others talked with him about them as a director (184).

Mr. Brandeis and his firm were employed from time to time in specific matters for which specific charges were made (705). The last employment was in a matter begun in 1906, and the only matters which lasted after January 7, 1907, were two begun in 1904 or earlier.

In the winter and spring of 1906 legislation was proposed in Massachusetts to prohibit anyone from imposing in the lease or sale of a patented machine a condition that the lessee shall not use the machines of another, and from offering unreasonable discounts which would prohibit such use (218, 705, 713). This proposed legislation was believed to be aimed at the United Co., and to emanate from one or more machinery manufacturers (1153) and not from shoe manufacturers.

Mr. Brandeis believed on the information which he then had, or which he was given by Mr. Winslow, that the methods of the United Co. were beneficial particularly in that their leasing system and uniform terms to all worked to the advantage of the small shoe manufacturers (217, 705), and that the shoe manufacturers were content with the terms of the leases. At this time Mr. Coolidge, one of the counsel for the United Co. and who was experienced in legislative matters, was ill and Mr. Winslow requested Mr. Brandeis to act (221, 705). He did so, and in April, 1906, he appeared before a committee and argued (232) against the proposed legislation, adopting the facts furnished him by Mr. Winslow (187). He stated that he was counsel for a large number of shoe manufacturers (228) and Mr. Winslow then knew of this fact (228, 179).

He, Mr. Winslow, denied it emphatically (181) on February 16, 1916, until confronted with the statement (228).

In May, 1906, Mr. Brandeis undertook to secure the assistance of some of these shoe manufacturers, Mr. McElwain, Mr. Jones, and Mr. Bliss, to support the opposition to the proposed legislation (218, 714). He then learned that they objected to the tying clauses in the leases (218, 715). Nevertheless, it was arranged that they would join in the opposition, but upon the understanding that Mr. Winslow would take up the adjustment of the differences, by conference with them, without legislation (176, 717). Mr. McElwain asked Mr. Winslow to appoint a time for the conferences, and Mr. Winslow expressed the desire to postpone them until fall, as he was about starting for Europe, and this was satisfactory to Mr. McElwain (218, 722). The bill in the legislature failed to pass.

In September, 1906, Mr. Brandeis wrote to Mr. Howe, counsel and member of the executive committee, calling to his attention the great significance of the decision rendered August 22, 1906, by Judge Seamans in Indiana Manufacturing Co. *v.* J. T. Case Thrashing Machine Co. (148 Fed., 21), holding that there might be a monopolistic combination of patents contrary to the Sherman antitrust law (723).

Mr. Winslow says that Mr. Brandeis before his resignation and acceptance of other employment never gave any "intimation" that there was "any legal or moral" wrong in the company's organization or methods (240).

On October 5, 1906, Mr. Brandeis, in response to a letter of criticism from Mr. Erving Winslow, a stranger to the company, wrote him reciting what he had ascertained the preceding spring and defending the company's methods (162).

On October 6, 1906, Mr. Erving Winslow replied, saying that even on the facts stated he thought that the company was open to criticism (724).

After Mr. Winslow's return from Europe, about October (181), some conferences (228) took place between Mr. Winslow and Mr. Jones and Mr. McElwain, in which they disclosed more fully the objections to the exclusive use, full capacity, and tying clauses, but nothing was accomplished toward the removal of any of these clauses (221), and Mr. Winslow did not discuss the matter much (227, 725, 727).

Mr. Brandeis became convinced by these new disclosures that the company's policy was questionable, and also that nothing was going to be accomplished (221) and that he must either take the matter up in the board of directors and fight, probably unsuccessfully, with Mr. Winslow and his associates or retire from the company (221). On December 6, 1906, Mr. Brandeis resigned from the board of directors, without assigning this difference of opinion as a reason in his letter of resignation (163), but Mr. Winslow understood perfectly that Mr. Brandeis's desire not to be a party to the existing policy of the company was the reason. Mr. Winslow telephoned him on December 11, before his resignation had been accepted, and said: "I am very sorry to have you go, and don't want you to feel that there need be any embarrassment on your part; but, of course, if you think, in view of what may be called up this winter, you would rather not be there, we do not want to insist upon it" (726). Mr. Brandeis replied that it might be embarrassing both to Mr. Winslow and to him, and that if they did not agree as to the course to be pursued he might, if he were a director, feel called upon to bring the matter up before the board (726). It had been announced already (179) that there would be an effort in the

coming winter to get legislation against the practices of the company (726).

Efforts to get the company to make some changes continued and Mr. Winslow had long conferences with Mr. Brandeis on January 2 and January 7, 1907 (726), at which Mr. Brandeis urged his objections at length to the tying and other clauses, but Mr. Winslow was unwilling to make any change (177, 178, 179, 180, 730). Mr. Brandeis told him that by making the changes they could avoid trouble (182). Later (735), in a letter to Mr. Winslow referring to this interview, Mr. Brandeis speaks of the "radical differences between your opinion and mine when we last met" (237). Mr. Winslow replied the next day, saying, "We value your opinion in these matters very highly, even if we do not decide that we can follow same at this time" (735). Mr. Brandeis had become convinced by this time that, while the policy and methods of the company had on the whole operated beneficially up to that time, they must, if pursued, eventually prove injurious both to the community and the company's interest; and he urged most strenuously upon Mr. Winslow and the officials who participated in the conference with him that these methods be changed, that the policy of monopoly be abandoned, and particularly that the tying clauses be eliminated from the leases (219).

Mr. Winslow testified on direct examination that he knew of no reason for Mr. Brandeis's resignation except that expressed in the letter (175), and that at the later conference of January 7, 1907, "he expressed a desire that the United Co. make changes in its leases, but he made no concrete suggestion, though asked to do so," and left the inference clear that his severance of relations with the company had nothing to do with this (163). In his widely published attack on Mr. Brandeis in the spring of 1912 he said that during the time that Mr. Brandeis was director and counsel "there entered his mind no doubt whatever of the propriety and legality" of the company's policies and methods. In his published letter of January 19, 1912, attacking Mr. Brandeis, to Senator CLAPP, as chairman of the Committee on Interstate Commerce, he says that up to the day that Mr. Brandeis accepted employment by clients having hostile interests he never gave any "intimation" of any legal or moral wrong in the company's organization or methods, and nowhere in the letter does he refer to the fact that Mr. Brandeis had suggested any changes of policy. In his published letter of February 29, 1912, to Senator CLAPP he refers to the fact that Mr. Brandeis's letter of resignation shows "no uneasiness in Mr. Brandeis's mind as to the soundness of the company's policy or the propriety of its methods."

At the time of testifying on direct examination and at the time of these publications Mr. Winslow had in his possession the letters of September 12 and 13, 1907, and Mr. Brandeis's narrative of the facts (221, 227). His answers on cross-examination showed his full consciousness of the stand which Mr. Brandeis had taken (177, 178, 179, 180, 182, 237).

After January 7, 1907, Mr. Brandeis never acted as counsel for the company and no new matters were taken to his firm. One of the members of the firm continued to act in one litigation which involved no question of tying clauses or monopoly (731). This litigation was begun to secure the return of certain machines claimed to be the property of the company. This was tried in December, 1906, was argued on exceptions in November, 1907, and decided in January, 1908 (734). Other suits followed as a result of this decision, and the company retained other counsel for them. Incidental services were rendered in this connection until 1909.

In the legislative proceedings in 1907, and in all new matters, the company employed other counsel (183, 734).

Mr. Brandeis's termination of relations with the United Shoe Machinery Co. was due to his unwillingness to be identified longer with their policies, which he then expressly disapproved, because of the objections pointed out by the shoe manufacturers and others in the fall of 1906 (219) which came to him after he had expressed to Mr. Howe the possible significance of the decision of Judge Seamans in the legal situation (723) His severance of relations meant the loss of a client (727) and was without expectation of advantage to himself, financial or otherwise.

During the following three and one-half years he had nothing to do with shoe machinery matters (219), and in 1907 declined to act for Mr. Plant (735), a potential rival of the United Co. (222).

On April 30, 1907, the supreme judicial court gave to the legislature, in response to its request, an opinion that an act of the kind proposed aimed against certain of the clauses in use by the United Co. in its leases would be constitutional (220) (193 Mass., 605). Such an act was passed on June 1, 1907 (219–222). The company attempted to avoid the prohibition by adding to its leases a provision, in substance, that any provisions in the lease which were unlawful should not be deemed to be binding, and also a provision reserving to the company the right to cancel the lease on 30 days' notice (222). A use of new machines in contravention of the language of the tying clauses involved thereafter to the shoe manufacturers the double danger of a decision that the clauses were valid and of a 30-day termination at the will of the company (222, 737).

In June, 1910, Thomas G. Plant, the owners of two-thirds of the stock and the executive head of the Thomas G. Plant Co., a large shoe manufacturer, claimed to have perfected a complete line of shoe machinery which was installed in the shoe factory of the company. Other shoe manufacturers had this examined in their interest and received a favorable report. Mr. Charles H. Jones, of the Commonwealth Shoe & Leather Co., who had been a client of Mr. Brandeis and his firm for over 15 years, asked Brandeis, Dunbar & Nutter for an opinion as to whether he could legally take the new machines or whether the leases were enforceable to prevent them (223, 736).

They reached the conclusion that under the conditions which then existed and in the light of the decisions rendered, notably the Wall Paper Trust decision (212 U. S., 227), rendered February 1, 1909 (219), that the company was then a combination in restraint of trade and that the leases were unlawful as essential parts in perpetuating its monopoly, and were in themselves restraints of trade, and that the fact that the machines were patented did not relieve the leases of this objection, because designed to create a monopoly in excess of the patent. They so advised Mr. Jones (163, 736). Other manufacturers received the same advice from able counsel (223).

When this opinion was given the leases were public property, the opportunities, theoretic and practical, of getting shoe machinery from the United Co., or from any other source, and the practical possibilities of installing and using an entire new line of machinery at one time were known to the shoe manufacturers. The essential facts for forming the opinion rendered were not obtained from the United Co., confidentially or otherwise (744).

Mr. Winslow, on direct examination and in his published letters, used language and made omissions calculated to create a contrary impression (160, 164); but he was unable to think of a single fact in support of the unfounded insinuation (185, 249), and when the question showed that he perceived the truth, Mr. Winslow receded to the point that his real criticism of Mr. Brandeis was untruthfulness, not use of private information.

He said, "I do not criticise Mr. Brandeis's acting for anyone if he had at all times scrupulously, or I might say, fairly, confined himself to statements that were correct or true" (202).

When this opinion was rendered to Mr. Jones, Brandeis, Dunbar & Nutter were as free in right and propriety to render it as any lawyers at the bar, and it was rendered to one who had been their client from a time before the United Co. existed or was thought of. They received compensation for this opinion (1154).

It was given to Mr. Jones for his guidance and not as an advertising weapon. Mr. Jones has testified that he showed it to Mr. Plant and Mr. Plant published it. Neither Mr. Brandeis nor his firm had any part in any scheme of Mr. Plant's, if any there was, to force the United Co. to buy him out (253).

At about this time—summer of 1910—Mr. Brandeis, in response to a question in casual conversation from Mr. Barbour, a member of the executive committee of the United Co., told him that in his opinion it would be unlawful suppression of competition for them to buy out Plant or his patents (219, 223).

The company bought out Plant on September 23, 1910, and at a time when a group of large shoe manufacturers from St. Louis were considering the purchase.

Two of these manufacturers, Mr. Jackson Johnson and Mr. Milton S. Florsheim, then conferred with Mr. Winslow. He says that they proposed that they be permitted to acquire stock in the United Co. on unduly favorable terms, and be given better terms on their shoe machinery than was accorded to other manufacturers (196, 191). They deny this (192, 193).

During the following fall and winter (200) these and other manufacturers formed the Shoe Manufacturers' Alliance, designed to secure an opportunity to acquire shoe machinery, whether by purchase or lease, on terms that left the shoe manufacturers free to choose one or more machines at a unit price (163); that is, without tying or exclusive-use clauses. Their object was to get the freedom which Mr. Brandeis had advised the United Co. four years before that they ought to give.

Apparently the information which started the proceedings of the United States against the United Co. came from sources disconnected with this alliance and before Mr. Brandeis acted for them (739).

On January 4, 1911, a resident of Fall River, Mass., wrote the Attorney General about the matter. In consequence, on January 11, 1911, the Department of Justice asked the United States attorney for Massachusetts for information on the subject, and by March the representatives of the Government were making investigations at the offices of the company (201).

On May 3, 1911, the Western Shoe Manufacturers related to the Senate Committee on Finance the alleged monopolistic position which the United Co. had attained (Senate Hearings on the Tariff, 1–5, 1911, p. 3, Cong. Lib. H. F. 1756–a3–1911).

On May 4, 1911, in debate on the farmers' free list, in the House, Mr. Thayer, of Massachusetts, quoted the act passed in Massachusetts in 1907 and severely attacked the United Co. as a trust (Cong. Rec., 62d Cong., 1st sess., vol. 47, pt. 1/2, 953–954). This was followed by his introducing a bill on June 8 (pt. 2, p. 1808).

On May 9, 1911, Senator GORE introduced a resolution for an investigation into the use of patents in the creation of monopolies (pt. 2, p. 1072) (740).

The subject matter of the proposed legislation was the betterment of conditions as they existed in 1911, and not an attack upon past acts. The same is true of the equity suit brought by the Government and the indictment was limited to offenses committed since 1908.

On May 22, 1911, for the first time, representatives of the Shoe Manufacturers' Alliance consulted Mr. Brandeis, and he said that he was willing to act if what they were after was not special terms but freedom in the acquisition of shoe machinery for themselves and their competitors. They were in accord with this purpose and showed no hostility to the United Co., but the reverse (224, 737).

One of the first steps taken by Mr. Brandeis was to endeavor to ascertain what sources for shoe machinery were in existence (738).

In response to the request of the shoe manufacturers, Mr. Winslow apparently for the first time submitted to them a scheme for separating the different departments so that they would be independent of each other (201–260).

About this time, the Standard Oil decision (221 U. S., 1), having been rendered in May, Mr. Matz, one of the directors of the United Co., requested Mr. Winslow to bring the relations of the Government before the directors and to have Mr. Brandeis and Mr. James A. Garfield, his friend and lately Secretary of the Interior, talk to the directors. It was known that Mr. Brandeis was acting for the Shoe Manufacturers' Alliance (200). On June 17, 1911, Mr. Matz had sought advice from Mr. Brandeis and he had advised him to resign, as he, Brandeis, had done in 1906 (227, 741). Mr. Garfield advised Mr. Matz to bring the matter before the directors, and this was done on July 12, 1911 (221). At this time Mr. Brandeis stated fully to the directors his own course in severing his connection with the company at the end of 1906, his reasons therefor and his belief as to the effect of the company's course as a suppression of competition (221, 227).

When Mr. Winslow attacked Mr. Brandeis in his published letter of January 19, 1912 (217), to Senator CLAPP, Mr. Matz gave Mr. Brandeis permission to write to Senator CLAPP what Mr. Brandeis had said at this meeting, concerning his own course, and Mr. Brandeis did so (217, 221), omitting any reference to the fact that he had attended at Mr. Matz's request. Mr. Winslow, well knowing this fact (201), described the meeting in his published letter of February 29, 1912, to Senator CLAPP as a "part of the same campaign," i. e., that for the Western Alliance of Shoe Manufacturers.

In the following December (14, 15, and 16), 1911, Mr. Brandeis in the course of a three-day discussion before the Senate Committee on Interstate Commerce as to trusts, made reference to the United Shoe Machinery Co. as an illustration of the ultimate effect of a monopoly however innocently created and prudently managed (741).

In these remarks Mr. Brandeis made no point of the advantage of his former connection with the company.

Mr. Winslow in his testimony says that Mr. Brandeis's words carried added weight because of his known former connection (165, 202). In his letter to Senator CLAPP, January 19, 1912, Mr. Winslow criticized

Mr. Brandeis for failing to disclose this former connection and promptly himself gave the added weight, if any.

On January 26, 1912, before the Judiciary Committee of the House, in the hearings on the Thayer bill, the Lenroot bill, and the Peters bill (743, p. 13), and on February 16, 1914, before the Judiciary Committee of the House, he spoke on the same subject.

The statements made in these hearings (1025–1050), which Mr. Winslow says are false (166–168), are statements of inferences fully warranted by the information furnished by shoe manufacturers and others familiar with the real situation, and by the fact that these manufacturers do not know where they can get sufficient equipment of the necessary machines, except from the United Co. (746).

Some of the leases of what are regarded as essential machines provide in substance that on failure to observe the conditions of the exclusive use, additional machinery, or tying clauses of that or any other similar lease from the company, the company may terminate not only the particular lease but all other leases from the company.

Mr. Brandeis's statements concerning the effect of the United Co. upon Mr. Plant's credit were clearly expressed to be his own inferences (167). The hostility of the United Co., with its great power, would tend to reduce and perhaps to destroy Plant's credit, even if the company did absolutely nothing. Mr. Plant, who did not testify in the suit of the United States against the United Co., had said, in August, 1910, that the company had cut off his credit in Boston, and that he must therefore try New York (746). He says there was a definite basis for this belief. In New York negotiations were taken up with Mr. Evans and Mr. Wallace, of New York, and in the course of them Mr. Wiggin, of Chase Bank, a director of the United Co., spoke to Mr. Evans about the matter. It appears that Mr. Wiggin brought one of the attorneys for the United Co. into communication with Mr. Evans and Mr. Wallace (747). He says that he did not discourage the financing, but Mr. Plant did not know that and did not learn that they were in communication.

It is not possible to try out in detail the accuracy of Mr. Brandeis's statements, but enough has been said to show that there is no warrant for any of Mr. Winslow's assertions that they were not scrupulously truthful.

These services have been without compensation to Mr. Brandeis (742).

The most significant fact in this case is that Mr. Brandeis voluntarily and with no prospect of profit to himself gave up his connection with a profitable client as soon as and because he became convinced that the policy which it was pursuing and would not change was wrong. Four years later, and again without desire for profit to himself, he gave his assistance to the effort to stop what he believed would be the future and increasing effect upon the community of that wrong policy. It may well be asked, How long does an employment mortgage the lawyer's conscience? After all, what "private information" was divulged? I can not see that there was any.

GILLETTE CASE.

It is urged that the action of Mr. Brandeis, taken for Mr. Gillette in the organization of the Gillette Securities Co., was unprofessional because of its effect upon Mr. Joyce. (Richardson, 355 to 371; Williams, 372 to 384.) This contention seems to me to be far-fetched, if there can be found, indeed, the slightest reason to urge it.

Mr. Brandeis and his firm acted as counsel for Mr. Gillette, beginning about 1901 (887). In 1906 suits were brought against Gillette, Joyce, Curran, Holloway, and Heilborn (888), claiming that they had conspired to obtain, and in consequence had obtained, stock of several stockholders of the Gillette Safety Razor Co. by false representations, and that the defendants had also, as directors of the company, paid Gillette, Joyce, and Holloway excessive salaries. The defendants made a joint defense, and Brandeis, Dunbar & Nutter acted for them in so doing.

During the pendency of the suits Mr. Gillette and Mr. Holloway became convinced that Mr. Joyce was cooperating with another stockholder in measures to oust Mr. Holloway and possibly Mr. Gillette from their official positions in the company (889). Mr. Joyce probably had other counsel (889). Mr. Gillette and Mr. Holloway obtained the cooperation of other stockholders to guard against the ousting of Holloway and Gillette. In order to obtain a majority of the stock it was necessary to secure the stock or the cooperation of Mr. Stewart and Mr. Flaccus, plaintiffs in the pending litigation (889) and believed to be the clients of Mr. Richardson, with whom Mr. Williams was supposed to be cooperating, because he had clients having a similar interest (888).

Mr. Brandeis acted for Mr. Gillette in some of the conferences with Mr. Richardson, which resulted in the purchase by Mr. Gillette of Mr. Flaccus's stock and an agreement between Mr. Gillette and Mr. Stewart whereby Mr. Stewart exchanged his stock for stock in a holding company which was formed to acquire a majority of the stock of the razor company (889).

There was nothing in the proceedings that bore any relation to the pending suits, except that the sale of Mr. Flaccus's stock involved his giving up the pending suit, and this was by so much to the advantage of Mr. Joyce (891).

The facts of this matter became known to Mr. Joyce about January, 1907. Brandeis, Dunbar & Nutter continued the defense of the pending cases for all of the defendants and obtained a decision wholly favorable to all the defendants except Mr. Heilborn. Before this decision had become final, other suits had been brought against Mr. Heilborn and Mr. Joyce, not including Mr. Gillette or Mr. Holloway. In these Mr. Joyce's counsel, Hurlbut, Jones & Cabot, appeared for Mr. Joyce. They also appeared in the Stewart case, Mr. Jones, of that firm, having stated that Mr. Joyce thought that his interests might differ from those of Mr. Holloway, so that he wanted to be separately represented (892).

In connection with negotiations with Mr. Stewart to have him join in exchanging his stock for stock in the holding company, Mr. Gillette agreed to cause him to be elected an officer of the company. Mr. Gillette subsequently did all that he could to carry out this agreement, through action by the board of directors in which he and those in sympathy with him did not have a majority of the votes. Before the next annual meeting, Mr. Gillette bought Mr. Stewart's stock and so terminated his obligation by agreement with Mr. Stewart (986).

At a later date, Mr. Joyce purchased Mr. Holloway's stock in the holding company and then brought a suit to dissolve the holding company or to convert his holding company stock into stock in the razor company, which would have given him a majority of the stock in the razor company (893). Subsequently, in December, 1911, Mr. Joyce bought Mr. Gillette's stock, or a substantial part of it, and thereby secured control and the suit was dismissed (893).

There was nothing to criticize in Mr. Brandeis's connection with the matter at any point (883).

ILLINOIS CENTRAL RAILROAD PROXIES.

It is charged that Mr. Brandeis misrepresented his relation to the procuring of the proxies for the meeting of the stockholders of the Illinois Central Railroad Co. in the fall of 1907. (Peabody, 754.)

On May 19, 1908, Mr. Joseph B. Warner, the chairman of the commission on commerce and industry, in committee of the Massachusetts Legislature, in supporting the position taken by the majority of that commission in favor of the New York, New Haven & Hartford Co. against the opposition of the minority (638, 639), referred to Mr. Brandeis, who opposed the position taken by the majority of the commission. In the course of his remarks Mr. Warner referred to Mr. Brandeis's activities in connection with the obtaining of proxies for the meeting of the stockholders of the Illinois Central Railroad Co. On the same day, May 19, 1908 (697), Mr. Brandeis wrote to the chairman of the committee a precise statement of the exact relation of himself and of his firm to these proxies (352).

In the fall of 1907 Mr. Brandeis's partner, Mr. Nutter, was requested by Mr. Catchings, of the firm of Sullivan & Cromwell, New York, to supervise the solicitation in and about Boston of proxies in the interest of the existing board of directors of the Illinois Central Railroad Co., of which Mr. Harrahan was the president and Mr. E. H. Harriman an important member. The opponents in this contest were a faction headed by Mr. Fish. Mr. Nutter appealed to Mr. Brandeis before taking the matter up, to assure himself that there was nothing in it that would conflict in any way with the work Mr. Brandeis was doing in connection with the attempted so-called merger of the Boston & Maine Railroad with the New York, New Haven & Hartford Railroad. Mr. Brandeis made special inquiries to assure himself that there was no conflict and that the side which was advocated by Mr. Catchings, in the internal difficulties of the company, was one which appeared to be for the best interests of the stockholders (340). There was nothing to indicate, and there is nothing now to indicate, that either side in this controversy had any relation to the railroad situation in New England. Mr. Brandeis "was expected to do nothing, and he did do nothing," in this matter (342), and the evidence is consistent with the statement in the letter of Mr. Brandeis to the chairman of the House Committee on Railroads (352). It would seem that anyone looking at the evidence (353–354) and the letter signed by Alfred Jaretzki, and noting the failure to produce Mr. Jaretzki, could not fail to dismiss this charge as wholly unsupported.

LENNOX CASE.

The claim asserted in this matter is that Mr. Brandeis was guilty of unprofessional conduct in accepting employment as counsel for P. Lennox & Co., or James Lennox, and then acting against them.

P. Lennox & Co., a partnership consisting of Patrick Lennox and his son, James T. Lennox, and doing a large tanning business in Lynn, Salem, and Peabody, Mass., found themselves seriously crippled financially at the beginning of September, 1907. At this time the active partner was James T. Lennox. His father had been inactive in the business for about 10 years. This financial embarrassment led James T. Lennox to send for Mr. Stein of the Abe Stein Co., of New York (1104), who was a creditor (Whipple, 286). Mr. Stein and his counsel, Mr. Stroock, reached Boston on the night of September 3, 1907; and on the morning of September 4 they had a conference with James T. Lennox; Mr. Spaulding, of the Columbia Kid Co., conducting a selling agency (778) for P. Lennox & Co., and Mr. Coburn, treasurer of the Tracy Bros. Leather Co., in which James T. Lennox owned an interest (770; Stroock, 311). On learning of the financial situation, Mr. Stroock suggested that as he was counsel for Mr. Stein and not a Massachusetts lawyer, Mr. Lennox ought to have counsel (1073, 1114). He suggested Mr. Brandeis, and he being satisfactory to Mr. Lennox, Mr. Stroock called on Mr. Brandeis on the morning of September 4 (1074) to arrange an interview.

The subject under consideration at this time was the possibility that Mr. Stein might make Mr. Lennox a further loan, if the prospects were such that this was safe and likely to bring success. (Stroock, 315; Whipple, 286; Brandeis letter, 289, 1099.) Mr. Stein was ready to make the loan (1105).

Mr. Stroock arranged (1076) with Mr. Brandeis for an interview, and soon after 10 in the morning of September 4 (Stroock, 310, 1014), Mr. Stein, Mr. Stroock, Mr. Lennox, Mr. Coburn, and Mr. Spaulding called together on Mr. Brandeis. He had never met Mr. Stroock or James T. Lennox (Stroock, 312), and never has met Patrick Lennox.

Shortly after the interview began (Stroock, 311), or in the afternoon, a stenographer was called in and took notes of the interview (1014; stenographer's report, 775). The first thing dictated was a form of letter which apparently Mr. Stroock desired to send to certain concerns holding leather received from P. Lennox & Co., to which Mr. Stein asserted title under the terms of certain trust receipts (Stroock, 313), under which he had originally supplied the skins to P. Lennox & Co. (788, 1014). This was dictated in the presence of all (1077, 1112).

The interview lasted into the afternoon, or, as Mr. Stroock put it, consisted of two interviews on that day, at both of which all the same persons were present (Stroock, 310). Mr. Stroock's recollection is that it was at the afternoon interview that the stenographer was present first (311) and that the morning conference lasted but a few moments (311). Mr. Stroock says that it was at the afternoon interview that Mr. Brandeis said, for the first time, that he could take the matter up (312), notwithstanding his firm's sometime relation to a creditor, Weil, Farrell & Co. The stenographer's report indicates convincingly that this remark did not occur until the following morning (788). She has no reference to such a statement on the afternoon of September 4 (775–787), and has one on the following morning inconsistent with the question's having been settled the day before (788). Other remarks which Mr. Stroock attributes to the afternoon of September 4 (312) do not appear in the stenographer's notes of that interview (775–786), but do in those for September 5 (790), notably Mr. Stroock's statement that—

"I said that I saw no reason why Mr. Brandeis could not go over the matter and work out *the whole situation* for the benefit of all the parties, because it seemed to me that this was a situation where the *interests of the debtor* and the *interests of the creditors* were alike" (312). [Italics not in original.]

Mr. Lennox says that the stenographer was present when Mr. Brandeis said he would take the case (1119), and that the first day, September 4, Mr. Brandeis said that he would not give his decision about undertaking his case until the following day (1131), and that on the following day he said that he would act as his counsel. This shows clearly that Mr. Lennox is testifying to the same things which

appear in detail and with precision in the stenographer's notes of September 5, hereafter referred to.

The conversation on September 4 was conducted openly in the presence of all and without any private communications between Mr. Lennox and Mr. Brandeis. Mr. Lennox was at no time alone with Mr. Brandeis. Mr. Stein was a creditor, Mr. Spalding a debtor, Mr. Coburn was a business associate and adviser (785). The conversation was long. The names of the principal creditors and the amounts of their claims were stated, and also the character and value of the assets (775–787). Mr. Lennox said that the partnership consisted of Patrick Lennox and himself (775), and it was not intimated, even remotely, that there was any question about it (Stroock, 313, 314). Mr. Lennox now says that the partnership consisted of his father and himself (1128). Mr. Lennox's statement of his assets and his liabilities showed clearly the insolvency of the partnership (775–786).

Mr. Brandeis then said:

"Well, now, I think it perfectly clear that you ought to discuss this matter with your father. He has unfortunately not had any information up to now, but he ought to have it now, and he ought to know fully the situation, and he ought to consider whom he would like to have represent him" (774, 786).

Mr. Lennox said that his father would leave it all to him, and that as notes were coming due every day it was imperative that he do something (786).

Mr. Brandeis said that the situation was much more serious than he had supposed from what Mr. Stroock had said in the morning, and that he had very little doubt that it would be necessary to make an assignment to trustees for the benefit of creditors (786). Mr. Lennox was a man of 30 years' experience in business and accustomed to business in a large way and understood what an assignment for the benefit of creditors was (1119, 1123).

The interview closed with Mr. Brandeis repeating that Mr. Lennox should talk the matter over with his father, who might have some preference in the matter of counsel, and asking Mr. Lennox to make up a more detailed statement of assets and liabilities, and suggesting another conference early the next morning (787).

On the following morning, September 5, Mr. Lennox and Mr. Stroock called on Mr. Brandeis. Mr. Stroock says that the others were present also (311). The stenographer's notes do not show this (791). Mr. Lennox began by reporting that he had talked with his father, and that he had no suggestion to offer (791, 1122). Then, after a short talk about assets and liabilities, Mr. Brandeis said:

"Well, now, Mr. Stroock, I should think that the question that we ought to decide now is whether I should act for Mr. Lennox in this matter or not. I of course understand you came to me after conference with Mr. Lennox to ask me whether I would act for Mr. Lennox."

To this Mr. Stroock replied:

"May I ask you this question, Mr. Brandeis: From all you know, do you believe that you could remain in the case in view of your firm's position with Weil, Farrell & Co.?"

To this Mr. Brandeis replied:

"Yes; I think I could. The position that I should take if I remained in the case for Mr. Lennox would be to give to everybody, to the best of my ability, a square deal" (792).

It seems clear that this conversation is the one which Mr. Stroock, testifying after eight years, has placed as occurring on the preceding day (312).

It is apparent that it was still being considered whether Mr. Brandeis should act in the matter at all. He followed this by saying that the only course for Mr. Lennox was absolute squareness and frankness to creditors, each to have whatever his legal rights might be. He said:

"I should, if I acted for Mr. Lennox, see that he got his legal rights—no more and no less" (793).

Next he repeated that he thought an assignment for the benefit of creditors would be advisable. Mr. Stroock suggested the possibility of bankruptcy if the assignment was made. Mr. Brandeis said it was a possibility, but he thought that the creditors would want to avoid bankruptcy (793). Then Mr. Stroock suggested Mr. Brandeis's acting for Stein rather than as "attorney for trustee of the Lennox family" (793). Mr. Brandeis favored the latter course and said:

"I should feel if I were acting for Mr. Lennox as trustee that it was the duty of the trustee to see that everybody got his legal rights as nearly as we could make it."

And in cases of doubt—

"I should feel that we ought to have a committee of the creditors with whom the trustee could confer; and if there are any questions of doubt in adjustment, that we get the advice of that committee and through them make the proper settlement" (793).

This is followed by repetitions of the same ideas in other words, with an explanation that an assignment would transfer all the property to the trustee for the purpose of liquidation and distribution to creditors (794); that the trustee could employ Mr. Lennox and that the trustee would have to determine with the creditors whether the business should be continued. This part of the discussion closed with Mr. Lennox's inquiry:

"You are speaking now of Mr. Brandeis acting as my counsel?"

To this Mr. Brandeis replied:

"Not altogether as your counsel, but as a trustee of your property" (795).

These are the conversations that determined the only understanding upon which Mr. Brandeis took this matter up; that is, as a trustee of this property for the benefit of the creditors and the debtors (1121). Mr. Lennox, Mr. Stroock, and Mr. Brandeis then agreed and now agree that the interests of the creditors and of the debtors were common and to realize as much as possible on their property, and not in conflict. (Stroock, 312; Whipple, 289; Lennox, 791, 1126.) Mr. Lennox asserted that his father also wanted to pay his creditors in full (791). They desired Mr. Brandeis's assistance to bring about this result.

All agreed, and now agree, that an assignment to a trustee for the benefit of creditors was the wisest course. (Stroock, 314, 795, 1088.) Indeed, there was no other course open except immediate bankruptcy proceedings.

Instead of Mr. Brandeis acting personally as trustee, it was agreed that Mr. Nutter should do so. (Stroock, 313.)

Up to the time that the assignment was made there had been no private communications between Mr. Brandeis and Mr. Lennox. They had never talked together alone. No papers had been shown or delivered to Mr. Brandeis. The attorney of the creditors was there all the time. There was no reason to suppose that the facts concerning the condition of the business could be longer concealed or that there was any desire or intention to conceal them.

Whatever may have been the occasion for coming to Mr. Brandeis in the first place, the only employment which he accepted was that of trustee for the benefit of creditors or as attorney for such trustee (827, 828). He was free to act. He was under no obligation to become or remain counsel for Mr. Lennox in opposition to this trust. He was not employed by any other client in this matter. He gave the only sound advice that could be given at that time, and everything which he did thereafter was consistent with, and required for, the performance of that trust (834).

The assignment was in the printed form (796) in use in the office. It described the assignors as Patrick Lennox and James T. Lennox, copartners as P. Lennox & Co., and the assignee as George R. Nutter. James T. Lennox signed it and gave Mr. Nutter a letter to his father, Patrick Lennox (314, 801). Mr. Nutter called on Patrick Lennox and told him that this was an assignment for the benefit of creditors, and told him what an assignment was (802). Patrick Lennox was in full (1122) possession of his faculties and in physical condition to be at his place of business the following day.

September 5, 1907, Mr. Nutter arranged with an audit company to begin work the next day to find out the exact financial condition.

On that day, pursuant to prior arrangement with Mr. Stroock and Mr. Lennox (795), Mr. Brandeis talked with numerous creditors, and told Mr. Lennox, Mr. Spaulding, Mr. Nutter, Mr. Stein, and Mr. Stroock that he had told those creditors that the assignment had been executed but that they would like to avoid recording it (803–804).

Then followed lengthy interviews for the information of the trustee as to the condition of the accounts, assets, and liabilities (804).

On September 6, 1907, Mr. Nutter went to the office of P. Lennox & Co. Before entering he met Patrick Lennox and he asked him how things were getting along, and Mr. Nutter said all right (804). This was the second and last time (805) that Mr. Nutter ever saw Patrick Lennox. Mr. Nutter learned that the books had not been balanced since 1902 and did not cover many outside business transactions and were meager (293, 804).

The employees of the audit company called to Mr. Nutter's attention two checks for $5,000 each, apparently drawn on September 3, to pay notes, and that no notes to be paid on that day could be found (804).

On September 7, 1907, Mr. Brandeis, Mr. Nutter, and Mr. Lennox had an interview, in which Mr. Nutter asked Mr. Lennox what had become of these two checks for $5,000 each, drawn on September 3 (804). Mr. Lennox said finally that he had the money in the safe of another man in Lynn (804). He then agreed to bring the money to the assignee, and did so on September 9. Nothing by way of lack of frankness to Mr. Brandeis and Mr. Nutter on Mr. Lennox's part had been noticed by them before this (805).

On September 9 it became apparent that an extension by the creditors was out of the question and the newspapers published a statement that the firm was financially embarrassed (314, 805, 1102). On that day Mr. Nutter told Mr. Lennox that hope of an extension was out of the question and that it was necessary to record the assignment. Mr. Lennox assented to this (805) before it was recorded (1169).

On September 10, 1907, Mr. Nutter recorded the assignment.

On September 10, 1907, Mr. J. P. Leahy called upon Mr. Nutter and said that he acted for Mr. Patrick Lennox, and from that time he continued to appear in that capacity in this matter for two or more years (805, 806). This showed a clear understanding that Mr. Brandeis was not counsel for Patrick Lennox, and there was nothing to distinguish between Patrick and James T. in that respect.

Patrick Lennox took a position of opposition immediately (291), and it was this opposition more than anything done by James T. Lennox that rendered bankruptcy proceedings inevitable (1130, 1133, 1134).

On September 11, 1907, Mr. Stroock and Mr. Stein called on Mr. Brandeis and asked him to act particularly for Mr. Stein, and Mr. Brandeis told them that he could act for Mr. Stein only, as for all the creditors equally, and that he had no objection to their getting independent counsel to act for them specially (819, 820). They decided not to do so for the time being (823). This interview as a whole shows that there was a clear understanding that Mr. Brandeis was acting for the trustee for creditors only (815, 828, 1097).

From September 4, 1907, to September 18, 1907, the interviews between James T. Lennox and Mr. Brandeis and Mr. Nutter were almost daily. On September 18 Mr. Lennox declined to go on with the matter and help the assignee in discovering the assets and liabilities unless he received $500 per week (1131, 1127). Mr. Nutter said that this sum was unreasonable and would not be approved by the creditors, but that he would pay him $100 per week, and perhaps could get approval of something better. This was declined by Mr. Lennox, and he rendered little or no assistance to the assignee thereafter (828, 1127, 290).

Mr. Brandeis took substantially no active part in the matter after this, and Mr. Lennox did not consult him in any way or ask him to do anything (290). He last saw him in the matter on September 19, 1907 (828).

On October 4, 1907, Mr. Nutter submitted to Mr. Leahy a draft of his proposed report to creditors, and at Mr. Leahy's request he inserted in it a statement that for some years Patrick Lennox had not been active in the business, and made some other changes until they agreed upon the form of the report (825). No objection was made to the part of the report which stated that P. Lennox & Co. was composed of Patrick Lennox and James T. Lennox.

On October 24, 1907, Mr. Nutter learned for the first time, and from Mr. Leahy, that it was claimed that Patrick Lennox was not a partner in P. Lennox & Co. (826). This put Mr. Nutter in a position where he was compelled by his duty as trustee to establish the fact of the partnership (831). Creditors to the amount of about $380,000 had assented to the assignment (829).

During September and October, 1907, the investigations into the business were continued by Mr. Nutter, and he had several interviews with Mr. Leahy about possible terms of composition.

Mr. Nutter was unable to get from Mr. Lennox adequate information concerning the property covered by the assignment (303, 314), and the creditors insisted that bankruptcy proceedings were necessary. Mr. Lennox was aware of this (832), and Mr. Nutter wrote him to this effect (1130). Mr. Lennox raised no objection to bankruptcy proceedings.

Mr. Nutter made repeated requests for information from Mr. Leahy as to the property of Patrick Lennox, but did not secure it (291, 1130). He became convinced that bankruptcy proceedings were necessary.

On October 31, 1907, Mr. Nutter, Mr. Herrick—representing Lee Higginson & Co., large creditors—and Mr. Leahy had a conversation, at which it was stated by Mr. Nutter that bankruptcy proceedings seemed inevitable (829). He reported this to James T. Lennox by letter on November 9, 1907 (1130), and informed him that, under the circumstances, if a composition was to be effected it would necessitate bankruptcy (1130).

On November 11, 1907, Mr. Nutter issued a report to the creditors, stating that the estate could be administered in bankruptcy better than under the assignment (830).

Under the Massachusetts law a voluntary assignee has no power to compel the assignor to submit to an examination as to the property covered by the assignment.

Between November 13, 1907, and January 4, 1908, several petitions in bankruptcy were filed on behalf of different creditors. The one on which Brandeis, Dunbar & Nutter appeared was brought first and by Allen Lane & Co. and other creditors (830). No compensation was paid by these (836, 847) creditors.

Mr. Lennox says that Mr. Nutter told him that he was assignee for the benefit of his creditors and not his counsel. Mr. Nutter told Mr. Lennox that he had better get independent counsel (836, 1126). This was prior to October 21, as Mr. Nutter saw him last on October 21 (290, 836, 1132).

On November 18, 1907, Mr. Sherman L. Whipple began to act as counsel for James T. Lennox, and continued to do so for two years or more (290). He promptly saw Mr. Brandeis and told him that Mr. Lennox claimed that Mr. Brandeis had undertaken to act as his counsel. Mr. Brandeis at once told him the facts (289).

In the bankruptcy proceedings an answer was filed alleging on behalf of Patrick Lennox that he was not a partner in P. Lennox & Co. and that the assignment had been obtained by fraud (834). The manifest duty of the trustees was to maintain the integrity of the assignment and the existence of the partnership which had made it.

No evidence was offered in support of the allegation that the execution of the assignment had been obtained by fraud.

Mr. Lennox said that his only criticism of Mr. Brandeis or of Mr. Nutter was that Mr. Nutter would not pay him at the rate of $500 per week (828, 1131).

The stenographer's transcript of the interview defining Mr. Brandeis's relation to the matter was offered in evidence in the hearings in bankruptcy (1164).

The case was heard before a referee in bankruptcy, who found that the partnership existed (847). This was followed by a trial before a jury, at which the court directed a verdict (1167), and then the case was taken by Patrick Lennox to the circuit court of appeals, without success (847).

Mr. Nutter, Mr. Herrick, and Mr. Hall became trustees in bankruptcy (830, 1170). The administration as assignee and trustee took four years (1144).

Counsel for Mr. Lennox and the trustees negotiated for a composition offer and finally one was made by which the firm creditors received 40 per cent and the individual creditors 100 per cent, and the bankruptcy was closed (839).

Neither Mr. Brandeis nor Mr. Nutter ever deviated from the course which Mr. Brandeis outlined as the only one upon which he would act in the matter, that of trustee for the benefit of all the creditors alike, and of counsel for the trustee. Only the surplus, if any, was to go to the debtor. All the steps taken were necessary to protect the creditors and were taken in performance of the duty incurred. No compensation was received from any source, except out of the trust fund (847, 1145).

No retainer or other payment for services was ever made to Mr. Brandeis or his firm by Patrick Lennox or James T. Lennox, Weil, Farrell & Co., or any other creditors (315, 847, 1113, 1145).

When the assignment was made there was no reason to suppose that there was the slightest conflict of interests between the debtor and the creditor (289, 312). It was understood that Mr. Brandeis was to act as counsel for the trustee. In that sense he was to act for the creditors and for the debtors in common (289, 312) to the point where either had any interests adverse to those of the trustee. The trustee and his counsel and the debtors had the common moral and legal duty of discovering, disclosing, and getting into the possession of the trustee all the property. They must perform that duty. When the debtors unexpectedly failed (303, 1134) to perform this duty, their conduct necessitated legal proceedings. They, and not the trustee or his counsel, were the ones who acted adversely to the common understanding on which the matter had been undertaken (289). Only that adverse action made the bankruptcy proceedings necessary (289, 834, 1130). The trustee and his counsel were not relieved (299, 300) from performing their affirmative moral and legal duty by the fact that the debtors then took an adverse position, contrary to the understanding upon which the assignment was made. If the debtors withheld property, the assignee must take action to get it. If the debtors would not disclose their property, the assignee must take action to discover it. The examinations of James T. Lennox were in pursuance of the duty of the trustees to ascertain about the property of the debtors (820, 822, 823, 1007, 1170). This was the only action taken. No unwarranted feeling of embarrassment or taste (296) could justify the assignee or his counsel in neglecting the performance of this duty (290, 834).

When criminal proceedings were instituted against Mr. Lennox, the assignee and his counsel were under no duty to prosecute. They were asked to do so and declined (297, 304, 305, 837, 1145, 1170).

Mr. Whipple, who was his adversary, saw clearly that Mr. Brandeis's conduct was upright throughout (299).

Neither Mr. Brandeis nor Mr. Nutter declined to act for Mr. Lennox so far as it was consistent with the duty of a trustee for creditors (1131), and Mr. Lennox makes no criticism of either, except that Mr. Nutter would not pay him a salary of $500 per week (1132).

The events in this case were due entirely to the fact that the debtors went back on the plan to which they agreed and under which the matter was taken up, namely, to devote their property fully and without hesitation to the payment of their debts. They were never deserted in any way. When they refused their assistance, and one of them denied a partnership which unquestionably existed and failed to turn over assets and charged fraud, of which there was no evidence whatever, they were deserting, and it would have been dishonorable in the trustee and his firm to assist in the attempt or to fail to take all necessary steps to secure the performance of the trust. Such a course would have been inexcusable, and the one pursued was the only possible one. The debtors were fully informed of everything and were never refused any assistance consistent with the trust. The course pursued by Mr. Brandeis and his firm was consistent and honorable throughout. No better one can be suggested (833). With Lennox's knowledge and consent, Mr. Nutter became assignee. It is inconceivable that Mr. Brandeis would thereafter desert his partner.

GLAVIS APPEARANCE.

It is charged that Mr. Brandeis was guilty of unprofessional conduct in appearing for Louis R. Glavis at the expense of Collier's Weekly, and concealing the source of his compensation from the select committee engaged in the investigation of the Department of the Interior and of the Bureau of Forestry. (Senate 719, 61st Cong., 3d sess., 1072.)

On August 18, 1909, Louis R. Glavis, then Chief of Field Division of the General Land Office, made a report to the President setting out facts which, if true, indicated that Secretary Ballinger was not a fit official for his high position. On September 13, 1909, the President rendered a decision exonerating Mr. Ballinger and authorizing the dismissal of Mr. Glavis, which immediately followed. On September 20, 1909, Mr. Glavis wrote the President of his intention to make public the charges leading to what he believed was his unwarranted dismissal. (Investigation 888.) On November 13, 1909, the charges were published in Collier's Weekly (330.) On January 19, 1910, the resolution was passed by Congress for the investigation. This resolution contained a provision that "Any official or ex-official of the Department of the Interior, or of the Bureau of Forestry in the Department of Agriculture, whose official conduct is in question, may appear and be heard before the said joint committee or any subcommittee thereof, in person or by counsel" (988).

Collier's Weekly having taken the legal and moral responsibility of presenting Mr. Glavis's charges to the country, felt it imperative to see that all proper steps were taken to have these charges verified before the committee (453–460; Sullivan, 325–335, 385). Collier's accordingly asked Mr. Brandeis to act for Glavis (455) and undertook to pay him therefor, and subsequently did pay him. No pretense was made that Mr. Brandeis was acting as unpaid counsel or for the public, and it was probably assumed by the committee that he was to be paid (994) and that Glavis was not in a position to pay for five months of continuous work by a man of Mr. Brandeis's standing and ability. (Senator FLETCHER of that committee, 994.)

It was thought by Collier's Weekly that it was not seemly to attempt to get the credit of conducting the investigaion (455), but no attempt whatever was made by anyone to conceal the fact that Mr. Brandeis was to be paid by Collier's (330, 332, 455). It was freely talked about (332, 455). It was known to members of the Interior Department who were in opposition (455). When occasion arose, the fact that Collier's Weekly was paying Mr. Brandeis was referred to in the paper itself (706).

Mr. Brandeis's efforts in the case were directed toward establishing the truth of the Glavis charges. He made no effort to have his own position or any belief that he was acting merely as a friend give any added weight to these efforts; and no occasion arose on which there would have been any propriety in his parading the fact that some one other than Glavis was the source of his compensation. That fact was assumed generally. If it were improver to give or to take compensation for such services except from the party of record, no poor man could ever have competent counsel in any extensive proceedings. These investigations are not social functions, but serious affairs. The truth is the goal to be attained. The facts are the same no matter who may have paid the lawyers. The committee did not ask Mr. Brandeis who was paying his fee, because then it made no difference. The fact that during the trial Mr. Finney, of the Interior Department, knew that Mr. Brandeis was employed by Mr. Hapgood, of Collier's (455), seems to me to demonstrate that those interested knew the situation then as well as they do now. This incident has nothing in it detrimental to the nominee.

MR. THORNE'S OPPOSITION.

Mr. Brandeis was employed to represent the Interstate Commerce Commission in the Five Per Cent Advance Rate case of 1913, and worked in the matter for about a year. His letter of employment was as follows:

"We are of course aware of the fact that the carriers will not fail fully to present their side of the case, and the commission has felt that every effort should be made in the public interest adequately to present the other side. Would you care to undertake that burden? As you are already aware, in a number of cases of large importance and wide interest special counsel have been retained by the commission. As a matter of fact, that has not been their real relation in these controversies. They have been retained by the commission not as advocates or to support any special theory of the issues involved but as a means by which the commission might be advised of all the facts and not have to decide the issue upon a record made up largely in one interest. It is with this general thought in mind that the commission has reached the conclusion that in the Rate Advance case special counsel should be retained, and I have been asked to ascertain whether your engagements and inclinations are such as to permit you to undertake the task of seeing that all sides and angles of the case are presented of record, without advocating any particular theory for its disposition. In making this last observation you will of course understand that you will be expected to emphasize any aspect of the case which in your judgment, after an examination of the whole situation, may require emphasis. The commission, however, wishes to avoid a record based solely on a particular view or theory."

His duties were (1) to get before the commission those facts omitted by the carriers which might help the other side (2) to see that all sides and angles of the case were presented and (3) to emphasize any aspect of the case which in his "judgment" required it (8).

Mr. Thorne was employed by a number of railroad or public utilities commissions of several States and by organizations of shippers, some having general and some special and peculiar interests (7, 48, 53, 90).

Mr. Brandeis acted for the commission and not as a partisan (78, 87). He collected (76), formulated, and presented his evidence through the employees of the commission (51), and by the examination or cross-examination of the railroad employees and their witnesses (79) and not in connection with Mr. Thorne or any other counsel for particular interests (82).

Mr. Thorne prepared and presented his evidence in his own way "independently," as the witness puts it (80, 82).

The other attorneys for the railroads and for the shippers did the same.

The hearings for the reception of evidence began in October or November, 1913 (80), and closed on April 7, 1914, and the case was then set for the filing of briefs and the beginning of arguments on April 27, 1914 (15).

Counsel separated and prepared their briefs and arguments without conference or communication with each other concerning them (17, 50, 61, 82).

On April 27, 1914, they gathered, the briefs were filed, and it was arranged that the shippers' counsel should close their arguments first, with Mr. Thorne as the last, then Mr. Brandeis, and then counsel for the railroads.

On April 27 or 28 (76) Mr. Thorne asked Mr. Carmalt, the examiner attached to Commissioner Harlan's office and now chief examiner for the commission, what Mr. Brandeis's position in argument would be,

and Mr. Carmalt told Mr. Thorne that Mr. Brandeis "would take the position that the net operating income of these carriers was not adequate, with especial stress on the lines in Central Freight Association territory, but that he would take the further position that the methods which the carriers had pursued to obtain greater revenues, namely, a horizontal increase of 5 per cent, was not the proper method of increasing their revenues" (19, 76, 81, 83, 84). Mr. Thorne also asked Mr. Brandeis on that day and received substantially the same information as to his position (19).

This brief was understood to take substantially the same position (20, 61).

It was two or three days later, on April 30, that Mr. Thorne began his argument.

He was followed by Mr. Brandeis, who opened by saying that he had reached the following conclusion:

"First, that on the whole the net income, the net operating revenues of the carriers in official classification territory are smaller than is consistent with their assured prosperity and the welfare of the community, and that this is notably true of the C. F. A. lines, and it is true practically as to other lines also, because of the C. F. A. scale.

"In view of this it is desirable that steps should be taken as promptly as reasonably may be to increase those net revenues.

"Secondly, that the method proposed by the carriers for increasing these net revenues is essentially unsound; that it is, except as to a small part of the tariffs that have been submitted, entirely too low, and would, if approved, involve the exceeding of the powers vested by Congress in this commission; and as to that small part of the tariffs as to which it would be legal to approve them, it would be extremely unwise, both for the carriers and for the commission, to grant that approval.

"Third, that there is nothing in the conditions of the carriers which should prevent the adoption of those methods of increasing their revenues which are conformable to and in accordance with their interests and that of the community, and that there exists, as has been indicated on this record, adequate means of increasing those revenues without resort to the unsound, largely illegal, and undesirable method of the horizontal increase (33)."

Mr. Brandeis had developed in evidence with great diligence and skill the facts (77) which might bear adversely (84) on the railroads. The evidence as a whole had convinced him of the soundness of the conclusions stated. He would have been derelict in his duty to the commission employing him if he had concealed this from his employers (62, 63, 64, 66, 68, 84, 92). His conclusions should be those which he could advise the commission to write into an opinion. They could accept or reject his advice, but were employing him for such help as he could give (63, 71).

On the merits of his conclusion, the difference between Mr. Thorne and him appears to be that Mr. Thorne grouped (32) the net revenues of a whole body of carriers and struck an average which was, of course, not available to the many carriers who were below that average and some of them below zero, whereas Mr. Brandeis stated these revenues in detail in his brief (p. 55) and classified them into four classes—(1) above 12 per cent, (2) 6 to 12 per cent, (3) 0 to 6 per cent, and (4) below 0 (988).

Rates fixed by the average of revenues derived from different and not comparable services, would not save the community (66) from receiverships over those roads performing a necessary service and having too small net revenues or none at all (988).

Counsel for shippers and their clients recognize the correctness of Mr. Brandeis's position (14, 88, 89).

Mr. Brandeis opposed the increase and filed an eleborate brief (11, 89), and argued in opposition, taking the position that even if the "net revenues" of some of the railroads were inadequate the rates sought to be raised did "yield an adequate return to the common carriers, the railroads operating in official classification territory" for the services rendered, so that the first question laid down by the commission (12–13) should be answered in the affirmative.

Mr. Brandeis's remark as to the surplus was elicited by Mr. Thorne's inquiry and was not a part of his argument (32). It is to be read in the light of his argument that rates were not to be fixed by reference to surplus earnings but that if the rates were fixed at such an amount that railroads properly managed had an adequate return and no more, any excess produced by extra skill and diligence should not be taken from them by adopting a fixed limit to allowable earnings. He desired to increase the incentive for greater efficiency (31).

The increase in rates sought by the carriers was denied on the grounds urged by Mr. Brandeis (36).

Later, in the light of the new conditions created by the European war, a part of the increase sought was granted, against his opposition (36).

Mr. Brandeis performed his duty fully and with due regard for all parties and counsel interested, and for the commission which retained him as their counsel.

No complaint has been made by the commission, nor by any member of it, that I am aware of. Suppose Mr. Brandeis had taken the opposite view and had "decided" every point according to the view of Mr. Thorne, would he then have considered such a course wrong? The fact that the commission adopted Mr. Brandeis's view forces the conclusion that if Mr. Brandeis was culpable so is the commission. If he, as their attorney, advised them to do wrong and they did it, we must conclude that they indorsed the wrong or are incompetent, a conclusion which would shock the judgment of the country. In my opinion this charge is without any merit whatever.

FREDERICK M. KERBY.

It is suggested, rather than charged, that it was improper for Mr. Brandeis to receive information from Mr. Kerby because he was in the employ of Mr. Ballinger (650). This refers to the Ballinger case.

Kerby was in the employ of the United States, was paid by the United States, and his duty of fidelity was as much to the United States as to his immediate superior. It is not necessary to go further on that point. He was a stenographer assigned to work under Mr. Ballinger when he was the Secretary of the Interior.

On August 18, 1909, Louis R. Glavis, then Chief of Field Division of the General Land Office, made a report to the President setting out facts which, if true, indicated that Secretary Ballinger was not a fit person for his high position. On September 13, 1909, the President rendered a decision exonerating Mr. Ballinger and authorizing the dismissal of Mr. Glavis, which immediately followed.

On January 19, 1910, a joint resolution was passed for an investigation of the Department of the Interior and of the Bureau of Forestry.

In the investigation which followed, the main issue was whether Mr. Ballinger or Mr. Glavis was wrong. Upon this issue Glavis suffered from the inevitable presumption that the President's decision was right. It therefore became important to show the fact that the decision had been drafted, in substantial respects, in Mr. Ballinger's office after an ex parte presentment of the facts by Mr. Ballinger, and had been rendered in an unwarranted reliance upon him and his subordinates, and that Mr. Ballinger and his subordinates were disingenuous in their statements.

In September, 1909, Oscar Lawler, Assistant Attorney General, assigned to the Interior Department, drafted a letter of decision for the President to sign, condemning Glavis and exonerating Mr. Ballinger. He dictated this in part to Kerby.

Shortly after the publication of the President's letter exonerating Mr. Ballinger, Hugh A. Brown, a friend of Kerby's, asked him what he thought of the President's letter, and Kerby informed him that it was practically written in the Secretary's office (988; S. Doc. 719, 61st Cong., 3d sess., pp. 4395–4489, 4398). In response to a similar inquiry, Kerby also told another acquaintance, Arnold, who represented the United Press (4398). These communications were supposed to be confidential (4398). At some time Brown told Mr. Garfield that the draft had been prepared in the Secretary's office. Brown had been private secretary to Mr. Garfield when he was Secretary of the Interior.

In February, 1910, Brown told Kerby that Mr. Garfield knew that the letter had been prepared in the Secretary's office, and that he might be called as a witness (665). Kerby, apparently recognizing the right of the investigating committee to have the truth and his own duty to disclose it, feared that he might be dismissed as Glavis had been, and he therefore sought an interview with Mr. Garfield to see if there was not some way in which the information could be brought out without his being called. (S. Doc. 719, 4397, 4441.) Brown undertook to arrange this meeting for a particular evening, between February 10 and 15, at the house of Mr. Gifford Pinchot, where Mr. Garfield was staying. Kerby, supposing Brown had made this appointment, called on Mr. Garfield (665) and told him of his desire to avoid being called if the fact could be brought out in some other way. Mr. Garfield asked him to talk with Mr. Brandeis, who was at the house at the time, and he did so. This was the first time that he had met Mr. Brandeis (666).

After this conference Mr. Brandeis made several calls for papers, evidently seeking production of the Lawler memorandum (648).

On or about May 8, 1910, Arnold introduced Robert S. Wilson, of the Newspaper Enterprise Association, to Kerby (S. Doc., 4400) and Wilson sought to get a statement of the facts for publication and assured Kerby of a position if he was dismissed; but Kerby declined to give it, as he had a family dependent upon him (S. Doc., 4413). Later, on reading Mr. Ballinger's testimony (S. Doc., 4415, 4456), and seeing that the memorandum was not produced in response to the calls (S. Doc., 4419, 4443, 4449, 4460), and being sure that it was known that there was a copy of the letter in the department (S. Doc., 4419, 4429, 4448, 4452), and observing that a majority of the committee had declined (S. Doc., 4493) to call on the President for the production of the draft letter, he decided to publish the facts and so to force the production of the letter (649).

He had an interview with Mr. Brandeis at Wilson's office, in which Mr. Brandeis told him that he thought it was impossible for him to get the facts before the committee, but declined to advise him whether or not to publish the story (651).

This was the second and last time that Mr. Brandeis ever talked with him (S. Doc., 4448). In neither interview did Mr. Brandeis urge him to make the disclosure or offer him any inducement (S. Doc., 4431).

Kerby decided to publish the facts, and they appeared in the newspapers of May 14. On May 17, at the suggestion of the chairman of the committee, Kerby was called as a witness and examined by Mr. Ballinger's counsel and by Mr. Brandeis and testified in detail as to these facts (650, 667). There are no limits to suspicion, but there are rules of evidence, as well as just ways for determining the probatory effect of facts. Shall we ignore the proved facts and indulge a suspicion in order to condemn the nominee? I can not. The facts in this matter leave no stain upon Mr. Brandeis.

FAIR TRADE LEAGUE.

No charge has been suggested against Mr. Brandeis in connection with this league.

Mr. Brandeis has spoken in support of the price-maintenance principle and of the provisions therefor embodied in the Stevens bill. This has been without compensation and because of his belief in the principle underlying the bill (812, 976).

The evidence under this head was brought out at the instance of the committee for the same reason as stated under the heading "Dingley bill wool duty."

EQUITABLE POLICYHOLDERS' PROTECTIVE COMMITTEE.

It is charged that Mr. Brandeis, or his firm, was paid for his services as counsel for this protective committee, and subsequently accepted employment by the Equitable Life Assurance Society in a manner that was unprofessional (886).

From 1901 to the present time, Brandeis, Dunbar & Nutter have acted from time to time in different matters for the Equitable Life Assurance Society when that society had occasion to employ counsel in Boston (690).

In 1905 strife developed between the different officers of this society; and thereupon a number of large policyholders formed a protective committee to investigate and determine what, in their opinion, should be done for the best interests of the society, and Mr. Brandeis acted as unpaid counsel for this committee. He and the committee criticized the methods which had been pursued by the officers (669) and made many suggestions for improving the methods of this and other life insurance companies (689, 696). The committee continued as long as its services were of value (698). One of its members became a director (971). The committee was not designed to be antagonistic to the society, but for its protection and benefit (972). Mr. Brandeis rendered faithful, diligent, and satisfactory services to the committee (971). His employment by the company was that of attorney in specific cases, having nothing to do with the company's management. He had no retainer, but was paid for what he did. I can see nothing to criticize in his conduct.

NEW YORK, NEW HAVEN & HARTFORD RAILROAD CO. MERGER.

It is charged that Mr. Brandeis was in some way responsible for the destruction of the financial condition of the New York, New Haven & Hartford Railroad Co. (123). This charge is without foundation (271).

In 1907 and thereafter Mr. Brandeis did a large amount of public-spirited work in attempting to prevent the acquisition or retention by the New York, New Haven & Hartford Railroad Co. of the control of the Boston & Maine Railroad Co. and other transportation facilities in New England, tending, as he then claimed, to produce artificial transportation monopoly and suppression of normal railroad competition (809).

He investigated and made public the financial condition of this railroad (271, 618, 627). He was bitterly assailed for this (618, 620, 627, 642). The correctness of his position is now generally conceded (271, 638, 639, 645, 641). This extensive work was done without compensation (991).

WILLIAM F. FITZGERALD.

It was insinuated that Mr. Brandeis counseled an improper method for obtaining additional finances for the Old Dominion Copper Mining & Smelting Co., improperly concealed a report from stockholders, and went over to interests adverse to those of the Old Dominion Copper Mining & Smelting Co. because of the money to be obtained thereby (1225).

These insinuations were so entirely unwarranted that the entire committee thought it unnecessary to hear the facts in reply (1231).

From January 9, 1902, to April 2, 1902, Mr. Brandeis acted for Mr. Fitzgerald, Mr. Smith, and others in obtaining sufficient proxies to elect a new board of directors for the Old Dominion Copper Mining & Smelting Co. in place of the board favorable to Albert S. Bigelow, then president of the company (1246) (1228). On April 2, 1902, the new board was elected and Charles Sumner Smith was by it elected president of the company, and has remained the president ever since. The board of directors selected Mr. Brandeis as the counsel for the company, and he never was counsel for Mr. Fitzgerald in this matter thereafter (1247) (1231). He instituted suits against Mr. Bigelow and Mr. Lewisohn to discover alleged promoters' profits taken by them in the organization of the company in 1895 (1247).

In the late summer of 1903 it became apparent that the company must have additional funds. A plan was formed to secure these funds by having the company issue bonds to the extent of $750,000 with a bonus of stock to a securities company, the stock of which should be subscribed for by all of the stockholders in the Old Dominion Copper Mining & Smelting Co. Mr. Fitzgerald testified that this plan failed because only about one-third of the stockholders availed themselves of the opportunity to subscribe (1248).

At this time, in October, 1903, negotiations were taken up between the company and men connected with Phelps, Dodge & Co., owners of the stock of the United Globe mines, a corporation owning mines adjacent to those of the Old Dominion Copper Mining & Smelting Co.

These negotiations finally resulted in a plan for the formation of a holding company, organized under the laws of the State of Maine, called the Old Dominion Co. This company was to acquire the stock of the United Globe mines and the stock of such of the stockholders in the Old Dominion Copper Mining & Smelting Co. as wished to exchange their shares for shares in the new company.

This plan involved the consideration of the advantages which would result from this connection with the United Globe mines, in the value of the mines and the known financial strength and mining ability of Phelps, Dodge & Co.

The entire board of directors of the Old Dominion Copper Mining & Smelting Co., including a partner of Mr. Fitzgerald, was favorable to the plan. Mr. Fitzgerald desired to have a receiver appointed for the company and Mr. Smith opposed this (1250, 1282).

Mr. Smith requested a mining engineer to examine the United Globe mines (1281). He made an examination involving only a few hours (1281) and made a report to the effect that the United Globe mines property did not have a value as high relatively to those of the Old Dominion Copper Mining & Smelting Co. as the proportion of stock which it was proposed should go to the stockholders of the United Globe mines had to the value of the stock which it was proposed should be received by the stockholders in the Old Dominion Copper Mining & Smelting Co. Mr. Smith did not feel that the report of this cursory examination was of any value and believed that the connection with the stockholders in the United Globe mines had a value greatly in excess of what was to be gained from the acquisition of the properties which they owned (1281). Mr. Smith announced that the engineer's report was at the company's office, and many stockholders did come in and see the report and were given an explanation of its value (1281). He believed that the report alone, if published, would be misleading rather than helpful to stockholders (1281, 1283). He accordingly did not publish this report. In this he acted on his own initiative, and Mr. Brandeis was not responsible for its not being published (1282). At the end of October Mr. Fitzgerald requested the publication of the report (1252). It was published on November 11, 1903 (1254).

The agreement under which the Maine company was formed was made after this, and the holders of a very large proportion of the stock in the Old Dominion Copper Mining & Smelting Co. exchanged their stock, and the enterprise has since been very successful and to the advantage of the stockholders who exchanged their stock and to those who did not (1284, 1236).

As a part of this new organization, it was provided that whatever the Maine company received in dividends from the New Jersey company, resulting from the suits against Bigelow and Lewisohn, and certain other assets amounting to about $94,000, should be paid over by the Maine company to trustees for the benefit of the existing stockholders in the Old Dominion Copper Mining & Smelting Co., who transferred their stock to the Maine company, or to those persons to whom they might transfer their rights, the trustees to receive as compensation an amount not exceeding 5 per cent of the funds handled (1280). The trustees selected were Mr. Smith and Mr. Hoar, who was then a partner in Brandeis, Dunbar & Nutter. The purpose of this arrangement was to have these proceeds go to the benefit of the existing stockholders in the New Jersey company, and not go to those stockholders in the Maine company who had become such by reason of having been stockholders in the United Globe mines (1272).

At this time the litigation against Mr. Bigelow had been going on for more than a year without any specific arrangement having been made as to the amount to be charged by Brandeis, Dunbar & Nutter as counsel. This situation continued for three years more, and until the suits had passed the stages of demurrers and the greater part of the evidence in support of them had been taken.

In the fall of 1906, four years after the suit was started, the board of directors desired to have some specific agreement made as to the liability which they were incurring for the services of counsel. This resulted in an arrangement that the payments on account of these should be not exceeding 6 per cent on the fund of $94,000 (1275)—that is, $5,500 a year (1279)—and that in addition there should be paid as a balance for these services an amount not exceeding 10 per cent of the judgment or settlement obtained in the cases (1276). This amount was suggested by Mr. Smith (1275) and approved by the board of directors, who believed that this would be a reasonable arrangement (1276). The company considered a settlement at one time of a hundred thousand dollars (1285), subsequently five hundred thousand dollars, and then a million dollars, but ultimately about two million dollars was obtained (1276). The litigation incident to this claim or growing out of it has been conducted during about 13 years in about 15 courts (1256). The payments which have been made have been based upon the agreements, and everything has apparently been entirely satisfactory to all parties (1274).

There is no evidence whatever that Mr. Brandeis did anything but what was entirely commendable. Mr. Fitzgerald, notwithstanding the questions urging to the contrary, said that he was not prepared to charge any irregularity in the matter (1245) and that he did not mean in any way, shape, or manner to suggest that Mr. Brandeis was working for the Phelps-Dodge interest or conspiring to do anything in that way, because he knew he was not (1246), and that to his mind Mr. Brandeis advised him that his best interests would be to go into the reorganization (1239).

EDWARD R. WARREN.

The charge, if any, to which Mr. Warren's testimony related was that Mr. Brandeis had misrepresented to a committee of the Massachusetts Legislature the attitude of the State board of trade concerning certain legislation as to the Boston Consolidated Gas Co.

This company, or the interests which were consolidated into it, were urging to be allowed a capitalization of $24,000,000 (808). The Public Franchise League opposed this (1309). Mr. Warren was the chairman of the executive committee of this league, which consisted of 12 or 14 men, and Mr. Brandeis acted as its counsel. The State board of trade cooperated in this opposition (1309).

At or shortly before the beginning of May, 1905, it became evident that the legislation which the Public Franchise League wanted, namely, a general law concerning the consolidation of gas companies, could not be passed (1315), and that the company could be persuaded to accept a capitalization of $15,124,600 (1315) (808). This was somewhat higher than the Public Franchise League desired.

Mr. Brandeis urged upon the league that they should support the bill for the capitalization of $15,124,600, and the executive committee voted unanimously, with the exception of Mr. Warren, to support this bill (1309). Mr. Sprague, representing the State board of trade, did not concur in this position (1309).

The charge made against Mr. Brandeis was that he represented to the committee of the legislature that the State board of trade did concur. No evidence in support of any such charge has been offered, and on the contrary, it appears that Mr. Brandeis informed the legislative committee that the State board of trade could not favor this compromise bill, and was opposed to it (1315). This fact was reported to Mr. Warren and to Mr. Sprague the same day (1315).

These are all the charges, and embrace every matter as to which the evidence related except the opinions evidence.

I yield to none in respect for that "greatest judicial tribunal," our Supreme Court. Its importance in our scheme of government is manifest; and that the appointing power has always looked upon the selection of the justices of that court as involving a sacred duty is proved by the great ability and probity of certainly a very large majority of its membership at all times in our history. Nevertheless, its membership must be recruited from the people, and anyone measuring up to the required standard in ability would be suspected at once of a lack of initiative and personal force if he had not made some enemies and had not engendered an opposition, which could, if it felt so inclined, make a plausible fight against his confirmation. The nominee whose name is before us now has been an active, forceful quantity in his city, State, and country. He has enjoyed a large, lucrative law practice almost ever since he was admitted to the bar. He has been for many years a member of the bar of the Supreme Court, a member of the American Bar Association, and of similar associations in his home State; a member of the board of visitors of Harvard Law School; a writer upon law as well as general subjects; a public speaker and lecturer with pronounced views, and with exceptional powers for impressing those views upon the public; the unpaid counsel of labor organizations, protective associations, and other civic bodies; the paid counsel in many of the most important legal contests before the courts and other public tribunals; an arbitrator in strikes and labor disputes; and the special counsel of the Interstate Commerce Commission.

Such a man, so prominently active in public and private life and at the period when the construction of the Sherman law, the awakening of the States to their duty concerning industrial combinations, and the determination of the dividing line between State and National power, is bound to have been engaged in contests before the courts and before legislative bodies more or less bitter; and he would indeed be a human prodigy if he had not aroused some bitter antagonisms. It is in evidence that there was a systematic campaign of advertisement to injure him in the estimation of the public. I must therefore either decide that the active, earnest, fearless man who might, in the discharge of his duties in his own way, arouse such opposition, is forever debarred from judicial appointment, or else inquire into the grounds of the opposition and determine whether or not such opposition is based upon good and sufficient reasons or otherwise. Anyone who reads the protests made against Mr. Brandeis must come to the conclusion that the opinion expressed by those who undertake to give his reputation is based upon some one or the other of the charges heretofore discussed at length, and since I find that no fault can be attributed to the nominee as to any of those charges in the light of the facts brought before us, then I am bound to say that those who express the adverse opinion have been erroneously influenced by the advertising campaign carried on against him.

To give an idea of the character of the campaign which has been waged against Mr. Brandeis, I clip from the Wall Street Journal, of March 27, 1916, under the heading, "Sacredness in confidences," the following:

"No lawyer can faithfully serve a client without gaining knowledge of that client's peculiarities, strength in parts and weakness in parts, which would make him doubly valuable as a counsel to his opponent.

"When an attorney has accepted the confidence and compensation of one side and then gone over to the compensation and confidences of the other side, and the President and Senate of the United States place him upon the Supreme Bench of the land, a new era has dawned for the priest, the physician, and the advocate, or there is condemnation for both bench and bar, for a Senate of lawyers, for a President, and for a party and its politics.

"When James Lennox in the presence of several witnesses unbosomed himself to his attorney and later found his $10,000 credited against the $48,000 received from the other side with the denial that his attorney was ever his attorney, what can we think of honor at the bar?

"But when that attorney goes to the United States Supreme Bench, what can the world say of honor within the United States with both bench and bar?

"Brandeis at the bar may represent individual wrongs, but Brandeis on the bench puts the United States before the world below even the present standards of his Teutonic ancestors."

If the writer of the above will read the record of the evidence taken before the subcommittee I do not doubt that he will be ashamed of having penned it. It is absolutely false to say or intimate that Mr. Lennox ever paid Mr. Brandeis a cent, much less $10,000, for any services to be performed by the latter, or for any other purpose, and Mr. Lennox never made any such claim; and yet the average person would infer from the above editorial that Mr. Lennox had paid Mr. Brandeis as a retainer the sum of $10,000.

The testimony of Mr. Barron, to which I have already referred, shows that he fostered an advertising campaign against Mr. Brandeis, and yet when he was brought before the committee and asked for the facts upon which his campaign was based, and after the committee had examined every witness suggested by him, obtainable, we find that there is nothing in the conduct of Mr. Brandeis to warrant Mr. Barron's opinion, and absolutely nothing to reflect upon Mr. Brandeis's character as a man or a lawyer. It is suggested in the brief of counsel of the protestants that if a doubt shall be raised concerning the ethical conduct of the nominee, he should not be placed upon the Supreme Court. If that theory shall obtain, then it is possible, by a campaign of slander, to bar the best men and the best lawyers in the country from the judicial office. I am not willing to indorse a campaign of slander, whether it was intended to be slander or not, when promulgated.

If after full investigation I find, as I do, that Mr. Brandeis is not guilty of the things charged against him by his enemies, then it is my duty to say so and to give him the benefit of a pure life and his upright conduct, regardless of the slander.

Judicial temperament is a thing of which it is not for man to judge except by actual experience on the bench. No one can tell whether a great lawyer will be a great judge until he has been tried. It seems to me that there is more in the life of Mr. Brandeis as shown by this record to incline one to the belief that he has the qualities of a good judge than there is to the contrary. It is remarkable that friend and foe alike speak of his ability as a lawyer. The late Chief Justice Fuller advised one seeking a lawyer in the East, as follows: "Go to Boston and see Mr. Louis D. Brandeis, as I consider him the ablest man who has ever appeared before the Supreme Court of the United States. He is also absolutely fearless in the discharge of his duties."

It is impossible to give in detail the testimonials to Mr. Brandeis's fitness and his high character, and it is unfortunate that there are so many of these coming from every part of the United States, from lawyers, judges, college professors, business men, labor leaders, and people in all walks of life, that it would be almost impossible to print them. I do not doubt that if one takes the pains to look at the protests upon the one side and the indorsements upon the other, in the light of the evidence in this case upon both, my conclusions will be found by him to be reasonable and fair. I therefore voted with the majority of the subcommittee to recommend confirmation.

W. E. CHILTON.

I am authorized by Senator FLETCHER to say that he concurs in the above.

W. E. C.

APRIL 3, 1916.

Mr. WALSH, from the subcommittee of the Committee on the Judiciary, submitted the following views:

To the COMMITTEE ON THE JUDICIARY,
United States Senate:

The unusually grave character of the duty with which this committee has been charged quite fully justifies, if it does not require, from each member thereof an expression of the course of thought through which he has arrived at the conclusion in consequence of which he assumes the responsibility for the recommendation he makes.

The testimony taken by the committee is voluminous. In the infinite multiplicity of the duties devolving upon Senators it is quite vain to hope that any considerable number, except those upon whom the burden ot investigation has been directly imposed, will read it all or read any of it.

Outside of the Senate opinion will be based in very small part upon anything more trustworthy than a résumé of the evidence collected by the committee. I assume the task of reviewing it with a just sense, as I hope, of the importance of the office to which it relates in our scheme of government. The interest in the nomination in respect to which we are called upon to act, manifested alike by the citizen in the humble walks of life and by those whose influence is nation wide, reveals the universality of the conviction that in large measure the liberties and the destiny of the American people have been intrusted to the great court to fill a vacancy in which the President has named Louis D. Brandeis.

It so happens that the nominee has awakened unrelenting enmities and fast friendships. He is the object of unrestrained admiration on the one hand and of fierce vindictiveness on the other. The qualities that evoke the just praises of those who believe in him need not engage our attention. It is conceded on all hands that in intellectual equipment and professional attainments he easily measures up to all requirements—indeed, in that respect his qualifications are superb.

His character is assailed, however, as too perverse to justify the Senate in advising or consenting to his appointment. His private life appears to be blameless. It is not charged that he is corrupt, at least by anyone not moved by reckless malevolence. The accusations, if they may be so called, relate entirely to alleged disregard of ethical standards in his professional relations. Singularly enough, there is very little opportunity for dispute in respect to the facts constituting the incidents which the committee deemed worthy of its notice.

There is wide divergence of view touching the significance of the facts disclosed. Interpreted by those bent on finding something to criticize or ready by prepossession to attribute discreditable motives to Mr. Brandeis, they assume a sinister aspect. Men of the highest character, frank admirers of that gentleman, who participated in the transactions in respect to which he is denounced, insist that his conduct was either irreproachable or altogether honorable. It is particularly important in this quite curious situation, in order to form a just estimate of the conduct and character of the nominee, to guard against the insidious influence of detraction and calumny.

Long before his name came to the Senate for the high office of associate justice of the Supreme Court efforts were made through the public press and by means of circulars widely distributed to bring him into disfavor and disrepute. Not unlikely some impression such as it was hoped might be conveyed may remain on the minds of some Senators who fell under the influence of these and like attacks. Moreover, it is scarcely to be expected that one unacquainted with local conditions, who has not followed with scrupulous care the inquiry as it proceeded, would be wholly uninfluenced by the fact that a considerable number of the members of the bar of Boston, the home of the nominee, have protested against the confirmation of his nomination and have organized to oppose it, and that some of them have testified that he is regarded in that community as untrustworthy. These conditions make it imperative, before attempting to survey the particular transactions to which reference is made as justifying the ill opinion thus expressed, to have in mind some incidents in the career of Mr. Brandeis which may have predisposed those by whom it is entertained.

It is clear that he has been a vigorous, aggressive, relentless antagonist in all his legal battles. Moreover, he has been successful. In illustration: One of the lawsuits in connection with which some misconduct was charged is referred to as the "Old Dominion case." The nature of the dereliction with which he was accused need not be adverted to. It was utterly puerile, the testimony drawing from a member of the committee [Senator CUMMINS] a public declaration that it was valueless. Mr. Brandeis had been employed to assist in securing stock or proxies sufficient to take the control of the Old Dominion Copper Mining Co. from the hands of one Bigelow and associates, who had promoted the company. The effort was successful and a new board elected, through which suits were brought in the name of the company by Brandeis as its attorney to recover of Bigelow the value of a large block of the stock of the company which it was averred they had fraudulently converted. The litigation was bitterly contested in the courts of Massachusetts, New York, and New Jersey, repeatedly reaching the reviewing courts and eventualy the Supreme Court of the United States. Judgment was finally rendered against Bigelow for two and a quarter million dollars, on which, after a contest lasting 14 years, payment of upward of $2,000,000 has been enforced. It may well be assumed that any man of whom a judgment in excess of $2,000,000 can be collected is one whose influence is felt even in a city the size of Boston, at least in the banking center and in financial circles. Those who know something of the development of the copper-mining industry with which Boston has been long and creditably identified are aware of how commanding that influence was. It is quite reasonable to suppose that his social standing was in keeping with his great wealth and the magnitude of the enterprises with which he was associated. It was bad enough to be required to give up $2,000,000, but to be branded as having misappropriated so much of the property of the stockholders who had been induced to come into a corporation organized by him was a grievance that very naturally rankled. It is altogether probable that Mr. Bigelow would not express himself in complimentary terms concerning Mr. Brandeis if he were moved to speak of him.

No wretch e'er felt the halter draw
With good opinion of the law,

and few with good opinion of the lawyer. So it is likely that all Mr. Bigelow's friends, or most of them, share the ill opinion which he may be excused for holding of Mr. Brandeis, if he does cherish such.

The part that Brandeis had in exposing the malefactors of great wealth who, in insolent contempt of the law, monopolized the transportation facilities of New England, merging them in the New York, New Haven & Hartford system, and milking the properties in the process is more generally known. These were the very high priests in the temple of Mammon. Boston was the New England as New York was the western terminus of that system. The fight was waged before the Legislature of Massachusetts and the railroad commission of that State long before it engaged the attention of the National authorities. Among many public-spirited citizens who, singly and through local organizations, attempted to prevent the absorption of the Boston & Maine by the New Haven, Brandeis was conspicuous. Before legislative committees and officials of the State government, in public addresses, he declaimed against the consolidation. He not only attacked through pamphlet and the public press the design to impose a transportation monopoly on that highly industrial region, but he investigated and laid bare the financial condition of the company, in consequence of which its stock, a few years later, dropped spectacularly, and the system was brought to the verge of bankruptcy. He asserted that its securities were not a safe or proper investment for savings banks, by which they were held in great quantities. The timid deprecated his assaults and the guilty assailed him with unrestrained venom. He was placarded through paid advertisements in the press as a public enemy.

It will be remembered that the merger was accomplished; that afterwards suit was brought to dissolve under the Sherman Act, which was soon dismissed; that subsequently, pursuant to a resolution of the Senate, the affairs of the New York, New Haven & Hartford were investigated by the Interstate Commerce Commission; that the hearing revealed a state of affairs at which the country stood aghast; that a new dissolution suit was instituted, resulting in a "consent" decree; that the directors participating in the merger transactions were indicted and upon trial some were acquitted and as to others the jury disagreed. We need not concern ourselves as to whether Mr. Brandeis was right or was wrong in the warfare he thus waged. It may be that the absorption of the New England lines was a benevolent assimilation and not a criminal conspiracy. It may be that his elaborate figures touching the financial condition of the New Haven were not fully and altogether justified by the investigation conducted six or seven years afterwards by the Interstate Commerce Commission. I am endeavoring now merely to bring to mind some idea of the atmosphere breathed by those who speak in disparagement of him. To enforce this point I quote from testimony elicited on cross-examination of two of them—both very honorable gentlemen—Mr. Storey and Mr. Hutchins, of the Boston bar. In the testimony of the former will be found the following:

"Senator WALSH. Is it your opinion that the conduct on the part of Mr. Brandeis was calculated unjustly to injure the New Haven road?

"Mr. STOREY. I do not know that I can or ought to express any opinion on the subject. The feeling was that there were better ways of conducting that matter than were adopted. The undoubted result was

apparent. The truth, of course, is that the New Haven Railroad under that administration was spending money recklessly, incurring liabilities recklessly, and doing various things which were most unfortunate for the property. There is no question that Mr. Brandeis called the attention of the public to those facts; but for some reason or other I think they did not make the impression on the public that they would have made if they had come from another source.

"Senator WALSH. But his communications through the public press at that time did direct the public mind to what afterwards was disclosed to be a rather questionable system of operation in finance?

"Mr. STOREY. I have no doubt that is correct. (Hearings, 270–271.)

"Senator WALSH. I judge from what you say that people associated with that organization exercise a very powerful influence, socially, politically, and financially, in your community?

"Mr. STOREY. They did, certainly, at one time. (Hearings, 272.)"

Mr. Hutchins being on the stand, the following colloquy took place:

"Mr. ANDERSON. Mr. Hutchins, I should like to ask you a few questions. Mr. Joseph B. Warner was chairman of the commission of commerce and industry, if I have the name correctly, which wrote a report about 1908 which was quite a factor in the New Haven fight, was it not?

"Mr. HUTCHINS. I think so; yes.

"Mr. ANDERSON. And there was a pretty sharp controversy at that time relative to the statistics and figures which Mr. Warner and Mr. Charles F. Adams, jr.—I have forgotten the other members of the commission—had accepted and published as accurate, and what Mr. Brandeis alleged were the actual facts?

"Mr. HUTCHINS. Yes.

"Mr. ANDERSON. And the subsequent history of the New Haven tended, at least in the minds of a great many, to show that those gentlemen were led into grave error. Is not that so?

"Mr. HUTCHINS. I really can not speak of the merits of that controversy; that is, I mean as to the report of the commission, etc.

"Mr. ANDERSON. You did not go into that in any detail?

"Mr. HUTCHINS. I did not go into that.

"Mr. ANDERSON. But there was a good deal of bad blood engendered in and about Boston in that New Haven fight, was there not?

"Mr. HUTCHINS. Yes; a good deal.

"Mr. ANDERSON. A lot of people maintained for years that there was nothing but a wicked drive being made on the New Haven, and that everybody who criticized the New Haven was a destroyer of properties and values, and the facts as they later appeared did not justify that criticism, did they?

"Mr. HUTCHINS. I do not know about the justification of the criticisms, but there was certainly a great deal of sentiment of the kind that you express in your question.

"Mr. ANDERSON. Assuming that the Interstate Commerce Commission investigation developed something approaching the truth, the atmosphere against Mr. Brandeis in 1908 and 1909 was an atmosphere of harsh and unwarranted criticism, was it not?

"Mr. HUTCHINS. The criticism was harsh. Whether it was unwarranted or not I do not feel competent to judge."

It is quite proper to say here that no one save one Barron, a newspaper publisher, shown to have acted as publicity agent for the New Haven road in the course of the long struggle being outlined, ventured to question the purity of the motives which actuated Mr. Brandeis therein, however the soundness of his judgment as to the methods he pursued or the conclusions he drew might be questioned. No one has suggested that he had any private interest to subserve, and he received no compensation from any source.

One circumstance in this connection would not be mentioned but that it helps to a correct solution of his conduct in the Lennox case, hereafter to be noticed.

Those who think of him as grasping and avaricious, if there are any such, may find one hue in his acts in that case; those who believe him a man of high ideals or as not afflicted with an inordinate love of money may give them quite a different color. Not only was he paid nothing for the herculean labors he performed in the New Haven fight, involving him in a torrent of abuse and villification, but he declined employment by parties holding Boston & Maine securities in a large amount who, like him, were opposing the merger, preferring, as the subject was one of public concern, to be untrammeled. And then, because he had deprived his firm of a lucrative engagement, he paid into it $25,000, a sacrifice that was not so great as it might seem to some in view of the volume of business the firm was doing and the fees it was accustomed to receive. (Hearings, 991, 995.)

Seven members participated in its earnings and it employed a house full of clerks, stenographers, accountants, and other like subordinates. The record discloses another instance in which he pursued, in substance, the same course.

Just how far the animosities engendered by the New Haven fight, considering the infinite ramifications of its interests and of those vitally concerned in effecting its purposes and in concealing the unstable character of its finances, may have influenced the minds of those about Boston who protest against this appointment is a matter of speculation. Doubtless most of the wealth and culture of the community were arrayed on its side.

While it stands out most prominently in the public mind, because of the vast interests involved and the standing in the financial world of the chief figures in it, the New Haven fight was not singular. Perhaps less is known yet much has been told of his warfare on the United Shoe Machinery Co., a corporation with a capital stock of $25,000,000, with headquarters at Boston. When, in 1910, four years after he ceased to be a director of that company, it was about to acquire control of the Thomas G. Plant Co., then threatening to become a formidable rival, he declared that the penitentiary would yawn for anyone concerned in the consolidation. Indictments were found against the officers of that company, the Department of Justice being satisfied that there was sufficient foundation for a prosecution, though the indictments were afterwards quashed. A deep-seated hatred was aroused against him on account of his criticisms of that company that is still virulent, and not the less so that Congress, by the agitation, was moved to insert provisions in the Clayton law and the trade-commission law which it is hoped may correct some of the evils most intimately associated in the public mind with the operations of that company.

The Consolidated Gas Co. of Boston, whose career is not as sweet smelling as might be wished, found Brandeis a serious obstacle in the way of getting everything it wanted from the Massachusetts Legislature. It was the central figure in another protracted fight which has vexed the Boston people. Indeed, the public-service corporations of that city exhibited such a disposition to lay hands on anything they could secure that the people organized themselves to resist their exactions and propensities. The Public Franchise League came into existence to protect the public. Brandeis was a prominent member of the organization, as was George W. Anderson, afterwards a member of the Massachusetts Utilities Commission and at present United States district attorney for the district comprising that State.

It is not without excuse, whatever reason they may have, that some Boston people do not like Mr. Brandeis. A number of the members of the bar of that city sent a protest against his confirmation, reciting that his reputation among the lawyers of that city is that he is untrustworthy. One of the signers wrote a letter setting out why in his opinion such a view was entertained and giving his own judgment of the merits and demerits of Mr. Brandeis's character. It is so judicial in spirit, so keenly analytic, that I venture here to insert it:

BOSTON, MASS., *February 24, 1916.*

GEORGE W. ANDERSON, Esq.,
85 Devonshire Street, Boston, Mass.

MY DEAR ANDERSON: You have asked me to write you a letter giving my views on Mr. Brandeis and on his appointment to the Supreme Court and on the way in which that appointment would be viewed by the Boston bar. I am not seeking to be involved in this controversy any further than necessary, but I do not feel that anyone asked for such an opinion has a right to refuse.

First, then, so far as ability goes, there can be no question as to Mr. Brandeis's professional standing. He is universally acknowledged to be one of the ablest men at our bar, both in point of legal learning and of effectiveness, and if the question was of intellectual ability alone, his appointment would be generally approved.

There is, however, equally little question that he is not generally popular with the bar, and that among a considerable proportion of the lawyers here he has the reputation of not being a man with whom it is pleasant to deal in business matters, and one who is unscrupulous in regard to his professional conduct. Just how far there is any solid foundation for such a reputation it is extremely difficult to say. So far as specific charges go, all of any consequence of which I have ever heard have been or will be brought to the attention of the committee at Washington, and of those it is unnecessary that I should speak, especially as I can add nothing of my personal knowledge.

The general reputation remains, and it is certainly one which is worthy of consideration, in estimating the fitness of an appointment to the bench. Indeed, I think in the existing state of the feeling here that no one can be fairly criticized for opposing the appointment. Many of his opponents are my personal friends and I understand and respect their point of view, though I believe they are mistaken. At the same time, I believe that the reputation to which I have referred is not founded so much on anything that Mr. Brandeis has done as it is on other causes. He is a radical and has spent a large part, not only of his public but of his professional career, in attacking established institutions, and this alone would, in my judgment, account for a very large part of his unpopularity. It would be difficult, if not impossible, for a radical to be generally popular with Boston lawyers, or to escape severe adverse criticism of his motives and conduct. Certainly I have never heard of anybody, from Joseph Story down, who has ever succeeded in doing so. The fact, too, that Mr. Brandeis has been the object of constant attack, and in particular of a very skillful and long-continued press campaign engineered on behalf of the New Haven management by Mr. C. W. Barron, has probably increased the feeling against him, for such advertising inevitably produces effect, by mere repetition, upon people who are not conscious of its influence. When you add to this that Mr. Brandeis is an outsider, successful, and a Jew, you have, I think, sufficiently explained most of the feeling against him.

Undoubtedly he is a merciless antagonist, fighting his cases up to the limit, and with great technicality, and taking every advantage which the law allows him, without perhaps always a keen regard for fair play. So far as I am aware, nothing more than this could be fairly considered as proved against him. On the other hand, there is, except among a comparatively small number of people, a general recognition that Mr. Brandeis has rendered public service to the community of extraordinary value, and that in doing so he has been actuated by disinterested motives. He lives with great simplicity, and has throughout his career devoted to unpaid public works a very large proportion of his time and energy. With the opportunities that have been open to him, he could, by following more conservative courses, have been a much richer man than he is to-day. I do not think it can fairly be doubted that he deliberately chose to serve the public rather than to devote himself entirely to making money, nor do I think it can be fairly questioned that in doing this he was actuated by high motives.

Throughout his career he has shown unusual interest in and sympathy for those classes in the community upon whom economic conditions bear hardly, and has devoted a large part of his time and energy to measures which he believed would help them. The work which he has done along these lines has been sanely planned and carefully worked out, and he has acquired in doing it an unusual grasp of those social and economic conditions which underlie many of the most important questions with which the Supreme Court will have to deal. I believe he will bring to the consideration of these problems not only great legal acumen and deep sympathetic insight, but a power of careful analysis and an ability to see facts and law in their larger relations, which will make him a great judge. Once on the bench the things which have injuriously affected his standing at the bar will cease to be important and his strong qualities, his great ability, his knowledge not only of law but of economics and social conditions, and his capacity for taking a broad judicial view of any questions to which he applies his mind, will be of inestimable value.

Of his fundamental honesty of purpose and his deep moral enthusiasm I feel absolutely sure. His qualifications for the position of Supreme Court Judge far outweigh, in my judgment, anything which can fairly be urged against him. For these reasons I sincerely hope his nomination will be confirmed.

I ought, perhaps, to add that I have never had any legal or other business either with Mr. Brandeis or against him, and have no reason to expect that I ever will have such business. I have known him for many years, but never intimately, and I entirely disagree with his political opinions. My knowledge of him is simply that which I have gained in 20 years' practice at the same bar. I have no reason to desire his appointment except the interest which every citizen, and particularly every lawyer, has, to wish that the best possible man should be selected. It is only because I know no one in this community whom I consider so well fitted for the position that I hope he will be confirmed.

Yours, sincerely, ARTHUR D. HILL.

(Hearings, 619, 620.)

[N. B.—Mr. Hill was not one of the protestants, as erroneously stated above. He ardently supported Mr. Brandeis.—T. J. W.]

In the light afforded by what has been said, I proceed to consider the several matters in connection with which the nominee is said to have shown himself unworthy of the high honor with which the President desires to invest him. I pass directly to the two apparently deemed most grave—the Lennox case and the Warren case. Astonishing as it may seem, the leading counsel in both of these cases, representing the parties whose cause Brandeis is charged with abandoning, completely exonerates him from any misconduct worse than an error of judgment. In respect to the Lennox case, Mr. Sherman L. Whipple, who, as the attorney for James T. Lennox, developed in certain proceedings in bankruptcy the exact facts touching the relations which Mr. Brandeis had sustained to his client (the stenographic notes of the interviews out of which the alleged employment rose having been read), asserted that in his opinion Brandeis acted from most honorable motives and with a high ideal of the duty of a lawyer in the premises. Later his exact language will be quoted.

THE LENNOX CASE.

The business of the firm of Lennox & Co., tanners, had been developed by Patrick Lennox, who, at the time of the occurrences to be narrated, was nearly or quite 80 years of age. For 10 years his son James T. Lennox, the other member of the firm, had managed the business. Its transactions amounted to about $1,000,000 a year. The firm property and private assets of the partners exceeded that sum. In the panicky season of 1907 the firm became embarrassed, and a creditor, one Stein, was called to Boston from New York by James T. Lennox. With his lawyer, one Stroock, he met Lennox, who, in detailing his situation, disclosed that if not actually insolvent he was dangerously near being so. Stroock suggested that he, Lennox, ought to consult a lawyer, and, mentioning Brandeis, Lennox assented. The three waited on Brandeis, under whose questioning, which was exhaustive, going in detail into assets and liabilities, the condition referred to was more clearly exhibited. Stein was friendly. Another creditor participated to some extent in the conferences and it was determined that a general assignment without preferences should be made and that Brandeis should try to work out some general agreement among the creditors—for an extension or a composition, as the progress of negotiations might suggest. This was done, one of Brandeis's partners, George R. Nutter, being named as assignee. It was canvassed in the course of the conference whether Brandeis should become attorney for Stein or for Lennox, but it was agreed eventually that the plan could be worked out most effectively if Brandeis did not represent Stein or any other creditor and that he would represent Mr. Lennox in the manner stated. Stroock having asked Brandeis whether, in view of relations which his firm had sustained to a creditor, Weil, Farrel & Co., he could act for Lennox, the latter said:

"Yes; I think I could. The position I should take if I remained in the case for Lennox would be to give everybody, to the best of my ability, a square deal." (Hearings, 792.)

And he continued:

"I should, if I acted for Mr. Lennox, see that he got his legal rights; no more, no less." (Hearings, 793.)

Again, he said:

"I should feel if I were acting for Mr. Lennox as trustee that it was the duty of the trustee to see that everybody got his legal rights as nearly as we could make it." (Id.)

And then Lennox, referring to some comment by Stroock, remarked:

"You are speaking now of Mr. Brandeis acting as my counsel?"

Whereupon Brandeis interjected:

"Not altogether as your counsel, but as trustee of your property." (Hearings, 795.)

It is plain from the foregoing that Brandeis proposed (whatever may have been the understanding of Lennox) that the latter and his father should turn over to him, Brandeis, all their property, he to deal with the situation with justice to everybody and in the hope of making an adjustment that would be satisfactory to all concerned, or, in the event that such a solution could not be reached, to apply the assets to the liquidation of the indebtedness.

The assignment was made in pursuance of that plan, and Brandeis immediately got into communication with the other creditors with a view to carrying it out. When the assignee went to take possession under the assignment he learned, through accountants who had been directed to examine the books, that James T. Lennox had but recently cashed checks to the amount of $10,000, the avails of which did not appear. Inquiry revealed that he had the cash in his possession. On being questioned in the present hearing he stated that he needed the money. The assignee required him to surrender it, which he did, though reluctantly. A short time after a controversy arose between him and the assignee concerning the compensation he was to receive for assistance which he was rendering pursuant to request in attempting to straighten out the tangled affair—the books being fragmentary and the business having been run without much system. He demanded $500 a week; the assignee refused to allow him more than $100. Meanwhile, on September 10, the assignment having been made on the 5th and recorded on the 9th, one J. P. Leahy, of Lynn, where the Lennoxes lived, called upon Mr. Nutter, representing, as his counsel, Patrick Lennox. He conferred with Nutter and forwarded his work for some time, but toward the close of October Patrick Lennox through Leahy, set up the claim that he was not a member of the firm of Lennox & Co. and that he had never signed the instrument making Nutter assignee or that his signature had been obtained fraudulently or without full understanding of its purport. When Nutter refused to hire James T. Lennox at $500 a week he ceased to assist actively in carrying out the trust, and much difficulty was encountered on account of his indifference or apathy and the claims of the elder Lennox referred to. Meanwhile the creditor, Weil, Farrel & Co., was threatening to proceed criminally against James T. Lennox on an alleged fraudulent statement of his financial condition and sought to employ the Brandeis firm to conduct the prosecution, but they declined. An indictment was afterwards returned. The execution of the trust with which Brandeis had charged himself through the assignment proving impracticable, on account of the attitude of the Lennoxes, it was resolved to see it carried out through bankruptcy proceedings, to which various creditors had recourse. Several petitions were filed, one by the Brandeis firm. An adjudication went, the court holding that the assignment was duly made and constituted an act of bankruptcy. In the original conference it had been mentioned that it was such and would require an adjudication, if asked, but the hope was expressed that the creditors would assent to the assignment. (Hearings, 788.)

The thing worked out as was originally contemplated. A composition was effected under which the individual debts of the partners were paid in full and the firm creditors got 40 cents on the dollar. There is no doubt that the making of the assignment, though an act of bankruptcy, was the wise course to pursue under the circumstances. None of the parties involved are making any complaint. Mr. Leahy was not called to express any complaint on behalf of the elder Lennox, and it will be borne in mind that an organization of protestants was represented at the hearing by counsel who undertook to present to the committee the names of any witnesses his clients deemed it advisable to call. James T. Lennox came in response to a subpœna, but was excused on his request on saying that he could add nothing to what had been said by Mr. Stroock and Mr. Whipple. He was later called, at the instance of a member of the committee, but he showed no hostility to Mr. Brandeis. Whipple was employed to resist the bankruptcy proceedings. He is the head of a leading firm of Boston lawyers, said without dispute to be one of the ablest trial lawyers in New England, an enviable reputation which those who heard him testify will agree he doubtless fully merits. When the story was told him of how the Lennoxes employed Brandeis in their troubles only to find that his firm had filed a petition in bankruptcy against them, he did the manly and fraternal thing. He called on Mr. Brandeis. Let him tell the story of the interview. Introducing the subject which gave rise to his call he said:

"They say that you advised an assignment to your partner, Mr. Nutter, and took all of Mr. Lennox's property, and that you now claim that you are not and never have been his counsel, and I thought, Mr. Brandeis, it would be better for me to come right to you and talk over a situation which seemed to me to be serious, because if you did agree with the Lennoxes that you would act as their counsel, and now are acting in a position hostile to them, through this assignment, you will agree with me that a rather serious situation is presented." (P. 287.)

The witness continues:

"He said, 'Of course it would be,' or he said, in substance, 'Of course, that would be a serious situation, but it is not the situation at all; I did not agree to act for Mr. Lennox when he came to me. When a man is bankrupt and can not pay his debts, Mr. Whipple, he is a trustee for his creditors; he has no individual interest; he finds himself with a trust, imposed upon him by law, to see that all his property is distributed honestly and fairly and equitably among all his creditors, and he has no further interest in the matter. Such was Mr. Lennox's situation when he came to me, and he consulted me merely as the trustee for his creditors, as to how best to discharge that trust, and I advised him in that way. I did not intend to act personally for Mr. Lennox, nor did I agree to.' 'Yes,' I said, 'but you advised him to make the assignment. For whom were you counsel when you advised him to do that, if not for the Lennoxes?' He said, 'I should say that I was counsel for the situation,' I said, 'Yes, but you advised an assignment of all his property, so that your firm became possessed of it, because Mr. Nutter was your partner.' He said, 'Yes; and I knew no one better in the city of Boston than my partner, Mr. Nutter, to execute such a trust as that. He stands high; he has everybody's confidence, and that is why I advised it.' I said, 'I must say, Mr. Brandeis, it looks to me very much, according to your principles, as if when a man was bankrupt and went to a lawyer, and the lawyer advises him to make an assignment for the benefit of his creditors, he assigns his lawyer with it, very much in the way a covenant runs with land.' He said, 'Mr. Whipple, I think that is a very unkind and very ungenerous statement for you to make. It impugns my motives, and I can only assure you that I had no such motive in doing it. I was merely occupying myself with seeing that this property, which was brought into my office in this way, was equitably and fairly distributed among the creditors, and I was looking after the interests of everyone; I was looking after any interest that Mr. Lennox had, if any, if anything should be left after the settlement with his creditors, but, in the first place, looking after the interests of the creditors.'" (Hearings, pp. 287-288.)

The impressions Mr. Whipple took away are expressed by him as follows:

"Mr. WHIPPLE. You see, my belief was, at the time, that there was a misunderstanding. My belief was at the time, and is now, that Mr. Brandeis was misunderstood. That is, I preferred then, and prefer now, not on account of any personal friendship or feeling, but my view was that there was a misunderstanding. I think Mr. Brandeis was so much absorbed in the question of caring for the situation, and so much interested in the development of his ideas as to how this estate should be administered, that he unconsciously overlooked the more human aspect of it, which would perhaps have appeared to another, but here was a man confronted with perplexities and charges and troubles, who wanted his personal and individual care and attention. But I think Mr. Brandeis looked upon it as a problem of distribution.

"He did not view Mr. Lennox, with his difficulties and troubles and desires, in quite the human way that certainly some lawyers would. He took a broader view, as it seemed to me, that he was charged with the duty and responsibility, not merely of looking to Mr. Lennox, or to Mr. Lennox alone, but that he owed a larger and broader duty to all the interests involved. Now, I felt then, and I feel now, that that was a mistake, but it does not mean, to my mind, that Mr. Brandeis was culpable; that he deserted a client; that he neglected a duty to a client, because, as it seemed to me—and I will say it frankly—at first he was going with the property and had a more lucrative job. I was convinced from my talk with Mr. Brandeis and from my knowledge of his character that the mercenary motive did not exist; that the thought of deserting Mr. Lennox's case and interest did not enter his head. I thought then, and I think now, that he made a mistake in this, at least, that he did not make it clear, so that a layman would understand just what he was talking about. When a lawyer talks to a business man about being charged with the responsibility of an equitable division of the estate among all who may be interested, such talk, I think, goes right over the head of the ordinary business man, who does not understand clearly the fiduciary duties of a man in that position, and who does not understand the clear and fine definition of the fiduciary duty in its different aspects."

To this he added:

"I was convinced of his sincerity, his devotion to a thought and an idea with regard to the administration of this estate, which was credible—credible because it is true that a man when he is a bankrupt is the trustee for his creditors, and he has no right to try to keep money from his creditors or to prevent an equitable and fair distribution or

to prefer them. That is true. It is a high and proper ideal of practice. A lawyer who is charged with the duty of advising under those circumstances has a duty not only to the debtor who comes to him but to every creditor, and he must and ought to be scrupulous in his discharge of it. But, of course, his scrupulous discharge of that duty to all the others must not permit him to neglect his duty to the one who needs his help the most." (Hearings, 300–301.)

These observations prompt me to inquire what a man wants with an attorney anyway after he has made a general assignment for the benefit of his creditors? All his property is gone, and there is nothing an attorney can do except to see that the trust is managed to the best possible advantage, so that the property will go as far as may be to discharge the claims of creditors or possibly satisfy them in full, leaving a residue which becomes his again. The best thing a lawyer can do for him—the only thing he can do—is to become attorney for his assignee and aid him in administering the trust. There can be no diversity of interest so long as the assignor purposes and seeks to have the trust carried out. He needs no lawyer except the attorney for the assignee. It is the universal practice, accordingly, for the attorney who draws the deed of assignment to become counsel to the assignee. Lennox must have known—it was impossible that he could fail to know—that the Brandeis firm would become the attorneys for Nutter, the assignee. He could not by any possibility have imagined that in a contest of any character arising between him and the assignee Mr. Brandeis or the Brandeis firm was going to counsel him, except as both he and Nutter were counseled; or that if, perchance, any difference between him and the assignee found its way into court Brandeis or his firm was to represent him as against the assignee, Nutter. He never paid the Brandeis firm anything and no charge was ever made against him. When he put himself in an attitude of hostility to Nutter he knew that he could not count on Mr. Brandeis as his personal legal representative. It is an embarrassment to a lawyer who has drawn an assignment and become attorney for the assignee to make a choice should a disagreement unhappily arise between him and the assignor. He could, perhaps, not be blamed whichever way he determined lay his duty. But, as Mr. Brandeis's partner was the assignee there was no choice open to him. Nor was there, apparently, any choice open to the assignee, when it became evident to creditors that the trust was not being carried out and could not be carried out in view of the hostile claims being made, but to resort to the bankruptcy court or watch the assets pass out of his control through proceedings in that court instituted by creditors who would not sit idly by while the assignors were perhaps getting away with the property. Mr. Brandeis apparently resolved that an obligation rested upon him to carry out the trust in the only way open to do so. Some may differ with him as to what ought to be done in a case so rare, but no one who does not view the proceedings with a jaundiced eye can doubt that he acted conscientiously in the course which was taken.

THE WARREN CASE.

On leaving college Brandeis formed a partnership with a classmate, one S. D. Warren, the son of a successful paper manufacturer, S. D. Warren, sr. After the youths had been in business in Boston under the firm name of Warren & Brandeis for about 10 years the elder Warren died, about 1888, leaving three other sons, Edward, Henry, and Fiske, a daughter, Cornelia, and a widow, their mother. The children, of whom S. D. was the eldest, had all reached their majority. The law firm had so successfully established itself by that time that Warren was drawing out of the business about $10,000 a year. The property which had enriched the family was left by the will of Warren, sr., to his widow and children. Warren & Brandeis became the attorneys for the executors. It was the desire of all that the business be kept in the family, and yet Edward was in Europe most of the time, devoted to antiquarian research and the collection of antiquities; Henry was a student in feeble health, who died not many years after; Fiske was a youth without much experience. The ladies were cultured, but their capabilities in a business way had not been put to the test. It was in mind that those who undertook to run the business should assume the risk and that the other members of the family should be relieved of personal responsibility. It was planned that the property should be conveyed to trustees, and these trustees should lease the property to those who undertook to manage it. One Mason, a relative, had long been associated with the elder Warren in the business. He, S. D. Warren, and Fiske Warren took it over, the old firm name continuing. The mill property was conveyed to trustees, Mrs. Warren, S. D. Warren, and Mr. Mason, the deed reciting the trusts and authorizing the trustees to lease to a firm of which any of the trustees might be members. It was then leased to the new firm, which agreed to pay to the trustees 6 per cent on the valuation placed upon it and one-half the profits. The movable property appurtenant to the mills was taken over by the firm and the value of the respective shares credited on its books to each beneficiary. Substantially, the firm bought this property and became indebted for it. S. D. Warren, who had given some attention to the business during the later years of his father's life, severed his relations with the law firm and thereafter devoted himself to the paper business, though the firm name of Warren & Brandeis was carried for a number of years thereafter.

The firm of which Mr. Brandeis was the head after the retirement of S. D. Warren became attorneys for the trustees and for the firm of S. D. Warren & Co., their fees being paid in part by each, respectively. Edward Warren was abroad when the instruments mentioned were prepared and the deeds had to be sent there to him for execution. With the letter went a list of the accompanying instruments, as follows:

"1. Deed of Cumberland mills and other property, from the residuary devisees under father's will to John E. Warren.

"2. Deed of Copsecook mill, same to same. The property covered by both these deeds will be conveyed by deed of even date to the trustees named in—

"3. Declaration of trust by Susan C. Warren, Samuel D. Warren, and Mortimer B. Mason, of which I send you a copy.

"4. Deed of Forest Paper Co. property to Louis D. Brandeis. This will be conveyed by him at once to the purchasers of the property, Mortimer B. Mason and Samuel D. Warren.

"5. Bill of sale, residuary legatees, to new firm of S. D. Warren & Co.

"6. Brief explanation of proposals, showing the reasons for the various transfers." (Hearings, 843.)

The letter, after giving directions concerning execution of the instruments, continued:

"I do not send you at the moment detailed figures of the condition of the estate, such as I have submitted to the other children, for two reasons—first, because I do not like to have them go out of my possession and run any chance of going astray, and, secondly, because I have found so much explanation necessary to their comprehension by the other children that I do not think you would understand them without explanation. All the others have been carefully into the matter and approve of the proposed arrangement; and I shall have to ask you to take my word for it so far as you do not understand it. When you return in the fall, I will go into all details to your satisfaction.

"The upshot of the whole matter is that the Forest Paper Co. is sold to Mortimer and myself at what I think is a fair price for the one-half interest of the estate (viz, $90,000), the other half being owned by George W. Hammond. The assets of the old firm of S. D. Warren & Co. are sold to the new firm at a fair valuation. The Cumberland and Copsecook mills and other real property in Maine are conveyed to the trustees for 33 years to be dealt with for the benefit of the residuary devisees in the proportions in which they are interested under the will. For the present the rental allowed to the firm of S. D. Warren & Co. for the use of these mills will be 6 per cent per annum on the value of the plants at any time plus 50 per cent of the net profits of these mills. This I think an extremely favorable arrangement for the devisees.

"I should add, lest you get an inflated idea of your income, that the profits of last year (in which you had a larger interest than those of this) were larger by a considerable sum than they will be this year, or than they ever were before; 1888 was the high-water mark in profits.

"Please execute these papers as soon as convenient and return them immediately on execution, care S. D. Warren & Co., 220 Devonshire Street, in a waterproof envelope clearly addressed.

"Your affectionate brother,

"SAMUEL D. WARREN."

(Hearings, 844.)

Edward did return in the fall, and came to this country at intervals thereafter. The liveliest affection had always, until differences unhappily afterwards arose, obtained among the various members of the family. Even on the eve of starting suit against his brother S. D., in the year 1909, Edward wrote him as follows:

"MY DEAR SAM: I have had to file the bill, because otherwise it would have been difficult to obtain a satisfactory before Monday next, but—

"First. I hope that you will make me contented to withdraw it; and

"Second. The phrases are such as in a legal document I have felt obliged to sign, but are very far from representing my feelings toward you aside from the business or my desire for unanimous fraternal procedure.

"Let us try to agree: it would be much pleasanter.

"Your affectionate brother,

"E. P. WARREN."

"BELLEVUE HOTEL, BOSTON,
"December 13, 1909."

(Hearings, p. 860.)

Annual statements were sent to all the beneficiaries and remittances or settlements made. In 1902, after the plan had worked without friction for 13 years, Edward exhibited some dissatisfaction. He employed a lawyer, one William Youngman, who several years thereafter brought a suit for Edward, asking that his brother S. D. be removed as trustee, for a decree annulling the lease, and for an accounting. Issue was joined. S. D. Warren was examined at length before a master, the examination being conducted by Sherman L. Whipple, heretofore referred to. S. D. Warren died before his examination was completed, and a settlement of the litigation was effected, under which the interest of Edward Warren was acquired. Mr. Moorfield Storey was employed by Fiske Warren and represented him in the litigation. Mr. Storey appeared before the committee as a protesting witness. He signed a remonstrance as an ex-president of the American Bar Association, appearing in the record. He appeared to tell that Brandeis had been employed to wreck the New England Railroad, to be hereafter referred to, and that the reputation he bore at the bar of Boston was not good. Asked about the Warren case, he said:

"Mr. STOREY. The position is this: When Mr. Samuel D. Warren, sr., was alive he owned the mills and was the controling partner in the firm. The firm sold the goods, and there was some arrangement between the firm and Mr. Mason, personally, for a division of the expenses and profits. When he died that situation existed, and something had to be done in order to carry on the business, and an arrangement was made whereby the property formerly held by Mr. Warren, personally, was vested in trustees, and Mr. Samuel Warren took his father's place in the firm, and Mr Fiske Warren was also in the firm, but with a smaller interest. Mr. Edward Warren was in Europe engaged in the study of arts and curiosities and was not in active business.

"The arrangement which was made seemed to me, as I examined it, a perfectly fair arrangement. It probably, in view of what happened afterwards, would have been better if Mr. Edward Warren had independent advisers to counsel him. But the thing was submitted to him and agreed to by him, and I saw nothing in the arrangement as to which he could complain. I sat through the trial, which had begun, and Mr. Warren was on the stand, as I remember, about six weeks, and during that time was cross-examined by Mr. Whipple. There were about six weeks more, as I understand it. It looked as if the cross-examination might last longer, when Mr. Warren died. During the cross-examination nothing developed which reflected upon Mr. Samuel D. Warren in any way or upon Mr. Brandeis.

"As I say, I saw nothing in the case up to the time the case ended of which Mr. Warren could be in any way ashamed. It seemed to me he had treated his brother with great fairness. I should have done, perhaps, very much as Mr. Brandeis did if I had been in his place. It would have been a matter of caution, however, to have independent counsel, but apparently the family united——

"Mr. ANDERSON. Was there any more reason for suggesting independent counsel for Mr. Edward D. Warren than Mrs. Warren—I mean at the outset?

"Mr. STOREY. I do not know that there was.

"Mr. ANDERSON. Was there any more reason for suggesting separate counsel for Edward Warren than for Fiske Warren?

"Mr. STOREY. They were all of age, and Fiske Warren, up to that time, had not been very active as a business man, any more than Edward Warren, but he was on the ground and was in a position to employ counsel. Mr. Edward Warren was on the other side of the water. At the time, as I say, there was nothing in the relations between the different members of the family to suggest that there was any divergence of interests, or any reason why they should not act harmoniously, as they did." (Hearings, 277, 278, 279.)

Perhaps that is all that need be said about the Warren case.

If Mr. Storey, with his opportunity to know the facts, and he was obliged to investigate them in order properly to advise his client, found nothing to criticize, the quest is not likely to yield much.

Mr. Hollis Bailey was associated with Youngman in the litigation. He is likewise an adverse witness.

The following indicates his view of Brandeis's wrongdoing:

"Senator WALSH. So far as the Brandeis firm are concerned and Mr. Brandeis's connection with it, as I understand you, the complaint which you make against him is that this firm acted during this period at one and the same time for the lessors and for the lessees in these arrangements?

"Mr. BAILEY. Yes; and that should rightly have suggested to him, when there were conflicting interests, that independent counsel would have been quite proper to act.

"Senator WALSH. The point you make is that it was the duty of the Brandeis firm to have suggested to your client, as soon as differences arose, that he should get independent counsel?

"Mr. BAILEY. Independent advice. (Hearings, 149.)

"I think, further, that if Mr. Brandeis had properly considered the rights and interests of Mr. Edward Warren he would have said to him, 'Your brother, Samuel, while he is trustee, is getting these very large sums for carrying on the business under the lease.'

"Senator WALSH. That is to say, that when the lease was made orginally you think Mr. Brandeis should have advised Edward that he ought not to consent to that lease or enter into it because his brother, Samuel, was getting a better bargain than he ought to get?

"Mr. BAILEY. Not to do it, in any event, without having the advice of independent counsel. Those are the main points." (Hearings, 150.)

But why should Brandeis advise Edward Warren that he ought to get independent counsel? Would not such a suggestion from him be an affront, and a perfectly gratuitous affront, to S. D. Warren, who might be presumed by anyone knowing him, and particularly by his law partner, to give his brother such information as the conditions might seem to require? Edward was at the time 30 years of age—a graduate of Oxford. If Brandeis ought to have advised him to employ an independent lawyer, certainly he owed the same duty to Mrs. Warren and to Cornelia and to Fiske and to Henry. It would be an absurdity as a business proposition to bring into a family settlement of that character a lawyer for every member or even one representing each diverse interest, and there were at least three.

As to advising Edward when differences arose to get another lawyer, he forthwith employed Youngman, and it was unnecessary to give him any advice on that point.

But it was suggested at the hearing, perhaps by a member of the committee, that when suit was begun against S. D. Warren, the Brandeis firm ought not to have acted for him, because it had been attorney for Edward Warren in the transactions under investigation in that it had been attorney for the trustees to whom he stood in the relation of cestui que trust. That is a startling doctrine. Certainly Edward Warren had disclosed nothing to the firm, confidential or otherwise, which could be used against him. The firm had learned nothing and could have learned nothing that each beneficiary was not entitled equally to know. Can it be that when the title of the trustee or his administration of the trust is attacked by one of the beneficiaries the attorney for the trustee can not represent him, because, forsooth, the former has been drawing pay out of funds which belong equitably in part to the suing cestui? Is an attorney for a corporation precluded from defending its directors when assailed in court for maladministration? Is the attorney for an executor or administrator? The suggestion must have been made unreflectingly.

The suit was founded upon the supposition that the lease fell within that class of contracts which equity avoids, not because of any fraudulent purpose, but because of a public policy springing from a desire to remove the temptation to defraud.

Here is what Mr. Whipple has to say of this affair:

"The question was then whether all parties who were involved—all the beneficiaries—knew it and assented to it, fully advised and with their eyes open, and it was contended in behalf of Mr. Edward Warren, who was at the time abroad and whose information all came by correspondence; that he intrusted the whole matter to Mr. Brandeis and was not fully informed, so that that was the ground of the position which we took in the litigation and with reference to which my cross-examination of Mr. Samuel D. Warren proceeded; but Mr. Bailey, as I noticed by the public press, stated, in response to a question by one member of the committee, that he believed that Mr. Brandeis intentionally framed this lease and other papers so as to give Mr. Warren this opportunity to make private profit. That belief I do not share with Mr. Bailey. I cross-examined Mr. Warren at length, and I was then impressed, and so expressed myself, that the idea of defrauding his brother or the other members of his family, or securing a personal advantage to which he was not entitled, did not enter his head; that the entire transaction was free from any taint of dishonest motives or intentional fraud.

"I had the feeling with regard to Mr. Brandeis somewhat like Mr. Storey has just expressed, that he was possibly careless in not making very, very clear to Mr. Edward Warren just the whole transaction and its possible effect upon his rights, but I felt at the time, and I feel now, that Mr. Brandeis, who has been the family counselor and been trusted for many years, thought that there was a perfect understanding and accord among all the members of the family; that Mr. Samuel D. Warren, who, by the death of his father, became the head of the family, should be charged with the responsibility of handling and operating this large property and should have what he could make out of it. Of course, if that was so, and all parties assented, there was no violation of trust, and there was no moral wrong. Therefore I reached the conclusion that there was a legal wrong; that there was a violation of that principle of law with regard to trusts which I have just pointed out, but that there was no reprehensible motive to secure a personal advantage secretly or in any way like that." (Hearings, 283–284.)

Mr. Youngman, referred to, overwhelms Mr. Brandeis with accusations in connection with this case, but it may be said in charity that his employment by Barron to gather up the material for a newspaper campaign against Brandeis probably warped his judgment touching the acts of that gentleman.

THE BALLINGER INQUIRY.

The essential facts in reference to this matter are well known. Glavis, a subordinate in the Interior Department, had laid before President Taft charges affecting the administration of that department under Secretary Ballinger and had been dismissed from the service. It was claimed, among other things, that by a laxity or liberality in the practice of the department the Secretary was permitting the coal lands of Alaska to be fraudulently appropriated. Complicity in the general purpose, or at least toleration of it, was understood by many to be implied. The incident intensified a suspicion of the Secretary entertained by the so-called "conservationists," headed by Gifford Pinchot, Chief Forester. Collier's Weekly, an advocate of the ideas of the "conservationists," printed the Glavis charges. A congressional investigation into the causes of the removal of Glavis was ordered. Collier's Weekly employed Brandeis to appear at the investigation. Upon consideration it was determined that he should appear for Glavis, their contributor, and not seek to introduce the paper as a party to the proceedings.

Glavis was presumably quite willing to have so able a lawyer as Mr. Brandeis. He announced to the committee that he appeared for Mr. Glavis, and as his attorney conducted the inquiry. Collier's paid him $25,000 for his services, which extended over a period of five months. He is accused of unprofessional conduct in not announcing to the committee that he was employed and paid by Collier's.

It is asserted and not denied that it was common knowledge at the time that he was employed by Collier's. He never was asked who hired him or by whom he was paid. The committee, perhaps, thought it quite immaterial. They could scarcely have believed that an impecunious Government clerk was feeing one of the first lawyers in the country.

Be that as it may, were it not for the views of some members of the committee, I should unhesitatingly declare the charge absurd. It presents the question of whether a lawyer may with propriety have his name entered in a cause as attorney for a party who pays him nothing under employment by another, but with the assent of the party he nominally represents. I assert that it is a practice of daily occurrence, not only tacitly approved but recognized by the courts. Can not a mother employ an attorney to defend her son charged with crime? Must he announce in entering his appearance who employed him and where he gets or expects to get his pay?

The stock association of my State frequently employs a lawyer to aid county attorneys in the prosecution of cattle-stealing cases. The local prosecutor is usually glad to have his assistance. Is he disqualified for judicial honors if he does not announce to the court that the State did not hire him and does not intend to pay him? I venture to assert that scarcely a term of the Supreme Court passes during which some lawyer does not have his appearance entered on the invitation, or by the assent of the counsel already of record, being employed by some one not a party to the suit, but who is interested in the principle involved. The court would stare at a lawyer who under such circumstances, in beginning his argument, took its time to announce that he was not hired and did not expect pay from the party for whom he spoke.

If this is professional misconduct the bar needs regeneration.

Another charge in this connection is answered by the undisputed evidence of the record.

THE NEW ENGLAND CASE.

Barron told the committee that Hon. Moorfield Storey could tell that Brandeis had been employed in 1902 to wreck the New England Railroad. It was the conclusion of that gentleman that he had been so employed. The facts were that Brandeis had been retained by one William Kelly, a reputable lawyer of New York City, now a supreme court justice, to bring suits against the directors of the New England road, charging misconduct on their part, to restrain the payment of dividends, alleged to be illegal because there were no profits from which to pay them, and to restrain the issuance of bonds because the bonding power of the corporation had been exhausted. A receivership was contemplated and a bill drafted. Separate suits were started in the States through which roads comprising the system ran. They represented a contest between Austin Corbin, Kelly's client, and the board in control of the road. He had been president, but had resigned, possibly under pressure. The suits were started in the name of Goldsmith, a liquor dealer of Boston, who was a stockholder. The season of financial depression was on. After carrying on the litigation with success, so far as it progressed, Corbin, in 1893, quit and directed Kelly to give no further attention to it on his account, advising him that the New Haven, which had meanwhile acquired the property in foreclosure proceedings, would take care of the litigation. He insists that Corbin was in no way associated with the New Haven at the time the suits were commenced, that Corbin indeed was fighting that system, running a rival road. Be that as it may, there is not a breath of testimony that Brandeis knew or had any reason to suspect that Corbin was acting for the New Haven, if he was, nor is it intimated that the suits were without foundation, so palpably baseless as to suggest to an ordinary lawyer that they were malicious.

In 1893 the Massachusetts Legislature inquired whether the New Haven had not forced the New England into insolvency with a view to the monopolization of transportation facilities. The examination was conducted by Mr. Storey. He called Mr. Brandeis and interrogated him concerning the suits and his employment. Brandeis quite deferentially declined, in the first place, to tell, claiming the privilege and the duty of counsel, but later told, as herein set out, about the matter. The litigation had evidently engendered bad blood between these two lawyers, as evidenced by the examination referred to. I should be loathe to believe that Mr. Storey carried to this day the animosity thus aroused, but the opinion of a man often defies analysis.

Another protesting ex-president of the American Bar Association, Simeon E. Baldwin, was counsel in Connecticut in that litigation for the directors of the New England road, which Corbin charged with misdeeds of many kinds. This affair narrows down to the question of the offense of Brandeis in bringing the suit in the name of Goldsmith, who was fully indemnified by Corbin. Goldsmith afterwards sued the Corbin estate to recover on account of expenses incurred in the litigation. It was not asserted that the court held that his agreement with Corbin was contrary to public policy or good morals.

It is conceded that whatever right Corbin had to maintain the actions, Goldsmith had the same right. The question is akin to that presented in the Ballinger case.

The Supreme Court of the United States held, in Wheeler v. Denver (229 U. S., 342), that a taxpayer could maintain a suit in the Federal court, though it was brought by his permission by the attorneys for a corporation which could not sue therein, which had indemnified him against costs and damages, provided the attorneys, and borne all the expenses.

A fight was waged in my home city for years between the municipality and a water company. On a number of occasions when action was taken by the city which the company thought inimical to its rights or interests, and which in its opinion would justify a taxpayer's suit, it got some friend, possibly a director of the company, to bring suit; that is, started suit in the name of the taxpayer under an indemnity to him. The most high-minded lawyers at our bar have pursued this course, and it never occurred to me that they were subject to disbarment or open to censure for having appeared as they did. What harm is done? What evil is to be feared? Isn't it true that the law is no respector of persons? The "saloon keeper" Goldsmith looked to the court quite like the capitalist Corbin. It does not appear why Corbin preferred not to have the suit brought in his name, but, as in the Ballinger case, it was generally known that he

was back of them. They were referred to as "the Corbin suits." That is immaterial. It was of no consequence to the court in the determination of the suits whether Goldsmith proceeded on his own motion or at the instigation of some one else. Neither the facts nor the law could be affected.

THE ILLINOIS CENTRAL.

This complaint simmers down to a question of whether Mr. Brandeis dissimulated or prevaricated in a statement made in a letter in relation to his being or having been the attorney for E. H. Harriman. The letter having been read and the facts having been developed by testimony, Senator CUMMINS, a member of the committee, addressed the following question to Mr. Fox, who was conducting the case for the protestants:

"Senator CUMMINS. I would like to know, before we go further, your view of Mr. Brandeis's statement or letter to Mr. Walker. Wherein do you think it shows false? Wherein do you think that it departs in any degree from the truth?" (Hearings, 354.)

To this he got no answer; presumably because Mr. Fox was able to give none. Neither am I.

THE SHOE MACHINERY CO.

Mr. Winslow, president of the Shoe Machinery Co., heretofore referred to, made bitter complaint against Brandeis. Prior to 1899, when that company was organized, the latter had been the representative—business rather than legal, apparently—of the Henderson family, of Chicago, owning interests in one of the companies uniting to form the Shoe Machinery Co. Brandeis became one of 19 directors in view of the interest referred to and had such part in the work of the board as a director not immediately concerned with the management of the business ordinarily has, being 1 of 19.

Perhaps more, because his business capacity is perhaps not much less marked than his talent as a lawyer. His firm, though not the general counsel for the company, was frequently employed by it. In 1906 an attempt was made before the Massachusetts Legislature to have an act passed declaring void so-called "tying clauses" in leases under which the company let out its machinery. At the request of Mr. Winslow, the president, Mr. Brandeis appeared before a committee and made an argument against the bill. It will be noted that the bill proceeded upon the assumption that the tying clauses were perfectly legal. It proposed to outlaw them. Up to that time the legality of the clauses in question had not been the subject of any special comment, and nothing appears to show that the Brandeis firm had ever been called upon to express an opinion on the subject. In the effort to defeat this legislation the Shoe Machinery Co. had the cooperation of a number of the shoe manufacturers, clients of Brandeis, whose sympathy and help had been enlisted partly, at least, through his efforts.

The controversy directed attention in a special way to the specific provisions of the leases and the legislation failed, due to some extent at least to a promise secured by Brandeis from Winslow to confer with the shoe manufacturers concerning certain provisions of the leases to which, as the contest proceeded, they expressed a decided objection. These conferences took place in the fall, Brandeis insisting that the leases should be changed, but without convincing Winslow. Thereupon Brandeis resigned as a director of the company. Some lawsuits then pending, apparently of no great consequence, in which his firm represented the company, were afterwards tried, but save for that work all his relations with the company ceased.

In 1907 the Massachusetts Legislature passed an act outlawing tying contracts. The bright legal minds which then guided the affairs of the Shoe Machinery Co. found it easy to circumvent the law, as they thought, by inserting a provision in the lease authorizing the company to cancel it at will. A lease could be avoided, then, against any man who appealed to the new law.

In 1911 the Supreme Court affirmed the decisions in the Standard Oil and American Tobacco Co. cases. Other decisions were rendered shaking the faith of many people that a combination, the basis of which was patent rights, was immune under the Sherman law. Enlightened by these cases the Brandeis firm gave an opinion to the effect that the tying clauses were void under the Sherman Act, of course with respect to insterstate business.

Meanwhile the Thomas G. Plant Co. was acquired by the Shoe Machinery Co., as heretofore recited. Thereafter at hearings before congressional committees and in public addresses to illustrate some point he was making in connection with the trust problem, Brandeis frequently referred to the oppressive tying clauses of the Shoe Machinery Co.—which, by the way, were a growth dating from 1861—and to practices of that company, all of which he roundly denounced. It is not claimed that he ever disclosed any facts concerning its business not long public property, of which he might have learned either as director of the company or as casual attorney for it. Indeed, the things of which he complained had already been communicated to the Department of Justice, and had been the subject of comment by representatives of the shoe manufacturers before committees of Congress.

Mr. Winslow seems to be possessed with the idea that because Brandeis had taken fees from the Shoe Machinery Co. he bound himself forever not to criticize its policy or its practices—that in a way he had violated his fealty. It is not an uncommon view on the part of those who manage great industries and command many men that they may insure the support of lawyers on public questions by putting them on the pay roll or paying them from time to time for legal services. In the case of Brandeis the assumption seems not to have been well founded. In that he did something to dispel that notion, he deserves well of his profession.

It is claimed that in some respects his position in realtion to questions in which that company was concerned was inconsistent. Doubtless he finds it easy to reconcile whatever differences may appear or he may frankly admit that on at least one occasion he was in error. What if he was inconsistent? Is it forbidden to a man that he change his mind?

If in the impetuosity of attack or the ardor of advocacy he was led sometimes into giving too vivid a hue to the facts touching the methods of business of Mr. Winslow's company or drew unwarranted conclusions from them, there was no such obliquity of mind disclosed or faults of character revealed as would in anywise unfit him for judicial duties. It is impossible in reason to attribute his attitude toward the Shoe Machinery Co. after he parted company with it to any but the most creditable motives. There had been no quarrel, no heated interchanges, when the separation came that might have bred some deep-seated resentment to satisfy which the subsequent accusations were made by Brandeis. He was moved either by a sincere purpose to serve the public interest or he was playing the part of a demagogue. Few who plead the cause of the great public escape the imputation from those whose privilege they seek to curtail of pandering to popular prejudice.

In the Illinois Central matter he was getting proxies in New England for what may be called the Harriman interests as against the Fish interests while he was fighting the merger of the Boston & Maine. In these matters, too, it is said he occupied positions that were wanting in consistency. It would serve no useful purpose to inquire whether the local fight was an attempt to "Harrimanize" New England or whether the ousting of Fish was to be desired notwithstanding the influence of Mr. Harriman would be extended.

THE GILLETTE SAFETY RAZOR CASE.

I shall not enter into the details of this matter. Brandeis's firm was employed to defend the directors of that company in a maladministration suit, and to resist actions brought by various parties against the directors to rescind sales of stock sold them without disclosing the true value of it and the condition of the company.

While these actions were pending the defendants quarreled. Certain of them, including Gillette, the inventor of the device, fearing a plot on the part of others to oust them from the directory, went to Brandeis and employed him to help them to secure enough outstanding stock to give them control. He did so, and the firm continued to defend them all, in the actions in which they were employed, until they were finally disposed of. None of the parties are complaining, but the plaintiff in one of the annulment suits had some stock. Brandeis besought his attorney to induce his client to sell. He did so, and the stock was acquired. Now, the attorney for another claimant prosecuting a similar suit, but who owned no stock of record, had been associated on the record as counsel for the plaintiff. The original attorney asserts that Brandeis asked him in the course of the negotiations not to mention the matter to the attorney for the other claimant who had thus been associated. He bore no relation whatever to the directors to whose interests it is suggested Brandeis was not faithful. They are, as stated, not complaining, nor does it appear that they ever did complain.

THE ADVANCE RATE CASE.

Mr. Brandeis was employed by the Interstate Commerce Commission to resist the application of the railroads made in 1913 for a 5 per cent increase in freight rates. He had appeared for certain shippers in a similar application which had been made in 1910, and which had been denied.

Clifford Thorne, one of the railroad commissioners of the State of Iowa, appeared for various shippers and for the State authorities for a number of the Central Western States, who naturally resisted any raise.

The inquiry involved two questions; first, as to whether the net revenues of the railroads as a whole were adequate—that is, without any new economies or change of business methods; and, second, if they were not, how were the net revenues to be increased, and particularly whether they were to be increased by a general raise.

The shipper is not ordinarily concerned, or, at least, not so deeply concerned about what the rate is going to be on any commodity except his own. It may be that the rates as a whole do not produce the requisite revenues and that something additional ought to be raised by an increase on his particular line of goods.

An attorney to represent all interests, as one employed by the commission must, approaches the proposition from a slightly different angle from that from which the attorney for the shipper views it.

It was assumed, however, that the railroads would be represented by able counsel who might be relied upon to bring out all facts helpful to their side of the case.

Mr. Thorne, whose diligence and fidelity, not to speak of his talents, which are undoubtedly of high order, can not be too much commended, in his testimony and in his argument before the commission advanced that the net revenues on the whole were sufficient to pay the companies a reasonable return on their investment.

Mr. Brandeis, in closing the case, declared that in his opinion they were not on the whole sufficient. He then proceeded to tell how by making readjustments here and instituting economies there they could be made sufficient without any raise in general rates. The increase was denied. It is said that Brandeis should not have made the admission that he did. Naturally it was disappointing to Mr. Thorne, but no one suggests, not even Thorne, except from his manner, that Brandeis had not reached the conclusion he announced after a thorough and painstaking inquiry, bringing to bear on the subject his masterful faculty in the analysis of accounts. But it is asserted that he might have said, "If it be conceded, etc.," or "I shall assume for the purpose of the argument, etc."

Mr. Brandeis's critics are hard to please. In the Ballinger and Goldsmith cases it is said he should have been more frank with the court; in this case, that he should have been less so.

The remainder of the matters submitted to the committee do not seem to require notice. It would be useful, perhaps, if time permitted, to outline them in order to show the frivolous character of most of them—indicating a straining after results and a consciousness that the case made on the matters reviewed is a weak one.

The real crime of which this man is guilty is that he has exposed the iniquities of men in high places in our financial system. He has not stood in awe of the majesty of wealth. He has, indeed, often represented litigants, corporate and individual, whose commercial rating was high, but his clients have not been exclusively of that class. He seems to have been sought after in causes directed against the most shining marks in it. He has been an iconoclast. He has written about and expressed views on "social justice," to which vague term are referred movements and measures to obtain greater security, greater comfort, and better health for the industrial workers—signifying safety devices, factory inspection, sanitary provision, reasonable hours, the abolition of child labor, all of which threaten a reduction of dividends. They all contemplate that a man's a man and not a machine. A letter addressed to me by Hon. David I. Walsh, concerning his activities in a public way in the State of Massachusetts, affords some light on the opposition to this nomination. It is made an appendix hereto.

It is said that it is to be regretted that any such controversy as this in which we are involved should arise over a nomination of a justice of the Supreme Court. So it is. But when it is said further that one might better be chosen over which no such bitter contention would arise, I decline to follow. It is easy for a brilliant lawyer so to conduct himself as to escape calumny and vilification. All he needs to do is to drift with the tide. If he never assails the doer of evil who stands high in the market place, either in court or before the public, he will have no enemies or detractors or none that he need heed. The man who never represents the public or the impecunious citizen in any great forensic contest, but always the cause of corporate wealth,

never has these troubles. It is always the other fellow whose professional character is a little below par.

The bar is still the bulwark of the liberties of the people. To it they must look in the future as they have looked in all of our history for fearless champions. Discouragements enough beset the ambitious youth who resolutely sets out upon the path of devotion to duty and to the cause of justice, who strives to render some real public service. I do not care to warn him to abandon the hope of reaching the summit of his profession by that route.

My vote is for the confirmation of the nomination of Louis D. Brandeis for associate justice of the Supreme Court.

Respectfully submitted.

THOMAS J. WALSH.

APRIL 3, 1916.

APPENDIX.

WASHINGTON, D. C., *February 7, 1916.*

MY DEAR SENATOR WALSH: It seems to me a public duty to write to you in regard to the appointment of Mr. Louis D. Brandeis, of Massachusetts, as a justice of the Supreme Court of the United States. During the two years I was governor of Massachusetts, and in the years preceding them, I had repeated occasions to observe this man and his high ideals and common sense; his wide practical knowledge of the law; his extensive understanding of the business, economic, and social problems of our time; his sound judgment and ardent devotion to the public welfare. As you know, we are justly proud of the number and ability of our public-spirited men in Massachusetts, and it would be difficult to point out a better example of generous, unpaid, diligent constructive work upon the side of the public interests than that which has been done by Mr. Brandeis.

On numerous occasions, beginning at least as far back as 1896, whenever the creation and control of the Boston subways was before the legislature, he has been, as a private citizen, a tireless and successful leader against powerful opposition in support of the principle that the value of the subway franchises should be kept for the public, after giving to the operating company a reasonable return for services rendered. He declined to accept any compensation for his long-continued and very valuable constructive work during all these years in this cause.

When the gas situation in Boston appeared to be in a hopeless condition he urged again as a private citizen the plan by which the dividends of the gas company were made dependent upon the price charged for gas to the consumers. This has resulted in a reduction in the price of gas to the public and in a corresponding increase in dividends to stockholders of the company.

When the insurance investigations occurred he devised and successfully pressed for legislation in Massachusetts permitting, for the first time in this country, our savings banks to issue small-payment life insurance policies. This has resulted in an opportunity for our working people to insure themselves at much lower rates than were being charged by the industrial insurance companies, and has led these companies to make lower rates. To my personal knowledge, Mr. Brandeis has given annually thousands of dollars to further the work of bringing to the working people of our State this opportunity for less costly insurance. For more than 20 years prior to the Massachusetts law there had been no reduction in the cost of industrial insurance, but since the passage of the law so successfully advocated by Mr. Brandeis in Massachusetts, the premiums of the old-line companies have been reduced on an average 20 per cent, thus saving to the people of this country insured in industrial companies from $15,000,000 to $20,000,000 annually and to the people of Massachusetts about $1,000,000.

The system of arbitration which he devised for the New York Garment Workers is an equally significant example of his judicial qualities and his public service in other fields.

In 1906 the people of New England began to awaken to the fact that the New Haven Railroad was apparently successfully seeking to create a New England transportation monopoly. The event which focused public opinion most sharply was the acquisition of the controlling interest in the Boston & Maine Railroad. Mr. Brandeis, again as a private citizen, commenced an exhaustive study of this railroad problem, and made public an analysis of the financial condition of the New Haven Railroad, pointing out for the first time to the people of New England the inevitable disaster sure to result from the course of mismanagement and waste then being pursued. His advice was unheeded, his warning derided, and his motives impugned. But time has shown that his conclusions were based upon carefully ascertained facts, to which he applied the clearest and most cogent reasoning power. Three years ago what he prophesied nine years ago became apparent to all and is now a matter of public knowledge and of record in Senate documents and elsewhere.

I instance these, among many public services covering a long period of years, as illustrative of the work done as a private citizen in the service of the public interest without compensation, at a large expenditure of his own time in the midst of a very active professional life.

Indeed, in extensive acquaintance with public men, I know of no one who, without emolument or honors of public office, has given so much of the valuable constructive service of a trained lawyer to the public weal as Mr. Brandeis.

I have written mainly of Mr. Brandeis's public work for the past 20 years, but I would not have you overlook that before he engaged in these public activities out of which have grown results for which he is entitled to the gratitude of the American people, he had achieved already a position at the Massachusetts bar which would well have warranted his appointment to the Supreme Court at the age of 40. He is a great lawyer and a great citizen. Is not this a combination for a great judge?

Were I not hastening on a far journey I would seek a personal interview with the committee, but failing such opportunity, I venture to emphasize and perhaps to repeat some of the things I said to you orally, and I hope that you will communicate them to your committee, together with my very best respects.

Very sincerely, yours,

DAVID I. WALSH, *Boston, Mass.*

Hon. THOMAS J. WALSH,
The Senate, Washington, D. C.

On May 10, 1916, the Committee on the Judiciary appointed the same subcommittee, with the exception that Senator BORAH took the place of Senator CUMMINS (absent), to take further evidence regarding the matter brought to the attention of the committee by a member of the committee concerning the relation of Mr. Brandeis with a drug merger.

This subcommittee met on May 12, 1916, and heard the testimony of Mr. Louis K. Liggett, Mr. Frederick E. Snow, and Mr. George W. Anderson, and also heard the testimony of Hon. James S. Harlan, member of the Interstate Commerce Commission, all of which evidence was printed as a part of the record.

It seems that there was a holding company formed to take over certain drug companies, and Mr. Brandeis was consulted as to the legality of the corporation and proposed combination.

There was nothing in the employment out of the ordinary, and since the evidence was taken no one has suggested that there was anything improper in the employment or anything to be criticized in what Mr. Brandeis said or did. It was a proper employment, and, unless this committee is to supervise the private practice of the law, there is nothing regarding the charges to discuss.

This supposed charge is one of many which come under the notice of an honorable member of the committee, and he in good faith brought it to the attention of the committee, which, regarding its source, felt called upon to take the evidence.

We venture to introduce further comment upon this nomination with the following from an address made by Mr. Brandeis on May 4, 1905, before the Harvard Ethical Society, as follows:

"It is true that at the present time the lawyer does not hold as high a position with the people as he held 75 or, indeed, 50 years ago; but the reason is not lack of opportunity. It is this: Instead of holding a position of independence, between the wealthy and the people, prepared to curb the excesses of either, able lawyers have to a large extent allowed themselves to become adjuncts of great corporations and have neglected the obligation to use their powers for the protection of the people.

"The leading lawyers of the United States have been engaged mainly in supporting the claims of the corporations; often in endeavoring to evade or nullify the extremely crude laws by which legislators sought to regulate the power or curb the excesses of corporations.

"For nearly a generation the leaders of the bar have, with few exceptions, not only failed to take part in constructive legislation designed to solve, in the public interest, our great social, economic, and industrial problems, but they have failed likewise to oppose legislation prompted by selfish interests."

No doubt the distinguished audience which heard this address, as well as the bar and public generally, approved it; that the distinguished author of it deigned to put it into actual practice should go to his credit rather than to his prejudice.

The Five Per Cent Rate case was somewhat illuminated by the testimony of Hon. James S. Harlan, member of the Interstate Commerce Commission, found in part 22 of the hearings at page 157. This evidence makes it clear that the charges brought by Mr. Thorne against Mr. Brandeis are certainly not taken seriously by the Interstate Commerce Commission. Mr. Harlan reviews the whole circumstances concerning the employment, and we quote from that part of his evidence, as follows:

"Senator WALSH. Mr. Harlan, I want to ask you a question or two. I should like to inquire of you whether it had ever occurred to you or to any of the members of the commission, so far as you are permitted to speak for them, that Mr. Brandeis had been faithless to the commission or to the public in the discharge of the duties which he undertook?

"Mr. HARLAN. Senator, I feel assured that I represent the views of my colleagues when I say that no such thought ever occurred to any of us. So far as I am concerned personally, if I may express a personal view, I can not associate such an idea with Mr. Brandeis. It is not consistent with my view of him or with the impressions that I have formed from a long acquaintance with him.

"Senator WALSH. Doubtless you know, Mr. Commissioner, the nature of the complaint made in this connection. It appears to be that, the questions involved being, first, whether the net revenues of the railroads as a whole, without any economies or change of business methods, were adequate; and, second, if they were not, by what means they should be made adequate. Mr. Brandeis, in opening the discussion before the commission, made the statement in effect that, in his opinion, the revenues of the railroad companies were not on the whole adequate, considering the needs of the railroads and the general welfare of the community. Do you recall the statement to which I allude?

"Mr. HARLAN. Yes; I do, Senator.

"Senator WALSH. In a general way, at least?

"Mr. HARLAN. Yes; I do.

"Senator WALSH. What was your view as to the propriety or the impropriety of Mr. Brandeis expressing any such opinion as that to you in the course of his discussion of the matter as he had investigated it?

"Mr. HARLAN. It never occurred to me that there was any impropriety in it. On the contrary, as I view the situation, it was precisely the sort of view that we looked to counsel to express as the result of his study of the case and the record as it lay before us. I do not mean, in saying that, that we had expected him to reach that conclusion on the record before us; I mean to say that it was that sort of judgment that we wanted from all the counsel discussing that case, and particularly from Mr. Brandeis. He had, of course, been in the case from the beginning. We wanted him to develop the facts—all the facts—that might bear upon the public interest, and I know of no more important fact in such a case than precisely that question. If the revenues of the carriers, the net incomes of the carriers, were not sufficient, that was something that we ought to know. It was one of the questions that the commission undertook to investigate. Having retained Mr. Brandeis to bring out all the facts of value, as I have explained, I do not see how he could have failed, when discussing the record, to advise us of any conclusion he had reached from his study of the testimony and evidence adduced, and to point out from the record, as he did, the reasons for that conclusion. We were entitled to have the views of those who had studied the record. As far as I know, the impropriety of the statement by him, to which you refer, has never occurred to any of my colleagues. But in saying that, and in what I have said or shall say, I speak only for myself.

"Senator WALSH. That is all.

"Senator WORKS. Mr. Harlan, that admission, if we call it an admission, practically covered the whole case, did it not?

"Mr. HARLAN. Why, no, Senator.

"Senator WORKS. The very question you had before you was whether these rates should be increased as asked for by the carriers, was it not?

"Mr HARLAN. Well, whether the net revenues were adequate in the public interest was a very different question from the reasonableness of the rates which were then in existence, or the rates which were proposed by the carriers."

Of Mr. Brandeis, Mr. Harlan said further in his testimony:—

"Mr. HARLAN. I do not believe that I am prepared to make any response to that question. I will say that, as far as my experience goes with Mr. Brandeis, he is a man who showed at all times great consideration for others. I do not believe that Mr. Brandeis would consciously have done an unfair thing. I am perfectly certain that in saying what he did he was moved by a sense of duty, upon the record, to the commission. No other thought about it has ever occurred to me, and I never have heard any of my colleagues indicate any criticism of it, or that they were surprised by it. Now, that may not be responsive to your question."

Again, in answer to a question by Senator FLETCHER, the following occurred:

"Senator FLETCHER. And no matter what Mr. Brandeis or any of the counsel may have stated in argument, the commission itself had the whole record before it and all the facts were collected, and there has been no claim that any shipper or any other interest was omitted in the collection of the facts?

"Mr. HARLAN. No; I have heard no criticism of that kind, and I do not think there is any basis for such criticism. I want to say also that I do not think the commission ever dealt with any case that engaged the personal attention of each commissioner more deeply and for a greater length of time than did the Five Per Cent case."

Again, in answer to a question by Senator WORKS, Mr. Harlan said:

"Senator WORKS. I believe it was testified at this hearing with respect to this particular case, by one of those attorneys that you had previously employed, that he never assumed to give any such advice or opinion respecting such a matter as this but simply developed the facts?

"Mr. HARLAN. I do not know who that was; but my own recollection is, and my understanding is, that we expect those who are retained by the commission for this purpose to be of aid to the commission not only in developing the facts but after weighing the record in pointing to the conclusions that the record seems to justify; and as I have said before, I say again, that I heard no comment or criticism in the commission of Mr. Brandeis's course upon the argument.

"Senator FLETCHER. I understand that there was in your mind in writing the letter that presenting the other side meant in the argument of this case and when the facts were collected?

"Mr. HARLAN. When the broad record was made.

"Senator FLETCHER. As you expressed it further down in the letter: 'And I have been asked to ascertain whether your engagements and inclinations are such as to permit you to undertake the task of seeing that all sides and angles of the case are presented of record,' etc. Was there any claim or suggestion that he failed or neglected to do that?

"Mr. HARLAN. I have heard none at all.

"Senator FLETCHER. Even Mr. Thorne, in complaining about the statement made by Mr. Brandeis, never contended that Mr. Brandeis had failed in the effort to collect all the facts in the case?

"Mr. HARLAN. I do not recall that he made that criticism, Senator.

"Senator FLETCHER. Then, when you announced one issue in the language mentioned 'Do the present rates of transportation yield an adequate return to common carriers?' is not that a different question than whether or not the net income of the railroads—the net operating revenues of the railroads—are sufficient?

"Mr. HARLAN. I regard it, of course, as a very different question.

"Senator FLETCHER. Yes.

"Mr. HARLAN. I mean there is a very distinct difference between the two questions.

"Senator FLETCHER. A very distinct difference?

"Mr. HARLAN. Yes.

"Senator FLETCHER. So that when an admission is made that the net operating revenues of a railroad company are insufficient, or the net income is insufficient as the road is being operated, it is not an admission that the rates are inadequate?

"Mr. HARLAN. No; by no means. The adequacy of net operating revenues brings up questions of credit, adequate facilities, efficient service, extension of tracks, and matters of that kind. Whether the rates are adequate brings into view their reasonableness and related questions. As I have before pointed out, the commission held in the first report in the Five Per Cent case that the net operating revenues of the carriers were inadequate in the public interest, but at the same time we denied the increased rates demanded by the carriers and permitted an increase in central freight association territory only in connection with a finding that those rates were unduly low when compared with rate structures elsewhere in the country.

"Senator CHILTON. It therefore follows that Mr. Brandeis's admission did not answer and conclude the first proposition that you presented?

"Mr. HARLAN. Well, it certainly did not conclude it with the commission."

At another place in the evidence Mr. Harlan says:

"But I do not understand that Mr. Brandeis was on either side. He was there in the public interest."

At another place, speaking for the commission, he said that the services of Mr. Brandeis were "eminently" satisfactory.

It seems to us that this evidence makes it perfectly clear that the charge of Mr. Thorne can not be sustained, but that on the contrary the conduct of Mr. Brandeis in this matter was honorable, in every way satisfactory to the commission, and showed fidelity to a most important trust.

In view of the fact that some citizens of great prominence have protested against this nomination, reference may properly be made to certain letters concerning Mr. Brandeis. One is a letter from the President of the United States in answer to a letter from Mr. Culberson, chairman of the Committee on the Judiciary, which letter and the reply thereto follow:

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
Washington, D. C., May 5, 1916.

DEAR MR. PRESIDENT: As you are aware, the Committee on the Judiciary of the Senate has under consideration the nomination of Mr. Louis D. Brandeis for Associate Justice of the Supreme Court of the United States.

In response to the formal and usual request of the committee made to the Attorney General for all papers in the possession of his department touching this nomination, he replied that there were no such documents in his department.

Inasmuch as this request usually results in the presentation to the Committee on the Judiciary of papers showing the reasons which actuated the President in making the nomination, I would be glad to have you state these reasons, for the benefit of the committee, in case you see no objection to so doing.

Very sincerely, yours,

C. A. CULBERSON.

To the PRESIDENT,
The White House.

THE WHITE HOUSE,
Washington, May 5, 1916.

MY DEAR SENATOR: I am very much obliged to you for giving me an opportunity to make clear to the Judiciary Committee my reasons for nominating Mr. Louis D. Brandeis to fill the vacancy in the Supreme Court of the United States created by the death of Mr. Justice Lamar, for I am profoundly interested in the confirmation of the appointment by the Senate.

There is probably no more important duty imposed upon the President in connection with the general administration of the Government than that of naming members of the Supreme Court; and I need hardly tell you that I named Mr. Brandeis as a member of that great tribunal only because I knew him to be singularly qualified by learning, by gifts, and by character for the position.

Many charges have been made against Mr. Brandeis; the report of your subcommittee has already made it plain to you and to the country at large how unfounded those charges were. They threw a great deal more light upon the character and motives of those with whom they originated than upon the qualifications of Mr. Brandeis. I myself looked into them three years ago when I desired to make Mr. Brandeis a member of my Cabinet and found that they proceeded for the most part from those who hated Mr. Brandeis because he had refused to be serviceable to them in the promotion of their own selfish interests and from those whom they had prejudiced and misled. The propaganda in this matter has been very extraordinary and very distressing to those who love fairness and value the dignity of the great professions.

I perceived from the first that the charges were intrinsically incredible by anyone who had really known Mr. Brandeis. I have known him. I have tested him by seeking his advice upon some of the most difficult and perplexing public questions about which it was necessary for me to form a judgment. I have dealt with him in matters where nice questions of honor and fair play, as well as large questions of justice and the public benefit, were involved. In every matter in which I have made test of his judgment and point of view I have received from him counsel singularly enlightening, singularly clear-sighted and judicial, and, above all, full of moral stimulation. He is a friend of all just men and a lover of the right; and he knows more than how to talk about the right—he knows how to set it forward in the face of its enemies. I knew from direct personal knowledge of the man what I was doing when I named him for the highest and most responsible tribunal of the Nation.

Of his extraordinary ability as a lawyer no man who is competent to judge can speak with anything but the highest admiration. You will remember that in the opinion of the late Chief Justice Fuller he was the ablest man who ever appeared before the Supreme Court of the United States. "He is also," the Chief Justice added, "absolutely fearless in the discharge of his duties."

Those who have resorted to him for assistance in settling great industrial disputes can testify to his fairness and love of justice. In the troublesome controversies between the garment workers and manufacturers of New York City, for example, he gave a truly remarkable proof of his judicial temperament and had what must have been the great satisfaction of rendering decisions which both sides were willing to accept as disinterested and even-handed.

Mr. Brandeis has rendered many notable services to the city and State with which his professional life has been identified. He successfully directed the difficult campaign which resulted in obtaining cheaper gas for the city of Boston. It was chiefly under his guidance and through his efforts that legislation was secured in Massachusetts which authorized savings banks to issue insurance policies for small sums at much reduced rates. And some gentlemen who tried very hard to obtain control by the Boston Elevated Railway Co. of the subways of the city for a period of 99 years can probably testify as to his ability as the people's advocate when public interests call for an effective champion. He rendered these services without compensation and earned, whether he got it or not, the gratitude of every citizen of the State and city he served. These are but a few of the services of this kind he has freely rendered. It will hearten friends of community and public rights throughout the country to see his quality signally recognized by his elevation to the Supreme Bench. For the whole country is aware of his quality and is interested in this appointment.

I did not, in making choice of Mr. Brandeis, ask for or depend upon "indorsements." I acted upon public knowledge and personal acquaintance with the man, and preferred to name a lawyer for this great office whose abilities and character were so widely recognized that he needed no indorsement. I did, however, personally consult many men in whose judgment I had great confidence, and am happy to say was supported in my selection by the voluntary recommendation of the Attorney General of the United States, who urged Mr. Brandeis upon my consideration independently of any suggestion from me.

Let me say, by way of summing up, my dear Senator, that I nominated Mr. Brandeis for the Supreme Court because it was, and is, my deliberate judgment that of all the men now at the bar whom it has been my privilege to observe, test, and know, he is exceptionally qualified. I can not speak too highly of his impartial, impersonal, orderly, and constructive mind, his rare analytical powers, his deep human sympathy, his profound acquaintance with the historical roots of our institutions and insight into their spirit, or of the many evidences he has given of being imbued to the very heart with our American ideals of justice and equality of opportunity; of his knowledge of modern economic conditions and of the way they bear upon the masses of the people, or of his genius in getting persons to unite in common and harmonious action and look with frank and kindly eyes into each other's minds, who had before been heated antagonists. This friend of justice and of men will ornament the high court of which we are all so justly proud. I am glad to have had the opportunity to pay him this tribute of admiration and of confidence; and I beg that your committee will accept this nomination as coming from me quick with a sense of public obligation and responsibility.

With warmest regard, cordially and sincerely, yours.

WOODROW WILSON.

Hon CHARLES A. CULBERSON,
United States Senate.

We submit also the following letter from Prof. Charles W. Eliot, emeritus president Harvard University:

CAMBRIDGE, MASS., *May 17, 1916.*

DEAR SIR: I have known Mr. Louis D. Brandeis for 40 years, and believe that I understand his capacities and his character. He was a distinguished student in the Harvard Law School in 1875–1878. He possessed by nature a keen intelligence, quick and generous sympathies, a remarkable capacity for labor, and a character in which gentleness, courage, and joy in combat were intimately blended. His professional career has exhibited all these qualities, and with them much practical altruism and public spirit. He has sometimes advocated measures or policies which did not commend themselves to me; but I have never questioned his honesty and sincerity or his desire for justice. He has become a learned jurist.

Under present circumstances, I believe that the rejection by the Senate of his nomination to the Supreme Court would be a grave misfortune for the whole legal profession, the court, all American business, and the country.

Sincerely, yours,

CHARLES W. ELIOT.

Hon. CHARLES A. CULBERSON.

Also the following letter from Charles B. Greenough:

262 WASHINGTON STREET,
Boston, Mass., May 19, 1916.

Hon. CHARLES A. CULBERSON.

DEAR SIR: In reading the report of the hearings before the subcommittee of your committee on the question of approval of the nomination of Mr. Brandeis it has seemed to me that the testimony of some of the lawyers from this city as to the reputation of Mr. Brandeis did not do him justice.

I think I am able to speak with some authority, as I have been secretary of the bar association, treasurer, member of the council, vice president, and president from 1902–1905. These positions gave me an excellent opportunity of knowing the character and reputation of the members of the bar. I was also chairman of the grievance committee of the bar association for 15 years, and during these years there had not been to my knowledge any complaint against Mr. Brandeis's character or method of practice.

I know there is among a number of our leading attorneys a strong feeling of antagonism to Mr. Brandeis, which I attribute entirely to two causes: First, the vigorous and, I think, outrageous attacks upon him for his opposition to the United Shoe Machinery Co. in 1909. Thousands of pamphlets were sent to members of the bar. I myself received several, and I have no doubt many received their impressions from these public repeated attacks, which could not be as widely answered. The second reason was his attack on the New York, New Haven & Hartford Railroad Co. All holders of the stock resented his attacks, and he was called a liar, a railroad wrecker, and many other similar names. As every trustee in New England held the stock—I held a lot of it myself, and was for a time inclined to resent his action—I have no doubt the distrust of him was increased thereby. That he was right, and conclusively shown to be so, came too late to dissipate the impression already formed.

At all times, however, and now his firm has the very best of reputation, and is the one most sought by students from the Harvard Law School.

I think I am justified in saying that a large number of the members of the bar to-day have a great respect for his ability and for his remarkable devotion to the public good, and would retain him without hesitation and with entire confidence in any matter relating to their own interests.

Very truly, yours, CHARLES B. GREENOUGH.

An impression has gone abroad that a great majority of the lawyers of Boston and vicinity are protesting against this nomination. That is a great mistake, as may be shown, and we, therefore, attach some letters from prominent lawyers and eminent citizens of that community as an appendix to this report. It will be noted that among that number are the following:

Roscoe Pound, new dean of Harvard Law School and eminent juridical scholar.
George B. Dorr, friend of Samuel D. Warren.
Joseph B. Eastman, member of Public Service Commission, Massachusetts, formerly secretary Public Franchise League.
David I. Walsh, recently governor of Massachusetts.
A. S. Hall, lawyer, practicing in Boston during Brandeis's entire career.
W. T. A. Fitzgerald, register of deeds, Suffolk County, Mass.
Lionel Norman, lawyer, characterizing narrowness of opposition.
J. M. Head, lawyer, knowing Brandeis 40 years.
Richard H. Dana, lawyer, long prominent leader in Civil Service Association.
John W. Cummings, a leading lawyer, Bristol County, bar, supposed to have been offered and declined appointment to superior court.
Melvin C. Adams, former United States district attorney.
Joseph C. Pelletier, State district attorney.
John A. Coulthurst, member of the city council and candidate for mayor.
George U. Crocker, member finance commission.
Samuel K. Hamilton, president Middlesex Bar Association.
Roger Sherman Hoar, former Assistant Attorney General.
James P. Magenis, finance commission.
Frederick W. Mansfield, former State treasurer.
Robert W. Nason, former assistant district attorney.
W. R. Sears, of Whipple's firm.
John R. Thayer, of Worcester.
James H. Vahey, formerly candidate for governor.
George Wigglesworth.
Arthur D. Hill, professor in Harvard Law School.
Prof. William Z. Ripley, of Harvard.
Rev. Edward Cummings, successor of Edward Everett Hale.
Bernard J. Rothwell, former president, chamber of commerce.
Henry S. Dennison, vice president, chamber of commerce.
Robert A. Woods, license commissioner.
William Lloyd Garrison.
Mark de Wolfe Howe, editor Harvard Bulletin.
President Bumpus, of Tufts College.
Robert N. Washburn, brother of Representative Charles G. Washburn, of Worcester.

It has been urged that in view of the fact that these charges have been made, and, at best, there may be still a doubt in the minds of many as to the truth of some of them, this nomination should be rejected.

For the reasons stated in the report of the majority members of the subcommittee, we can not concur in this view, but there are many other considerations which make such a proposition unthinkable. First, the precedents of the Senate are against any such theory. The appointment of Chief Justice Marshall and Justice Story, Justice Taney, and Justice Matthews were viciously attacked.

There were no ex-presidents of the American Bar Association to give their testimony as to the first two, but they did not lack critics of such high position as to impair their reputation at the time, and the criticisms from those of a different political faith were in nowise confined to political opinion.

Of Marshall, Thomas Jefferson said:

"Never will chicanery have a more difficult task than has now been accomplished to warp the text of the law to the will of him who is to construe it.

"The judge's inveteracy is profound and his mind of that gloomy malignity which will never let him forego the opportunity of satiating it on a victim.

"An opinion is huddled up in conclave perhaps by a majority of one delivered as if unanimous, and with the silent acquiescence of lazy or timid associates by a crafty judge who sophisticates the law to his own mind by the turn of his own reason.

"It (Marshall's Life of Washington) is written, therefore, principally with a view to electioneering purposes It will consequently be out in time to aid you with information, as well as to point out the perversions of truth necessary to be rectified."

These opinions from this respectable source were of a man of whom William Wirt said, "Marshall was justly pronounced one of the greatest men of the country"; and William Pinckney said, "A man born to be the chief justice of any country into which Providence should have cast him"; and John Quincy Adams said, "He was one of the most eminent men that this country has ever produced."

Chief Justice Marshall was elevated from the bar and held no judicial position before becoming Chief Justice of the United States.

Of Mr. Justice Story, Josiah Quincy, jr., said:

"I remember my father's graphic account of the rage of the Federalists when 'Joe Story, that country pettifogger, aged 32,' was made a judge of our highest court."

On the other hand, John Quincy Adams says:

"The Associate Judges from the time of his (Marshall's) appointment have generally been taken from the Democratic or Jeffersonian Party. Not one of them excepting Story has been a man of great ability."

In his "Memoir of Joseph Story, LL. D.," 1868, George S. Hillard says:

"Mr. Story, when he went upon the bench, was only 32 years old, a very early and, with the exception of Mr. Justice Buller, an unprecedented age for a lawyer to be advanced to a seat upon the highest judicial tribunal of his country. When we call to mind his youth and remember how earnest and conspicuous he had been on the unpopular side in politics, it will not be a matter of surprise to learn that the news of his appointment fell with something like consternation upon the elder, the more apprehensive, and the more conservative portion of the people of New England. His merits as a lawyer could be scanned only by his professional brethren; his sweet and generous nature could be appreciated only by his friends. The public knew him as an enthusiastic partisan; and it is not too much to say that with many there was an apprehension that, in his hands, rights and property would hardly be safe. It is hardly necessary to add, that the existence of such fears was a striking proof of the truth of Mr. Jefferson's saying, 'How much we suffer from misfortunes that never happen.' From the moment he assumed his judicial office he shook the dust of politics from his feet, and he bore himself with such absolute impartiality that it is literally true that there was no act of his judicial life from which it could have been known to which of the two great parties which divided the country he had previously belonged."

Roger B. Taney was nominated by President Jackson in January, 1835, to be an Associate Justice.

Chief Justice Marshall interested himself in support of the confirmation.

History records the following:

"At the last moment of the session the nomination of Mr. Taney was brought up in the Senate, and was indefinitely postponed, which was equivalent to a rejection."

"It is sad to a reflecting man to witness in an august body like the Senate, composed at that time of men who, by their eminent abilities, would give the highest dignity to any legislative assembly in the world, the unreasoning domination of party spirit, making it do an act of which every Member was afterwards ashamed." (Memoirs of Roger Brooke Taney by Samuel Tyler, p. 242.)

Chief Justice Marshall died in the summer of 1835, and on December 28 President Jackson nominated Taney for Chief Justice. There was violent opposition, particularly by Clay and Webster. On March 15, 1836, the nomination was confirmed by a majority of 14 votes.

The contest over the confirmation of Mr. Justice Stanley Matthews shows how easily mistaken conceptions concerning the predisposition of a judge upon questions of law or policy may develop into an unwarranted attack upon his moral qualities.

He was nominated by President Hayes early in 1881 on the retirement of Mr. Justice Swayne.

Charles Theodore Greve in his Life of Matthews (Great American Lawyers, Vol. VII, pp. 418–420) says:

"That his confirmation was bitterly opposed particularly by many in the East is a matter of public history. He had taken a most active part in one of the bitterest conflicts of modern politics and had been most conspicuous among the members of the bar as a representative of corporations and capital. To the objections that might have been urged as the result of mere differences of judgment were added as always happens in such cases the calumnies of personal enemies. Even a most unfair version of the old Connelly case of a quarter of a century before was made to do service. The opposition was sufficient to prevent confirmation during the few remaining weeks of President Hayes's term, but promptly after the inauguration of Garfield he, at Hayes's request, sent the nomination once more to the Senate. The opposition continued for some time but this extraordinary proof of confidence, the selection by two Presidents, each from his own State and each familiar with his entire career, finally led to his confirmation on May 12, 1881. He took his seat upon the bench of the Supreme Court on May 17, and soon came to be recognized as one of its strongest members. Whatever opposition may have been manifested at the time of his nomination was soon shown to be without foundation and those that led that opposition

were glad to acknowledge their error. Principal among these was Senator Edmunds, who later bore testimony that 'the grounds upon which many Senators (myself among others) thought it unfit that he should be called to this particular public service, turned out to be entirely mistaken, and in the public respect toward which our solicitudes were directed, his opinions delivered in this court and his assent to opinions upon that class of questions delivered by other judges, justified the President of the United States in insisting upon his appointment and convinced me and I think no doubt all the other Senators who were opposed to him at the time, that it was our mistake and not that of the President of the United States.' Senator McDonald, also a member of the Senate committee to which the nomination was sent, took occasion to brand as false any insinuations as to his conduct during the crisis of 1876–77, at which time he, McDonald, was one of the 'visiting statesmen' on behalf of the Democratic national committee."

The Connelly case, just referred to, gave ample opportunity for unjust criticism. In 1859, when Matthews was United States attorney for the southern district of Ohio, it became his duty to prosecute Connelly, the reporter of a local newspaper, who was indicted for aiding in the escape of fugitive slaves. Matthews was then believed to be sympathetic with the antislavery cause, and the prosecution was regarded as an unwarranted persecution by many influential citizens.

Another occasion on which Matthews found himself at the point where conflicting principles met was created by a resolution passed by the board of education of the city of Cincinnati, which provided:

"That religious instruction and the reading of religious books, including the Holy Bible, are prohibited in the common schools of Cincinnati, it being the true object and intent of this rule to allow the children of all sects and opinions, in matters of faith and worship, to enjoy alike the benefit of the common-school fund."

Suit was brought to restrain the execution of this resolution. Matthews was at the time a pronounced Calvinistic Presbyterian. Nevertheless, he accepted employment to defend the board of education. His biographer says of him:

"Matthews's appearance for the defense in this case shows as no other act of his life can show more plainly the liberal character of the man as well as his high conception of a lawyer's duty."

In arguing the case, Matthews said:

"It is easy to swim with the tide, to go with the current, to follow in the wake of the multitude. To do things that are popular is not hard. But to stand by a man's individual moral convictions, in opposition not to enemies but to friends, tries a man. If your honors please, it tries me."

The New York Sun had many violent editorials against Stanley Matthews from January to May, 1881, most of them by reason of his alleged connection with the Pacific railroads or Jay Gould. They appear on these dates: January 27, February 1, 2, 4, 7, 9, 11, 12, 16, 19, March 7, 19, 23, 24, 29, May 12 and 13.

Those of February 1 and 4 refer to the Anderson letters and indicate on their face that Matthews had been the custodian of papers that showed that Anderson had forged false return to get the necessary Hayes count in Louisiana, and show clearly that Matthews after he had this paper in his possession was active in endeavoring to get Anderson a Federal position. Matthews had stated in his testimony before the investigating committee that he understood that this paper was got up for blackmailing purposes, and that Anderson had not in fact been guilty of fraud in connection with the returns. These editorials refer to the committee as a "whitewashing" committee.

The February 7 editorial sets out the virtual trade that was alleged to have been made by Matthews on behalf of Hayes, not to interfere with the local State governments in control of the Democrats in certain States if the filibuster was stopped against the acceptance of the report of the Electoral Commission as to the presidential count. This editorial and some others refer to Mr. Justice Harlan's appointment on the Supreme Court bench as having been a reward for his help in the fraudulent counting in of Hayes.

Stanley Matthews was active in the Hayes-Tilden campaign of 1876 and visited Louisiana as an observer of the count. Subsequently one James E. Anderson made statements which led to an investigation by a select committee of the Senate: Allison, Ingalls, Hoar, Davis of Illinois, Whyte, and Jones of Florida, to determine what connection Matthews had had with real or pretended frauds in Louisiana and any promise of rewards that had been made to Anderson in connection therewith. Anderson was apparently a Republican election officer. They had heard and considered Anderson's testimony and Matthews's testimony and decided that Matthews's statement was correct; that is, that he had had nothing to do with inducing Anderson to suppress testimony or to give false testimony. But it did appear from Matthews's statement that he had exerted himself to get an appointment in the Federal service for Anderson, apparently merely because he was, in Matthews's view, a worthy and needy Republican. The committee, after absolving Matthews from guilt in any other respect, concludes its report:

"* * * We can not but regard his action with respect to James E Anderson's effort to obtain an appointment to office, under the circumstances, as wrong and injurious to the public interest." (Report, Mar. 1, 1879, vol. 2 of 1879, 45th Cong., 3d session., S. Rept. 867.)

Thus it may be seen that Mr. Brandeis will not be the first distinguished lawyer to serve upon the Supreme Court of the United States after having been criticized most severely.

It is easy to make charges, and there is too much proof in this case of a preconcerted effort to weaken the power of Mr. Brandeis before the public, to think of permitting insinuations and inuendoes to take the place of reasonable proof. We should be certain to have an honest, capable man upon the bench, but unless one be appointed who has not had the capacity and the courage to take part in the discussions of the last quarter of a century, which have been pregnant with constructive legislation and decisions, as well as undergoing a revolution in public sentiment regarding many questions, then it would be hard to find one, whom either malice or interest could not easily disqualify. For instance, take such an eminent man as Senator Root, now the president of the American Bar Association. We take it that practically everyone who has protested against Mr. Brandeis would gladly accept Mr. Root as the kind of a man and the kind of the qualified lawyer who would adorn the Supreme Bench. Yet it is the irony of the present situation that in a report published in 1902 entitled "Root's Record in Philippine Warfare," Mr. Moorefield Storey, who has been most prominent in fighting the nomination of Mr. Brandeis, joined in summing up conclusions, among others, as follows:

"That the statements of Mr. Root, whether as to the origin of the war, its progress, or the methods by which it has been prosecuted, have been untrue.

"That he has shown a desire not to investigate, and, on the other hand, to conceal the truth, touching the war and to shield the guilty, and by censorship and otherwise has largely succeeded."

Since that time Mr. Root has occupied many positions of trust and responsibility, among them the position of Secretary of State and United States Senator from New York and president of the American Bar Association. His preeminent position as a citizen is a guaranty that nothing which we quote now from Mr. Storey in 1902 can possibly do any injury, but if he had had less prominence and power, and disappointed railroads and other special interests had so desired, the above-quoted report would be certainly as substantial a foundation upon which to build a structure of doubt as formidable, in any view of the situation, as is the one which is now sought to be interposed against the nomination of Mr. Brandeis.

The active life of the people, the bitterness and intensity of political, legal, and civic controversies have made many prominent men the object of attack from large sections of the people or some particular communities. Instances of this could be multiplied, but we do not care to take liberties with others' names, preferring to let the illustration of one of the very distinguished members of the bar, which we have given, and who can not possibly be injured thereby, suffice.

Since 1907 Mr. Brandeis has been the object of bitter attack from those interested in defeating his opposition to the transportation monopoly sought by the New York, New Haven & Hartford Railroad Co. (620, 751, 615, 640, 499, 510). Before this time his efforts in behalf of what he believed to be the interests of the community had exposed him to the enmity of other public-service corporations, and the banking interests allied therewith (810, 613, 618).

But it was at the end of 1907 that the systematic efforts to discredit him began. This was done through inspired news articles and editorials, and finally through extensive advertising (620, 640, 664, 239). This was placed to some extent through Clarence W. Barron (134), the editor of a financial paper called the Boston News Bureau, and Wall Street Journal, and some of the advertisements were approved by Mr. Charles F. Choate, jr., the counsel for the railroad and a son of one of its directors (640, 643). This advertising was put out under such headings as "Brandeis the Railroad Wrecker." It was not the sporadic outburst of spite. It was a systematic policy of defamation to break down the power of his opposition, which was effective because of his high repute, and could be broken only by attacking his reputation. The method adopted was to spread the idea that he was not acting disinterestedly for the benefit of the community, but under pay and for hostile private interests (640, 660). This is of particular significance when considering the nature of the alleged bad reputation. It is not that he is unfaithful to his clients or false to the courts; it is that he is not entirely "trustworthy" (153), is "ruthless" in the attainment of his objects, and not "scrupulous" in the methods he adopts (271); that he works "under cover" (653); that he is not "straightforward" (611), and not always truthful, and sails under "false colors" (750). This was the very reputation which an extensive and skillful campaign was conducted to give him (620). The meaning of the witnesses is still further defined by their illustrations, namely, that of his being paid by Collier's for appearing for Glavis (614, 269), and the false charge that he was knowingly acting for the New York, New Haven & Hartford Railroad Co. in bringing the Corbin suits against the New York & New England Railroad Co. (415).

The coincidence of the beginning of this alleged evil reputation with a systematic campaign to create it is well shown by the testimony of Mr. Peabody, one of the hostile witnesses, who says that he has a wide acquaintance at the Boston bar, and for years has been a member of the same club with Mr. Brandeis, and yet the first that he heard by way of criticism of Mr. Brandeis's good faith was when he attacked the New Haven Railroad Co. in 1907 (753), and this was an attack to which Mr. Peabody was personally opposed (751).

This was an attack, as Mr. Storey says, upon people, many of whom exercised a very powerful influence, socially, politically, and financially, so that a man would not be in high favor with some of the best citizens of Boston who was engaged in exposing the shortcomings of these people (272).

Outside of this small circle and the influences of the hostile campaign, Mr. Brandeis's reputation is not only above reproach but is that of a man who is conspicuous for high standards of action, personally and in his profession.

With 38 years of practice in the Boston bar, Mr. Melvin O. Adams says of his reputation:

"If I may analyze it, as I observe it, there is a group of men of high standing, like Gen. Peabody, in the community, who are in the network of State Street, which is our financial street, who state and think that Mr. Brandeis is not straightforward in his practice. I think these opinions, when traced, run into some one of these pockets of more or less publicity, namely, the Lennox case, the United Shoe Machinery case, the wrecking of the New England—those allegations. That is a fair statement as to that group. On the other hand, there is a large body of the bar, who, coinciding with what I have said as to his being a very able lawyer, a man of profound learning, also believe that he is actuated by lofty purposes, is honest and trustworthy" (766).

Mr. Thomas J. Boynton, lately attorney general of Massachusetts, says:

"That reputation, so far as I know it, is good. Down to the time this appointment was made I think the only thing that had ever come to my attention in any way reflecting upon Mr. Brandeis was certain printed matter circulated by the United Shoe Machinery Co. With that exception, I do not think I ever heard anything reflecting in any way upon his character as a man or as a lawyer" (771).

The testimony of Mr. French and Mr. Walker are cumulative on this point.

Of his national reputation, Mr. Stephen S. Gregory, formerly president of the American Bar Association, says that "his reputation is excellent as a lawyer of ability and character" (711).

Hon. Newton D. Baker, Secretary of War, says that he knows Mr. Brandeis's reputation among social workers, and that among them he is regarded as not only the greatest lawyer of their group of aids but as a detached and spiritual and high-minded man (762).

This is emphasized by a memorial in Mr. Brandeis's favor signed by many well-known men (761).

Mr. Whipple, already quoted, says:

"As a lawyer, Mr. Brandeis is able and learned. As a man, he is conscientious and high minded. The feature of his career which is the most striking and remarkable has been his unselfish and unswerving devotion to the social, moral, and industrial uplift of the lowly and less fortunate of our people. I believe that on the Supreme bench

of the United States he will exert a strong influence in establishing the ideals to which he has devoted his recent years." (282.)

It is evident that the standing Mr. Brandeis's firm in the public esteem can not rise above his own. Mr. Whipple says that it is a reputable firm, generally so regarded, one of the leading firms of the city (285), one to which go men of superior excellence in their work in the Harvard Law School.

Mr. Hutchins says that the firm is one of the high-standing firms of the city to which for 20 or 30 years a good many of the high-class men from Harvard have gone, and that it has done a large and varied business, dealing on terms of good fellowship and general respect with the entire bar (621).

Without going further into details it may be said that the testimony of Mr. French, Mr. Walker, and others convinces your committee that the high standing of the law firm is not open to doubt.

The unreality of the strictures upon Mr. Brandeis's reputation is strikingly demonstrated by the treatment which has been accorded to him by some of the very men who now make these assertions. Among his critics are several of the overseers of Harvard College and members of that corporation. They are charged with the duty of maintaining the high moral standard of that institution, and of putting in places of prominence only those whose example will be elevating to the student body. Year after year these men have appointed Mr. Brandeis a member of the visiting committee to the Harvard Law School—a committee made up of such men as Mr. Justice Hughes, of the Supreme Court of the United States; Mr. Justice Loring, of the Supreme Court of Massachusetts; Mr. Justice Swayze, of the Supreme Court of New Jersey; Hon. James T. Mitchell, some time chief justice of Pennsylvania; Hon. Robert Grant, judge of the probate court in Boston; Hon. Henry L. Stimpson, some time Secretary of War; James C. Carter, leader of the American bar; Charles C. Beaman, member of the distinguished firm of Evarts, Choate & Beaman, a partner of Joseph E. Choate, lately ambassador to Great Britain; Francis C. Lowell, United States judge for Massachusetts; Charles J. Bonaparte, lately Attorney General; Jeremiah Smith, formerly justice of the Supreme Court of New Hampshire and one of its most distinguished citizens and professor in the law school after 1891; Charles S. Fairchild, formerly Secretary of the Treasury under Mr. Cleveland; Charles P. Greennough, formerly president of the Boston Bar Association; Robert M. Morse, one of the leaders at the Boston bar for the last 40 years; John Noble, clerk of the Supreme Judicial Court of Massachusetts; James J. Storrow, Edmund Wetmore, Henry W. Putnam, William Rand, George Putnam, Langdon P. Marvin, and Chandler P. Anderson.

Some of the members of the board of overseers of Harvard College, which has appointed Mr. Brandeis a member of the visiting committee to the law school, are the following:

Henry Cabot Lodge, Senator from Massachusetts; George F. Hoar, formerly Senator from Massachusetts; Roger Wolcott, formerly governor of Massachusetts; Moorfield Storey, one of the protestants; Francis C. Lowell, United States circuit judge, cousin and former partner of A. Lawrence Lowell; John D. Long, formerly governor of Massachusetts and Secretary of the Navy; William C. Loring, justice Supreme Judicial Court of Massachusetts; Winslow Warren, collector of port under Mr. Cleveland, father of Charles Warren, Assistant Attorney General of the United States; Frederick P. Fish, a protestant; John Noble, clerk of Supreme Judicial Court of Massachusetts and father of a protestant; Robert Grant, judge of the probate court, Suffolk County, Mass.; Robert M. Morse, one of the leaders at the Boston bar for the last 40 years; Solomon Lincoln, formerly a leader of the Boston bar; Moses Williams, a protestant; George O. Shattuck, formerly a leader at the Boston bar; James J. Storrow, Charles R. Codman, Henry W. Putnam, Leverett Saltonstall, Edmund Wetmore, Louis A. Frothingham, and George Wigglesworth.

It will not do to oppose the nomination of a man like Mr. Brandeis and then, after a complete investigation, admitting that the charges are not supported, ask that the nomination be rejected because of the charges rather than of their truth. This would be an injustice to the nominee and to the court, and would be out of line with that sense of justice which pervades all classes of people. Having failed in the charges and admitting the eminent ability of the appointee, it would be the manly thing to concede the evident error in making the charges and ask for a confirmation.

APPENDIX.

HON. WILLIAM E. CHILTON,
United States Senator, Washington, D. C.

DEAR MR. CHILTON: I am venturing to write you the impressions of one who has come into this community from without and may perhaps have been able to judge Mr. Brandeis more fairly than it seems to me he is judged here. His friends, as it seems to me, make a great mistake in urging as his chief qualification his views upon social questions and the eminent services he has performed in the public interest. Important as these matters are, their importance does not lie immediately in the direction of qualification for the bench. What is not so generally known is that Mr. Brandeis is in very truth a very great lawyer. At the beginning of his career his article in the Harvard Law Review on the right of privacy did nothing less than add a chapter to our law. In spite of the reluctance of many courts to accept this, it has steadily made its way, until now it has a growing preponderance in its favor. All the cases upon this subject concur in attributing the origin of the doctrine to Mr. Brandeis's paper. The promise thus given has been amply fulfilled. One might instance the revolution which his brief in Muller *v.* Oregon achieved in the matter of arguing cases involving the constitutionality of social legislation. The real point here is not so much his advocacy of these statutes as the breadth of perception and the remarkable legal insight which enable him to perceive the proper mode of presenting such a question. Since I came to Cambridge, not quite six years ago, I have had many opportunities of observing Mr. Brandeis, and do not hesitate to say that he is one of the great lawyers of the country. So far as sheer legal ability is concerned, he will rank with the best who have sat upon the bench of the Supreme Court.

As to the charge that he is lacking in judicial temperament and would be a partisan upon the bench, it seems to me that those who urge this know very little about him and base their opinions upon newspaper accounts of the vigorous battles which he has fought as an advocate. Of course the newspapers are not interested in the purely legal side of his activities. Only those causes involving more or less sensational public interest attract general notice. In these causes he has appeared as a vigorous and sometimes radical advocate. But those who conceive him disqualified because of his advocacy of those cases make the same mistake as is made by others who have so often objected to putting sound and well-qualified lawyers upon the bench because they had often been engaged in advocating the cause of great corporate interests. Moreover it is well proved by experience that a great advocate may easily become a great judge also. A notable example is to be seen in the case of Sir Henry Hawkins the greatest advocate probably of his generation. When he was appointed to the bench fear was expressed that he would carry his habits of advocacy into the judicial station. On the other hand, when he retired it was universally acknowledged that he had been a fair and sound trial judge in the very class of cases in which he had so often been engaged in the forum. One might instance also the late Lord Russell, easily the greatest advocate of his time, who filled acceptably the post of Chief Justice of England. In the case of Mr. Brandeis the very qualities that have made his advocacy so effective would, I think, make his study of a controversy as a judge equally effective in achieving a sound legal result.

As to the charges of unprofessional conduct which are so much in the air here, I have no first-hand information. But I may call your attention to one circumstance which seems to me conclusive. At least from 1910 (when I came here) to the present Mr. Brandeis has been one of the committee appointed by the board of overseers of Harvard University to visit the law school. That is, the board of overseers have appointed him as one of a committee to inspect the work of teachers and students, and to advise as to the conduct of the school. At different times between 1910 and the present he has been associated on this committee with Mr. Justice Hughes, of the Supreme Court of the United States; Mr. Justice Loring, of the Supreme Court of Massachusetts; Mr. Justice Swayze, of the Supreme Court of New Jersey; Hon. James T. Mitchell, sometime chief justice of Pennsylvania; Hon. Robert Grant, judge of the probate court in Boston, and Hon. Henry L. Stimson, sometime Secretary of War. During this period, in which Mr. Brandeis has been reappointed from time to time to serve with lawyers of the caliber of those just enumerated, the following lawyers have been members of the board of overseers by whom he has been so reappointed: Hon. Henry Cabot Lodge, United States Senator from Massachusetts; the late John D. Long; Mr. Justice Loring, of the Supreme Court of Massachusetts; Hon. James T. Mitchell, sometime chief justice of Pennsylvania; Mr. Justice Swayze, of the Supreme Court of New Jersey; William A. Gaston, Esq., of the Boston bar; Robert F. Herrick, Esq., of the Boston bar; Frederick P. Fish, Esq., of the Boston bar; Judge Robert Grant; and L. A. Frothingham, Esq., of the Boston bar. It can not be that these gentlemen would have appointed him along with such colleagues to a position of such importance had they then believed him deficient in professional honor or guilty of professional misconduct. Nor can it be asserted that the eminent members of the Boston bar who participated in the appointment and reappointment were ignorant of what is now charged, for these charges are not new. Conceding, as one must, the absolute sincerity of these gentlemen one is driven to the conclusion that the objections now urged against Mr. Brandeis at the Boston bar by his colleagues are the unconscious product of fear of his political views and aversion to his social and public activities.

Yours, very truly,

ROSCOE POUND.

SOMERSET CLUB,
Boston, March 21, 1916.

To the CHAIRMAN OF THE SENATE JUDICIARY SUBCOMMITTEE,
Washington, D. C.

DEAR SIR: Having followed with interest the report of evidence submitted to your committee in regard to the President's nomination of Mr. Brandeis for the Supreme Court vacancy, I find myself impelled, as a personal friend of his early partner, Mr. Warren, and as one of a now older group of Boston and Harvard men who have watched Mr. Brandeis's legal career develop from its commencement, in usefulness and distinction—to say that while well acquainted with the views of those who now oppose his confirmation and giving weight in other matters to the opinion of some among them, I believe them to be prejudiced and wrong regarding this.

Mr. Brandeis is a man of keen intelligence, but high ideals, possessing also a rare creative quality of imagination that, combined with fearless courage of convictions, has brought him at times, to the public benefit, in conflict with vested interests and established points of view. We need such a man as this on that high bench to keep it open to the ever-changing thought and sentiment of the world and Nation, recognizing these in their changes and passing judgment on them through the decisions that it renders.

I trust accordingly, for the country's sake, that the Senate may confirm his nomination. And I remain, with respect.

Very faithfully, yours,

GEORGE B. DORR.

THE COMMONWEALTH OF MASSACHUSETTS,
PUBLIC SERVICE COMMISSION,
February 26, 1916.

HON. WILLIAM E. CHILTON,
Chairman Subcommittee on Brandeis Appointment,
United States Senate, Washington, D. C.

DEAR SIR: I have followed the press accounts of the hearings before your subcommittee in the Brandeis matter with a great deal of interest. After it has probed his record to the bottom, as I hope it will, I feel very sure that the committee will favor his confirmation. My confidence does not rest upon what others have told me about him but upon personal knowledge.

Before I became a member of the Public Service Commission of Massachusetts I was, for some years, secretary of an organization in Boston known as the Public Franchise League. It was made up of a group of business and professional men of standing, who thought that they could be of service as citizens by making a disinterested study of some of the important questions that arise from time to time in regard to the public-service corporations of every community and by presenting the results of their study to the public bodies which have to deal with these questions. Mr. Brandeis was one of the members of this league and I saw a great deal of him and worked with him intimately.

If your committee would care to have it, I should be glad to furnish you with a statement, in some detail, of what this league did in connection with street railway, railroad, gas, and electric matters, for its work was, in my judgment, of great public importance and value. It would also help you, I think, to understand the attitude which Mr. Brandeis has taken upon such public questions and the antagonisms

which have been aroused. As you probably appreciate, it is impossible in a conservative community like New England for a man to speak plainly in the public interest upon such questions (especially if he also speaks forcefully) without creating enemies, some of whom are sincere but influenced by a prejudice which is often quite unconscious.

Louis D. Brandeis is a man of very unusual ability and power and a man of great moral courage. Furthermore, he is an indefatigable worker and student. The impression which some have that he is merely a brilliant advocate and addicted to reckless and extreme statements is not warranted. I have never known him, in any matter in which I was associated with him, to take a position before he was well grounded in the facts. This was particularly true in the New Haven Railroad matter. That he is honest and sincere I think no one who really knows him will doubt. I have no hesitation in expressing the opinion that he will make a very valuable addition to the Supreme Court, and I believe that you will feel the same after you have completed your investigation. My own feeling is illustrated by the fact that since I have been a member of this commission I have frequently consulted with him upon important matters.

It is, I think, hardly necessary to say that this letter is not an official communication, but the expression of my personal views.

Yours, very truly,

JOSEPH D. EASTMEN.

—

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: It is my desire to record my indorsement of Louis D. Brandeis, who is nominated as Associate Justice of the Supreme Court of the United States.

I have been a lawyer in active practice in the city of Boston more than 21 years and have been district attorney for more than 6 years. Previous to that time I served as civil service commissioner for the Commonwealth for 4 years and have held other nonelective public positions.

I want to speak of Mr. Brandeis's reputation at the Suffolk bar. I note that, according to the press, a gentleman recently claimed to represent the bar association of the city of Boston, of which I have been a member for many years. While as an officer he may have certain rights, or some committee may have given him authority, I want to call your attention to the fact that no meeting of the bar association has been held and the matter of Mr. Brandeis's indorsement has never been considered by the body as a whole.

I believe that in my private practice and in my official capacity I have been in a position to know much about the bar and the standing of its members. Few men come in contact with more men in active practice, and, as you will appreciate, it is inevitable that the estimate of members of the bar, one toward the other, soon becomes known and a matter of current gossip, criticism, or praise. I have never heard the slightest criticism of Mr. Brandeis, but, on the contrary, he has always been admired and looked upon as one of our most brilliant trial lawyers and one of the best jurists at the bar, learned in the law, and skilled in its practice. I never have heard the slightest intimation that he was anything but honest and upright, as he is capable and energetic. He has never hesitated to take a strong public position on public matters and it is never difficult to place him.

He seems to have been a man who always had an ambition to do something to better the conditions of the people.

It is not unusual for a man of his large experience and long years of turmoil in the courts and out to have displeased many, and perhaps offended them very deeply, and this is true of any man of his years and of his activity.

I am confident that if a vote of the Boston Bar Association were to be taken, or if a vote of the members practicing at the Suffolk bar, many of whom are not members of the association, was to be had, Mr. Brandeis would receive almost a unanimous vote, and, regardless of individual feelings, the lawyers would indorse him as an honest man, well fitted by training and experience to hold a place on the bench of the Supreme Court of the United States.

I have seen in the press a protest against the appointment of Mr. Brandeis signed by some members of the Suffolk bar. These are all estimable men, but, almost without exception, men of one class and one kind. I see there few names of the active trial members of the bar. I see there few names of men who have had to struggle to attain success. I see there few names of men engaged in general practice. This is not to be taken as any reflection upon these men, but merely as calling your attention to the fact that the list of names which I saw published was far from representative of the Boston bar, where we have all races and creeds, whose opinion is worth while and whose standing is beyond question and who are perhaps much nearer to the people than those in the list I have mentioned.

I do not want to accuse anyone in particular, but I think I express the notion of the majority of the people of Boston when I say that there is a feeling that the underlying opposition to Mr. Brandeis is more because he is a Jew than that he is unfit by reason of anything he has ever done. I know that your committee will have this in mind and that such a thought and such a reason will have no harbor and no merit in your honest consideration of this case.

Very truly, yours,

JOSEPH C. PELLETIER.

—

WASHINGTON, D. C., *February 7, 1916.*

MY DEAR SENATOR WALSH: It seems to me a public duty to write to you in regard to the appointment of Mr. Louis D. Brandeis, of Massachusetts, as a Justice of the Supreme Court of the United States. During the two years I was governor of Massachusetts, and in the years preceding them, I had repeated occasions to observe this man and his high ideals and common sense; his wide practical knowledge of the law; his extensive understanding of the business, economic, and social problems of our time; his sound judgment and ardent devotion to the public welfare. As you know, we are justly proud of the number and ability of our public-spirited men in Massachusetts, and it would be difficult to point out a better example of generous, unpaid, diligent, constructive work upon the side of the public interests than that which has been done by Mr. Brandeis.

On numerous occasions, beginning at least as far back as 1896, whenever the creation and control of the Boston subways was before the legislature, he has been, as a private citizen, a tireless and successful leader against powerful opposition in support of the principle that the value of the subway franchises should be kept for the public after giving to the operating company a reasonable return for services rendered. He declined to accept any compensation for his long-continued and very valuable constructive work during all these years in this cause.

When the gas situation in Boston appeared to be in a hopeless condition he urged, again as a private citizen, the plan by which the dividends of the gas company were made dependent upon the price charged for gas to the consumers. This has resulted in a reduction of the price of gas to the public and in a corresponding increase in dividends to stockholders of the company

When the insurance investigations occurred he devised and successfully pressed for legislation in Massachusetts permitting, for the first time in this country, our savings banks to issue small-payment life insurance policies. This has resulted in an opportunity for our working people to insure themselves at much lower rates than were being charged by the industrial insurance companies, and has led these companies to make lower rates. To my personal knowledge Mr. Brandeis has given annually thousands of dollars to further the work of bringing to the working people of our State this opportunity for less costly insurance. For more than 20 years prior to the Massachusetts law there had been no reduction in the cost of industrial insurance, but since the passage of the law so successfully advocated by Mr. Brandeis in Massachusetts the premiums of the old-line companies have been reduced, on an average, 20 per cent, thus saving to the people of this country, insured in industrial companies, from $15,000,000 to $20,000,000 annually, and to the people of Massachusetts about $1,000,000.

The system of arbitration which he devised for the New York garment workers is an equally significant example of his judicial qualities and his public service in other fields.

In 1906 the people of New England began to awaken to the fact that the New Haven Railroad was apparently successfully seeking to create a New England transportation monopoly. The event which focused public opinion most sharply was the acquisition of the controlling interest in the Boston & Maine Railroad. Mr. Brandeis, again as a private citizen, commenced an exhaustive study of this railroad problem and made public an analysis of the financial condition of the New Haven Railroad, pointing out, for the first time, to the people of New England the inevitable disaster sure to result from the course of mismanagement and waste then being pursued. His advice was unheeded, his warning derided, and his motives impugned. But time has shown that his conclusions were based upon carefully ascertained facts, to which he applied the clearest and most cogent reasoning power. Three years ago what he prophesied nine years ago became apparent to all and is now a matter of public knowledge and of record in Senate documents and elsewhere.

I instance these among many public services covering a long period of years as illustrative of the work done as a private citizen in the service of the public interest without compensation, at a large expenditure of his own time in the midst of a very active professional life.

Indeed, in extensive acquaintance with public men, I know of no one who without emolument or honors of public office has given so much of the valuable constructive service of a trained lawyer to the public weal as Mr. Brandeis.

I have written mainly of Mr. Brandeis's public work for the past 20 years, but I would not have you overlook that, before he engaged in these public activities out of which have grown results for which he is entitled to the gratitude of the American people, he had achieved already a position at the Massachusetts bar which would well have warranted his appointment to the Supreme Court at the age of 40. He is a great lawyer and a great citizen. Is not this a combination for a great judge?

Were I not hastening on a far journey I would seek a personal interview with the committee, but failing such opportunity I venture to emphasize and perhaps to repeat some of the things I said to you orally; and I hope that you will communicate them to your committee, together with my very best respects.

Very sincerely, yours,

DAVID I. WALSH.

Hon. THOMAS J. WALSH,
The Senate, Washington, D. C.

—

FEBRUARY 1, 1916.

To the members of the Judiciary Committee
of the United States Senate.

GENTLEMEN: I have practiced as a member of the Boston bar ever since the admission of Louis D. Brandeis. I have known him well and watched him with interest through all these years, though not connected with him in any way. If confirmed by the Senate, as I have no doubt he will be, I am satisfied he will be an acquisition of the highest value to the Supreme Court. His mind is clear, analytic, exact, incisive, and sound. There is in my acquaintance no surer, saner, more exact and reliable mental macanery than is found in him. I know of no lawyer anywhere who could better assist in the correct solution and conclusion of the involved legal propositions coming before our highest court than Mr. Brandeis. He is versed in nearly all departments of the law. He is acquainted with all sections of the country. He knows all human conditions and has regard for them. His purpose is noble and untrammeled. His spirit and habit are modest, considerate, and kind. He is never obtrusive, but he never hesitates to take the consequences of his convictions. He accomplishes an enormous amount of work in a day, and he is ripe in wisdom, sense, and courage.

Mr. Brandeis is thoroughly judicial in temperament and habit. He is never hasty or extreme, but is calm, mathematical, incisive, and careful in his ready reasoning. His judicial analysis and conclusion in the numerous public issues with which he has been connected are often taken as controversial, because he sees the wrong sooner than others do, and then lays it bare to the world's inspection in the succinct, clear, unanswerable terms which the courts employ. His words are few; he never reiterates. He enunciates propositions which the courts and laymen adopt.

I have never known Brandeis to be assailed, except for turning on the truth. For instance, in the conduct of the New York, New Haven & Hartford Railroad all the attorneys general, district attorneys, and administrators of governments in the three States traversed by the railroad knew for years that the corporation was proceeding ultra vires and regardless of law. By enormous expenditures it quieted agitation, and New England thought it well enough for that railroad to be superior to law. Finally Mr. Brandeis alone made plain that its unlawful monopoly and wasteful aggrandizement were bringing financial ruin as well as moral abasement; that from $100,000,000 to $250,000,000 had been lost in its unlawful courses; and that all would yet be lost unless the policy were changed. The stockholders of that corporation are to-day indebted to Mr. Brandeis alone for effectuating the halt and

turning about which have saved them whatever value they have left in the New Haven Railroad. For his stand against ruination, voluntary to be sure, some writers, like the editor of the Boston News Bureau, who received $104,000 from the railroad company to place among newspapers for advertising, have defamed Mr. Brandeis shamefully and relentlessly, claiming he ruined the credit of the road, whereas he saved the remnants of its value for restoration by a law-abiding management.

The Supreme Court and the country, now that the opportunity is given, should have the benefit of this plain, sincere, and remarkable personality in the position for which he is most signally qualified. Massachusetts could not make a better contribution to any department of the Government.

Respectfully, yours,

A. S. HAL.

FEBRUARY 18, 1916.

Senator WILLIAM R CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

MY DEAR SENATOR: This letter is written to urge the confirmation of Louis D. Brandeis as associate justice of the Supreme Court of the United States.

To identify myself to your committee, in order that you may know what opportunity I have had to pass upon the qualifications of Mr. Brandeis, I would say that I have been a member of the bar, practicing in Boston, for the past 18 years. In politics I am a Democrat, and have served in the Boston City Council, Massachusetts House of Representatives, and the Massachusetts Senate, and have been register of deeds for Suffolk County since 1907. I was president of the Democratic city committee of Boston from 1902 to 1905, inclusive, and a vice president of the Democratic State committee for several years. I was a delegate to the national Democratic convention at St. Louis in 1904 and an alternate at the Democratic national convention in Baltimore in 1912.

I first met Mr. Brandeis 20 years ago, when I was a delegate to the Boston Municipal League, an organization composed of representatives from many improvement societies and other bodies who were interested in improving the civic welfare of the city and obtaining better laws for the benefit of the whole people and opposed to any privileged class, political or otherwise.

I recall that Mr. Brandeis was counsel for the league and had done considerable work for the organization; and I remember distinctly that it was a great surprise to me as a law student at that time when Mr. Brandeis presented to the league a receipted bill for $500, with his compliments, and declined to receive any compensation whatever or to make any use of the appropriation that had been made for counsel fees.

On many occasions since that time I know that Mr. Brandeis has acted in behalf of the public, and has represented civic and charitable organizations without compensation. I have seen him in action before legislative committees and at great gatherings of citizens discussing public questions. I have seen him in court in the trial of cases, and I have never known a man that possessed a keener or more logical mind. I consider him the equal, if not the superior, of any man at the bar in this part of the country.

At a meeting of the Boston City Club about two years ago Mr. Brandeis made the ablest presentation of an antitrust argument that has ever been heard in this city, and it was the unanimous opinion of the members, of all shades of political opinion, that no more scholarly or logical address had been made at the club during its history, and our speakers have included Presidents Wilson and Taft, Hon. William J. Bryan, Hon. Champ Clark, many United States Senators and Congressmen, Cabinet officers, the governors of many States, college professors, eminent pulpit orators, and many leading lawyers of the United States, as well as members of the English Parliament.

At the dinner that preceded this address at the City Club brief speeches complimentary of Mr. Brandeis were made by representative citizens of Boston, and as a vice president of the club I was asked to speak. I said that I agreed with all the speakers, and with the entire community, in fact, that Mr. Brandeis was an exceedingly able lawyer and a good citizen, but that I had been trying for many years to make up my mind whether he was a deep-dyed schemer who had been carefully laying his plans to become mayor of Boston or governor of Massachusetts or whether he was simply an honest man.

I felt that the time had come to make a decision, and, inasmuch as he had stood the test for nearly 20 years and had not declared himself a candidate for office, I had come to the conclusion that he was simply an honest man, sincere in all his endeavors in behalf of the common people, and that he had absolutely no ulterior motive in devoting his magnificent talent on many occasions to the public without compensation. I still adhere to that opinion, and believe that his confirmation would add great strength to the Supreme Court.

Many a man is loved for the enemies he has made, and I believe that Mr. Brandeis is to be congratulated for some of the enemies he has made, although there may be a few of his opponents who sincerely believe his confirmation unwise, but I think they do it because they can not see outside of their own sphere of influence and because Mr. Brandeis has attacked their interests.

These men, however, do not represent the general opinion of this community, and I have no doubt that a poll of the citizens of Boston would be overwhelmingly in favor of the confirmation of Mr. Brandeis.

Respectfully, yours,

W. T. A. FITZGERALD.

[Lionel Norman, attorney and counselor at law, 200 Devonshire Street.]

BOSTON, *February 19, 1916.*

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I understand that you are chairman of the subcommittee having the matter of the confirmation of Louis D. Brandeis for the Supreme Court of the United States under consideration. While my law practice in the past has not been an extensive one, still I have had more or less trust matters, involving large sums of money, to attend to, and in this connection have had some contact with Mr. Brandeis's firm. One case involved a matter of $168,000, which was referred to Mr. Brandeis personally. The matter was dealt with in a manner showing great integrity and consideration, when it might easily have been dragged out for years and cost the estate a great deal of money. The fee charged to the estate and the whole attitude in the premises made a very deep and favorable impression upon me.

Outside of the few hereabouts in Boston who represent what we call "God's own anointed," but who do not always practice God's precepts, Mr. Brandeis is regarded as a man of very high principles as well as of very great ability and deep legal learning. Possibly, if there is any criticism of him which I might be inclined to make, it would be that instead of being overpractical, as he has been accused of, he is too idealistic.

Yours, very truly,

LIONEL NORMAN.

BOSTON. *February 1, 1916.*

Senator W. E. CHILTON,
Washington, D. C.

DEAR SIR: I see from the daily papers that you are the chairman of the Senate committee which is to inquire and report as to the advisability of confirming the nomination of Mr. Brandeis to fill the vacancy in the Supreme Court.

Having known Mr. Brandeis as a student at the Harvard Law School in 1876, watched his career as a lawyer, and having lived in Boston for the past 12 years, I desire to urge your committee to recommend his confirmation.

Mr. Brandeis was certainly one of the leading men, if not the leading man, in his class at Harvard, and since his admission to the bar in Boston has gradually forged his way to the front until he is now, and for several years has been, recognized as one of the ablest lawyers in this city. His standing as a man and as a lawyer is the best, but like all leading men in his profession has necessarily made some enemies in attaining his present position. He is a lawyer who thinks for himself and is not afraid to express his convictions, and who realizes that the law must grow to fit existing conditions rather than undertake to apply precedents which have arisen out of conditions which no longer exist to present-day problems.

I hope you will find it consistent with your duty as a Senator to vote for and urge his confirmation as a member of the Supreme Court, as I confidently believe that the appointment of a man of his ability an character to the Supreme Court at this time is both wise and judicious.

Very truly, yours,

J. M. HEAD.

FEBRUARY 23, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I address you as chairman of the subcommittee on the question of confirming the nomination of Louis D. Brandeis, Esq., to the United States Supreme Court. If it is proper at this time to make a statement of opinion, as many eminent persons have recently done pending the investigation, let me say that I was in the law school with Mr. Brandeis and knew him well, and have kept up a friendship with him ever since.

Of late years I have retired from active practice and wholly withdrawn the last four years. I have, however, followed his course with great interest, have the highest opinion of his intellectual and moral qualities, and would not hesitate to entrust my affairs in his hands, feeling sure that if I did so he would look after them with the greatest intelligence and loyalty, and I believe his large knowledge of sociological questions would be of distinct benefit to the Supreme Court. Believe me,

Respectfully, yours,

RICHARD H. DANA.

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Chairman Subcommittee,
Washington, D. C.

DEAR SIR: I am glad to support the nomination of Louis D. Brandeis. I believe that he is an accomplished, able lawyer; that he has been zealous and faithful in his office as attorney; that he is in every way trustworthy and reliable and eminently qualified for the office of justice of the Supreme Court of the United States.

Very truly, yours,

JOHN W. CUMMINS.

COPY OF RESOLUTIONS ADOPTED BY TAUNTON BAR ASSOCIATION.

[Prepared by Silas D. Reed and Louis Swig.]

Whereas the due consideration and formal expression of the Bar Association of the City of Taunton is proper and becoming upon such subjects as may specially and intimately concern the profession of the law, the said Bar Association of the City of Taunton at a special meeting and after due notice, in which was included reference to the subject of these resolutions—

Resolved, That it unqualifiedly and unreservedly indorses Louis D. Brandies, Esq., of Boston, for appointment to the Supreme Bench of the United States. We regard that Mr. Brandies's learning in the law, his training in its science, and his wide and reputable experience with men and affairs, eminently and becomingly qualify him for the honorable and learned service demanded of the justices of the Supreme Bench. We also voice the opinion that Mr. Brandeis eminently represents the spirit of the times and the democracy of the age. Popular government has a right to expect that such expression be represented in the judiciary as well as in the executive and legislative: Be it further

Resolved, That an attested copy of these resolutions be sent by the secretary of the association to the Senate of the United States, and that they be entered upon the records of the association.

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Chairman Subcommittee,
Washington, D. C.

DEAR SIR: I hope that the nomination of Mr. Louis Brandeis to the office of Justice of the Supreme Court of the United States will be confirmed. He is an able lawyer in good standing, and he has the confidence of the community.

Respectfully, yours.

CHARLES R. CUMMINGS.

FEBRUARY 26, 1916.

Senator WILLIAM E. CHILTON,
Subcommittee, United States Senate, Washington, D. C.

DEAR SIR: Apropos of the appointment of Mr. Louis D. Brandeis, of Boston, for Associate Justice of the United States Supreme Court, I feel that I should be remiss in my duty as a citizen of this Commonwealth were I not to say at least a word of commendation and assist the good cause so well begun by His Excellency the President.

I have known Mr. Brandeis for 30 years and have had ample opportunity to study him at close range. Having been a public servant, in that I served in the governor's council several terms, and was lieutenant governor of the Commonwealth of Massachusetts, I feel qualified to judge of the pulse of the people with regard to public officers. Consequently, I feel safe in saying that the appointment is one of the greatest acts which the President has done yet, to show that he intends to have as servants of the great American public, men who really will serve the public. The general public feels that no wiser move for the advancement and behalf of the so-called common people has yet been made by His Excellency.

Again I beg to state that I heartily indorse the appointment, and trust that no petty opposition arising from the disgruntled opponents whom Mr. Brandeis has unmercifully beaten in litigation will stand in the path of so worthy an appointee.

Sincerely, yours,

E. P. BARRY.

—

FEBRUARY 10, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: This letter is intended as an indorsement of Louis D. Brandeis, who has been nominated as Associate Justice of the Supreme Court of the United States.

I may be identified as a lawyer in practice in Boston for 35 years and more, who is and has been a Republican, and who was United States attorney for this district in 1905–6, resigning then by choice and not by request while there was a Republican administration at Washington

I have known Mr. Brandeis since he was called to the bar, and I became then and have remained through the continuing years his friend and admirer.

I have differed from him in many questions of politics and policy.

I do not recall that I have ever been associated with him in legal matters and causes, but I am sure he has many times represented interests which were adverse to those for which I appeared.

I have naturally known many men and many lawyers, but he to me seems supereminent in so ordering his life that with his splendid mental equipment and his great acquisition of learning there were always time and energy to recognize and pay his obligation to the State and the people as he in his vision saw it.

Of course, one can not assert that he has high judicial qualities without a trial, but of such as he great judges have been made, and therefore I think he should be confirmed. I am,

Very respectfully, yours,

MELVIN O. ADAMS.

—

FEBRUARY 24, 1916.

WILLIAM E. CHILTON, Esq.,
Chairman of Subcommittee of the United States Senate,
Washington, D. C.

DEAR SIR: I have read with dismay the press reports of the testimony given by Moorefield Storey and Hollis R. Bailey before the subcommittee of the Senate regarding Mr. Brandeis. In view of my knowledge of Mr. Brandeis it did not seem to me possible that these men and others would unite in an effort to prevent his appointment to the Supreme Court and to go to the limits they have gone in maligning him. I am thoroughly convinced that the ring behind this fierce and totally unwarranted opposition to Mr. Brandeis are the representatives of predatory wealth and vested interests, and those who are not directly the representatives of these interests have been influenced in their course by these interests.

My familiarity with conditions in Boston, where I have lived all my life and where I have actively practiced law for more than 15 years, convinces me that this chain of men and interests opposing Mr. Brandeis has been forged together from links which have been closely united for generations in this Commonwealth. These men think more or less alike and have a common purpose. Their thoughts and purposes have been in direct conflict with Mr. Brandeis's thoughts and in direct opposition to the purposes which Mr. Brandeis has made the precepts of his life. The present opposition to him is due entirely to the fact that he has been a vigorous opponent of their interests and that he has laid bare their business methods in a way which did not put them in any very enviable light. It is now their purpose "to get back" at him, and that weight should be given to their testimony (especially in so far as their testimony merely gives their opinions, and that is all the testimony seems to amount to) as would be given to anyone's testimony who has been injured and who has thereby become vindictive.

Their opinions of Mr. Brandeis are entirely unfounded and their testimony as to his standing and reputation is entirely conjured up as the result of their bitter feeling against him. The young men practicing law in Boston have held him up as the ideal of what a lawyer should be—courageous, honest, faithful, and zealous in representing his clients, and in the performance of his duties as a citizen most unusual and unselfish. The accusation that he does not think honestly is to me so absurd, so unwarranted, in view of his public acts and of his splendid accomplishments in the public's behalf, that it seems incredible that men of any type can even give utterance to, let alone think, such things about Mr. Brandeis.

The accusation that the majority of the bar, or of a very large number of the bar, in Boston have no faith in him is to me the most astounding charge, in view of the fact that his office is now, and has been for years, one of the most prominent law offices in this city, and that Mr. Brandeis's firm is constantly coming in contact with numbers of members of the bar. I have yet to hear any lawyer call the conduct of Mr. Brandeis or his associates to account, except in those instances which have already been made public and which have been known for years. As to these accusations, it should be borne in mind that every lawyer's conduct is capable of being misinterpreted. A lawyer is frequently placed in a position where it is difficult for him to know what to do and where his conscience is the sole test as to whether he has done his full duty to all concerned. This must necessarily be the situation in the cases in which Mr. Brandeis was called upon to represent the apparently harmonious but to some extent conflicting interests. Those who know Mr. Brandeis as I do feel that he has conscientiously fulfilled his duty as he saw it to all concerned. Unfriendly persons are likely to misinterpret his conduct in that regard. To my mind the lawyer who endeavors to reconcile the apparently conflicting interests, thus preventing wasteful and annoying litigation, serves all interests best and renders at the same time a great public service. There are many times when it is unwise for him to attempt such a course, but when all parties consent and the lawyer does his best for the time being, if all his foresight and sense of justice fail to accomplish this purpose, is he to be condemned for it?

The accusation that Mr. Brandeis is the sort of man who would betray his clients is not borne out by anything which I have ever heard of him from his numerous clients, many of whom I know intimately, who are substantial business men and have been his clients for years. They have to a man always spoken of him in the most praiseworthy way.

I feel certain that if any of the men who have testified before the committee had been present at any of the gatherings at which Mr. Brandeis was either a speaker or a guest and saw the wonderful receptions which he received from people of every walk in life, from the humblest to the most prominent, that not even their vindictiveness would have given them the courage to have given the testimony before the committee which they gave. I have never witnessed more genuine enthusiasm of a public man anywhere than I have witnessed at large gatherings at which Mr. Brandeis was either a speaker or a guest. I have heard men in every walk of life praise Mr. Brandeis in terms which, in his presence, I am sure frequently embarrassed him, and it is inconceivable that the man who has the "reputation" which has been testified to before the committee should be so lauded and praised.

I was attorney for one of the creditors in the Lennox case, and I was active in that matter. There was nothing in the Lennox case with which any creditor or any party interest could complain of as against Mr. Brandeis. If he purported to represent "the situation" (which is not uncommon practice), he and his associates did it in a masterful and an entirely proper way. This is attested by the fact that for months after Mr. Nutter was appointed common-law assignee, and months after the involuntary petition was filed, not a single creditor made a move to ask for the appointment of receivers to take the place of Mr. Nutter or to serve with him as receiver, which they had a right to do. It has been suggested that the filing of the involuntary petition by Mr. Brandeis's office was not proper. If an involuntary petition had not been filed by Mr. Brandeis's office I feel quite certain, from what I know, that others would have filed such a petition, and, as a matter of fact, the records will show that two other petitions were filed after the petition was filed by Mr. Brandeis's office.

It is my opinion that every attorney, including those who have testified against him, would trust Mr. Brandeis and his office to keep any agreement which he or any of his associates would make. I have heard judges of our courts speak of Mr. Brandeis and his associates in the very highest terms, and I have never heard any attorney outside of this small coterie say anything derogatory of Mr. Brandeis or speak of him in any terms except the highest. There is a feeling here in Boston that if you want to know what an attorney thinks of Mr. Brandeis you must first find out what his affiliations and associations are. If they are with the type of lawyers who testified against him the chances are that they will stand with Mr. Storey and Mr. Bailey. If, on the other hand, they are with the every-day lawyer who does not represent vested interests, large corporations, or predatory wealth or the so-called "Back Bay crowd," I am quite sure that to a man they will stand with Mr. Brandeis and urge his appointment. The latter class constitutes by far the great majority of the bar, and with them Mr. Brandeis's reputation is to be envied.

I have felt that the real issue before your committee is not Mr. Brandeis's character, his standing, his reputation, or his ability, but as to whether Mr. Brandeis's service to the people of the country shall be condemned and as to whether the powerful interests behind the opposition shall be condoned for their wrongful acts. Shall Mr. Brandeis, who has altruistically given his efforts for the welfare of the rank and file of the country, be crucified so that the opposition may say to men of his type, "There hangs the man who was broken on the wheel because he attacked us"? Shall the Senate of the United States say that dishonest business, those who violated trusts and who break laws, may continue in their course, and those who attempt to interfere with them are doomed to destruction?

Mr. Brandeis's works are milestones in the progress of the country. He has labored to make the law a living, vital force for the equitable benefit of all and he has tried to correct it as a force which serves only a few and makes the public subservient to their interests. His grasp of government, his understanding of the conflicting social and economic forces, his genuine sympathy for all mankind, his extraordinary experience, his prodigious capacity for work can not but help make him one of the greatest judges of all times. If the Senate rejects him, I am satisfied that the great majority of the bar and the public will feel that the Supreme Court will have lost the services of a great man, one of the greatest of our time.

Yours, very truly,

ARTHUR BERENSON.

—

CRAIG HALL,
Atlantic City, N. J., March 13, 1916.

To United States Senator OSCAR W. UNDERWOOD,
Washington, D. C.

DEAR SIR: The day you left Atlantic City I called at the Dennis to say a few words on the matters about which I am now writing.

I wanted to say that I hoped Mr. Brandeis would be confirmed, for I have had a casual acquaintance with him dating back 35 years. I attended a part of the hearings in Washington and heard the evidence in the New England Railroad, the Warren Will, and the United Shoe Machinery cases. Judging the other allegations by these, I did not see any need to hear them. From what I heard in the above cases I rated the testimony as simply the whining of whipped dogs.

My brother, who has just retired from 40 years of law practice at Boston to our old plantation in Alabama, was in the Harvard Law School with Mr. Brandeis and knows his record in Boston. He has written an open letter strongly urging his confirmation.

The Boston & Maine and the New Haven Railroads were looted by a group of lawyers, bankers, and promoters in Boston with strong copartners in New York. It is these men who are the real opponents of Mr. Brandeis. I know personally a majority of the Boston lawyers who appeared before the Senate committee, and they were simply responding to their personal environment. The same may be said of President Lowell of Harvard, who, I have the strongest reasons for believing, did not represent the prevailing sentiment of Harvard alumni when he signed the protest of the Boston lawyers against the confirma-

tion of Mr. Brandeis. The Harvard sentiment on that point is expressed in an editorial in the New Republic of February 26. A copy of this I have sent to the Senate committee.

If the Government shipping bill ever reaches the Senate, I hope that will pass. The shipping question I have studied for a number of years, because I had an interest as a shipper in that direction. I do not believe under world conditions of to-day that we can build up a merchant marine without the aid of the Government's credit. Our private capitalists are nearly all associated with the foreign ship monopoly that is fighting the bill. That makes any new private shipping concern almost an impossibility. The plan of aid provided in this bill seems to me much better than that of granting subsidies. My reasons for that position you will find stated in my remarks before the House Committee on Merchant Marine.

Yours, truly,

THOMAS P. IVY.

BOSTON, *February 23, 1916.*

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I write this letter to urge the confirmation of Louis D. Brandeis, who has been nominated as Associate Justice of the Supreme Court of the United States.

I feel it my duty to address you because I am a lawyer in practice in Boston for more than 30 years and am still in active practice here. I have known Mr. Brandeis during the entire period.

It may be proper for me to state that I was for some years connected with the district attorney's office in this county, and, after that, before entering into general practice, was for some years first assistant city solicitor of the city of Boston.

I have always considered and now regard Mr. Brandeis as a man of great intellectual attainment of the highest character, whose motives are pure and noble.

It would be impossible for a man who has taken such decided stands and expressed what in this conservative end of the world may be called "advanced views" not to be criticized by some large interests.

It is my belief that our people as a whole have confidence in him and wish to see his nomination followed by his confirmation.

Very respectfully, yours,

ROBERT W. NASON.

MARCH 1, 1916.

Hon. WILLIAM E. CHILTON,
Chairman of the Subcommittee on Judiciary Appointment,
Washington, D. C.

DEAR SIR: From reports of the testimony already submitted to your committee appointed to consider the appointment of Louis D. Brandeis to the Supreme Court of the United States, I have learned that certain unfavorable opinions have been placed before your committee regarding the reputation in this community of the man you are considering.

These opinions are, to my knowledge, not representative of the general opinions of the reputation of Mr. Brandeis.

During my experience as a practicing attorney in Boston I have had brought to my attention on numerous occasions the general reputation of Mr. Brandeis. On every occasion that I have heard mention made of Mr. Brandeis it has always been in commendation of Mr. Brandeis, praising him for his standards of honesty, trustworthiness, fidelity, and profound knowledge of the law. I know these opinions are shared by a substantial majority of the lawyers of this community.

I sincerely hope that Mr. Brandeis will be recommended by the committee for appointment to the Supreme Court of the United States, and I feel that the esteem in which the Supreme Court of the United States is held by the people will thereby be greatly increased.

Respectfully, yours,

LOUIS ABRAHAMS.

FEBRUARY 19, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, Washington, D. C.

MY DEAR SENATOR: The nomination by the President of Louis D. Brandeis, of the Boston bar, for the position of Associate Justice of the Supreme Court of the United States meets with my approval.

I have practiced law in Boston for 15 years. The senior member of our firm has practiced in Boston since 1872. Our firm has had frequent matters with Mr. Brandeis's firm. The senior member of our firm, who at present is ill and unable to address you, has many times been interested in matters in which Mr. Brandeis was interested, one side or the other.

Our relations have been cordial, and we have had great respect for Mr. Brandeis and his firm throughout all these years.

From what I hear of the talk of other lawyers, I wish to say to you that I do not believe that the recent protest by certain Boston lawyers in any way represents the feeling of the Boston bar in reference to this nomination.

Yours, truly,

JOSEPH W. BARTLETT.

[From the office of Maurice Bergman, attorney and counsellor at law, Old South Building, Boston, Mass.]

FEBRUARY 29, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, Washington, D. C.

MY DEAR SIR: I have been in practice in this State since August 31, 1909, and during this period have constantly had before me as an example of success in legal attainment the career of the illustrious Louis D. Brandeis, whom I believe to be a true champion of the people of these United States, and that he stands for honor and integrity and constantly strives to achieve equality for all and special privilege to none.

Having these sentiments in mind, I take the liberty of addressing this communication to you.

Very respectfully, yours,

———— ————.

BOSTON, MASS., *March 4, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee on the Judiciary,
Washington, D. C.

DEAR SIR: In re Louis D. Brandeis. Permit me as a humble member of the Boston bar to add my bit to the many other which you must have received indorsing the appointment of Mr. Brandeis to the Supreme Court.

I have met Mr. Brandeis personally on several occasions and have found him a man of high ideals. His reputation among the members of the Boston bar, notwithstanding the report given by the self-constituted committee of "State Street lawyers," is most excellent, both as to his personal character and to his legal ability.

I wish I could say as much of several of the remonstrants.

Very truly, yours,

HARRY BERGSON.

MARCH 1, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: Permit me to add my indorsement to those of many others, which I am sure you have received in the matter of Mr. Louis D. Brandeis as Justice of the United States Supreme Court. I have had occasion to know Mr. Brandeis quite thoroughly, both as a lawyer and as a man, and though I could give many details of his worth and fitness for the high office to which he has been nominated, I will not encroach so unnecessarily upon your time.

Let me, then, merely summarize by saying that as a lawyer of almost 20 years' practice I would stake my reputation upon the prophecy that Mr. Brandeis will do honor and credit to his country as a Supreme Court Justice.

Respectfully, yours,

WM. M. BLATT.

BOSTON, MASS., *March 6, 1916.*

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: As a native and lifelong citizen of Boston and a practicing member of the Massachusetts bar for more than a dozen years, I can not too strongly urge the confirmation by your honorable committee of the nomination of Louis D. Brandeis, Esq., as Associate Justice of the Supreme Court, as I know him to be admirably equipped with the very qualities requisite for such office.

Respectfully, yours,

ABRAHAM BLUMENTHAL.

FEBRUARY 29, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

MY DEAR SENATOR: Permit me to express the hope that your committee will report favorably on the confirmation of Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

I have known Mr. Brandeis for a number of years. I first met him when he appeared before some of the committees on which I had the honor to serve as a member of the Massachusetts Legislature, and I know that even in those days he was considered one of the shining lights of the Massachusetts bar and a man whose integrity and honor was above suspicion. Since then I have known Mr. Brandeis more intimately both as a member of the bar and in philanthropic work and learned to admire and appreciate his many great qualities.

I have no doubt that as a member of the chief tribunal of our great country he will fill the place with honor.

Very truly, yours,

SAMUEL H. BOROPSKY.

[Massachusetts Catholic Order of Foresters, Joseph T. Brennan, high chief ranger.]

17 WORCESTER STREET,
Boston, February 25, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

SIR: As the executive head of the largest fraternal insurance organization in this State, having an active membership of 42,000 adults; as an attorney practicing in the Federal and State courts for 12 years; as a citizen who has endeavored to keep in close touch with industrial, social, and legal, and political conditions, I have had an extraordinary opportunity to observe the sentiment of the people of this community for and against the confirmation of Louis D. Brandeis as Justice of the Supreme Judicial Court. Outside of a few individuals, with personal or biased motives, and irrespective of class, creed, or race, the unanimous opinion is that the nomination should be confirmed.

I therefore beg to add my name to the long list of those who have already indorsed Mr. Brandeis, and trust that the honorable committee of which you are chairman will report favorably.

Respectfully,

JOSEPH T. BRENNAN.

FEBRUARY 23, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee of Senate Judiciary,
United States Senate, Washington, D. C.

DEAR SIR: In view of the fact that several of my associates at the bar have seen fit to protest against the appointment of Louis D. Brandeis, I wish to go on record in favor of his appointment.

I believe that Mr. Brandeis's presence as a member of the United States Supreme Court will greatly strengthen that body.

Yours, very truly,

LAWRENCE G. BROOKS.

---

40 COURT STREET,
Boston, Mass., February 24, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee United States Senate,
Washington, D. C.

DEAR SIR: This letter is intended as an indorsement of Louis D. Brandeis, who has been nominated as Associate Justice of the Supreme Court of the United States.

I have been practicing law in the city of Boston 12 years and have been a member of the city government of the city of Boston and of the Massachusetts Legislature, and I feel that the opposition that has been shown toward the confirmation of Mr. Brandeis comes from such a circle that opposes anything that tends toward democracy. I assure you that the different lawyers who signed the petition opposing his confirmation are not the men that rub elbows with the everyday lawyer who practices in our Massachusetts courts.

I think that the addition of Mr. Brandeis to the Supreme Court of the United States would be a great step toward the advancement of ideas that have long had a place in the history of our country.

Very truly, yours,

A. M. BURROUGHS.

—

FEBRUARY 19, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: Referring to the matter pending before the Judiciary Committee of the United States Senate on the confirmation of Hon. Louis D. Brandeis as Associate Justice of the Supreme Court of the United States, permit me to say, in view of the report of the evidence which I have seen in the local newspapers, that in my opinion Mr. Brandeis has the respect and confidence of this community.

I am writing as an attorney admitted to the bar of Massachusetts and practicing at Boston since July, 1894, and now occupying the position of a special justice of the municipal court of the city of Boston.

I know Mr. Brandeis and have met him professionally and in matters relating to civic and social welfare of this city.

I am in favor of the confirmation of the nomination.

Very respectfully, yours,

A. K. COHEN.

—

FEBRUARY 29, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: As a member of the Massachusetts bar and practicing attorney for the past four years, I beg the liberty of registering my heartiest and sincere approval of Louis D. Brandeis, Esq., as Associate Justice of the Supreme Court of the United States, earnestly believing in his sterling qualities, judicial temperament, and national demonstrative ability. I believe I am expressing the sentiments of impartial and unbiased thinkers of this community to whom he has endeared himself through his sympathetic knowledge and wide experience in the needs of our present financial and business organization in its relation to social organization.

Respectfully, yours,

EMANUEL COHEN.

—

FEBRUARY 29, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

HONORABLE SIR: Having been born in Boston and educated in its public schools, and having received two degrees from Harvard University, I write you with a deep sense of my responsibility as an American citizen indorsing Mr. Louis D. Brandeis for the position he has been recently named to by our President.

I realize that a man requires not only exceptional ability but unquestioned integrity in order adequately to fill a position in the United States Supreme Court.

I have known Mr Brandeis for several years, and have met him socially and in a business way. Though of the opposite political party, I indorse Mr. Brandeis most highly. I know him to be a man of absolute honesty, unquestioned integrity, and marked ability, and I am positive that he, if confirmed, will fill the position with dignity and to the entire satisfaction of all the people of the United States. I know that I reflect the consensus of opinion of the Boston bar in these statements.

In conclusion, I thank you for giving this letter your attention.

Respectfully, yours,

FRANKLIN M. COHEN.

—

MARCH 3, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

MY DEAR SIR: As a member of the Massachusetts bar and a member of the general court of this State for several years, I wish to attest as to the qualifications, ability, and character of Mr. Louis Brandeis, now under consideration by your committee, as the appointee of President Wilson to the Supreme Court of the United States.

While my professional associations with Mr. Brandeis have not been over an extended period of time, nevertheless whenever I have had occasion to transact business with him I have always found him to have been a man of the highest type, and, as a result of my observations of him, I take pleasure in saying that I have the utmost confidence in him and feel that he is thoroughly qualified in every particular to fill the high office to which he has been appointed by the President.

I am, sir, very truly, yours,

WILLIAM N. CRONIN.

—

SOMERSET CLUB,
Boston, March 21, 1916.

To WOODROW WILSON, *President,*
Washington, D. C.

MR. PRESIDENT: In the thought that possibly an added word, not idly said, by one possessing personal knowledge in regard to a high nomination lately made by you may not prove superfluous, I write as an older Boston and Harvard man who has followed Mr. Brandeis's career with interest from its early stage, and who has known intimately his friends and those of greatest weight who now oppose him, to say that, with full knowledge of the aims of these, I know the best regard the nomination as a singularly happy one. Mr. Brandeis, if his appointment be confirmed, will bring to that high court strong human sympathies and a creative intelligence, as well as legal knowledge, courage of convictions, and clear, quick apprehension. And that he will be adequately conservative in the presence of that great responsibility I have no fear.

I trust, accordingly, for the country's sake, that this appointment may, in despite of opposition, be confirmed, and with an expression of high personal respect, I remain,

Yours, truly,

GEORGE B. DORR.

—

MARCH 1, 1916.

Senator CHILTON, *Chairman,*
Washington, D. C.

MY DEAR SENATOR: As an attorney practicing in Boston since 1912, and as a social worker of many years, I desire to take the opportunity of going on record in favor of the appointment of Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

Mr. Louis D. Brandeis is known in this community as a man of great ability and sterling character. His reputation for honesty and uprightness is a matter of common knowledge among all the members of the bar, who have had occasion, disinterestedly, to watch his conduct in the many important causes with which he has been connected. Words of reproach against the reputation of Louis D. Brandeis as a member of the bar can come only from those persons who represent the vested interests and have had occasion very frequently to feel the force of his attacks.

Our country will indeed be fortunate if this learned jurist is placed upon the highest legal tribunal of this land, and that august and majestic body will be increased in strength by his membership.

Very truly, yours,

HARRY E. DUBINSKY.

—

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I take the liberty of writing the following letter in support of the nomination of Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

My practice has been in the State as well as the United States courts the last 16 years, and in 1914 and 1915 served as assistant attorney general of the Commonwealth of Massachusetts, and since have returned to private practice, and have been more or less active in public affairs and public questions.

Mr. Brandeis has been known to me personally and professionally during the last 16 years, and ever since I first met him he has appealed to me as the ideal lawyer and public man. I have been with him in many cases, and notably a large bankruptcy case in 1904, where his conduct with reference to fairness, wisdom, and integrity has ever remained with me as one of the pleasant memories of a lawyer whose practices were far higher than what one is wont to expect. I have differed from him in many questions of public policy, but even in those cases had a feeling that he represented more of the right attitude than I did.

His confirmation to the bench of the United States Supreme Court will be a distinct accession in dignity, force, and learning, and I prophesy that the time will come when his opinions and influence will be regarded as one of the influences of the early twentieth century in the decisions of that tribunal.

I have read of the opposition to his confirmation; I know it comes from a class in our community which, like the old Boston mob, so wonderfully described by Wendell Phillips, were the proponents of slavery, which mob was constituted of the best citizens, so-called, of Boston, because of their fear that some tradition of conservatism might be effected, and yet that very class, as you will remember, became the heroes in the war which followed. This class feels—and it is a very small minority of the community, both at the bar and out of it—that unless a man is of the bone and sinew of Massachusetts he should not have high place, however useful, sincere, and effective his career has been. Privately they will admit the almost incomparable attainments of Mr. Brandeis, but they fear the things he seeks to criticize; but they will be the first to realize 10 years later that his criticisms and work are the foundations of a new and better order. Their opposition, therefore, ought not be regarded too seriously. Their fears discolor their better judgment. The great voice of the country wish the confirmation to be made.

Very respectfully, yours,

L. R. EYGES.

—

MARCH 9, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcomittee, United States Senate,
Washington, D. C.

DEAR SIR: I have been an assistant corporation counsel of the city of Boston for the last 11 years, and during that time have had several cases with the office of Mr. Brandeis. He is, to my knowledge, well known at the bar as a lawyer of great learning who has given very largely of his time and abilities to public questions.

I have never heard anyone question his great ability and his capacity for public service. I am of opinion that the real sentiment of the community favors his confirmation as a member of the Supreme Court of the United States, and believe that Mr. Brandeis is a lawyer of great ability whose presence on the Supreme Bench would greatly strengthen it with the people as well as with members of the bar.

I am, very respectfully, yours,

GEO. FLYNN,
Assistant Corporation Counsel.

—

[Crigler & Frank, attorneys at law, suit 1117, Third National Bank Building, St. Louis.]

MARCH 16, 1916.

CHAIRMAN OF THE SENATE JUDICIARY SUBCOMMITTEE,
Washington, D. C.

DEAR SIR: I had occasion to notice yesterday in the press dispatches that a letter has been written to you by some of the leading men of this country, among whom were Elihu Root and William H. Taft, the letter in substance stating that it was their painful duty to say that they did not believe Mr. Louis D. Bradeis a fit person for membership in the Supreme Court of the United States.

I wish to call your attention to the fact that during the Glavis-Ballinger investigation Mr. Brandeis was counsel for Glavis; that in the course of the investigation he made Attorney General Wickersham admit that certain papers submitted by the White House to the Senate, at their request, had been antedated by him; that the White House, after denying the antedating, admitted the truth of this fact; that the White House again admitted later certain misrepresentations that it had made with reference to Lawler, a subordinate of Ballinger, and Kerby, Lawler's stenographer.

These decisions plainly show that the White House in response to the Senate's request had sent to Congress an important paper not relied on by the White House, and omitted to send another important paper on which the White House's previous decision relied, but from which only portions were copied. I have as my authority for this a preface, by Ernest Poole, to the book Business a Profession, by Louis D. Brandeis, and published by Small, Maynard & Co., Boston, page xxxix et seq. In connection with Ballinger's grilling examination by Brandeis, Mr. Root intervened with certain questions, showing his interest in the affair.

I have no doubt but that the Senate records of this investigation will bear out these assertions. A President is primarily responsible for

the conduct of members of his administration, and perhaps this incident will throw a little light upon why Mr. Taft and Mr. Root are so "pained" to write the above letter to you.

If you doubt the truth of any of my statements above, I believe a little investigation on your part will reveal the fact that they are true. I am sending a copy of this letter to President Wilson.

Trusting that you will give the above due consideration, and that the real motive behind the letter written will be seen by you, I beg to remain,

Yours, very truly,

MALCOLM I. FRANK.

[Max M Fritz, attorney and counselor at law, 40 Court Street.]

BOSTON, MASS, *March 1, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, Washington, D. C.

DEAR SIR: I have been a member of the Massachusetts bar for the past nine years, and have always looked upon Louis D. Brandeis as the ideal type of a lawyer. I have always heard none but the highest comment concerning his practice at the bar and his willingness to offer his services to the people at all times.

I respectfully urge you and your committee to submit a favorable report in the matter of the appointment by the President of Louis D. Brandeis as Associate Justice to the Supreme Court of the United States.

Very truly, yours,

——— ———.

MARCH 1, 1916.

Hon. WILLIAM E. CHILTON,
Chairman of Subcommittee, Washington, D. C.

DEAR SENATOR CHILTON: As a member of the Massachusetts bar practicing in Boston for nearly 16 years, and familiar with the reputation of all our big lawyers and the nature of their practice, I desire, in the interest of justice, to write to your committee strongly urging the confirmation of Louis D. Brandeis as a member of the Supreme Court of the United States.

The criticisms of Mr. Brandeis, of which I have read in the daily papers, all come from business men whose methods and interests have been attacked by Mr. Brandeis or from lawyers who represent the so-called "vested interests," whose methods have been so ably exposed by Mr. Brandeis in the public interest. I have looked in vain among the names of the men who are opposing Mr. Brandeis for a single one whose interest it has been to promote the public welfare, and in the last analysis it seems to me that the objection to Mr. Brandeis on the part of his opponents is that he would not be very friendly to illegal combinations in restraint of trade. So far from being an objection this strikes me as being a splendid recommendation for an appointee to the Supreme Court of the United States.

Neither Mr. Bailey nor any of the attorneys representing the large corporations, who have appeared before your committee to oppose the confirmation of Mr. Brandeis, represents the opinion of the Massachusetts bar as to the reputation of Mr. Brandeis for "straightforwardness" and "fair dealing." The rank and file of the bar who know anything about Mr. Brandeis, either by reputation or from business relations with him, believe him to be a high-minded, conscientious, honorable lawyer, and I believe it would be for the best interests of the country that Mr. Brandeis should be confirmed.

Very truly, yours,

FRANCIS P. GARLAND.

---

18 TREMONT STREET,
Boston, March 1, 1916.

United States Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: As an active member of the Boston bar for the last 10 years, I have been in close touch with many matters in which Louis D. Brandeis, Esq., of Boston, has been interested. I feel it my duty, therefore, to call to the attention of your honorable committee and the Members of the United States Senate that it is my belief that there is no more honorable member of the Massachusetts bar. He has the highest respect of all those with whom I have come in contact, not only for his ability but for his honesty and integrity.

I most heartily approve that his nomination by President Wilson as a Justice of the United States Supreme Court be confirmed.

Respectfully, yours,

EDWARD E. GINSBURG.

[Nathaniel Golden, counselor at law, 40 Court Street, Boston.]

FEBRUARY 29, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: As a graduate of Harvard College, 1912, and of Harvard Law School, 1914, and as a member of the Suffolk bar of the Commonwealth of Massachusetts, I beg to add my hearty approval of the confirmation of the appointment of Louis D. Brandeis, Esq., as a Justice of the United States Supreme Court.

Though my personal acquaintance with Mr. Brandeis is but a recent thing, my knowledge of his unselfish and illy recompensed devotion and service to the cause of the mass of people extends back for many years. When I recall a conversation that I had with President Lowell some three years ago anent Mr. Brandeis, who had a few days previously delivered a lecture in Cambridge on one of the many humane things to which he has so long given of his time and money, I can not help but form the conclusion that the sincerity and purity of motives of the signers of the petition of protest, of whom President Lowell was one, must be impugned, and that it is predicated upon some ulterior purpose.

The general public has long recognized and admired Mr. Brandeis's profound mentality and his courageous love for the truth, and I am certain that the general sentiment is overwhelmingly in favor of his confirmation.

Yours, very truly,

——— ———.

FEBRUARY 28, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I am writing you this letter as an indorsement of Louis D. Brandeis, who has been nominated as Associate Justice of the Supreme Court of the United States.

I am a member of the bar; and although I am a former member of the Republican city committee of Chelsea, I would not permit politics to enter into my indorsement of Mr. Brandeis.

I have been personally acquainted with Mr. Brandeis for several years, and he has impressed me as a possessor of keen intellect. He engages both in public and private activities with sincerity of purpose, and I have always considered him a rare man.

I believe that the opposition to his confirmation comes from sources that may be classified under the category of special privilege, and it would indeed be lamentable for the progress of this Government if the moneyed interests should influence the appointment of any man to the greatest court in the world.

Permit me to assure you that I am heartily in favor of the confirmation of Mr. Brandeis. I am,

Very respectfully,

GEO. E. GORDON.

FEBRUARY 23, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

HONORABLE SIR: I take the liberty of indorsing the appointment of Louis D. Brandeis, Esq., as Associate Justice of the United States Supreme Court.

I have discussed this appointment with a large number of lawyers and people in this community and can unhesitatingly say that this appointment meets with the approval of a great majority of the legal profession in this city and the people of our community.

From my observation and study of this controversy I am led to the conclusion that no small part of the opposition is due to racial prejudice, and that the rest of the opposition can be attributed to hostile corporation or privileged interests.

I have been a member of the Massachusetts bar for over 10 years and have practiced in the United States courts for several years. I have served my community in our city government and the Massachusetts Legislature, and by reason of such service and in the course of my practice I have had occasion to meet Mr. Brandeis and consider his attitude on many important public questions.

I know Mr. Brandeis to be a man of sterling character, of excellent standing in the legal profession and our community, possessed of a profound knowledge of the law, and one of the leading lawyers of our State. By reason of his knowledge of the law, ability to regard weighty and vital problems with keen and sagacious discernment, his experience with and knowledge acquired in important labor controversies, and participation in so-called "people's conflict with railroads, gas companies, and monopolies," and other questions and matters vitally affecting the people of our country, he is as thoroughly equipped for that honorable body as any man in the public eye to-day, if not more so.

I feel that failure on the part of the United States Senate to confirm this appointment would almost amount to a public calamity, and I strongly urge your honorable committee to make a favorable report in his behalf.

You are at liberty to make as much use of this letter as you deem advisable or necessary.

Respectfully, yours,

ISAAC GORDON.

---

17 MILK STREET,
Boston, Mass., March 3, 1916.

Hon. WILLIAM CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: In view of the so-called "Boston petition," and the wholly unexpected quarter from which the voice of the people appears to have emanated, possibly the opinion of an inconspicuous member of the Boston bar, but one who has had many dealings with Mr. Brandeis, may be of some interest.

During the past 13 or 14 years I have been general counsel for the Boot and Shoe Workers' Union, an organization composed of 40,000 men and women shoe operatives throughout the United States and Canada. In many important matters affecting the shoe industry Mr. Brandeis represented the shoe manufacturers, and in conference serious difficulties were often averted by the sound judgment, the keen insight, and the absolute fairness of Mr. Brandeis. In several controversies affecting the union where the interests of Mr. Brandeis' clients were not involved I retained him as senior counsel, notwithstanding the fact that this gave him information which had he been unscrupulous or untrustworthy could have been used to our disadvantage. My selection of Mr. Brandeis as senior counsel in these matters was always approved by the general officers of the union, and our implicit confidence in his integrity remains unshaken.

I have known Mr. Brandeis for 20 years. Until the New York, New Haven & Hartford Railroad inquiry I never heard from professional or business men any expression but of the highest admiration. I know many of his clients, men of high standing in business, who have been advised and guided by him for years, and who, I am confident, would intrust their entire personal fortunes and their business honor in his keeping.

I believe Mr. Brandeis has the complete confidence of this community excepting only those whose enmity he has incurred in his efforts to correct abuses, and I trust the nomination of the President will be confirmed.

Respectfully, yours,

EDWARD S. GOULSTON.

MARCH 1, 1916.

Mr. WILLIAM E. CHILTON,
Chairman of Subcommittee, Washington, D. C.

DEAR SIR: As a member of the Massachusetts bar I feel it my duty to express my views relative to the confirmation of the appointment of Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

I have known Mr. Brandeis for the past 20 years, and I feel justified in saying that his reputation as to honesty and integrity is above reproach and that the attempts to stain his trustworthiness are the result of unfairness and undue prejudice.

I am fully convinced that Mr. Brandeis is especially qualified for the position, as I know him to be a man of high ideals, one who will exercise his own best judgment regardless of fear or favor, one who can not erroneously be influenced even for personal gain, but will, if necessary, sacrifice his own interests for those of the public.

I am fully confident that the confirmation of Mr. Brandeis's appointment will add an important link to the chain of the administration of justice of our judicial department. He will be a protection not only to the prestige and honor of the Supreme Court itself but a protection also to the people and the great masses of the country.

Very truly, yours,

ISAAC H. GREENBERG.

—

[Elisha Greenhood, attorney at law, 604-5 Pemberton Building.]

BOSTON, *March 1, 1916.*

Hon. W. E. CHILTON,
Chairman Subcommittee of Judiciary Committee,
Washington, D. C.

DEAR SIR: Having been in very active practice at the Boston bar for the past 31 years, I feel I should furnish your committee with whatever light I may have respecting the confirmation matter now pending before it.

I do not suppose there is a practitioner at our bar who knows and has come in contact with a greater percentage of all possible subdivisions of our bar of 3,200 members than I, and I suppose it is obvious to every lawyer of any substantial experience—

First. That the individual constituents of no class of men are so thoroughly dissected within its own ranks as those of the legal profession.

Second. That, particularly if successful and originating in other than the prevailing nationality or creed, they are very likely to be the victims of jealousy, mistrust, and misunderstanding, with the usual concomitants of prejudice and enmity.

Having these two important facts in mind, along with my lengthy experience and unusually extensive professional acquaintance, I desire to say that, notwithstanding Mr. Brandeis's long and highly successful professional activities here, his prominence as a publicist in many necessarily friction-making movements, and his nationality, it is true that never before the nomination which you are considering did I hear, even in a whisper, a single word tending to indicate the slightest variation on his part from the highest standard of professional honor and ethics, and that the attacks now made upon him are to me as thunder out of a clear sky.

I must admit that my professional experiences with him have not been very many, but I do flatter myself with knowing the general reputation of the members of our bar; and I must express the opinion that the supposed general reputation which his opponents are presenting to your committee must be simply the prejudiced opinion of a comparatively small and very localized section of our bar, which honestly believes itself to be the bar, and that its sentiments—usually originating in and propagated by one of its small circle—are those of the entire community.

You will pardon me if, in closing, I add that some 30 years ago I was for over a year editor in chief of the Central Law Journal, and that about that time I wrote the treatise "Greenhood on Public Policy in the Law of Contracts," besides editing two columns of Federal decisions in constitutional law, and being a rather extensive contributor otherwise to legal literature in my early law days.

I have the honor to remain, yours, very truly,

———— ————.

—

FEBRUARY 18, 1916.

Senator WILLIAM E. CHILTON,
Chairman of Subcommittee, Washington, D. C.

DEAR SIR: In the interest of fair play, I do not think that the testimony of Hollis R. Bailey, Esq., and others as to Mr. Brandeis's reputation in Boston should remain uncontradicted. I have been practicing law here for 12 years or more and during that time I have never heard Mr. Brandeis's fair-mindedness or integrity attacked except by those representing "special interests" who were engaged in a controversy with him or by newspapers known to be controlled by those "special interests" or suspected to be under their influence.

He has here the reputation of being ever ready to see the right irrespective of the person it is attached to, and of being able to demonstrate that right in the face of overwhelming opposition, but most conspicuously I think he stands in our community as a man who, after his great ability has been proved, has continued to be willing to serve, and who has served with remarkable success, those who needed service, but who were not strong financially nor powerful otherwise.

Respectfully, yours,

LOUIS E. GUILLOW.

—

MARCH 2, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee on Judiciary,
United States Senate, Washington, D. C.

DEAR SIR: I beg to register my name as being in favor of the confirmation of the appointment of Louis D. Brandeis to the Supreme Court of the United States.

From 1905 to September, 1908, I was secretary and assistant to the late Prof. Frank Parsons, who, as an eminent lawyer, law text writer, sociologist, and economist, is undoubtedly known to you and your committee. As an expert for the National Civic Federation and head of the National Municipal Ownership League, and in many other capacities, Prof. Parsons was very closely connected with Mr. Brandeis in his work. I learned from Prof. Parsons to regard Louis D. Brandeis as a lawyer of exceptional ability, as a man of the highest integrity, and as a public-spirited citizen of the finest type.

Since 1908 I have watched Mr. Brandeis's work, particularly his public work, and I desire to say that I know of no man who is more honest or public-spirited or who has greater ability as a lawyer. I believe that Mr. Brandeis as a member of the Supreme Court of the United States would be a great addition to that already great tribunal.

It is my opinion that there are two reasons for the strong opposition which has developed against Mr. Brandeis's confirmation.

First, the fact that he has always stood for the public against the vested interests, even when to do so meant great loss to himself.

Secondly, and I consider this to be the stronger reason for this opposition, that Mr. Brandeis is a Jew.

I desire most earnestly to urge upon your committee the recommendation that Mr. Brandeis's appointment be confirmed.

Very respectfully, yours,

HARRY N. GUTERMAN.

—

[Hall & Hagerty, attorneys and counsellors at law, Taunton, Mass.
Frederick S. Hall, Charles C. Hagerty.]

TAUNTON, MASS., *February 21, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, Washington, D. C.

MY DEAR SIR: I notice from the papers and from other sources that the nomination by the President of Louis D. Brandeis, of Boston, for a seat on the bench of the Supreme Court of the United States has created quite a widespread discussion.

Being interested in the man, having watched his movements, and having had a number of years' experience with his office in connection with large interests, I think I can truthfully say that personally I have never known him to do or say anything which was not in strict accordance with strict legal propriety, and until this nomination came up I have never heard him criticized. A man of such wide knowledge and legal attainments would naturally make enemies, but it seems to me, from what I have observed, that there is nothing which would in any way disqualify him from filling this most important position to which he has been nominated.

Respectfully, yours,

CHARLES C. HAGERTY.

—

FEBRUARY 21, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate Subcommittee of Judiciary,
Washington, D. C.

DEAR SIR: It gives me great pleasure to write in regard to Louis D. Brandeis.

I understand that a number of prominent Boston lawyers have said that Mr. Brandeis is not respected by the Boston bar. I think you will find upon investigation that almost all of these men have been bitterly opposed to Mr. Brandeis on some financial or public question. He has naturally tread on the toes of a great many conservative men and men tied up in large interests, such as the New Haven Railroad. I think, therefore, that their statements must be taken with a grain of salt.

It seems to me that Mr. Brandeis's chief qualities for a position on the Supreme Court Bench are his broad point of view in regard to present-day economic questions and his very great knowledge of the facts and conditions of our modern economic industrial world.

There are many other lawyers in Boston who feel as I do about this matter, and I hope that you will not consider the opinions expressed by Mr. Moorfield Storey as binding upon the rest of us.

Very sincerely,

MATTHEW HALE.

—

BOSTON, *February 9, 1916.*

Hon. LEE S. OVERMAN,
Acting Chairman Judiciary Committee, Washington, D. C.

DEAR SIR: It has been my great privilege to have known Louis D. Brandeis intimately for 15 years, during which time he has been my personal and business counselor. I never knew his to advise or suggest anything that was not founded on the highest ethical grounds. I have no doubt of his confirmation, as it is inconceivable to me that any objection worthy to be seriously considered can be offered or that would weigh in the balance against the great addition he would be as an Associate Justice of the Supreme Court.

In my judgment there is no man living who is more the perfect embodiment of what he will be sworn to administer—justice.

Very truly, yours,

C. B. HALL.

—

WAUKESHA, WIS., *March 14, 1916.*

Senator GEORGE W. NORRIS.

DEAR GEORGE: Without intending or wishing in any way to influence your judgment, but only to give you a few facts as they have come to me, I will say that you, of course, remember that Lois's mother had something of an estate left her in Boston by her father.

This was, as I think I explained to you at the time, left in quite a complicated condition. I have never seen any of the firm, but I wrote to Brandeis, Dunbar & Nutter and asked them to look after Lois's interests, which they did. They got very good results, and they are still looking after this estate. Their charges were very modest, considering the work and the results they got, and in view of the attack on Mr. Brandeis I thought that in justice to him I would give you these facts.

Very truly, yours, H. H. HARRINGTON.

—

MARCH 1, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: Believing the appointment of Louis D. Brandeis to the United States Supreme Court to be most fitting and proper, I respectfully request that you add my name to the multitude indorsing the appointment.

I assert resolutely, from my long acquaintanceship with Mr. Brandeis professionally and publicly, that there is no higher type of citizen or public servant in our country, notwithstanding the attacks his candidacy has evoked. I know of no man in our city who is held in higher esteem or regarded with greater reverence and respect than the appointee.

I am aware of the importance, influence, and standing of the United States Supreme Court, the highest court in the world, and I believe that Mr. Brandeis would adorn this venerably body.

Respectfully, yours,

ISAAC HARRIS.

—

JOSEPH M. HERMAN SHOE CO.,
159 Lincoln Street, Boston, Mass., February 25, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SENATOR: I have known Mr. Louis Brandeis since he entered upon the practice of law. I have come into close contact with him in his personal and social life, in his professional career, and in his public civic activities. It is because of a long and intimate knowledge of the man that I, a member of an opposing political party, heartily indorse

President Wilson's selection of him to be an Associate Justice of the Supreme Court of the United States and earnestly urge the Senate to confirm his appointment.

Mr. Brandeis is one of the few lawyers of our time in this country who has willingly sacrificed lucrative pecuniary returns to an ideal conception of public service. His ability as a lawyer, his luminous and keenly trained intellect, his untiring industry and abnormal capacity for work, would have brought to him permanent retainers from all the great corporate interests in New England had he not voluntarily chosen to forego such retainers in the interest of his own independence of thought and action.

The Nation has always needed the services of men of the Brandeis type, and the confidence of the people in the Nation's highest tribunal can not help but be strengthened by the selection of such a man for a place on its bench.

Of Mr. Brandeis's private life I need not speak, for it has never needed commendation. In temperament he is dignified, calm, and dispassionate; and unless fearlessness in announcing the right as he sees the right can be said to deprive a man of what is called judicial temperament, then Mr. Brandeis possesses that temperament to the highest degree.

Yours, very respectfully,

JOSEPH M. HERMAN.

—

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: May I add a word in favor of confirmation of the nomination of Louis D. Brandeis?

I am a Democrat, and have been president of the National Democratic League of College Clubs and vice chairman of the State committee of Massachusetts. In 1911 I was a member of the State senate, and declined renomination. In 1914 and 1915 I was second, and then first, assistant attorney general of the Commonwealth, retiring with the change of administration. I am now engaged in private practice. I am a director of the Massachusetts Farmland Bank and of several manufacturing corporations. I am a member of the National Council of the American Judicature Association.

For two years I served in the office of Brandeis, Dunbar & Nutter, and came into personal contact with Mr. Brandeis on legislative matters while in the senate. I do not believe that I am prejudiced in his favor, but I do know from personal experience that his office maintains an unusually high standard of legal ethics. Mr. Brandeis has not been content with being merely personally incorruptible, but he and his associates have insisted that the subordinates in their office adhere to the same high standard.

With the exception of a few lawyers in the certain restricted district, I believe the sentiment of the Boston bar to be distinctly in favor of the Brandeis appointment.

Yours, very truly,

ROGER SHERMAN HOAR.

—

BOSTON, *March 2, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman of the Subcommittee on Judiciary,
Washington, D. C.

DEAR SIR: From reports of the testimony already submitted to your committee appointed to consider the appointment of Louis D. Brandeis to the Supreme Court of the United States, I have learned that certain unfavorable opinions have been placed before your committee regarding the reputation in this community of the man you are considering.

These opinions are to my knowledge not representative of the general opinion of the reputation of Mr. Brandeis, and it is for that reason that I take time to write to you to inform you of my knowledge regarding the reputation of this candidate.

I am a practicing attorney, having offices in Boston and vicinity. I have had brought to my attention on many different occasions the general reputation of Mr. Louis D. Brandeis. On every occasion that I have heard mention of him it has always been a recommendation of Mr. Brandeis, praising him for the standard of honesty, trustworthiness, fidelity, and profound knowledge of the law to which he adheres. All these opinions have been expressed by lawyers, members of the same club to which I belong, and who I had reason to believe had personal knowledge and acquaintance with Mr. Brandeis.

I sincerely hope that Mr. Brandeis will be recommended by the committee for appointment to the Supreme Court of the United States.

Respectfully, yours,

M. H. HORBLITT.

—

FEBRUARY 25, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I take the liberty of addressing this communication to you for the purpose of indorsing Louis D. Brandeis, who has been nominated by President Wilson as Associate Justice of the Supreme Court of the United States.

I am a lawyer with offices in Boston, and I have been in active practice for eight years.

I am president of the Associated Young Men's Hebrew Associations of New England, an organization comprising 45 young men's Hebrew associations scattered throughout the New England States, with a total membership of over 15,000 men. In my capacity as president of this organization, for the past two years, I have had occasion to travel throughout the district, coming in contact with large numbers of our citizens, and I can say that everywhere I have heard only the highest words of praise and commendation of Mr. Brandeis.

At a number of large public meetings that I have been present, addressed by Mr. Brandeis, the reception accorded him far surpassed any that I have ever witnessed received by any private citizen.

Ever since his nomination I have talked to many members of the Massachusetts bar, and I have heard the appointment generally discussed. In no instance have I heard anything but approval, and in no instance have I heard anything unfavorable.

There is no question in my mind but that the opposition to his appointment comes from a very small and narrow circle, and that the opinions that they express are their own and not those of the general public or of the large majority of the members of the Massachusetts bar.

I heard of Mr. Brandeis even before I became a member of the bar, and for the past two years I have come in contact with him personally. He has always impressed me as being a man of high ideals and principles, possessing a keen and analytical mind and a close student of social and economic problems. He unquestionably possesses all of the qualifications that should go to make of him a great jurist.

I am, very respectfully, yours,

ALBERT HURWITZ.

—

FEBRUARY 24, 1916.

Hon. C. S. THOMAS.

MY DEAR SENATOR: I have known and contacted with Brandeis for over 25 years and have never known or heard of his being guilty of unprofessional conduct.

As his ability is conceded, it is merely a matter of judicial temperament, and that is another term for viewpoint and perspective. He possesses it as much as Milburn or Cromwell or men who would be named by them, and very much more than A. L. Lowell, president of Harvard University, who, having selected a Jewish holy day for examinations last summer, refused to allow Jewish students another day for taking the examinations and advised them to dictate the work to hired stenographers.

We need men on the bench who will not measure and limit rights and liberties of this century by precedents and opinions of the mediæval ages.

Very respectfully,

H. J. JAQUITH, LL. B.

—

FEBRUARY 19, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Senate Subcommittee, Washington, D. C.

DEAR SIR: In view of the suggestion made to your committee—that an unfavorable opinion of Mr. Brandeis held by a portion of this community should in itself prevent his confirmation—I take the liberty of stating my dissent from this opinion of him and from the position so suggested. Mr. Brandeis's talents and legal learning are undisputed. These, with his wide experience, his study of public questions, and especially his readiness and resourcefulness in recognizing and meeting changing industrial conditions, enable him to make a contribution to public service as a Justice of the Supreme Court which possibly no other man in the country could make. I have been in the practice of law in Boston since 1898, have known Mr. Brandeis during most of that time, and have heard his character frequently discussed. While I have known of the unfavorable opinion of him entertained by a considerable number of lawyers, including men of character and standing, nevertheless I have not heard from lawyers any specific charges of unprofessional or dishonorable conduct made with personal knowledge, and I think I have not heard from lawyers specific reference to cases upon which an unfavorable opinion was based outside of those which have been mentioned before your committee. Considering the many heated controversies, private and public, in which Mr. Brandeis has been engaged, testimony as to his reputation can have little weight except so far as it is shown to rest upon facts. My own acquaintance with Mr. Brandeis for some 15 years leads me to believe him to be a man honorably and sincerely devoted to the public interest.

Respectfully, yours,

ELIOT N. JONES.

—

WORCESTER, MASS., *March 4, 1916.*

Senator WILLIAM CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: During the 12 years I have been in business it has been my good fortune to come in personal contact with the Hon. Louis D. Brandeis, whose appointment to the Supreme Court is being considered by your committee, and it gives me pleasure to state that I have always found him to be a man of the highest integrity and ideals. My contact with him and knowledge of him gives me every reason to believe him absolutely honest and straightforward in business dealings and in his public life.

Whatever opposition to his confirmation may develop must, it seems to me, come either from a very narrow circle of attorneys or else from the interests which Mr. Brandeis has necessarily (and not unworthily) antagonized during his public career.

Such opposition certainly does not represent the sound sentiment of the community, which, to the best of my belief, is strongly in favor of Mr. Brandeis's confirmation.

For all these reasons, and for the best interests of the common weal, I trust you may speedily report in favor of Mr. Brandeis's confirmation.

Very truly, yours,

MAURICE L. KATZ.

—

801–805 TREMONT BUILDING,
Boston, February 18, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, Washington, D. C.

DEAR SENATOR CHILTON: Respecting the appointment of Hon. Louis D. Brandeis to the Supreme Court of the United States, I want to say as a lawyer, 47 years old, as a member of the bar association of the city of Boston, and as a member of the American Bar Association, that I consider Mr. Brandeis not only an able attorney, but a man above reproach, who will add ability, integrity, grace, and dignity to the great bench to which he has been appointed. He is an honest man, conscientious to a marked degree, who has raised himself above the sordidness and show of mere wealth, and looks to the character and worth of the individual as the better elements of our citizenship aside from mere accumulation of cash. Louis D. Brandeis is a man with a vision of the American people and the Nation's possibilities. He will hew to the line for the future of the great Republic and the rights of all of its citizens.

Perhaps I should add as a means of identifying myself, that I served three years as a member of the Boston school committee, a board of five; and I am now a member of the Boston finance commission, a board of five, appointed by the governor of our Commonwealth to supervise the finances of the city of Boston.

I am, respectfully, yours,

JAMES P. MAGENIS.

—

FEBRUARY 18, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I venture to write to you on behalf of Louis D. Brandeis and express the hope that his appointment may be confirmed.

I have been a member of the Massachusetts bar since 1902 and am a member of the Boston Bar Association and the Massachusetts Bar As-

sociation. For the last 10 years I have been prominently identified with labor interests, and have represented labor unions and the American Federation of Labor officially as their attorney during practically all that time. In the course of my practice I have had occasion to meet Mr. Brandeis professionally many times, and from the standpoint of labor I do not hesitate to say that his conduct has been admirable. He has been fearless in his championship of the people's rights and has never hesitated to take up the cause of a labor union or even of unorganized workers when he thought that cause was just. He stands very high in the estimation of the labor men of New England, and I know of nothing which would afford them greater satisfaction than his confirmation as a judge of the United States Supreme Court.

I venture to say that most of his enemies have been made by his championship of the people's rights, and I know of no instance where a whisper has been raised against him by the "people" themselves. I am very sure that he will make a strong, able, fearless, and impartial judge, and that, high and august as the United States Supreme Bench is, Louis D. Brandeis would grace it.

Yours, very truly, FREDERICK W. MANSFIELD.

MARCH 2, 1916.

Hon. W. E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: As a member of the Massachusetts bar of many years' standing, I consider it my duty to express my opinion regarding the appointment of Louis D. Brandeis to the Supreme Court of the United States. That I am not influenced by political motives or partisan considerations is evidenced by the fact that I am and always have been a Republican.

It is, however, a pleasure to advocate the confirmation of a lawyer who possesses not only legal ability of the highest order but also a judicial mind and foresight such as was possessed by the framers of the Constitution of our country. His untiring efforts in behalf of the rights of his fellow citizens and indomitable courage in opposing wrong has won him hosts of ardent friends, and, naturally, bitter enemies.

The general sentiment of the public in Massachusetts is unquestionably with Mr. Brandeis, and with the exception of the interests which have reason to fear his unflinching and unswerving fidelity to the public welfare, it is the desire of Massachusetts that he be confirmed. The confirmation of Mr. Brandeis as a justice of the United States Supreme Court would be a distinct addition in character, legal knowledge, and judicial ability, and will surely add to the respect and esteem in which this highest judicial body of the Nation is held by the great masses of its citizens.

Respectfully, yours, HENRY I. MORRISON.

FEBRUARY 23, 1916.

Hon. WILLIAM E. CHILTON,
Chairman of Subcommittee on Judiciary,
United States Senate, Washington, D. C.

DEAR SIR: I wish to record my earnest desire that the appointment of Mr. Brandeis as a judge of the Supreme Judicial Court be confirmed.

I am not and never have been a Democrat, but write because from some personal knowledge of what Mr. Brandeis has done I think he is inevitably qualified for the position.

Respectfully, yours, FRANK H. NOYES,
73 Tremont Street, Boston, Mass.

MARCH 1, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: I am sending this letter as an indorsement of Louis D. Brandeis, who has been nominated as a Justice of the United States Supreme Court. I have practiced in Boston for about eight years and have always been identified as a member of the Republican Party.

The general opinion concerning Mr. Brandeis which has come to my attention and knowledge has been that he is one of the ablest attorneys practicing in this country. I have never heard his character assailed or integrity questioned by any except a few of the financial interests who may have suffered somewhat by Mr. Brandeis's activity as a friend and counsel of the general public.

I sincerely trust that Mr. Brandeis will receive the confirmation of the United States Senate which he justly deserves.

Yours, respectfully, MAX L. LEVENSON.

MARCH 2, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: I wish to record my indorsement of Louis D. Brandeis, recently nominated as a Justice of the United States Supreme Court. As a member of the Massachusetts bar for about 14 years I have had some opportunity of judging Mr. Brandeis, both from a professional and personal standpoint, and I wish to say that I have nothing but the highest regard for his integrity, honesty, and ability. I feel sure that his many years of activity and practice before all courts and commissions of this country have given him a vast experience and unquestioned judicial temperament.

My residence is in Chelsea, Mass., the home city of Congressman Ernest W. Roberts. I have always been identified as a member of the Republican Party, having had the privilege of being a member of the Republican city committee and a member of the school board of the city of Chelsea for several years. I am now representing the fifth Suffolk district as a member of the Massachusetts Legislature.

I am sure that any opposition which may be brought to your attention against the confirmation of Mr. Brandeis comes from a small circle of people who are biased either because of narrowmindedness or because they may have suffered financially from Mr. Brandeis's activity in the public welfare.

Trusting that Mr. Brandeis will receive the confirmation of the United States Senate, I am,

Yours, very respectfully, JOSEPH M. LEVENSON.
BOSTON, *March 3, 1916.*

Senator WILLIAM E. CHILTON,
Washington, D. C.

DEAR SIR: I graduated from Harvard College in 1903 and from the Harvard Law School in 1906. I passed the Massachusetts bar examination in 1905 and have been practicing at the Suffolk bar ever since.

While at the law school I heard of the fame of Louis D. Brandeis, Esq., and from the time I left the law school to this date I have had considerable opportunity to watch Mr. Brandeis grow in reputation as a lawyer and as a man. I am happy to be able to say that his growth in both respects in the estimation of the community has simply been marvelous. He certainly has been one wonderful example and inspiration for all members of the bar and all other persons in the community. I have never heard any criticisms derogatory to his character or reputation. His wonderful and repeated successes in the most complicated cases and his untiring efforts in behalf of the people at the sacrifice of considerable time and expense to himself have endeared him to the country at large.

It is no wonder that our honorable President of these United States has seen fit to appoint him as the one man fit and able to occupy the exalted position of Associate Justice of the Supreme Court of the United States.

Can it be said that our beloved President has been influenced by anything outside of the highest motive for the welfare of all the people in his appointment of Mr. Brandeis? The whole record of Mr. Brandeis's career must certainly have been reviewed by the President before he exercised the privilege and right under the Constitution to fill the vacancy on the Supreme Bench.

It seems to me that the opposition to Mr. Brandeis's confirmation comes from persons who are envious or jealous of his remarkable rise in the world or to the fact that Mr. Brandeis has so often and so successfully championed the cause of the common people against encroachments by monopolists and monopolistic combinations.

I humbly join in the almost universal desire that our President's appointee be unanimously confirmed.

I have the honor to be, respectfully, yours,

ABRAHAM LEVENTALL.

MARCH 7, 1916.

Hon. WILLIAM CHILTON,
Chairman of the Senate Subcommittee, Washington, D. C.

DEAR SIR: As a member of the Women Lawyers' Association of the State of Massachusetts and as a practicing attorney before the bar of this State, I earnestly advocate the confirmation of the nomination of Louis D. Brandeis for the United States Supreme Judicial Court.

Trusting that you will recognize his entire fitness for that great and honorable position, I am,

Yours, truly, ROSAMOND H. LEVY,

MARCH 1, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: Having made a specialty of the patent laws of this country and foreign countries, for the past five years our office has been doing a great deal of associate work on patent matters with the general-law practitioners in and about this city.

We are personally acquainted with Mr. Louis D. Brandeis, the President's nominee for the vacancy in the Supreme Court of the United States of America, and have, since the question of his confirmation has arisen, discussed his qualifications for that office with many of our clients, who are prominent members of the Massachusetts bar. We find their opinions to be absolutely in his favor and are satisfied that the opinions expressed before your honorable committee, as we understand them, by a few attorneys from Boston, to the end that the reputation of Mr. Brandeis is questioned throughout the Massachusetts bar, are positively without foundation.

We sincerely urge the confirmation of Mr. Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

Very respectfully, DAVID LICHTENSTEIN,
BENJAMIN H. CHERTOK.

MARCH 8, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

MY DEAR SENATOR: May I express my sincere hope that your committee will report favorably on the confirmation of Louis D. Brandeis as Associate Justice of the Supreme Court of the United States.

As a member of the Massachusetts bar and as president of the Associated Young Women's Hebrew Associations of New England I have had occasion to meet Mr. Brandeis frequently and have found him to be a man of the highest integrity.

I am certain that as a member of the Supreme Bench of the United States Mr. Brandeis will fill the office honorably.

Yours, very truly, S. M. LIPNER.

BOSTON, MASS., *March 3, 1916.*

JACOB J. KAPLAN, Esq.,
161 Devonshire Street, Boston, Mass.

DEAR MR. KAPLAN: Inclosed herewith find copies of letters in the Brandeis matter, which I received from Harry H. Guterman, Henry I. Morrison, David Lichtenstein, Benjamin H. Chertok, Harry Silverman, Joseph H. Samuel, Florence F. Sullivan, Israel Ruby, Isaac Harris, Elisha Greenhood, Max M. Fritz, A. E. Pinanski, Louis Abrahams, William E. Blatt, Isaac H. Greenburg, Harry E. Dubinsky, Edward E. Ginsburg, Albert Hurwitz, Eugene M. Schwarzenberg, Adolphus M. Burroughs, Samuel L. Silverman, George E. Gordon, Samuel H. Borofsky, Nathaniel Golden, Maurice Bergman, Emmanuel Cohen, Samuel L. Wolfson, Franklin M. Cohen.

Very truly, yours, DAVID A. LOURIE.

FEBRUARY 18, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: As a member of the Massachusetts bar for 26 years, 23 of which have been spent in general practice and 3 years as assistant corporation counsel for the city of Boston, and having known and had professional dealings with the firm of Brandeis, Dunbar & Nutter, of which Louis D. Brandeis is the senior member, I indorse his appointment for confirmation as an Associate Justice of the Supreme Court of the United States. I believe that Mr. Brandeis will bring to the high office to which he has been nominated ability, learning, and that sense of unswerving

and impartial justice which has ever been the keystone in the arch of our Government.

Yours, respectfully,

JOSEPH P. LYONS,
Assistant Corporation Counsel.

—

BOSTON, MASS., *March 3, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Judiciary Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: By way of introducing myself, I have been in the general practice of law for about 10 years, and have been identified with the Democratic Party since 1896; have also been a delegate to the Democratic National Convention at Denver and an alternate delegate to the Baltimore convention. I am at present connected with the law department of the city of Boston, having charge of the "workmen's compensation" cases.

My practice and connections have brought me in contact with a very large majority of the practicing lawyers of Boston and Massachusetts, generally, and I am delighted to say that I find the reputation of Louis Brandeis to be excellent, as far as honesty and ability are concerned.

I most heartily approve of his confirmation as a member of the United States Supreme Court.

Respectfully, yours,

H. MURRAY PATSUKKI.

—

FEBRUARY 28, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I should like to add my indorsement to the nomination of Louis D. Brandeis, Esq., as Associate Justice of the Supreme Court of the United States.

I am a graduate of Harvard College, 1908, and Harvard Law School, 1910, and have been a member of the Massachusetts bar since January, 1910. For two years after leaving the law school I was in the legal department of the Boston Elevated Railway Co. and for the past three years have been assistant to the general attorney of that company and engaged in the general practice of the law. I have known Mr. Brandeis personally for the past seven or eight years, and I believe that I am familiar with at least his public career of the past 20 years. Although I have been intimately interested in the opposite side of many public, particularly franchise, questions in which Mr. Brandeis has taken an important part, I have always felt and do still feel that he is a man of absolute integrity, exceptional ability and mentality, and unusual fairness.

I believe that I voice the general sentiment of the younger members of the bar when I say that Mr. Brandeis is a shining example of the unselfish, public-spirited citizen, earnest advocate, and profound scholar.

Very truly, yours,

W. E. PINANSKI,
Assistant to the General Attorney.

—

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I trust that there is no impropriety in the liberty I am taking in writing you this letter indorsing Louis D. Brandeis as an Associate Justice of the Supreme Court of the United States.

I am now and have been practicing law in Boston for 16 years. I was assistant district attorney in Suffolk County in 1909, and in 1906 was appointed a special justice of the Boston juvenile court, a life appointment.

I have known Mr. Brandeis, or of him, since I commenced the practice of the law. I have had matters connected with his office, although I have not dealt with him personally therein.

It is not unnatural that many should differ with Mr. Brandeis. His career has been exceedingly active and fruitful, and it would be impossible to expect that his acts should meet with the commendation of all. I can not believe, however, that the present opposition is viewed with favor by the great mass of our community. To them Mr. Brandeis towers as a man of great intellect and energy, who has unselfishly served the people, and who has accomplished large constructive good in their behalf.

I believe that Mr. Brandeis is preeminently fitted for the position, and, as far as one can foresee, will add genuine strength to the Supreme Court. The President has assumed the responsibility of making the appointment, and I believe he has exercised sound judgment. I hope the United States Senate will see fit to sustain the President in the matter.

Yours, very truly,

PHILIP RUBENSTEIN.

—

BOSTON, *March 2, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

MY DEAR SIR: Permit me to express my approval of the nomination of Louis D. Brandeis, Esq., as a member of the Supreme Court Bench of the United States. I sincerely trust that your committee will see fit to report favorably on the nomination to the honorable Senate.

I have been engaged in the practice of law for three years, and during that time I have had occasion to discuss the honesty, integrity, and ability of Louis D. Brandeis, Esq., at various times, and the sentiment of opinion always expressed was that he was a credit to our profession, and it is my sincere belief that his appointment to the Supreme Court Bench will add to the same a man who had not only himself at heart but his country and people.

Sincerely, yours,

ISRAEL RUBY.

—

BOSTON, *March 2, 1916.*

Senator WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: In reference to the confirmation of Louis D. Brandeis as a member of the Supreme Court of the United States, now pending before your committee for its consideration, I desire to be placed on record as follows:

I might say at the outset that I am in my fifth year at the bar, active in practice, and of the large number of lawyers with whom I have come in contact a very large majority are in favor of confirmation of the nominee.

I do not personally know him, but so far as I can ascertain—and I have discussed the matter with a number—his reputation at the bar for ability, efficiency, and integrity is good.

I desire to be recorded in favor of confirmation.

Very truly, yours,

JOSEPH H. SAMUEL.

—

[Law offices of Eugene M. Schwarzenberg and Edwin F. Schwarzenberg.]

BOSTON, MASS., *February 25, 1916.*

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: As a member of the bar of 12 years' standing and one who has participated somewhat in civic life, having been chairman of the good government association of the town in which I lived for several years, as well as a member of the Republican town committee and town council, I feel it my duty to write to express my position on the treatment being accorded to Mr. Louis D. Brandeis.

I have known Mr. Brandeis, both socially and professionally, for upward of 20 years, and have had a great many dealings with him personally and with his office, and have always found him conscientious, upright, and a man of highest integrity, high ideals, and fine ethics, besides which his ability can not in the least degree be impugned.

I wish to express my unqualified approval of his appointment as a member of the United States Supreme Court, believing that his appointment will add dignity and strength to that body. It is my belief, from what conversations I have had with other attorneys, that the only opposition to him in this section comes from a very narrow circle who are allowing selfish motives to warp their judgment.

With the sincere wish that the action of the committee will be favorable to Mr. Brandeis, I am,

Yours, respectfully,

———— ————.

—

MARCH 3, 1916.

Senator WILLIAM E. CHILTON,
Chairman of the Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: It is with a great deal of regret that I note the opposition against the confirmation of Louis D. Brandeis as Associate Judge of the Supreme Court of the United States. Personally, I think it is a misfortune to harass and malign a man who, to my judgment, in the words of Shakespeare, "is above suspicion."

I have practiced law since 1904, and have had more or less to do with the office of Brandeis, Dunbar & Nutter, and there never came a time that I could find any fault with the treatment I received from that office.

Mr. Brandeis has been generally regarded as a man of great legal ability. Not only is he recognized as a leader at the bar, but is known as a man who has given a great deal of his time to work for the public good, and is, in a sense, accepted as a leader of men.

His honesty, character, ability, and his general and judicial temperament has never, to my mind, been questioned. Personally, I believe that those who oppose him do so not because he lacks ability or honesty, but because they recognize the superior man.

I believe that this country needs the service of a man of this type, and I am sure that time will make those who now oppose him ashamed of their conduct.

I sincerely hope that the committee will report favorably upon his confirmation.

Respectfully, yours,

SAMUEL SELIGMAN.

—

MARCH 2, 1916.

Hon. WILLIAM E. CHILTON,
Washington, D. C.

SIR: I most respectfully urge the confirmation of Louis D. Brandeis, Esq., as an Associate Justice of the United States Supreme Court. His sterling character, unquestioned ability, fearlessness when fighting for a just cause, and sincerety of purpose in protecting the weak and oppressed are a few of his qualifications which make him eminently fit for this position which he will hold with credit to himself and honor to his country.

Respectfully, yours,

HARRY SILVERMAN.

—

[Samuel L. Silverman, 40 Court Street, Boston.]

FEBRUARY 25, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: The nomination of Louis D. Brandeis, Esq., of Boston, as Associate Justice of the Supreme Court of the United States is, in my opinion, one of the best nominations that could be made.

I have been a member of the Massachusetts bar since 1899, and I have yet to hear any objection to Mr. Brandeis. It may be that I do not come in contact with that class of attorneys who object to him. The feeling among the everyday members of the bar is that the nomination is a good one and will be a great credit to the United States.

I have had some business with Mr. Brandeis's office, and have found them fair and square.

I have served as a member of the Republican State Committee of Massachusetts for two years, and I have in past years actively participated in politics.

If you know anything about conditions in Boston you will know that the attorneys who oppose Mr. Brandeis are of a certain class who oppose everybody unless they come within their circle.

Very truly, yours,

SAMUEL L. SILVERMAN.

—

BOSTON, *March 2, 1916.*

Senator WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I am interested in the confirmation of Louis D. Brandeis for the office of Associate Justice of the Supreme Court of the United States.

In the outset let me state that I am a practicing lawyer and have been in active practice for 22 years, and during that time have had daily business relations with a great many lawyers, business men, and a representative element of the general public of this community. From my experience and personal knowledge I find the bar of this city

has among its members several men that seem to possess very deep-seated prejudices along certain lines that are the result of views expressed between themselves and within a somewhat limited circle. For reasons satisfactory to themselves, Mr. Brandeis has incurred the active opposition and personal ill-will of these men.

The standard that seems to have been set by these men for the general bar is of their own creation, unwritten, and, to my mind, very artificial and wholly out of sympathy with the rank and file of the 3,000 lawyers that practice before the courts of this city.

I do not claim to know the candidate, but can state for the information of your committee that the reputation and common speech of other lawyers and business men of this city consider Mr. Brandeis as a man who has elevated his character by his lofty and upright principles, according to a standard of honesty and reasonable application, and who as a lawyer and practicing attorney has distinguished his profession by the result of his achievements.

I believe such a man to be fully capable of calmly weighing matters that might come before him for judicial interpretation, and a man that would do full credit to the high office to which he has been appointed.

Very truly, yours,

F. F. SULLIVAN.

—

FEBRUARY 24, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I want to indorse President Wilson's nomination of Louis D. Brandeis for Associate Justice of the Supreme Court of the United States. I was a member of the Massachusetts Senate in 1907 and 1908 and was the Democratic candidate for governor in 1908 and 1909 and was also a delegate to the Democratic national convention in 1904.

I have been practicing law for 23 years, have always been a Democrat, and have known Mr. Brandeis for 15 years. I have never been associated with him in legal matters or causes, but have frequently been opposed professionally to his firm. While in the senate I was actively interested with him in the establishment of savings-bank insurance and voted for the bill which finally became a law.

I think that he is peculiarly well fitted and qualified for the position of Associate Justice of the United States Supreme Court. His knowledge of law and his breadth and grasp of great public and social questions remarkably fit him for such a high place. I think he has been very much misunderstood by some members of the bar here.

I earnestly hope that his nomination will be confirmed.

Yours, very truly,

JAMES H. VAHEY.

—

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: In the matter of the appointment of Louis D. Brandeis I wish, as a member of the bar of Massachusetts, to express my confidence and trust in Mr. Brandeis's high character and great ability.

In the city of Revere, where I have my residence, I mix in politics and belong to a number of social clubs and political organizations. Discussing Mr. Brandeis's appointment, the unanimous opinion seems to be that the gentlemen from Boston who are opposing him belong to a class who are known as "blue bloods." The people hark back to a time in Massachusetts, not so very long ago, when Catholics of Irish descent met with similar opposition from the same class who are now opposing Mr. Brandeis. They believe that Mr. Brandeis and men of his race and religion are now facing the same kind of prejudice in their fight for recognition, not of "blue blood" but red blood, courage, ability, and character.

The people, and especially the young lawyers of Boston, who are perhaps more familiar with Mr. Brandeis's career and attainments, are waiting with confidence for the confirmation of Mr. Brandeis as a demonstration that the test for high public office in Washington is the test applied by Mr. Wilson and is not influenced by class, race, or religion, but is determined entirely by character and ability for the office.

Very truly, yours,

P. A. WALSH.

—

FEBRUARY 16, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: In view of the present discussion as to Mr. Louis D. Brandeis, will you permit me, as one who has known Mr. Brandeis ever since we were together in the Harvard Law School, to say in brief that, although I have not for many years been in active practice, I have had an opportunity to know something of Mr. Brandeis's work in public matters, and that he has shown, in my judgment, not only brilliant ability but public spirit, breadth of view, and generosity both in the matter of time and money in helping on the public work which he has undertaken. As to his integrity, I have entire confidence in it, and would intrust my own affairs to him without hesitation.

Respectfully, yours,

GEORGE WIGGLESWORTH.

—

MARCH 4, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: I desire as a practicing attorney of this city, and in the interest of the community, to add my voice in commendation of the character and ability of Mr. Louis D. Brandeis, whose appointment as Justice to the Supreme Court is now awaiting the consideration of the Senate.

I sincerely trust he will be confirmed. I have followed Mr. Louis D. Brandeis's career with great interest, his professional and public activities are known by all men the country over, and I believe there is no one in point of ability or in character more fitted than he to strengthen the great court to which he has been appointed.

The reported sentiment of the Boston bar as unfavorable to Mr. Louis D. Brandeis is, I think, a great perversion of the truth, and it is limited almost wholly to those who have clients identified with vested interests and who are opposed to the measures advocated by Mr. Louis D. Brandeis. The disinterested members of the bar by an overwhelming majority respect him as a man of sterling worth and splendid ability.

Volumes might be written of his worth, but the main facts have already appeared in evidence, and I believe they should be conclusive to his remarkable worth and ability. It is certain that the great masses of the people, both lawyers and laity, will rejoice his confirmation, which is confidently expected.

I have the honor to remain,

Very respectfully, yours,

SAMUEL J. WITKIN.

—

[Law offices of Samuel L. Wolfson, 40 Court Street, Boston, Mass.]

FEBRUARY 29, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: I am an A. B., Harvard University, and LL. B., Boston University, and have been a member of the Massachusetts bar, Suffolk County, since 1913 and United States district court bar since 1915.

I have been for a great many years an ardent admirer of Mr. Louis D. Brandeis, because I believe him to be one of the foremost Americans of to-day and typical of American principles and democracy. I heartily approve his appointment to the United States Supreme Bench because I feel that he will stand up for what is equitable and just at all times and will make an excellent interpreter of the laws because of his vast legal experience.

I am of the opinion that the opposition to his confirmation is confined to a very small sphere, composed only of those who bear him a personal grudge and see a possible opportunity at hand to satisfy themselves, and it does not represent the voice of the people.

Respectfully, yours,

———— ————.

—

A few miscellaneous letters from lawyers outside of Boston or from nonlawyers:

MARCH 30, 1916.

Hon. WILLIAM E. CHILTON,
United States Senate, Washington, D. C.

DEAR SIR: I am taking the liberty of mailing you under another cover copy of an article concerning Louis D. Brandeis, whom I have had the honor of knowing a great many years.

As a citizen of Massachusetts and a former candidate for the nomination of governor and former chairman of the commission of efficiency and economy, I beg to say that in my opinion there is no living American who is more honest and more fearless, and no man that I know has better judgment or is more patriotic.

There are many people in Massachusetts and elsewhere throughout the country who believe that Brandeis resembles Abraham Lincoln in appearance and in character.

Yours, sincerely,

NORMAN H. WHITE.

—

FEBRUARY 9, 1916.

Hon. GEORGE E. CHAMBERLAIN,
Senate Chamber, Washington, D. C.:

Urge the confirmation of Brandeis because he is able, just, and progressive. One of the best appointments President could have made. No one opposing here but reactionaries, special-privilege beneficiaries, and big-business representatives. Opponents here include all who were applauding in advance nomination of Taft as the graceful thing to do.

WILLIAM U'REN.

—

FEBRUARY 19, 1916.

Hon. WILLIAM E. CHILTON.
Chairman Senate Subcommittee.

DEAR SIR: The newspapers report that certain gentlemen from this vicinity have given your committee an unfavorable estimate of the character of Mr. Louis D. Brandeis and of his standing in the community.

I think it is fair to say that the hostile estimates attributed to these gentlemen are not unexpected and occasion little surprise in his locality. We are accustomed to having honorable men, of strong convictions and divergent interests, differ painfully in their estimates of one another. But I think it is also fair to say that these critics of Mr. Brandeis can not speak for the community at large.

I, for example, have known both Mr. Brandeis and some of his critics for many years. Part of this time I was a member of the faculty of Harvard University, as teacher of political economy and sociology; subsequently colleague and successor of the late Edward Everett Hale as minister of the South Congregational Society of Boston. The longer I have known Mr. Brandeis the more I have admired him, not only for his personal qualities but also for his knowledge of economic conditions; his insight and impartiality in regard to the relations of capital and labor; his public spirit and devotion to the general welfare.

I regard him as one of the most conscientious members of his great profession; as one of the sanest, wisest, and most trustworthy citizens of this Commonwealth.

I was glad when the President nominated him to the Supreme Court; first, because I, like many others, am persuaded that he measures up to the highest standards of moral character, of professional equipment, of judicial temper, of patriotic devotion; second, because I believe he will bring to his high office a statesmanlike grasp of the fundamental principles and problems of our social, political, and industrial life.

Sincerely, yours,

EDWARD CUMMINGS.

P. S.—I think I am not identified with Mr. Brandeis either in race, religion, or political party.

—

ANDOVER THEOLOGICAL SEMINARY,
Cambridge, Mass., February 17, 1916.

Senator WILLIAM E. CHILTON,
Chairman Subcommittee of the Senate.

DEAR SIR: May I be allowed the privilege of expressing to you my appreciation of the character and service of Mr. L. D. Brandeis and my judgment of his eminent fitness for the great position for which our honored President has chosen him? I have known Mr. Brandeis for more than 20 years; I have heard him speak on many occasions on large questions, and have been brought into personal relations with him from our mutual interest in the welfare of workingmen. He has impressed me profoundly as a man of sterling character, absolutely devoted to the common welfare, thoroughly convinced that righteousness alone exalteth a nation, and so eager that good be accomplished that he willingly works in the background while others receive the commendation.

In view of the fact that great social problems are coming more and more to the Supreme Court, it seems to me that he is eminently fitted

for wise and humane judgment on these and other matters. From my contact with various classes of men in the community, I judge that his selection strikes others, with the exception of a small minority, as favorably as it does me.

Yours, respectfully,

DANIEL EVANS.

—

BOSTON, MASS., *February 25, 1916.*

Senator WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: I am writing you to throw what light I can upon the qualifications of Mr. Louis D. Brandeis for service in the Supreme Court. I have never had any business relations with Mr. Brandeis, but have been a close observer of his activities, both locally and nationally.

While I have no authority to speak for any organization with which I am connected, I think it fair to say that because I am connected with various public organizations in this vicinity I have come to know what kind of a man Mr. Brandeis is. As one of the organizers and president of the United Improvement Association, an affiliation of the various local associations throughout Boston, I have been associated with Mr. Brandeis and have seen his breadth of view and self-sacrificing contributions of time and money in the interests of the best civil development. As superintendent of the Wells Memorial Institute, I have become acquainted with his energetic and again self-sacrificing work in the upbuilding of our Massachusetts Savings Bank Life Insurance system. As director of the Boston Chamber of Commerce and an active member of various of its committees, I have had an opportunity to know of Mr. Brandeis's activities in connection with the New York, New Haven & Hartford Railroad. He has received much censure for his actions in this connection, and I believe that much of the opposition to him is based upon that. Let me assure you that such opposition is confined to a very small group of people, though the members of that group are wealthy men whose voices are heard afar. Because Mr. Brandeis discovered the evil financial and managerial situation of the New Haven Railroad and warned the public of it and of the need of an early and drastic remedy, he has been blamed as only the authors of the situation deserve. He is charged with the wrecking of the New Haven Railroad when what he really did was the very useful service of warning us that the railroad would be wrecked unless we took effective means to prevent such a catastrophe. One of our most prominent business men said to me very recently that he believed the opposition to Mr. Brandeis regarding the New Haven activities, which comes largely from the banking interest, is due to the fact that he discovered and made public the real situation of affairs before the bankers themselves had discovered it. It is my deliberate opinion that had Mr. Brandeis not made public the facts regarding the New Haven situation that debacle might have been even more serious than it is.

Finally, may I say that I believe the personal charges against Mr. Brandeis are due to the fact that he refuses to continne as counsel for a company after he becomes convinced that that company is working contrary to the public interest and demands his assistance in securing results which work against essential justice? Such a position is not in keeping with the general practice in the legal profession and is not required by legal ethics. In my opinion, however, it is a step in advance of what is absolutely required by the ethics of the profession; and I believe that in taking such a position he is standing for the higher morality rather than the lower ethics of the particular group. Not being a lawyer, I can not express any opinion of value as to Mr. Brandeis's purely legal contribution to the Supreme Court, but I do know that his intimate knowledge of the actual living conditions and problems of a great majority of the inhabitants of this country will be of inestimable value in giving a human and humanitarian balance to the views of the Supreme Court.

Respectfully, yours,

WILLIAM C. EWING.

—

60 STATE STREET, BOSTON, MASS.,
February 17, 1916.

Hon. WILLIAM E. CHILTON,
Chairman of Subcommittee, United States Senate,
Washington, D. C.

DEAR SENATOR: I write to urge the pending confirmation of Louis D. Brandeis. I am one of those citizens of Massachusetts who conceive Mr. Brandeis to be a great civic asset and potentially a distinct national asset. To many minds he stands as the embodiment of popular intelligence and courage striving for popular rights against selfish corporate aggression. He has a definite record of public achievement unequaled, I believe, by any other member of the bar in this State.

He is essentially a constructive and conservative element in the community, in that he believes in and assists orderly and evolutionary social progress. He is a man with a social vision, but never visionary; a useful servant of the public, but never servile; a profound and brilliant lawyer, who knows that historically the best law is ever expressive of the noblest social aspirations.

Faithfully,

WILLIAM LLOYD GARRISON, Jr.

—

FEBRUARY 17, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee, United States Senate,
Washington, D. C.

DEAR SIR: Louis D. Brandeis is, in my opinion, absolutely devoid of all selfish interests. I do not intend to presume upon his dignity by defending his character, but wish to say that during the last 10 years in which he has served as our counsel we have found him to be both conservative and constructive in his advice.

There are embodied in Mr. Brandeis so many of the essential elements that fit him for the Associate Justice of the Supreme Court it is inconceivable that any testimony presented should influence your committee to the extent of robbing this country of the power and quality of justice that Mr. Brandeis will administer.

It is my belief that we voice the opinion of the conservative element of the country.

Yours, very truly,

E. G. HOWES.

—

FEBRUARY 15, 1916.

Hon. T. H. WALSH.

MY DEAR SIR: Inasmuch as so many allegations by petition or personal statement have been presented to the subcommittee to consider the fitness of Mr. Brandeis for the Supreme Court, many of which allege that he is temperamentally unfit to act in a judicial capacity, may I take the liberty of contributing an opinion on the other side. My professional work at Harvard has for many years required that I keep in close touch with transportation and labor matters, and quite aside from personal acquaintance with Mr. Brandeis, it has been in the true line of my work to follow every detail of his career. Two particular events, in my judgment, prove that Mr. Brandeis, far from lacking the judicial habit of mind, is preeminently fitted to exercise it. The first of these is his attitude on the rate-advance cases, wherein, as your committee has already been so fully informed, he was willing to so far do justice to both sides as to concede the need of revenue for the carriers while still fully comprehending the interest of the public, which he represented, in low transportation rates. As a warrant for this judgment, and merely in order to give it weight technically before your committee, I am taking the liberty of inclosing a few citations from reviews of certain books on railroads which I have published during the last few years.

The second instance of marked judicial capacity on the part of Mr. Brandeis is his record in the New York protocol, covering 50,000 or more garment workers, and substituting standardized and orderly conduct of a great business for chaos and incessant strife. The fact that Brandeis should have been chosen as the third member of the arbitration board, which was the capstone of the system, and should in that difficult position have continued to promote orderly intercourse between capital and labor, is no mean achievement. It could by no possibility have been performed by one who did not possess the qualities of fairness and nice discrimination as to human rights in the highest degree. On this subject also my warrant for expression of opinion is based upon a quarter of a century of instruction and writing on labor problems in connection with my work at Harvard.

You will pardon the length of this communication, but it is difficult more briefly to substantiate the claim which the friends of Mr. Brandeis bring forward in behalf of this candidacy.

Believe me, very truly, yours,

WILLIAM L. RIPLEY.

—

FEBRUARY 21, 1916.

Hon. WILLIAM E. CHILTON,
Chairman Committee on Brandeis Nomination,
Washington, D. C.

DEAR SIR: I take the liberty of placing before you copy of telegram which I sent to President Wilson immediately after the announcement of his nomination of Mr. Louis D. Brandeis to vacancy on the bench of the Supreme Court of the United States:

"The PRESIDENT,
"*Washington, D. C.:*

"Your nomination of Louis D. Brandeis affords renewed evidence of your sagacity, is a fine tribute to his splendid qualifications, and a gratifying recognition of the confidence in which he is held by the masses of the American people."

I may add that for several years I have been in position to gauge with some accuracy the views of the people of Boston as a whole and to contrast them with those of a much more circumscribed local group mistakenly disposed to regard its own sentiments as those of the entire community.

Four men chanced to lunch together to-day at one table at one of our principal clubs. One is president of a prominent Boston savings bank, the second is a well-known lawyer occupying a high elective office, the third is one of the leading dry-goods merchants of Boston, the fourth (myself) is president of two flour milling companies. Among other matters the nomination of Mr. Brandeis was discussed. One suggested that those who favor his nomination hold up their hands and all four men held their hands aloft.

This is, I believe, much nearer a correct illustration of the views of the people of Boston—not to go farther from home—than was the petition recently signed here and forwarded for presentation to your committee.

If the matter were submitted to a vote of our citizens among whom Mr. Brandeis has lived and worked the greater part of his lifetime, I believe the majority in his favor would be overwhelming.

Very respectfully, yours,

BERNARD J. ROTHWELL.

—

[J. Russel Marble & Co., Worcester, Mass., also 77 Pearl Street, Boston, Mass. J. Russel Marble, Rufus S. Woodward, Charles E. Eager, Arthur E. Nye.]

WORCESTER, *February 23, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee Judiciary Committee,
United States Senate, Washington, D. C.

DEAR SIR: As a merchant of Boston and Worcester, Mass., and doing a very considerable business with the principal paper, woolen, cotton, and other manufacturers of New England, I want to state that I believe that a large proportion of the people of New England approve of the nomination of Louis D. Brandeis for Justice of the Supreme Court.

I have met Mr. Brandeis frequently in lines of work which are for the uplift and benefit of the people. His ability is recognized and I believe that he has a large degree of judiciary temperament. He is the only lawyer, so far as I know, of any particular prominence who has appeared before the Legislature of Massachusetts in the last 10 years in the interests of the people as a whole. The other lawyers have been there, chiefly representing the interests of corporations, whose interests are sometimes inimicable to those of the people. The Hon. Robert M. Washburn, a Republican, and more than five years a member of the Massachusetts House of Representatives, now a member of the Massachusetts Senate, himself a lawyer, has approved publicly of Mr. Brandeis's confirmation, as per inclosed interview in the Worcester Evening Gazette.

Knowing Mr. Brandeis as I do, and the sentiment of the New England people, I believe the court would be strengthened by his confirmation, and the respect for the court, if possible, increased among a large part of the community.

Very truly, yours,

J. RUSSELL MARBLE.

—

MARCH 3, 1916.

Mr. A. LAWRENCE LOWELL,
President Harvard University, Cambridge, Mass.

DEAR SIR: As a one-time member of the undergraduate body of the university, I feel that I owe it both to the traditions of that institution and to my own sense of duty to add my protest to that of the

undergraduates who have challenged your opinion as stated to the Senate committee of the fitness of Mr. Louis D. Brandeis for service on the Supreme Court of the United States.

I have some personal acquaintance with Mr. Brandeis. I have a good working knowledge of his activities in the public behalf during the past 10 years. There is no man of his time, in my opinion, who has rendered as valuable service to the cause of humanity and progress. He is of Supreme Court stature at all times. Under the conditions that prevail to-day in the United States, I believe him to be peculiarly fitted for services on that bench. President Wilson has made no appointment in his career that so honored him as that of Mr. Brandeis. In such a situation, it shocks me that the head of our most illustrious educational institution should join the clamor of the privileged and predatory interests of the country in defaming the reputation of this great lawyer and citizen.

Again I protest—for myself, for the old university ideals of truth seeking and service to humanity.

Truly, yours,

STILES P. JONES,
Class of '88.

—

HOT SPRINGS, ARK., *March 12, 1916.*

Hon. JOSEPH T. ROBINSON,
United States Senator from Arkansas, Washington, D. C.

MY DEAR SIR: Mr. Malheny, a brother attorney and old schoolmate of yours informed me that I might use his name as reference in writing to you relative to the confirmation of the Hon. Louis D. Brandeis for Supreme Court judge, who was indorsed by our local painters' union, No. 401, and a copy of the resolutions sent to you and Senator JAMES P. CLARKE on February 22 by special delivery. I wrote Senator CLARKE the second time, but have never received a reply to our resolutions nor my letters, and as I am originally from New England and also know ex-Secretary of the Interior Ballinger and many of the ring that attempted to hold up Uncle Sam in Alaska, and know Mr. Brandeis did his whole duty in that case and rendered invaluable services to the United States Government and the people of our country and in that and other cases, and that a large majority of the laboring men and law-abiding citizens are in favor of your early action and confirming the President's appointment, I hereby again ask you and your colleagues to stay by us, and we will stay by you.

Kindly acknowledge the receipt of this and let me know if you duly received a copy of our resolutions, and oblige your humble friend and servant.

E. E. NEAL,
Box No. 28, Hot Springs, Ark.

—

JOHN P. HERRMANN, JR., REAL ESTATE CO.,
St. Louis, Mo., March 15, 1916.

To the MEMBERS SENATE JUDICIARY SUBCOMMITTEE,
Washington, D. C.

HONORABLE SIRS: The inclosed copy of my letter to Senator Elihu Root, a copy of which was mailed to Mr. Barnes, of New York City, explains itself.

With all due respect to the Hon. William Taft, the ex-President of the United States, I beg to call your attention to the fact that he was not above accepting the nomination at the hands of the 1912 so-called Republican convention, and that notwithstanding that the platform on which he was previously elected as President called for a revision of the tariff downward, that in place of that the people who had voted for him on that platform were given Canadian reciprocity instead of a revised tariff.

If the other gentlemen who are so strenuously opposing the confirmation of Mr. Louis D Brandeis are in the same class, it might be well not to lay too much stress on their opinions as to his fitness for that high office. See inclosed editorial from Globe Democrat.

Trusting that you will receive this letter in the friendly spirit in which it is sent and will confirm Mr. Brandeis's appointment, I remain.

Very truly, yours,

A. F. HERRMANN, *1011 Market Street,*
Delegate to the 1912 Progressive Party Convention,
And Chairman Twelfth Congressional District of Missouri.

—

ST. LOUIS, *February 18, 1916.*

Hon. ELIHU ROOT,
New York City, N. Y.

HONORABLE SIR: You will in all probability recognize the following matter as having been printed on postal cards which were received by various representative men of the so-called Republican National Convention held in Chicago in 1912:

"Rather than stain the nomination for the high office of President with fraud and theft, organize a Progressive Party with the Hon. Theodore Roosevelt as its head."

Now that your State, the Empire State, and your party, the Republican Party of your State, has spoken and given you to understand that they did not consider you fit timber to fill the position of President, the most honorable within the gift of the American people, I sincerely trust that the exalted opinion you had of yourself so dogmatically expressed and displayed while chairman of the national Republican Party convention held in Chicago in 1912 has somewhat diminished.

Might does not always make right, and in this case the lesson has been driven home to you by your own people in your own State.

While your nomination for the highest office was a possibility, your election to same is an absolute impossibility, as we, the Progressives in the western section of the United States, have always resented, nor will we ever forget and few of us ever forgive, the treatment you accorded to us while acting as chairman.

Trusting that your forced retirement to private life may be of a pleasant nature, I am,

Very respectfully, yours,

A. F. HERRMANN, *1011 Market Street,*
Delegate to the 1912 Progressive Party Convention,
And Chairman Twelfth Congressional District of Missouri.

—

FEBRUARY 18, 1916.

Hon. WILLIAM E. CHILTON,
Chairman of Senate Subcommittee,
Washington. D. C.

DEAR SIR: Kindly allow me to express my approval of the nomination of Mr. Louis D. Brandeis to the Supreme Court.

It has been my privilege to have had somewhat of an intimate acquaintance with Mr. Brandeis for more than a dozen years, during which time I have observed his work at close range, both in public and private affairs. I have found him to be a man who is keenly active in getting after exact and fundamental facts before making a statement regarding any matter in hand, and subsequent events have usually proved that his judgment has been sound.

I feel sure that his activities have been misinterpreted sometimes as involving a radicalism which he did not feel or express, but, on the other hand, his utterances and actions have been of great value to the community in which he has lived.

Yours, very respectfully,

CHAS. M. COX.

—

FEBRUARY 3, 1916.

Hon. JOHN W. WEEKS,
Washington, D. C.

MY DEAR SENATOR WEEKS: Permit me to express the hope that you will not hinder the confirmation of Louis D. Brandeis even if you should find that you could not vote for him, which I sincerely hope will not be the case.

Yours, respectfully,

GEORGE W. COLEMAN.

—

FEBRUARY 3, 1916.

Hon. HENRY CABOT LODGE,
Washington. D. C.

DEAR SENATOR LODGE: With all my heart I hope you will not find it necessary to oppose the confirmation of the appointment of Louis D. Brandeis. Nothing would please me more than to see you voting for him.

Yours, sincerely,

GEORGE W. COLEMAN.

—

MARCH 10, 1916.

Mr. ELLERY SEDGWICK,
Editor Atlantic Monthly, 4 Park Street, Boston, Mass.

MY DEAR MR. SEDGWICK: The report in this morning's Herald of your suggestion to President Wilson of the social importance of Mr. Brandeis's appointment is most encouraging. With other Harvard men I was mortified by President Lowell's part in a stupid and unfair protest. Such action as yours is welcome, for it sets us right in the eyes of people throughout the country who have been criticizing Bostonians in general, rather unjustly, for the sad showing we made when one of our greatest citizens was given the recognition due him, and recognition is something Mr. Brandeis has never sought. Over the long-distance telephone some of the foremost social workers in New York told me of their indignation at the character of the protest emanating from this city. Fortunately we got every social worker in Boston to sign a petition showing how Mr. Brandeis really stands with the people and with those who are close to the people in this city. Those of us who regard the Atlantic Monthly as an expression of the best in democratic thinking find in your action a new satisfaction in our allegiance.

Sincerely, yours,

MEYER BLOOMFIELD.

—

CAMBRIDGE, MASS., *February 18, 1916.*

Hon. WILLIAM E. CHILTON,
Chairman Subcommittee of Judiciary,
United States Senate, Washington, D. C.

DEAR SIR: The writer of this letter is a clergyman of the Congregational denomination of over 25 years' standing, most of it in actual service in the Commonwealth of Massachusetts; a graduate of Harvard College, and most of his ministry spent within the limits of the city of Boston. From the ministry he went to the professorship of applied Christianity at Tufts College, and for several years now has been engaged purely in private literary and educational activities. You will find his history in Who's Who for 1914–15, up to my resignation as professor at Tufts, since which I have engaged in writing educational books. I am personally known to Senator HOLLIS, Senator GALLINGER, and Senator WEEKS. Any of these gentlemen can give you light as to my standing. I think this is also true of Senator CLAPP, whom I knew early in my career.

In these many years in Massachusetts I have also been something of a publicist and have engaged in many public activities of the nature of social and political reform, the results of which are embodied in my book on "Christianity and the Social Rage." My views on present movements, as they respect courts and judges, will be found in that volume very fully set forth in the chapter entitled "Social Justice on the Curbstone." I think this is sufficient for identification.

I am writing concerning Mr. Louis D. Brandeis. I have known Mr. Brandeis for nearly 16 years, being first attracted to him because of his activities as they related to sociological reforms in which I was interested. I became more closely acquainted with him in the campaign for savings-bank insurance for poor people in this Commonwealth and have kept more or less in touch with him and his activities during this entire period.

In the last 10 years I have lectured extensively in this State, and often speak in the course of a season to between 5,000 and 10,000 people of all kinds and types throughout the Commonwealth. I think I am in a position to know the public estimation of the man as well as almost any man in the State, and perhaps better than most, and I am writing to say that I am myself in favor of his confirmation as a Justice of the Supreme Court, and believe that the vast mass of the people of this Commonwealth, if they were permitted to express an opinion, would be found equally desirous of such action on the part of the Senate. I believe that more than any other man in the State Mr. Brandeis represents the feeling of liberal-conservative men as being a true and honorable embodiment of what has come to be known as "sociological jurisprudence." I believe that confidence in him is general, and perhaps even greater, because of some of the enemies which he has made, some of whom have appeared before your committee. The confirmation of Mr. Brandeis would reassure the people of this State and, as I believe, of the United States that a public man devoted to the popular interest—meaning thereby the public interest as against private and privileged interests—will not debar him from the highest service of the country. His rejection would be a distress signal which would, in my judgment, be damaging to the courts of the land already under fire in all parts of the land.

I think I am in position to understand and properly characterize the opposition to him from Boston and vicinity. It would not be fair to say that it was racial. It would be fair to say that if any man bearing an old New England name and practicing at the bar in Boston had everything which is alleged against Mr. Brandeis—alleged against

him—and were nominated for the Supreme Court, nobody would dream of raising these questions. Many of the interests represented by the protesting gentlemen are now, and have been ever since I have resided in this Commonwealth, against any emergence into public influence and power of anybody not of their number and clan. This is the simple truth.

Long and unchallenged control of everything in the Commonwealth has given many of these gentlemen the perfectly natural feeling that whoever is not approved by them is ipso facto a person who is either "dangerous" or lacking in "judicial temperament." I have met this in almost every form at public hearings of the legislature, of which I have attended a great many. It appears not merely in matters like this, but hardly less in philanthropies, the administration of public institutions, and many other forms of public activity. They simply can not realize, and do not, that a long New England ancestry is not prima facie a trusteeship for everything in New England. That is, in my judgment, the real spring of most of the opposition, though it must be recognized that it is entirely sincere, and the more sincere because never brought to the bar of critical review.

Doubtless your attention has been called to a recent editorial in the Boston Post entitled "A close petition," showing the comparatively narrow range of this opposition. I desire to affirm to your committee that if most of these people were brought into any public relation, as most of them have not, where a popular estimate of them could be registered, the verdict would be so overwhelmingly against them as to leave no doubt in the mind of any reasonable person of the restricted area in which they operate. I believe the real feeling of this community is one of high regard, amounting in some cases to idolized devotion to Mr. Brandeis as a type of man who will bring both honor and justice to the Supreme Court of the United States. They love him for the enemies he has made.

In my personal associations with Mr. Brandeis I have always been impressed with his sincerity, his uprightness of view, and his devotion to his cause. I believe that as a justice of the Supreme Court of the United States he would adorn the bench and add to the glory and renown of the greatest court in the world.

Respectfully yours,

A. A. BERLE.

To the SUBCOMMITTEE OF THE JUDICIARY COMMITTEE
OF THE UNITED STATES SENATE,
Washington, D. C.

GENTLEMEN: We, the undersigned ministers of Congregational churches in Greater Boston, as public-spirited citizens, hereby express to you the esteem in which we hold Mr. Louis D. Brandeis for his great service in behalf of the workers of the country and for the valiant fight which he has so successfully made for civic and corporate righteousness. We wish to bear witness that Mr. Brandeis was bitterly attacked several years ago for an address which he delivered before the Boston ministers' meeting. At that time, in the interests of fairness, we opened our platform to his opponents, that they might reply to his address and answer any questions which might be asked. This offer was declined. In view of the facts, we are glad that time has vindicated Mr. Brandeis in the position which he maintained before our body.

We sincerely trust that attacks from prejudiced quarters will not be allowed to defeat his confirmation as Associate Justice of the Supreme Court of the United States, and that unless evidence of unfitness not now known is produced, he will be so confirmed.

———.

We, the undersigned social workers in Greater Boston, desire personally to go on record in favor of the appointment of Mr. Louis D. Brandeis to the United States Supreme Court.

In the field of social progress—wherein we have had an opportunity to observe and measure Mr. Brandeis's usefulness—we know that his interest and untiring service in connection with the adjustment of labor differences, his social insight, breadth of mind, and unselfish devotion have won him the confidence and respect of hosts of people in this community and elsewhere. To our thinking, he has given evidence of possessing a knowledge and point of view in regard to present-day social conditions which should make him a most useful member of the Supreme Court.

———.

[The Pilgrim Congregational Church, Magazine Street.]

CAMBRIDGE, MASS., *February 22, 1916.*

Senator CHILTON,
Washington, D. C.

HONORED SIR: Pardon a few words on the Brandeis appointment now before you for hearing and report.

Many of us hereabout are delighted that the President has done the exceptionally good thing in his appointment of Mr. Brandeis, and we earnestly hope that your honorable committee will recommend that the Senate confirm the same.

At the time of the country-wide discussion of the New Haven Railroad matter, and when the public mind was agitated by it, our Boston ministers' meeting heard Mr. Brandeis, who presented the subject from his point of view with great fairness, abundant evidence, and brimful and overflowing thoroughness. His presentation was not answered openly, though his opponents were urgently invited to reply before our meeting. The only reply was a printed attack on the man, which was sent to all our ministers. Being cognizant of these facts, I fear that some of those now attacking Mr. Brandeis, were they and their methods under investigation, would hardly stand the light of day. Big business is surely more fully represented on the bench of the Supreme Court already; why should not the common people have on that bench such an eminent example of love for the public weal?

I have the honor to be, cordially and sincerely, yours,

RICHARD WRIGHT,
Pastor Pilgrim Church.

BRUNSWICK, ME., *March 6, 1916.*

Hon. CHARLES F. JOHNSON.

DEAR SIR: I concede that a Senator's conscience should, and in your case will, determine his official act.

I am aware that the sentiment of a single constituent may not be entitled to much consideration and I have hesitated to address you on the subject of this letter; but I have reflected that my sentiment may perhaps offset that of another.

I hope that you will vote for the confirmation of Mr. Brandeis. I think the definition of "a judicial mind" in our political dictionary should not be "one that stands between corporate rascality and the dispensation of justice."

I hope that in future years you may have the satisfaction to reflect that you have helped to make one of the greatest and purest judges of that great court.

Sincerely, yours,

HENRY F. THOMPSON.

[Ex. Rept. No. 2, pt. 2, 64th Cong., 1st sess.]

NOMINATION OF LOUIS D. BRANDEIS.

Mr. CLARK of Wyoming, from the Committee on the Judiciary, submitted the following views of the minority.

The nomination was referred to a subcommittee for hearing and investigation. Full hearings were had in open session and every opportunity given to all to appear and be heard either for or against the nominee. The evidence and proceedings of the subcommittee, including separate reports of its members, have been printed and a favorable report on the nomination of the appointee, by the full committee, has been ordered by a vote of 10 to 8.

In view of the extreme importance of the appointment and the remarkable conditions disclosed at the hearings, the minority members of the committee feel it to be a duty resting upon them to state their views and their reasons for believing that the nomination should not be confirmed.

We concur in the views expressed and the conclusions reached in the separate reports of Senators CUMMINS and WORKS of the subcommittee. Their reports are so full and ample that it is unnecessary now to enter into any extended review of the evidence. We make those reports a part of the views of the minority and annex them hereto and make them part of this minority report.

In addition to this we think it just and right to call the attention of the Senate to the important features of the evidence adduced before the subcommittee and to summarize in a brief way the vital things established by the evidence.

There were 12 separate and distince charges made against the nominee affecting his conduct, standing, and reputation as a lawyer, and his fitness for the high office for which he had been nominated. Besides this, proof was offered of his bad reputation amongst the lawyers of the Boston bar, of which he was and had been a member for many years. In addition to this, numerous protests, signed by men of high character, including lawyers and others, based upon the claim that he is unreliable and untrustworthy, were submitted to the subcommittee. There were 77 of these protests signed by leading and well-known citizens.

Again, the subcommittee had before it a protest signed by William H. Taft, Simeon E. Baldwin, Francis Rawle, Joseph H. Choate, Elihu Root, and Moorfield Storey, as follows:

"The undersigned feel under the painful duty to say to you that, in their opinion, taking into view the reputation, character, and professional career of Mr. Louis D. Brandeis, he is not a fit person to be a member of the Supreme Court of the United States."

The signers of this protest are among the leading and most highly respected lawyers of the country and each of them had been president of the American Bar Association, of which Mr. Brandeis was, and had been for many years, a member.

To summarize the evidence given before the subcommittee, we submit that it establishes against the nominee—

1. That in a most important proceeding before the Interstate Commerce Commission he was appointed to represent the public side of a vital question, and without conferences with or warning to other counsel upon the same side he joined the railroad companies in asserting that the existing revenues were insufficient, thereby betraying the public interest and imposing upon the producers and consumers an unjust burden of millions of dollars every year.

2. That after serving a client and upholding and defending its manner of doing business and the form of its contracts with its customers, he, in the interest of its competitors in business, and, as he claimed, in the public interest attacked the former client and assailed the same contracts he had approved and defended, denounced them as in violation of law, and endeavored to secure legislation against them.

3. That he made believe that he was appearing and contesting these contracts in the public interests and without pay when he was acting directly for and in the interest of private individuals, and his firm, other than himself, accepted and received a large fee for the services rendered by him in this behalf.

4. That he took employment from a client, advised him to make an assignment for the benefit of his creditors, had his own partner appointed the assignee, and afterwards denied that he had ever been employed by the client. That at the time he took the employment and gave the advice he was the attorney of one of the largest creditors of the client, and for whose benefit the assignment was made, and in connection with the question whether the assignment should be made or not was advising another of the large creditors. That later he repudiated his employment by his client and prosecuted a petition in bankruptcy against him, alleging as an act of bankruptcy the making of the assignment that he himself had advised him to make. Out of this course of conduct he made for himself and his firm fees amounting to $43,852.

5. That in the Glavis-Ballinger case he appeared for Glavis, pretending to act without compensation and in the public interest, when he was acting for and in the interest of a private corporation and was paid for his services a fee of $25,000.

6. That he for a long time represented and collected fees from two clients whose interests were diametrically opposed to each other, and when they later went to law over those same conflicting interests he took employment for one of them against the other.

7. That he took employment in the fight for control of the Illinois Central Railroad to secure proxies for one of the parties, by which, in part, proxies sufficient to control the election of officers by his client were procured, and afterwards he denied having acted in the matter.

8. He took employment in the prosecution of actions against the New England Railroad Co., the object of which was to wreck the road and put it under the control of his client. The actions were not prosecuted in the name of his real client, but in the name of dummy plaintiffs, who were paid to bring the action by the real party in interest, whose identity was purposely concealed. The object intended was accomplished by this means and the New England road was absorbed and taken over by the New Haven.

9. That in the case of the Equitable Life Assurance Society he acted for and in the interest of some of the policyholders, without

pay, and in the public interest, and made charges against the society of misuse and misappropriation of funds and other wrongs. And at this very time he was the attorney for the society in a number of cases, and later, an action was brought against the society by one of the policyholders who alleged in his complaint the very wrongful acts that he had denounced in the public interest, to which he filed a sworn answer for the society denying that it had ever committed the wrongful acts with which he had charged it.

10. That in the merger case, while holding himself as acting as a disinterested representative of the public, he was really acting in the interest of a private individual and himself paid the other members of his firm a fee of $25,000 for the services rendered by him, thereby recognizing and treating the service as rendered for a client and not for the public.

11. That he was employed by certain liquor dealers as a paid lobbyist to prevent the passage by the legislature of his State of a bill detrimental to their interests.

12. That he has, on different occasions appeared before committees of Congress urging legislation against combinations and trusts, and among others has vigorously denounced the so-called chain-store combinations, but notwithstanding he accepted employment as counsel to convince the Department of Justice that the persons who promoted and brought about the merger of the Riker & Hegeman Co. chain of drug stores with the United Drug Co.'s chain of stores and upward of 3,500 agents of the National Cigar Stands Co. should not be prosecuted under the antitrust laws, a prosecution which the district attorney had already determined would be justified.

This last charge is not covered by the reports of the subcommittees, for the reason that the evidence was taken on a rereference to the subcommittee for that purpose after those reports were made. It will appear from this evidence that Mr. Brandeis for some time had actively assisted the so-called American Fair Trade League in an effort to bring about the adoption of the Stephens's price maintenance bill which the league had advocated as a means of defense to the small retailer against the chain stores.

At one of the hearings before the House Committee on Interstate Commerce Mr. Brandeis contended that price maintenance "preserves the small retailer as against the great chain stores." In an article which was submitted at these hearings, which Mr. Brandeis wrote for Harper's Weekly, entitled "Cutthroat competition," he said that without price maintenance manufacturers would "combine with existing chains of stores," or establish "new chains of retail stores." This he declared would be an unmitigated evil. He said, "The process of exterminating the small independent retailer already pressed by capitalistic combinations—the mail-order houses, existing chains of stores, and the large department stores—would be greatly accelerated by such a movement."

An examination of what Mr. Brandeis has written and said upon the subject will disclose that his attitude has been one of vigorous opposition to the chain-store system.

In September of last year negotiations were set on foot looking to a merger of the United Drug Co. of Massachusetts, a $20,000,000 corporation, which also controlled a large number of stores. The Department of Justice, through District Attorney George W. Anderson (who, it may be said in passing, represented Mr. Brandeis before the subcommittee), entered upon an investigation to determine whether or not this merger would violate the antitrust laws. Mr. Anderson came to the conclusion that it would be in violation of these laws. Mr. Brandeis was employed to present the matter to Mr. Anderson in behalf of the merger and filed an elaborate brief with Mr. Anderson in an effort to convince him that the proposed merger was lawful.

We quote from the evidence taken before the subcommittee as follows:

"Mr. Louis K. Liggett testified in part as follows:

"Senator WORKS. Mr. Liggett, what is your business?

"Mr. LIGGETT. Manufacturer and retailer.

"Senator WORKS. Of what?

"Mr. LIGGETT. Drugs.

"Senator WORKS. With what companies are you connected?

"Mr. LIGGETT. The United Drug Co. as president, and chairman of the board of directors of the Liggett Co.

"Senator WORKS. What is the connection between these two companies?

"Mr. LIGGETT. That of parent and subsidiary company.

"Senator WORKS. What do you mean by that?

"Mr. LIGGETT. The Liggett Co. is a direct subsidiary of the United Drug Co., the United Drug Co. owning all the capital stock of the Liggett Co.

"Senator WORKS. What other companies are connected with the Liggett Co. or the United Drug Co.?

"Mr. LIGGETT. Several more subsidiary companies—the United Drug Co. (Ltd.) of Canada; the National Cigar Stands Co., of New York; the Guth Chocolate Co., of Baltimore; the Ballard Vale Springs Co., the United Candy Co., and the United Pharmaceutical Co. To the best of my recollection that is all.

"Senator BORAH. Does the parent company control all the stock of all these subsidiary companies?

"Mr. LIGGETT. It owns all the stock of all these companies, with the exception of a small amount of preferred stock in the United Drug Co. (Ltd.) of Canada, a small amount of preferred stock in the Guth Chocolate Co., and a small amount of the preferred stock of the Ballard Vale Springs Co. It owns all the common shares of all the companies.

"Senator WORKS. I have here a memorandum of some alleged facts relating to the connection between these companies, and I want to call your attention specifically to these statements, so that you may either verify them or correct any mistake in connection with them.

"It is said, first, that the merger of the Riker & Hegeman Co. chain of drug stores and the United Drug Co. brings under the same control nearly 200 retail drug stores and 3,500 agents of the National Cigar Stands Co. affiliated with the United Drug Co. Does that state the facts about correctly?

"Mr. LIGGETT. A little less number of retail stores; about 153 is correct.

"Senator WORKS. Instead of 200?

"Mr. LIGGETT. Instead of 200

"Senator WORKS. How about the agencies—3,500 agents?

"Mr. LIGGETT. I could not give the exact number offhand, but it is approximately correct.

"Senator WORKS. Then, again, it is stated that the United Drug Co. of Massachusetts was a $20,000,000 corporation which controlled the United Drug Co. of New Jersey, the F. L. Daggett Co., the National Cigar Stands Co., the L. K. Liggett Co., the United Drug Co. (Ltd.) of Canada, and owned substantial holdings in the Hanson-Jenks Co. and Ballard Vale Co., and had working arrangements with approximately 7,000 other stores throughout the country, and through its cigar department, operated by the National Cigar Stands Co., had 3,500 agencies in various parts of the country. Does that state the facts correctly prior to the final merger that took place?

"Mr. LIGGETT. Approximately correctly.

"Senator WORKS. Then, again, it is stated that the Riker & Hegeman Co. is a $15,000,000 corporation organized in 1912 to take over the chain of stores of William B. Riker & Co., Hegeman & Co., and the Jaynes Co., and owned and operated over 100 stores in New York, Brooklyn, Boston, Hartford, Newark, Philadelphia, Pittsburgh, Washington, and other eastern cities. Does that state the facts correctly?

"Mr. LIGGETT. As far as I know.

"Senator WORKS. How far do you know?

"Mr. LIGGETT. I was not a member of their organization, and I can not state that in 1912 they did take over those businesses.

"Senator WORKS. You have become connected with some of those corporations since?

"Mr. LIGGETT. We have taken over what was the Riker-Hegeman Co. as it existed at the beginning of this year.

"Senator WORKS. We will come to that directly, I think.

"It is stated that in 1913 the control of the Riker & Hegeman Co. stock was acquired by the United Cigar Stores Co. interest, headed by George J. Whelen, and the stock of the company was put into the corporation for R. H. stock which Mr. Whelen and his associates controlled. Mr. Whelen took active charge of the Riker & Hegeman affairs and a number of Mr. Whelen's strongest associates in the United Cigar Stores Co. came over and took hold of the managements of the Riker & Hegeman Co. What is the fact as to that?

"Mr. LIGGETT. My information is to the effect that the United Cigar Stores Co. as an organization had nothing to do with that; that it was simply an individual promotion plan of Mr. Whelen's; that the stock of the Delaware corporation, known as the R. H. Corporation, was not largely held by stockholders of the United Cigar Stores Co. but rather by independent stockholders, and I believe that to be true, because in the purchase of the business I had to check their stock lists. By long odds a majority of the stock was held by investors.

"Senator WORKS. Then we will go to the next statement.

"In September of last year it was announced that the United Drug Co. interest was negotiating with Mr. Whelen, of the United Cigar Stores, and his associates for the control of the Riker & Hegeman chain. On October 17 it was announced that the transfer had been arranged and that a special meeting of the Riker & Hegeman stockholders would be called to ratify the merger. What is the fact about that?

"Mr. LIGGETT. That is about correct.

"Senator WORKS. Then again, soon after it became public that the Department of Justice was investigating the Riker & Hegeman chain of stores to determine whether prosecutions should be begun under the Sherman Antitrust Act on the complaints which had been coming into the Department of Justice from independent retail druggists of different parts of the country. Had you notice of any such investigation being made by the Department of Justice?

"Mr. LIGGETT. No; my only notice came through the action of Mr. Anderson, the district attorney in Boston, and I rather have assumed and believe it to be the fact that this was initiated by him, not on complaints but rather purely on his own initiative.

"Senator WORKS. When were you first made aware of the fact that Mr. Anderson was investigating the situation?

"Mr. LIGGETT. The 1st of October.

"Senator WORKS. What was the state of the negotiations which finally resulted in the ultimate merger, when you first learned of that fact?

"Mr. LIGGETT. As far as the principals controlling the majority of stock of the company was concerned the agreement has been made between them.

"Senator WORKS. Then, again, it was then claimed that the proposed merger of the Riker & Hegeman Co. with the United Drug Co. would combine retail interests estimated to be doing an annual business of $30,000,000, and that the matter was being investigated by the Attorney General. What was the fact about it, as to the interest that would be included if the merger took place?

"Mr. LIGGETT. The volume of retail business for the year 1915, when the business was conducted separately, would of course have made the combined business approximately $20,000,000, not $30,000,000.

"Senator WORKS. How many different stores would be included in the merger?

"Mr. LIGGETT. One hundred and fifty-three.

"Senator WORKS. Where? Located in how many different States?

"Mr. LIGGETT. Located, the largest number, in New York City in one group; the second largest in the New England States, including all States of New England, excepting Vermont, and having but one store in New Hampshire and three stores in Maine. The rest of the business was distributed in New York State, largely in the principal cities along the New York Central Railroad; a few in Pennsylvania, three being in Philadelphia and two in Pittsburgh, one in Scranton, one in Wilkes-Barre, and one in Lancaster; one in Washington, and three in Detroit.

"Senator BORAH. Washington, D. C.?

"Mr. LIGGETT. Washington, D. C. Three in Detroit, two in Columbus, Ohio, two in Toronto, Ontario, and five in Winnipeg.

"Senator WORKS. Since that time has the number of stores under your control been increased?

"Mr. LIGGETT. Decreased by four.

"Senator WORKS. Where?

"Mr. LIGGETT. One in Providence, one in Troy, N. Y., one in Paterson, N. J., and for the minute I can not think where the fourth place is.

* * * * * * *

"Senator WORKS. Next, it is stated that Louis D. Brandeis is understood to have been retained during this period for some of the parties in interest for the purpose of preparing an opinion and taking part in the negotiations with United States District Attorney Anderson and with the Department of Justice. What do you know about that?

"Mr. LIGGETT. In the latter part of October, I think somewhere about the 22d or possibly the 25th of October, one of the two dates, I went to Mr. Anderson's office with my counsel, Mr. Snow, at the request of Mr. Anderson, to make a full statement regarding the merger and the policies of the United Drug Co. previous to, and what they might be following, the merger; going, as we expressed it, to lay our cards on the table.

"Mr. Anderson's point of view at that time was, as I felt, very arbitrary; and as we left his office with Mr. Snow, in answer to some statement that I made regarding Mr. Anderson's position, said that he felt positive that Mr. Anderson was wrong in his view of the case,

and he said, as nearly as I can recall it, that he has always represented the corporate interests in matters of this kind.

"Senator BORAH. That is, Mr. Snow?

"Mr. LIGGETT. Mr. Snow had always represented corporate interests in matters of this kind, and that while he did believe that Mr. Anderson was wrong it was possible that some one else who had represented interests other than corporate interests might have a different viewpoint to give Mr. Snow, and that he thought he would like to consult with some one. I asked him whom he had in mind. His answer was that there was only one man that he cared to put the question up to, and that was Mr. Brandeis, and I replied, 'Why don't you get Mr. Brandeis, if that is the case?'

* * * * * * *

"Senator WORKS. Now, you may go on. You were telling us what occurred between you and Mr. Snow, and his determination to consult Mr. Brandeis. Had you concluded that?

"Mr. LIGGETT. I had concluded that.

"Senator WORKS. Was that all the connection you had with it?

"Mr. LIGGETT. That was all the connection I had with it.

"Senator WORKS. Did you come in contact with Mr. Brandeis after that?

"Mr. LIGGETT. I have never seen Mr. Brandeis that I know of.

"Senator WORKS. Did you ever see any paper in the form of an opinion or brief that was prepared by Mr. Brandeis?

"Mr. LIGGETT. Yes, sir; a joint letter signed by Mr. Brandeis and and Mr. Snow.

* * * * * * *

"Senator WORKS. Mr. Liggett, at the time this opinion was furnished by Brandeis, what was the condition of this merger or consolidation, or whatever it might be called? Were all these chains of stores, as we may call them, under your control at that time?

"Mr. LIGGETT. No, sir.

"Senator WORKS. This was before the merger took place—the final merger?

"Mr. LIGGETT. Before the final merger took place. The final merger took place on February 4 of this year.

"Senator WORKS. This is dated, I see, December 16, 1915.

"Mr. LIGGETT. Yes, sir.

"Senator WORKS. And the consolidation took place in February following?

"Mr. LIGGETT. The final merger; yes, sir.

* * * * * * *

"Senator WORKS. What was the amount of the capital stock of the merged company?

"Mr. LIGGETT. Authorized or issued?

"Senator WORKS. You may give us both.

"Mr. LIGGETT. Fifty-two millions authorized stock and approximately thirty-five millions of issued stock.

"Senator WORKS. Let me read this statement which I have here and see whether that is substantially correct:

"'On February 5 the meeting of the Riker & Hegeman stockholders, which had been repeatedly postponed, was finally held and the merger was ratified, and two days later the United Drug Co. (Inc.) of New York was organized under the laws of New York with a capital of $53,100,000, which promptly took over all the Riker & Hegeman chains and all of the United Drug chains; and interests identified with the United Cigar Co. were conspicuous upon the board of the new United Drug Co.'

"Mr. LIGGETT. The last statement is incorrect.

"Senator WORKS. The statement respecting the——

"Mr. LIGGETT. The interests of the United Cigar Stores Co. were not represented then and are not represented now on the board of the United Drug Co. by anyone.

"Senator WORKS. And that concern is controlled by this merger?

"Mr. LIGGETT. Which concern?

"Senator WORKS. The United Cigar Co.

"Mr. LIGGETT. No; it is not—the United Cigar Co.

"Senator WORKS. They have no connection?

"Mr. LIGGETT. They have no connection with us whatever, either in stock ownership or representation or anything else.

"Senator WORKS. And that company is not represented on the board of directors?

"Mr. LIGGETT. No, sir.

"Senator WORKS. Except for that, is that statement correct?

"Mr. LIGGETT. Yes; so far as I can recollect.

* * * * * * *

"Senator BORAH. Do you control any articles or goods by reason of patents or copyrights or anything of that kind?

"Mr. LIGGETT. Only trade-marks.

"Senator BORAH. Trade-marks?

"Mr. LIGGETT. Yes; registered trade-marked goods; but we control no basic patent for manufacturing or control of production at all. We have none.

"Senator BORAH. As I understand you, there are 153 retail stores controlled by this merger?

"Mr. LIGGETT. Yes.

"Senator BORAH. Scattered in 8 or 10 States of the Union at least?

"Mr. LIGGETT. I should think that many or more.

"Senator BORAH. And your own parent company, the stockholding company, controls a sufficient amount of the stock of all the subsidiary companies to dominate those companies?

"Mr. LIGGETT. Exactly. They are subsidiary companies, practically.

"(Hearings, pp. 7, 8, 12, 56, 59.)"

Mr. Snow, mentioned by Mr. Liggett as his attorney, testified that he employed Mr. Brandeis, who joined him in a letter in the form of a brief to the district attorney defending the legality of the proposed merger; that he joined in the brief and was regularly employed as an attorney for that purpose.

The brief will be found in the record of the hearings (hearings, p. 13).

Also the report of the district attorney to the Attorney General (hearings, p. 39).

This combination of drug stores and cigar agencies was the largest in the country. Mr. Liggett testified on that subject as follows:

"Senator CHILTON. What other large retailers are there besides this of yours?

"Mr. LIGGETT. The Owl Drug Co., in California, is just on the Pacific coast.

"Senator CHILTON. What percentage of the business has the Owl Drug Co.?

"Mr. LIGGETT. Of the total business of the United States?

"Senator CHILTON. Yes.

"Mr. LIGGETT. I should not think it represented 1 per cent.

"Senator CHILTON. Is it as large as yours?

"Mr. LIGGETT. Oh, no. It is less than one-ninth the size of ours.

"Senator BORAH. Are there other companies aside from yours which represent a larger per cent than yours in the retail business?

"Mr. LIGGETT. No, sir. There are no other large retail drug businesses. By large I mean business running in excess of a million and a half of dollars. The nearest to it that I think of is the May Stores, of Pittsburgh, who are part of our 7,000 stores, however; we have their agency. Then there are the Marshall Stores, of Cleveland, the Public Drug Co., and the Bath & Raynor chain drug stores in Chicago. They all represent a substantial business running to about $1,000,000 each, or maybe a trifle more.

"Senator WORKS. Do you control any stores on the Pacific coast at all?

"Mr. LIGGETT. No, sir.

"Senator WORKS. The field is covered by the Owl Co.?

"Mr. LIGGETT. By the Owl Drug Co.

"Senator WORKS. The Owl Drug Co.?

"Mr. LIGGETT. We have a small interest in the Owl Drug Co., but that was put in at the time following the earthquake in San Francisco to assist them financially, and it has been profitable, and we left a very small interest in their business.

"Senator WORKS. What territory do they cover?

"Mr. LIGGETT. They cover from San Diego to Spokane, all the principal cities; the large cities, not the smaller cities. They have 22 stores, located in San Diego, Los Angeles, San Francisco, Oakland, Portland, Seattle, Spokane, and one in Sacramento.

"Senator WORKS. They have no stores east of the Rocky Mountains, have they?

"Mr. LIGGETT. No, sir.

"Senator WORKS. You have not gone into their territory?

"Mr. LIGGETT. No; we have not extended our business west of the mountains.

"Senator WORKS. Nor they into yours?

"Mr. LIGGETT. I do not know whether they have or not. We have heard that they were making leases in New York and Chicago.

"Senator WORKS. They have no stores there?

"Mr. LIGGETT. They have no established stores that I know of; only rumor."

Mr. Brandeis's inconsistent position as a defender of the public interests and his practice as an attorney—in the one case denouncing such combinations as illegal and against the public interests and in the other upholding their validity and attempting to defend and protect them from suit by the Department of Justice, is sharply and clearly presented by this transaction.

The facts upon which our conclusions are based are undisputed. They present a condition that should make the confirmation of this man by the United States Senate impossible. Never before in the history of the country has a man been appointed a Justice of the Supreme Court of the United States whose honesty and integrity were seriously brought in question. It must be evident to any thinking and unbiased mind that this appointment has resulted from something other than the qualifications and fitness of the appointee for the office.

We regard it as a great misfortune and a distinct lowering of the standard heretofore maintained in making appointments to this high office that one should be selected for the place whose reputation for honesty and integrity amongst his associates at the bar has been proved to be bad, which reputation has been justified by his own course of conduct. We can not conscientiously give our consent to the confirmation of such an appointment.

C. D. CLARK.
KNUTE NELSON.
WM. P. DILLINGHAM.
GEO. SUTHERLAND.
FRANK B. BRANDEGEE.
WM. E. BORAH.
ALBERT B. CUMMINS.
JOHN D. WORKS.

Mr. CUMMINS, from the subcommittee of the Committee on the Judiciary, submitted the following views.

To the COMMITTEE ON THE JUDICIARY,
United States Senate:

As a member of the subcommittee, appointed to consider the nomination of Louis D. Brandeis as a Justice of the Supreme Court of the United States, I beg to submit the following report:

That Mr. Brandeis is a man of unusual intellectual power and of high legal learning is admitted by everybody. The opposition to his confirmation is not based upon any doubt respecting his general competency as a lawyer.

There have been laid before the committee many opinions, some favorable, some unfavorable, touching his fitness for the office to which he has been nominated, and with regard to his reputation at the Boston bar. It is most unfortunate that such questions should arise concerning one who has been selected by the President for a place upon the most exalted tribunal in the world, and I deplore that phase of the controversy. These adverse opinions are, in the main, founded directly or indirectly upon certain specific acts of alleged wrong-doing or impropriety which the subcommittee has examined, and we are therefore in a position to determine whether Mr. Brandeis has given reason for the distrust which has been expressed.

My conclusions rest chiefly upon the proof submitted to the committee concerning definite charges which have been made respecting the conduct and characteristics of the nominee. From this standpoint it is my purpose, as briefly as may be, to state the effect of the testimony adduced and the impressions it has made upon my mind.

CHARGE RELATING TO THE CONDUCT OF MR. BRANDEIS IN THE PROCEEDING KNOWN AS THE "FIVE PER CENT ADVANCE RATE CASE" OF 1913–1915, TRIED BEFORE THE INTERSTATE COMMERCE COMMISSION.

It is alleged against Mr. Brandeis that in this case he was guilty of unfair, unprofessional conduct, and betrayed the interests of the public.

In commenting upon this charge, as well as upon all others, I desire it to be understood that I will confine myself to the undisputed facts, for my conclusions are not dependent upon the comparative weight of the testimony with regard to any controverted issue. This course will relieve me from extensive quotations from the evidence and in part from references to the pages of the record.

In 1910 the railroads operating in what is known as official classification territory, acting in concert, filed with the Interstate Commerce Commission schedules showing a general increase in rates. Under the

act of Congress of 1910 these rates were suspended and a hearing ensued which resulted in a denial of the proposed increases. In this proceeding Mr. Brandeis appeared as an attorney for a Massachusetts commercial organization in opposition to the increases sought, basing his opposition mainly upon the proposition that if the railroads were efficiently managed they could enlarge their net revenues without advancing their rates. He did not, however, concede or suggest that the net revenues, taken as a whole, were inadequate.

In 1913 the same railroads again filed with the commission schedules of rates advancing them generally but not horizontally, and again the commission suspended the schedules and went forward to another hearing.

The proposed increases were so great that shippers everywhere were alarmed. The State railroad commissions became interested, and these State commissions, together with the business organizations, appeared in Washington for the purpose of preventing, if possible, the advance. In this situation there occurred an incident which had never happened before and which, it is profoundly hoped, will never occur again. The Interstate Commerce Commission, acting through one of its members, employed Mr. Brandeis, and inasmuch as the terms of the employment will become important I quote the material part of the letter. It was dated August 15, 1913 (record, p. 8):

"We are, of course, aware of the fact that the railroads will not fail fully to present their side of the case, and the commission has felt that every effort should be made, in the public interest, adequately to present the other side. Would you care to undertake that burden? As you are already aware, in a number of cases of large importance and wide interest, special counsel have been retained by the commission. As a matter of fact, that has not been their real relation in these controversies. They have been retained by the commission, not as advocates or to support any special theory of the issues involved, but as a means by which the commission might be advised of all the facts and not have to decide the issue upon a record made up largely in one interest. It is with this general thought in mind that the commission has reached the conclusion that in the rate advance case special counsel should be retained and I have been asked to ascertain whether your engagements and inclinations are such as to permit you to undertake the task of seeing that all sides and angles of the case are presented of record, without advocating any particular theory for its disposition. In making this last observation you will, of course, understand that you will be expected to emphasize any aspect of the case which in your judgment after an examination of the whole situation, may require emphasis. The commission, however, wishes to avoid a record based solely on a particular view or theory."

With reference to that part of the letter which states that the commission had theretofore retained special counsel it may be said that the lawyers so employed considered their employment to cover only the development of the facts and no one of them, I believe, ever assumed that it was his function to become for the time being a member of the commission and decide the case, or make an argument for the carriers. (Record, pp. 87, 91, 92.)

It was claimed before the subcommittee that this letter made Mr. Brandeis substantially a member of the commission, and that it was his duty upon the hearing of the case not to make an argument but to render an opinion. If this is the true interpretation of the letter, the employment was not only without authority on the part of the commission but was most discreditable, and no reputable lawyer would have entered into such an undertaking or agreed to sustain such a relation to the commission. I desire, however, to do the commission the justice of saying that while the terms of the communication may be unfortunate, the real meaning can not be misunderstood by a fair-minded man.

Mr. Brandeis was employed to take the public side of the question; that is to say, he was to present the side opposed to the claims of the railroads. It was especially said to him that the railroads would be fully prepared to present their side of the case. What the commission wanted Mr. Brandeis to do was to develop all the facts, whether favorable or unfavorable to any theory, and his appointment was thought to be necessary because the commission has under the law opportunities to secure facts which are not accessible to a lawyer representing either State commissions or shippers. It was enjoined upon him that he was not to advocate any particular theory. Under such direction to Mr. Brandeis he entered upon his duties, and the next inquiry is, How did he perform them?

The hearing was both prolonged and exhaustive. Attorneys from all parts of the country representing shippers appeared with their evidence tending to show that the rates upon the particular commodities in which their clients were interested ought not to be advanced. Several State commissions, concerned not in any particular commodities but in the public welfare alone, took up the fight for the public and finally authorized Mr. Clifford Thorne, chairman of the Iowa Railroad Commission, to appear for them. His sole contention, on behalf of the State commission, was that the net revenues of the railroads in official classification territory, taken as a whole, were adequate; and to sustain it he introduced a very large volume of evidence.

If his position had been sustained, there would have been an end of the case, as in that event the Interstate Commerce Commission would have been compelled to have investigated the affairs of the individual railroads in order to ascertain whether, with respect to any one of them, the proposed increases were reasonable. In taking oral testimony before the commission Mr. Brandeis took his place upon the public side of the table and was in regular conference with the attorneys who represented the State commissions and the shippers. With others, he cross-examined the witnesses who were produced by the railroad companies. He extended to Mr. Thorne the most hearty congratulations upon the showing made intended to prove the adequacy of present revenues. Finally, the testimony being concluded, the time came for an arrangement concerning arguments, both printed and oral, and this is what happened before the commission on that occasion, April 7, 1914. (Record pp. 12, 13.)

The chairman of the commission after some preliminary statements said:

"There are, therefore, two proceedings which, however, the commission has consolidated upon the record. Growing out of the two proceedings were certain hearings respecting rates on certain commodities, and protests having been made by shippers interested in those particular rates, those hearings were conducted independently, but they are also a part of this proceeding now before us.

"The rest of the case has followed the two branches of inquiry propounded by the commission in its first order of investigation, namely:

"Do the present rates of transportation yield an adequate return to common carriers, the railroads operating in official classification territory?

"Second. If not, what general course may the carriers pursue to meet that situation?

"Our investigations under this first question are to be considered as having come to a close to-day, subject to the statement just made about exhibits called for and other matters. With respect to that matter the commission desires an argument and briefs at an early date. The first available date is on the 20th of this month, and it has been the desire and hope of the commission that counsel on all sides might have their briefs in and be ready on that date to commence the oral arguments under the first question. I should like to inquire whether that will meet the convenience of counsel?"

Counsel for the railroads made reply that it is immaterial to quote. Following him Mr. Brandeis addressed the commission as follows (record, p. 13):

"Mr. BRANDEIS. I have conferred with various counsel, and they suggest that the 27th will be a date that will be more agreeable to them than the 20th, as they will have to prepare the briefs as well as go through the record for the purpose."

It was accordingly arranged that briefs were to be filed on April 27, and that the oral argument upon the first question propounded by the commission should begin immediately thereafter. The time for oral argument was divided equally between the public and the railroads, and again Mr. Brandeis ranged himself on the public side, and his time was to be a part of the time allotted to the public. When the time arrived for argument, and after conference between Mr. Brandeis, Mr. Thorne, and other counsel, it was determined that attorneys representing particular shippers should speak first, then Mr. Thorne, and that Mr. Brandeis should close the case for the public. At this point it is important to understand just what occurred between Mr. Thorne and Mr. Brandeis at or about the time the argument began. I quote from Mr. Thorne's testimony (record, p. 17):

"I returned for the oral argument, met Mr. Brandeis in the offices of the commission. He was very cordial in his greeting. He called me into his room (where he worked occasionally, perhaps the bulk of his time, while he was over at the commission's offices) and he said, 'Mr. Thorne'—I am quoting him in substance; I can not remember his exact words, but this was the purport of his statement—'you and I have mastered, or tried to master, this case as a whole. The other representatives are chiefly interested in their specific commodities. I have talked it over with the commission,' or 'with Commissioner Harlan'—he said one or the other—'and it is the desire of the commission that you open the argument, and I will close on behalf of the public. In between will come the arguments of the representatives of special interests, whoever they may be. The railroads will open the case, they having the burden, and will close the case.' I said, 'Mr. Brandeis, it will be impossible for me to open this argument on behalf of the public at this time. I am physically unable to do so. I have been working day and night on the brief.'"

Mr. Thorne further says (record, p. 17):

"I was fearful that the men interested in a special commodity, with all the pressure that was being brought to bear upon the shippers everywhere, would be tempted to concede the main issue that was up for discussion at this time and say, 'But this should not apply to my commodity for the following reasons,' etc."

A little later and before the argument began there was further communication between Mr. Thorne and Mr. Brandeis, which I quote (record, p. 19):

"And I wrote a note to him stating as I understood he was giving special attention to the question of laches, inadequate revenues on particular commodities, as he had stated to me, and that when he came to the shippers they were giving their chief attention to the adequacy of revenues on their particular commodities, I was afraid I was going to be playing a lone hand on the issue that was specifically set down for argument at that time, and asked him if he could arrange for my following the shippers and preceding him. He misinterpreted the purport of my request. He thought I was desirous of displacing him in closing the argument.

"Senator WALSH. Have you that correspondence, Mr. Thorne?

"Mr. THORNE. No; it was just a note written in lead pencil on a sheet of paper at the time. And he said, 'You can make your opening statement and then make an additional argument after the shippers have concluded.' I said, 'No; I do not desire to make more than one argument.' And Mr. Brandeis, as I previously stated, misunderstood the purport of my request, evidently, because he then said, 'Well, I will leave to the commission whether you or I shall close for the public.' And I said, 'No; Mr. Brandeis, I do not desire to displace you in any sense of the word. I am not afraid of you a particle; but it is the person interested in the particular commodities who I fear will be tempted to make an unfortunate concession.' 'All right, then,' he said, 'that will be satisfactory. I think there will be no trouble about arranging that.'"

There is but one conflict in the evidence with regard to the entire subject, and it relates to the knowledge which Mr. Thorne had of the position which Mr. Brandeis was about to take. Mr. Thorne says—and it is not contradicted in any way—that Mr. Brandeis gave him no intimation of the extraordinary thing he was about to do. I quote again from Mr. Thorne's testimony (record, p. 19):

"Later in the day, or the following day—I can not state exactly—I received a copy of his (Brandeis's) brief. I looked through it to see the main positions he had taken. I did not find any statement there that the revenues, as a whole, were adequate or any discussion of such a proposition. I then became anxious to know the situation. Mr. Brandeis, I remember, was leaning forward or listening or talking to some other party—I do not know which. Mr. Carmalt was right between us. Mr. Carmalt was the assistant to Commissioner Harlan, chairman of the commission at that time, and was also assisting Mr. Brandeis. He is now chief examiner, I believe, of the Interstate Commerce Commission. I said to Mr. Carmalt, 'What position is Mr. Brandies going to take in this case?' He said, 'You will have to ask Mr. Brandeis. I think that probably he is going to hold that some of the rates are inadequate on special articles and that there should be a general revision in the central freight association territory.'

"Of course, that did not concern me vitally, and that served to allay my alarm; but to make sure, I asked Mr. Brandeis his position. He said, 'Well, now, Mr. Thorne, I believe that some of the railroads are not earning enough money, and I think that the situation is bad in central freight association territory.' I said, 'Well, Mr. Brandeis, that is all right; I have no objection so far as that is concerned,' and I was entirely satisfied. In the brief he had taken the position, 'If the revenues are inadequate, how could they secure the additional money?' But he had taken substantially the same position in the 1910 case—'If the revenues are inadequate, they should secure additional money through the adoption of scientific management methods.'"

Mr. Carmalt says (record, p. 83) that a day or two before the oral arguments Mr. Brandeis said, in discussing the question with him

(Carmalt), that he intended to take substantially the position which he afterwards did take, and that some time during the argument Mr. Thorne asked him (Carmalt) what position Mr. Brandeis was going to take on the sufficiency of the revenues, and that he (Carmalt) told him (Thorne) what Mr. Brandeis had previously stated.

This is absolutely the only dispute, in fact, and I am quite willing to accept either statement. To me Mr. Carmalt's recollection of the matter reflects much more severely upon Mr. Brandeis than does Mr. Thorne's statement.

Taking up the thread of the story again, I find this situation: After months of testimony the commission, with the concurrence of all who were interested in the subject, propounded, for argument to begin on April 27, one question, namely, "Do the present rates of transportation yield an adequate return to common carriers, the railroads, in official classification territory?" The other branch of the inquiry, namely, "If not, what general course may the carriers pursue to meet that situation?" was reserved for a later hearing.

Counsel representing commercial organizations, shippers, State railroad commissions, and Mr. Brandeis were on one side of the table, presumably to argue in the affirmative. And thus the trial proceeded. The carriers opened the argument. Then came the counsel for the commercial organizations and shippers, then Mr. Thorne, who presented the case he had made on behalf of the State commissions, attempting to show from the evidence which had been adduced that the net revenues of the railroads in official classification territory, taken as a whole, were adequate—sufficient. Then followed Mr. Brandeis. His opening sentences were (record, pp. 20–21):

"May it please your honors, it may be helpful if at the outset I state the conclusions to which a review of the record in these cases has brought me. They are these:

"First, that on the whole the net income, the net operating revenue of the carriers in official classification territory, are smaller than is consistent with their assured prosperity and the welfare of the community, and that this is notably true of the Central Freight Association lines, and it is true practically as to other lines also because of the Central Freight Association scale."

Later in his discussion he (Brandeis) declared (record, p. 21):

"I have said, and I will say again, that, whatever may be true of the rates, the net operating revenues and the net income of these properties are not such as to give assured prosperity to the railroads such as the welfare of the community demands."

It is not strange that when Mr. Thorne, representing the public through the State commission, heard these admissions he was dumbfounded and felt that the labor of months had gone for naught, and that Mr. Brandeis had made an admission which destroyed any hope of defeating the claims of the carriers. Sitting as a judge rather than as an advocate he thus practically decided the suit in favor of the railroads. It must not be understood that Mr. Brandeis admitted that the rates ought to be advanced according to the schedules filed by the railroads. After having made the fatal admission to which I have referred he proceeded to insist that there were other ways of swelling revenues, such as increasing the passenger rates, charging for services rendered without compensation, and the like, but this did not retrieve the disaster. The commission accepted the admission made by Mr. Brandeis. It followed his suggestions with respect to the new method of obtaining additional revenues for the purposes of the case then pending; but shortly thereafter, upon a rehearing, advanced the rates substantially as prayed by the common carriers, and the people are now paying them.

It is not my purpose to enter upon the merits of the issues tried before the commission and I shall express no opinion of the decision under which the carriers are now operating. I have only to do with the quality of the act of Mr. Brandeis. To me it seems utterly indefensible. He was an attorney for the public. Mr. Thorne was an attorney for the public. The only issue between the public and the railroads up for argument at that time was whether the railroads were getting enough money from the public to compensate them for the service rendered to the public. Mr. Thorne had made this the vital point in the most remarkable array of evidence I have ever examined. It had been strengthened by cross-examination conducted by both Mr. Thorne and Mr. Brandeis. No matter how they were appointed, Brandeis and Thorne were associate counsel for the public on this issue. The railroads had argued earnestly and ingeniously for their side. Thorne, in a wonderful discussion, had argued for the public side insisting that the public was paying enough already. Then Mr. Brandeis, who had asserted his right to close the argument for the public, rose and the very first thing he said was that the railroad contention, on the issue then being tried, ought to be sustained. I have heard it said that if Mr. Brandeis honestly believed the railroads were right on this question it was his duty to say so. Any such view is a total misconception of the situation. If he could not honestly argue for the public he ought not to have argued the question at all. He should have left Mr. Thorne to maintain the public rights as best he could. Because he reached the conclusion that the railroads were right, on the issue, is no justification whatever for making an argument for them under the circumstances of the trial.

If he appeared in the case as a judge he should have heard all the testimony and arguments and rendered his opinion in the usual way. If he appeared to see that all the facts that were pertinent to the issues were developed, he ought to have left the argument to those who were advocating their respective claims. If his employment was to advise the commission upon the conclusions or questions of law his place was in the conference room and not at the bar.

I have endeavored in vain to conceive any excuse for the course Mr. Brandeis pursued. Its consequences are emphasized when it is remembered that the testimony introduced by Mr. Thorne had established beyond controversy that the net revenue of the carriers had, during the preceding year, been sufficient to meet all the expenses of maintenance and operation, all fixed charges, including taxes, all interest on the bonded indebtedness, and that there remained enough to pay 8$\frac{1}{10}$ per cent on all their outstanding capital stock. (Record, p. 32.)

The commission had decided in 1910 that 7$\frac{1}{2}$ per cent net was on common stock outstanding was adequate; that is to say, that such a return was sufficient to pay a reasonable dividend upon the stock and create a reasonable surplus. This was the very pith of the claim made by Mr. Thorne, and yet during the argument of Mr. Brandeis before the commission the following colloquy occurred (Record, p. 32):

"Mr. BRANDEIS. While I would much rather it were possible to remove a fact, this fact that Mr. Thorne suggests as being such a peril to the community, I myself rather look with hope to the ultimate working out of this problem by the Supreme Court of the United States, with the aid of the commission and other courts, instead of denying to the railroads to-day that which, in good business judgment, in looking to the immediate future with which we have to deal, is an essential to the health of the railroads.

"Mr. THORNE. Mr. Brandeis, did you understand me to deny any surplus?

"Mr. BRANDEIS. I thought you were rather niggardly as to surplus.

"Mr. THORNE. I allowed the same surplus that the commission did in 1910, and if your remark applies to my allowance it applies to the other."

If, under the circumstances of this proceeding, the most important from every point of view which has taken place in a quarter of a century, a lawyer who appears with other counself in behalf of the public can, after his associates have made their arguments, arise and in open court admit that the carriers were wholly right and the public wholly wrong, upon the immediate question under consideration, without incurring the condemnation which follows betrayal, then I confess that I do not understand either common morality among men or the ethics of the profession to which Mr. Brandeis belongs.

THE UNITED SHOE MACHINERY CO. MATTER.

The facts relating to the charge which grows out of the connection of Mr. Brandeis with the United Shoe Machinery Co. are so fully stated in the separate views of my colleagues, Senators CHILTON and WORKS, that it is unnecessary for me to do more than, first, to state the charge; second, my conclusions respecting the facts; and, third, my opinion of the conduct of Mr. Brandeis.

The charge is that Mr. Brandeis, having been for years a director and counsel for the United Shoe Machinery Co., having approved the terms of its contracts and leases with its customers, and having defended them before a committee of the Massachusetts Legislature, after his relation as director and counsel had ceased, made war upon his former client, not only before committees of Congress, as a citizen, but as an attorney in behalf of certain shoe manufacturers; furthermore, that in his public campaign he did not adhere to the truth, and that in appearing for the manufacturers he attacked the very system he had helped build up.

That Mr. Brandeis was for some years a director and attorney for the United Shoe Machinery Co., frequently advised with respect to the leases and contracts which were afterwards assailed; that he did defend the system before a committee of the Massachusetts Legislature; that some three or four years after he had resigned as director and withdrawn as attorney for the Machinery Co., he did assail his former client in a public way and before committees of Congress as a vicious monopoly in restraint of commerce; that he did accept employment from an alliance of shoe manufacturers for the purpose of overturning the system, is not disputed.

I do not attempt to determine whether the statements made in the public assaults and in the campaign for the manufacturers were truthful or untruthful. It was manifestly impossible for the committee to try that question. Nor do I take into account the fact that in the litigation Mr. Brandeis personally returned to his clients the $2,500 collected by his firm as compensation. This fact seems to me to be immaterial, for if the attorney was not working for pay his clients were looking for pecuniary profit, and Mr. Brandeis had no more right to appear for them without compensation than with compensation. My opinion is that a due regard for professional propriety would have prevented Mr. Brandeis from accepting employment from anyone to attack his former client with respect to the very matters about which he had advised and defended it.

I do not apply the same rule to his efforts, as a citizen, to promote the legislation which he believed to be essential to the public welfare, for every man owes that duty to society; but I am not able to reconcile Brandeis, the attorney for the United Shoe Machinery Co., with Brandeis, the attorney for the Shoe Manufacturers' Alliance.

THE LENNOX MATTER.

In this matter the general charge against Mr. Brandeis is that in quick succession he accepted employment from three clients whose interests were necessarily in conflict and undertook the impossible task of advising all of them at the same time. The defense is that he became the attorney for a "situation," and that he could without offense represent all the interests, inasmuch as he was trying to do the square thing.

In many respects the history of Mr. Brandeis's connection with these several clients is the most remarkable I have ever heard. It was developed in a large volume of testimony, which is well worth reading, but for the purposes of the present report it may be condensed within narrow limits.

P. Lennox & Co., a copartnership composed of Patrick Lennox and his son, James T. Lennox, carrying on a large tanning business in Lynn, Salem, and Peabody, Mass., became financially embarrassed. The Abe Stein Co., of New York was a creditor to the extent of more than $200,000, and was represented by a New York lawyer named Stroock. The younger Lennox, who was acting for the firm, informed the Abe Stein Co. of the trouble early in September, 1907, and asked help of some kind. Thereupon Mr. Stein and his lawyer, Mr. Stroock, started to Boston, and on the way over decided that they would employ Mr. Brandeis on behalf of the Abe Stein Co. Immediately upon reaching Boston they visited Mr. Brandeis and did employ him. They then saw Mr. Lennox, and after some discussion advised P. Lennox & Co. to retain Mr. Brandeis. Mr. Stroock offered to see Brandeis to ascertain whether he would accept the employment, which he did during the same forenoon. Mr. Brandeis assented; whereupon Stein, Stroock, and two friends of Lennox went to the offices of Brandeis, Dunbar & Nutter to go over the affairs of P. Lennox & Co. Brandeis, Dunbar & Nutter already represented Weil, Farrell & Co., a creditor to the extent of something like $300,000. Such was the situation when Brandeis, Stroock, Stein, and Lennox, and the two other gentlemen, whose names are not material, came together in Mr. Brandeis's office for a conference. A stenographer was called in, and what was said upon that occasion was taken down, and a transcript of the stenographic notes is before the committee. An exhaustive inquiry into the affairs of the Lennox firm was made by Mr. Brandeis, unquestionably under his employment by Mr. Lennox. This is evident because the only purpose that Mr. Lennox had in going to Brandeis was to be advised with respect to the proper course to pursue. He wanted somebody to tell him what to do; and to that end laid before Mr. Brandeis a rather minute account of the assets and liabilities of the copartnership. The result of the conference was that Mr. Brandeis advised Mr. Lennox to make an assignment for the benefit of the creditors, and suggested that his partner, Mr. Nutter, should become the assignee. The assignment was immediately prepared, and after a little delay was executed and filed. Mr. Nutter took possession of the property, and the firm of Brandeis, Dunbar & Nutter became his

attorneys. Within a short time a disagreement arose between Lennox and the assignee; whereupon Brandeis, Dunbar & Nutter, as attorneys for certain creditors, filed a petition in bankruptcy against P. Lennox & Co., alleging the assignment for the benefit of creditors which Brandeis had advised and procured as an act of bankruptcy. Other petitions in bankruptcy were filed, alleging other causes, and finally the copartnership of P. Lennox & Co. and its individual members were adjudged bankrupts, and Mr. Nutter became one of the trustees, and his firm the attorneys for the trustees.

Four years later the bankruptcy proceedings ended in a compromise through which the firm creditors received 40 per cent and the individual creditors 100 per cent. The report submitted by Senator Chilton gives copious references to the testimony, and the report presented by Senator Works contains extracts from the record so clearly arranged and so abundant that if I were to attempt the same work it would be a mere duplication. There is no real conflict in the record, although there are some serious differences respecting the conclusions which are to be drawn from the conversations of the various parties to this strange proceeding.

There is absolutely no doubt that Mr. Brandeis was at the very beginning the attorney for Weil, Farrell & Co., Abe Stein Co., and P. Lennox & Co. There is no question that under these circumstances he advised an assignment for the benefit of creditors. It is not controverted that he made the assignment the basis of bankruptcy proceedings, and thus became hostile to his former client. The explanation which his friends present is that what Mr. Brandeis really agreed to do was to take the estate and see that it was distributed lawfully among the creditors. To me it is an unseemly spectacle, and Mr. Brandeis is not the only actor in the scene who deserves censure. When I think of how Lennox, with Stein and Stroock on either side of him, went to Brandeis, the attorney for Weil, Farrell & Co., and the Abe Stein Co., to be advised and guided in the way that would lead to emancipation from the troubles that were harrassing them, I can not understand how reputable men could tolerate even that arrangement; but when I see Mr. Brandeis accepting the relation, acquiring all the information that Lennox had to give, advising an assignment, practically to himself, and then to see him turn on Lennox and charge the very thing that he had counseled and procured as an act of bankruptcy, I am bound to condemn the whole transaction, no matter how distinguished the offenders may be.

THE GLAVIS-BALLINGER INVESTIGATION.

The material facts in this case are not in dispute, and they can be very briefly stated.

Glavis was an employee of the Interior Department. He made a series of grave charges affecting the conduct of the department and the integrity of Mr. Ballinger, the Secretary of the Interior. These charges related to the disposition of the public domain and involved what is generally known as the conservation policy of the United States. They were published in Collier's Weekly, a magazine of wide circulation and great influence. Out of these charges grew an investigation carried on by a joint committee of the two Houses of Congress. The investigation finally took the form of a proceeding which may be described as Glavis *v.* Ballinger. The inquiry broadened until there was brought within its scope the attitude of many public officials, including the President and the Attorney General. Glavis was not only without means, but was somewhat obscure and in and of himself could not have given to the proceedings any considerable force. Collier's Weekly, knowing that it had published statements which, if not true, would subject it to damages in a libel suit, and having a real desire, I have no doubt, to further the public interest and expose what it believed to be corruption in the Interior Department, employed Mr. Brandeis to appear before the committee and sustain the charges. The view of the magazine with respect to its relation to the controversy is clearly and forcibly stated by Mr. Norman Hapgood, who was then its editor:

"Senator WORKS. In the discussion of the matter, was the question raised at any time as to the probable liability of Collier's for the publication it had made?

"Mr. HAPGOOD. It certainly was. There was an enormous liability of every kind—moral and financial. When we undertook to show that the Government was concealing such important facts, we were undertaking a good deal, but we did it with a very large sense of responsibility of every kind.

"Senator WORKS. You understood perfectly that Collier's had a personal interest in the matter, in view of the fact that it might be held responsible in an action for libel for publishing a document of that kind?

"Mr. HAPGOOD. We certainly did understand that. (Record, p. 459.)"

Mr. Mark Sullivan, now the editor of Collier's, then the associate editor, put it in this way:

"Senator WORKS. Then you understood, Mr. Sullivan, that Mr. Brandeis was employed by Collier's Weekly to represent its interests and protect it?

"Mr. SULLIVAN. Certainly. If, when the investigation began, Glavis had been discredited, if the investigation had shown nothing serious, Collier's Weekly was in a position to be very much discredited.

"Senator WORKS. Will you be good enough to answer the question?

"Mr. SULLIVAN. Yes; surely. I meant to.

"Senator WORKS. Read the question, Mr. Reporter.

"The reporter (reading):

"'Then, you understood, Mr. Sullivan, that Mr. Brandeis was employed by Collier's Weekly to represent its interests and protect it?'

"Mr. SULLIVAN. Largely. I should say, though I ought to remind you again that the editor of the paper then was Mr. Hapgood. I was not even present.

"Senator WORKS. I was only asking for your understanding of it. That was your understanding?

"Mr. SULLIVAN. Largely to protect the paper's interests, and largely for public service. (Record, p. 327.)"

It is manifest that Collier's Weekly had as much right to appear before the committee as Glavis had, for they sustained exactly the same relation to the investigation; and as a matter of fact, Mr. Robert Collier was invited to so appear.

After Mr. Brandeis had been thus employed by Collier's Weekly the question came up, and naturally, for whom he should appear before the committee, and it is apparent that it was the subject of serious discussion. Mr. Hapgood says (record, p. 458):

"It seemed perfectly clear to us that if this was going to be kept a conservation movement against such big forces we must not try to get into the foreground; that Mr. Glavis, who was a Government official, as well as our contributor, should be the one person kept in the front in order not to cloud the issue."

Mr. C. E. Kelley was at that time counsel for Collier's Weekly in New York City and attended to its legal business there. He had conferences with Mr. Brandeis concerning the investigation and the substance of his evidence on that point is as follows (record, pp. 389, 392, 397, 398):

"Mr. FOX. Were you thereafter in Washington with Mr. Brandeis, while he was acting in the matter of the Ballinger-Pinchot-Glavis investigation?

"Mr. KELLEY. Yes, sir; I was.

"Mr. FOX. Did you have any conversation with him on the subject of your appearance with him in the matter before the committee?

"Mr. KELLEY. I did.

"Mr. FOX. Will you please state what Mr. Brandeis said in that regard, what you said to him and what he said to you, giving, of course, the substance?

"Mr. KELLEY. I would not undertake to state more than the general substance, because the conversations extended over many days. The substance of the conversation on Mr. Brandeis's part was that he did not care to have me appear with him before the committee, and he also stated in those conversations the reasons for that request.

"Mr. FOX. Will you give the reasons, please, and what he said?

"Mr. KELLEY. He stated in substance that he was going to appear or was appearing—because our conversations extended over some time—before the committee as attorney for Mr. Glavis. (Record, p. 389.)"

Again:

"Senator CUMMINS. In your discussions with Mr. Brandeis with respect to appearance, was it understood that the relation of Mr. Brandeis to Collier's Weekly could not be made known?

"Mr. KELLEY. Really, sir; I doubt my ability to testify as to what was understood. I might venture what the understanding was between Mr. Brandeis and myself, but I would not care to go further than that.

"Senator CUMMINS. That is precisely what I asked you.

"Mr. KELLEY. As between Mr. Brandeis and myself, I think I would have to say that was the understanding.

"Senator CUMMINS. What reason did Mr. Brandeis give, if any, for desiring that course to be pursued?

"Mr. KELLEY. That was a subject of conversation between Mr. Brandeis and myself on many occasions with a view to deciding what was the best policy, in so far as the prosecution of the charges, if I may put it that way, was concerned. I do not think I could state at this date that there was any further reason than one of policy. (Record, p. 392.)"

Again:

"Senator WORKS. The question was considered between you and Mr. Brandeis as to whether Mr. Collier should take advantage of the invitation that had been extended to him to appear in his own name before the committee, or whether Mr. Brandeis should appear in the name of Mr. Glavis; and that was really the matter of discussion between you, was it not?

"Mr. KELLEY. I think so; yes.

"Senator WORKS. Did Mr. Brandeis give any reason why he thought Mr. Collier should not take that course?

"Mr. KELLEY. He gave a reason, later on, as to why he thought Mr. Collier should not appear before the committee personally, namely, that he did not think that Mr. Collier could add anything to what had already been brought out.

"Senator WORKS. I am not asking you about that. I am talking about the question in the first instance as to for whom Mr. Brandeis should appear. Was that matter discussed between you then, as to the propriety or policy of his appearing openly for Mr. Collier, or whether he should appear for Mr. Glavis, who was already openly a party to the proceeding?

"Mr. KELLEY. It was not a subject of any extended discussion, because I accepted Mr. Brandeis's conviction on the matter.

"Senator WORKS. In that immediate connection did Mr. Brandeis give you any reason why he thought Mr. Collier should not appear through him, and why he should appear for Mr. Glavis?

"Mr. KELLEY. I at the present time do not recollect any reasons except his statement, in substance, that he thought it was better that he should appear for Mr. Glavis, or his statement that he was going to appear for Mr Glavis. (Record, pp. 397–398.)"

These extracts from the testimony show beyond any question that the whole subject was considered, and that after the most careful reflection it was decided that Mr. Brandeis, who had been employed by Collier's Weekly, not by Glavis, should appear for Glavis, not for Collier's Weekly, because it was better that Glavis, a subordinate in the department, should be the prosecutor rather than Collier's Weekly, a strong, public-spirited magazine. The decision was carried into effect when Mr. Brandeis appeared before the committee, and I quote the record of the appearance (record, p. 1072):

"Mr. GLAVIS. Mr. Chairman, I was here yesterday ready to proceed. I have brought my attorneys here, and I think that if they will be allowed to examine me that the testimony would proceed more rapidly.

"The CHAIRMAN. Are you ready to proceed to testify?

"Mr. GLAVIS. Yes, sir.

"The CHAIRMAN. Very well. If the committee has no objection to that course, we will have your testimony taken, and your attorney can examine you in chief.

"Mr. MCCALL. I understand that Mr. Louis D. Brandeis is your counsel?

"Mr. BRANDEIS. I am counsel for Mr. Glavis, with Mr. J. P. Cotton, jr., of New York.

"The CHAIRMAN. Have you any statement that you desire to make before we proceed?"

With the several parties occupying the relation toward each other shown in these quotations from the evidence, the hearing before the committee went forward, and for the service rendered by Mr. Brandeis he received from Collier's Weekly a fee of something like $25,000 and his expenses.

Upon these undisputed facts I am called upon, as a member of the subcommittee, to say whether Mr. Brandeis was guilty of impropriety. The suggestion of those who appeared before the committee in opposition to the confirmation is that when Mr. Brandeis appeared before the committee it was his professional duty to state that he had been employed by and appeared for Collier's Weekly and that Mr. Glavis was nothing more than a nominal client, if, indeed, he was a client in any sense. The reply of those who appeared before the committee favoring the confirmation is that there was no attempt to conceal the fact that Mr. Brandeis represented Collier's Weekly and that it was generally known by those who were interested in the investigation.

I have no doubt that both Mr. Hapgood and Mr. Sullivan told many persons that the magazine had employed Mr. Brandeis, nor have I any doubt that the circumstances themselves led many other persons

to believe that the magazine was really conducting the investigation. On the other hand, I am just as clear that the people of the country outside of Washington believed that Mr. Brandeis had undertaken to serve Mr. Glavis, who had no means to employ counsel, because he was interested in the public questions involved in the proceeding and that he was bringing his great abilities into the controversy in order to promote the general welfare.

I have no criticism for Collier's Weekly, for I am thoroughly convinced that its chief purpose was to expose what it sincerely believed to be gross malfeasance in office, and to protect the national resources against the unlawful designs of selfish men.

Mr. Brandeis, however, occupied a wholly different relation to the proceeding. I can not avoid the conclusion that it was his duty to state openly and frankly to the committee the fact that he had been employed by Collier's Weekly, not only to guard against the consequences of a suit for libel, but to carry on the campaign against the alleged wrongdoers in the Interior Department. Not only professional propriety in its technical sense, but the situation in a peculiar sense demanded the utmost candor. Mr. Brandeis failed to recognize his plain obligation; and the skill which he exhibited during the long and important proceeding in which the rights of the public were so vitally involved can not relieve him from just criticism.

THE WARREN ESTATE.

It required hundreds of pages of testimony for the development of this matter. Substantially all of it is immaterial, except for the purpose of informing us of the relation which existed between the several parties. I shall not even refer to the pages of the record for the comparatively few facts out of which the present charge against Mr. Brandeis arises will not be disputed by anybody.

Prior to May, 1888, S. D. Warren, sr., was a paper manufacturer in partnership with M. B. Mason, the latter having a very small interest in the property. Warren died on May 2, 1888, leaving an estate of more than $2,000,000. He left a will devising the estate to his widow and five children. To the former he gave five-fifteenths, to the latter two-fifteenths each. The property connected with the paper mills, which constituted the larger part of the estate, was, through a series of complicated instruments, finally vested in trustees, of whom Samuel D. Warren, jr., was one. The trustees held the property for the benefit of the heirs in the proportions already mentioned, and they acquired it with the understanding that they were to lease it to a copartnership composed of S. D. Warren, jr., and M. B. Mason, who, as lessees, were to continue the business. The trustees represented the widow and the widow and five children, namely, Susan C. Warren, the widow; S. D. Warren, jr.; Henry C. Warren; Cornelia Warren; Edward P. Warren; and Fiske Warren. M. B. Mason was also one of the trustees, so that the lease was in effect an agreement between S. D. Warren, jr., and M. B. Mason as trustee with themselves as lessees. I do not find it necessary to refer to the peculiar terms of the lease or to the controversies to which the conduct of the lessees finally gave rise. It is sufficient to say that the lease was enormously profitable for the lessees, and it may be doubted whether Edward P. Warren, one of the cestui que trustent, fully understood its provisions when he entered into the arrangement, for he was then living in England and continued to live there for many years.

S. D. Warren, jr., had been a law partner of Mr. Brandeis under the firm name of Warren & Brandeis, but upon the making of the lease ceased to practice law and devoted himself to the operation of the paper mills. This situation continued until about 1904, when Edward P. Warren complained of the action of the trustees and the way in which the lessees were keeping the books of the paper business, and employed counsel in Boston to look into the matter. Investigations and conferences followed without result, and on December 19, 1909, he filed a bill against the lessees for an accounting, challenging many things that had been done from the time of the making of the lease to the time of filing the bill. During the progress of the suit S. D. Warren, jr., died, and shortly thereafter there was a compromise, the details of which I think are irrelevant.

During the whole complicated transaction from the death of S. D. Warren, sr., to the time that Edward P. Warren employed independent counsel, about 1903 or 1904, Mr. Brandeis represented everybody connected with the matter; that is to say, the heirs, the trustees, and the lessees; and when the actual controversy arose between Edward P. Warren and the lessees, S. D. Warren, jr., and M. B. Mason, he continued to represent the lessees, and when the bill was filed for an accounting in 1909 his firm appeared as counsel for the defendants and so continued until the compromise was effected.

While there has been some suggestion that it was improper for Mr. Brandeis to represent the heirs, trustees, and lessees in the original arrangement, because there were or might be conflicting interests, I do not think the criticism is well founded. The members of the family sustained to each other the most cordial, friendly relations, and it is quite evident that the widow and the four children had the most implicit confidence in the oldest son, S. D. Warren, jr., who was a man of established integrity and great ability. I dismiss that part of the charge.

The thing which Mr. Brandeis did which, in my opinion, he ought not to have done, occurred when Edward P. Warren, as a cestui que trust, questioned the conduct of the trustees and the lessees. It was at that time the conflicting interests were made clear. Before that time Mr. Brandeis had represented Mr. Edward P. Warren just as he had represented all the cestui que trustent, and when the claim was made against the lessees it seems to me that Mr. Brandeis was not at liberty to defend the lessees against it. The lessees should have sought other counsel, and Mr. Brandeis should have occupied an impartial position between the litigants. I am satisfied that there was no corrupt motive on the part of Mr. Brandeis, but inasmuch as the question is squarely before the committee I can not withhold my judgment.

THE ILLINOIS CENTRAL RAILROAD MATTER.

The testimony with regard to the part which Mr. Brandeis assumed in this transaction fully appears in the record. I will not review it because, in my opinion, there is nothing whatever in it which reflects in the slightest degree upon anybody connected with it.

THE NEW YORK & NEW ENGLAND RAILROAD CASES.

It is difficult for me to disassociate my general information with respect to this matter from the testimony introduced before the subcommittee. Inasmuch, however, as there is nothing in my information, or the testimony, to connect Mr. Brandeis with the conspiracy which I believe was formed to wreck the New York & New England Railroad and turn it over to the New York & New Haven Railroad, the difficulty I have mentioned is not important.

The facts are that in 1892 Austin Corbin, then a well-known capitalist and promoter in New York, who had theretofore been connected with the New York & New England Railroad, but who had lost control, began an attack upon the credit of the company and the conduct of its management. Personally, I have no doubt that this attack was the beginning of a campaign, the end of which was to be the complete control of the New York & New Haven, but there is no direct evidence in the record of this unlawful purpose.

For obvious reasons Corbin did not want to bring the suits in his own name, and he sought small and obscure stockholders to effectuate his design. His attorney in New York was William J. Kelly, then a practicing lawyer, now a judge of the superior court. Kelly employed Brandeis, and also found in Boston a wholesale liquor firm, composed of N. F. Goldsmith and Walter H. Keith, which owned a few shares of the common stock, of very little value. Goldsmith & Co. and one E. H. Knowlton, of New York, the owner of a few shares of the preferred stock, became the plaintiffs in something like 10 suits brought in Massachusetts, Connecticut, and one or two other States against the New York & New England Railroad Co., which had for their ultimate object the appointment of a receiver. The agreement between Corbin and Goldsmith & Co. by which the latter agreed to act as plaintiff was of the most discreditable character. Its terms became known because the New York & New Haven in the course of time assumed the burdens of the litigation. The suits had the desired effect. The New York & New England became hopelessly involved, and the New York & New Haven became its owner.

If Mr. Brandeis had known all that was going on he could not escape the severest condemnation, but there is no satisfactory testimony that he was informed of Mr. Corbin's object, or knew anything about the relation of the New York & New Haven to the conspiracy. So far as we are advised by the evidence, all that Mr. Brandeis knew was that Goldsmith & Co. and Knowlton were not his real clients. He was retained by Mr. Kelly, paid by Mr. Kelly, and while he was aware of the relation between Corbin and Kelly, there was nothing in the record to convict him of complicity in the very questionable undertaking. All that I can say is that it leaves in my mind a doubt concerning the extent of Mr. Brandeis's knowledge of this affair, and I am not disposed to hold him responsible.

I have not referred to the pages of the record, because the material parts are carefully quoted in the separate views of my colleague, Senator WORKS, and anyone who desires to read the testimony will there find the references necessary to a full examination.

THE BOSTON & MAINE MATTER.

When the New York & New Haven Railroad Co. sought to acquire the Boston & Maine there were certain stockholders, among them a Mr. Lawrence, who resisted the merger, and it is to be assumed that the resistance was in part at least to protect what they believed to be their pecuniary interests. There was also resistance from a great many people based solely upon public policy. Mr. Brandeis and his firm were retained by these stockholders, and in connection with the employment a most remarkable incident occurred. It is said Mr. Brandeis felt that he ought to render his service without compensation, but that his partners should not be deprived of the fees which would otherwise have accrued to the partnership. In this situation Mr. Brandeis paid to his partners $25,000 out of his own funds and rendered his service without pay. This payment was not solicited by his partners, but accepted by them rather under protest.

I have not been able to fathom the motive for this transaction. In so far as the stockholders represented by Mr. Brandeis were concerned no one could question the propriety of an appearance by Mr. Brandeis nor the acceptance of compensation. In so far as the public generally was concerned Mr. Brandeis ought not to have represented anybody as an attorney and there should have been no compensation for work done to promote the common good. The controversy was carried on mainly before the Massachusetts Legislature, but in part through the ordinary avenues of publicity.

Personally, I am of the opinion that a lawyer has no right to appear before a committee of Congress or a committee of a legislature as an attorney to urge questions of public policy. He has a right as a citizen to become a part of a movement and to be the spokesman of the movement but in so doing he is not an attorney or representative. He is speaking for the people of whom he is one. In such a situation there ought to be no clients whose pecuniary interests are to be served or protected

All that I can say of the singular performance is that Mr. Brandeis furnished the opportunity for serious criticism and at the best indicated that his view of duties and responsibility was somewhat abnormal. It is not strange that those who looked at the incident from the outside were skeptical and suspicious. I pay no heed to the charge that in the course of the campaign Mr. Brandeis made untruthful statements, for I have thought it impossible to examine at this time the complicated facts which were then in dispute.

OTHER CHARGES.

The subcommittee heard a great deal of testimony concerning a variety of other charges, namely, the relation of Mr. Brandeis to the Equitable Assurance Society of New York, the solicitation of proxies to enable Mr. E. H Harriman to control the Illinois Central Railroad, misconduct in regard to the Gillette Safety Razor Co., the connection with the Old Dominion Copper & Smelting Co., the appearance before the Massachusetts Legislature for the liquor interests, the Consolidated Gas transaction, and the activities for the bill in Congress authorizing manufacturers and producers in certain instances to fix retail prices.

I find nothing in any of these matters to warrant extended comment. There are some things in them which might be regarded as of doubtful propriety, but they admit of fair difference of opinion. All that I care to do is to commend the testimony to the full committee.

CONCLUSION.

In view of all the matters to which I have referred I have been constrained to reach the conclusion that the nomination of Mr. Brandeis as a Justice of the Supreme Court ought not to be confirmed. My conclusion is the result of much reflection, and it is with great regret that I announce it. I am acquainted with Mr. Brandeis, and for the strength of his mind and the scope of his knowledge I have the profoundest admiration. Moreover, I am in sympathy, for the most part, with his sociological and economic opinions, and for the work that he has done in these directions I have nothing but commendation. I can not, however, even seem to approve his course in many of the matters which have been brought to the attention of the subcommittee, through which he has lost the confidence of so large an element of the profession of which he is a member and of the country of which he is a citizen as to vitally impair his usefulness as a Justice of the Supreme Court.

ALBERT B. CUMMINS.

APRIL 3, 1916.

Mr. WORKS, from the subcommittee of the Committee on the Judiciary, submitted the following views:

To the COMMITTEE ON THE JUDICIARY,
United States Senate:

It has often been said that the Supreme Court of the United States is the greatest judicial tribunal in the world. This assertion may well be accepted when we consider the vast and controlling powers of the court—its jurisdiction over a hundred million of people whose lives, liberties, and independence are in its keeping; its control over the business of a great, rich, and powerful Nation and its protecting power to preserve our free institutions and the Federal Constitution even to the extent of nullifying laws enacted by Congress and the States. No such far-reaching powers are vested in any other court in the civilized world. The acts and proceedings of every department and every officer of the Government, from the President of the United States down, is subject to its decrees, and from its decisions there is no appeal. They are final and conclusive.

The appointment of a member of such a tribunal involves the gravest responsibility and should call for the exercise of the highest degree of disinterested patriotism, free from political, religious, or race interests or prejudices. To fit any American citizen to fill this exalted and responsible position his ability must be undoubted, his character above reproach, his integrity beyond suspicion, and his fairness and the judicial character of his mind fully established. It may be that this standard of fitness has not always been maintained in making such appointments, but it is the standard that should guide and influence the appointing power. The President has exercised this power, in the present instance, so far as it rests with him, by appointing Louis D. Brandeis to be a justice of the Supreme Court. The responsibility now rests with the Senate of the United States. Our responsibility, individually and collectively, as Members of the Senate, is just as great as was that of the President in making the nomination. Our duty and responsibility, it may also be observed, is to the country and not to the President.

It is most unfortunate that the nomination of Mr. Brandeis for the office should have given cause in the minds of anyone for an investigation or that any inquiry into his fitness should have become necessary. But the investigation has been called for and has been held. The fullest opportunity has been given to all who had any showing to make, for or against him, to present the facts in their possession and their views. It is my purpose to review here the charges made against him and the evidence given before the subcommittee to support and to refute them.

THE RAILROAD RATE ADVANCE CASE.

The charge is made that Mr. Brandeis betrayed his clients in this proceeding in the Advance Rate case and acted in bad faith toward his associate counsel, and evidence was submitted to support the charge. The position of Mr. Brandeis in the case was a peculiar and anomalous one. He was not employed as attorney for any of the litigant parties, and therefore he had no clients to whom he owed a duty resulting from an employment as such. He was called into the case by the Interstate Commerce Commission, the tribunal before which the case was to be tried, a proceeding well calculated to bring about just such an unfortunate condition as the one that resulted in this case, and one that, in my judgment, should not be allowed in any case. Almost inevitably counsel coming into such a controversy in that way will be given greater consideration and his opinions and admissions given greater weight than those of the attorneys for the adversary parties Mr. Brandeis's authority, so far as it was disclosed at the hearing, was contained in a letter from the commission to him. It was said in the letter:

"We are, of course, aware of the fact that the carriers will not fail fully to present their side of the case, and the commission has felt that every effort should be made, in the public interest, adequately to present the other side. Would you care to undertake that burden? * * * I have been asked to ascertain whether your engagements and inclinations are such as to permit you to undertake the task of seeing that all sides and angles of the case are presented of record without advocating any particular theory for its disposition."

This letter, which constituted the authority of Mr. Brandeis to act in the case, was about as ambiguous as it could well have been made. In the first clause of it he was, in plain and unambiguous terms, made the representative of the interests opposed to the railroads, "in the public interest." In the latter he was expected to "undertake the task of seeing that all sides and angles of the case are presented of record."

But, however that may be, Mr. Brandeis himself construed the letter as imposing the duty on him of representing the interests of the shippers and others opposed to the railroads and aiding them to support their defense against the raising of rates. He took place at the table occupied by the attorneys for the shippers, consulted and acted with them throughout, and in the division of time for argument took a part of their time. In the division of time Mr. Brandeis was given the closing argument on behalf of the shippers. The issues to be discussed were stated by the commission as follows:

First. Do the present rates of transportation yield adequate return to common carriers, the railroads operating in official classification territory?

Second. If not, what general course may the carriers pursue to meet that situation? (Hearings, p. 12.)

After this statement of the issues, 20 days were given all parties to prepare briefs, oral arguments to follow. Mr. Brandeis in the brief prepared by him directed his attention chiefly to the second issue and did not disclose his position on the first. At the oral argument, after the other attorneys for the shippers had made their arguments, and without previous notice to them, he made this broad admission:

"First. That, on the whole, the net income, the net operating revenues of the carriers in official classification territory, are smaller than is consistent with their assured prosperity and the welfare of the community, and that this is notably true of the central freight association lines, and it is true practically as to other lines also, because of the central freight association scale. (Hearings, p. 20.)"

This, as I construe it, was to admit away, as against the interests he was called upon to represent and protect, the first and chief issue in the case. Clifford Thorne, chairman of the State Board of Railroad Commissioners of Iowa, presented this charge against Mr. Brandeis and the evidence to support it. He prefaced his testimony on the merits with this statement:

"In the first place, the gentleman whom you have under consideration, I believe, was guilty of infidelity, breach of faith, and unprofessional conduct in connection with one of the greatest cases of this generation. (Record, p. 8.)"

And in stating the effect upon him of Mr. Brandeis's admission above mentioned he said:

"I was simply dumfounded by this statement. This was not an ordinary case. The railroad had been fighting for four years to get that fact established which I have just read to you before the Interstate Commerce Commission. They had maintained a propaganda, Nation wide in extent, in magazines and newspapers and had made speeches everywhere, and had brought pressure to bear in every conceivable manner. * * * And in the closing argument, after every other party on behalf of the public had concluded, the special counsel for the commission appointed to see that all phases of the case were developed, in the final closing argument on behalf of the public, without any notice or warning to other counsel taking part in the argument, he concedes the very point in issue and set down for argument. (Hearing, p. 21.)"

There can be no doubt of the sincerity of Mr. Thorne's views or his feeling that by the admission made by Mr. Brandeis, under the circumstances, the public interests were betrayed and that the course taken by him was unfair to other counsel and unprofessional.

On the other hand, John M. Eshleman, a very estimable and reliable gentleman, formerly chairman of the Railroad Commission of California, and later lieutenant governor of California, and who died suddenly soon after this testimony was given, and Joseph N. Teal, of Portland, Oreg., an attorney at law, who has had large experience in cases of this kind, gave it as their opinion that Mr. Thorne had no just reason to complain of the conduct of Mr. Brandeis. But both of these gentlemen agreed that his admission was not justified and that the rates were adequate and should not have been increased. And the following extract from Gov. Eshleman's testimony shows that he differed from Mr. Thorne only because their construction of the letter under which Mr. Brandeis acted differed:

"Senator CUMMINS. Governor, it seems to me that there is not much difficulty about the controversy between you, if there is one, and Mr. Thorne?

"Mr. ESHELMAN. We have no controversy, Senator.

"Senator CUMMINS. It all depends, I think, upon the relation which Mr. Brandeis bore to that case. You look upon his appointment as an advisor to the commission, and you look upon his argument before the commission as the delivery of a judicial opinion, whereas, I take it, Mr. Thorne supposed that he was counsel for the general public and was associated with him in the defense.

"Mr. ESHELMAN. I think that is our main difference.

"Senator CUMMINS. That is the real difference?

"Mr. ESHLEMAN. Yes. (Hearings, p. 66.)"

So it is left to the committee and finally to the Senate to determine whether Mr. Brandeis's course in the matter calls for condemnation or not.

There is nothing in the evidence to show that in making the admission complained of Mr. Brandeis was moved by any ulterior or improper motives. Whether he was justified in making it as a result of the evidence could only be determined by a retrial by the committee of the rate case, which is manifestly out of the question. Mr. Thorne maintains stoutly that the evidence did not justify or support the admission. In this conclusion he is supported by both Gov. Eshleman and Mr. Teal. But his final justification must rest upon the decision of the commission, which was in accord with this admission. But, very naturally, Mr. Thorne and others interested with him maintain that the conclusion reached by the commissioners resulted from this very admission made by counsel specially appointed by them. Whether this is so no one can tell, but it is only fair to conclude that such an admission made under such circumstances must have been given weight in the final decision of the case.

As to Mr. Brandeis's duty in the matter, independently of the question whether or not the admission was justified by the evidence, it seems to me that any fair mind must conclude that the wise, the prudent, and the fair thing for Mr. Brandeis to have done when he concluded to make the admission would have been to inform the attorneys with whom he had been acting of his intention and give them an opportunity to meet and refute it if they could. His relations with Mr. Thorne throughout the trial had been intimate and confidential. He had commended Mr. Thorne for the able presentation he had made of the shippers' case. There was no intimation from him that he disagreed with Mr. Thorne as to what the decision should be. To make the admission he did and at the time and under the circumstances was to my mind exceedingly unfair to Mr. Thorne and to the interests he represented; besides, there is a serious question in my mind whether Mr. Brandeis was justified or warranted in making any such admission under any circumstances by virtue of his employment. He was employed "adequately to present the other side" as against the railroads, who "will not fail fully to present their side of the case" and to see "that all sides and angles of the case are presented of record." In short, he was employed to see that the case was fully and fairly presented to the commission for its decision and not to decide it himself.

THE UNITED SHOE MACHINERY CO.

It is charged that Mr. Brandeis was from 1899 to 1906 a director and the attorney of the company. That he represented on the board of directors the large interests of the Henderson family of Chicago. That he participated in and approved the organization of the company and the form of leases made by it and was familiar with all its business and affairs. That, as its counsel, he defended its leases when legislation was sought against them, and that afterwards he acted as counsel for certain shoe manufacturing companies which were opposing the leases and which had formed themselves into an alliance to defeat their conditions. That in that capacity he gave a written opinion assailing the leases that he had formerly approved and in addition appeared at the hearings before committees of Congress and assailed the business of the company of which he had been a director and its attorney, during which time it had conducted its business the same as when his attack was made. The charge and the evidence to support it will be found in the testimony of Sidney W. Winslow, president of the company, commencing on page 160 of the hearings. It consists very largely of quotations from Mr. Brandeis at the hearings while he was connected with the company and afterwards. I think a few extracts from his declarations will present with sufficient accuracy what is claimed to be his equivocal and contradictory positions for and against the company and its mode of doing business. But first let me quote the charges made by Mr. Winslow. He says:

"He acted as counsel for the company in many matters for nearly eight years. In 1906 he took practically entire charge of the com-

pany's opposition to a bill proposed in the Massachusetts Legislature designed to restrict the company's leases. He then expressed the firm conviction not only that the company's leases were legal and that the Legislature of Massachusetts could not constitutionally limit their scope but also that they were of great benefit to the shoe manufacturers. As late as October 5, 1906, he wrote Mr. Erving Winslow a personal letter expressing his moral approval of the Shoe Machinery Co.'s system of business.

"He resigned as director of the company in December, 1906, giving as a reason that he felt he ought not to continue an exception to his general rule of not holding the office of director in any corporation for which he acted as counsel.

"Never during his connection with the company did he express disapproval of any of their acts, methods, or policy. On the contrary, the company's method of conducting business met with his full approval.

"I believe that Mr. Brandeis, since he left our company, has been guilty of unprofessional conduct and of conduct not becoming an honorable man, in the following:

"First. Mr. Brandeis has, at the instance of new clients, attacked as illegal and criminal the very acts and system of business in which he participated, which he assisted to create, and which he advised were legal, and he has persistently sought to injure our business. In so doing his knowledge of our leases and business, acquired while acting as our director and counsel, has naturally been of value.

"Second. Owing to his long-extended connection with our company as director and counsel and his acquaintance with our affairs, Mr. Brandeis's statements as to our methods and business have naturally carried an authority which would not otherwise have been accorded them. An honorable man, when acting for other clients, would, in these circumstances, have been scrupulously careful that any statements made by him were truthful. Mr. Brandeis, however, has made false and misleading statements as to our acts and business, both to committees of Congress and elsewhere.

* * * * * * *

"He spoke before the joint judiciary committee of the Massachusetts Legislature in opposition to the bill. He filed a brief with the chairman of the committee, in which he contended that the proposed act was unconstitutional, and he drafted a letter for the United Co. to send to shoe manufacturers urging them to oppose the bill.

"In his remarks before the joint judiciary committee on April 18, 1906, he strenuously defended the lease system employed by the United Co., and explained how it benefited the shoe manufacturer. He stated that the system then employed was not materially different from the system employed by the predecessor companies which had been merged into the United Co. There has been no substantial change of any kind in the lease system since Mr. Brandeis appeared before this legislative committee."

Then he quotes Mr. Brandeis's own language in support of the leases, as follows:

"'If we do not have this clause in certain of the leases where we have it, we could not sell certain things we do sell. We could not lease certain things which we do lease at as low a price as we do. It is only on account of the volume of business that we are able to undersell other people.'

"Referring to the charge of monopoly brought against the company, he said:

"'It has been said that this is a monopoly. In part it is a legal monopoly absolutely granted, because all the machinery we sell—I mean all that we lease or sell, because some we lease, some we sell, and with some we do both—all of the important machines are patented machines. The Federal law means that we shall have a monopoly of those, and nothing in the State can take it away or limit it. We have also a very large part of the business outside of the necessarily patented machines, and why we have it is because we are able to give to the people those machines cheaper than other people, and that is a complaint that is made against this company, that we are giving them cheaper. That is the main complaint.'

"With reference to the charges as to the character of the company's leases, he said:

"'The terms that these gentlemen say are in the leases are not in the leases, taken down as they say. It is not true that if you take one of our leases you can not use any other machine. That is not true. Take the manufacture of the Goodyear turn shoes, which Mr. Storrow spoke about, where he said there were 96 machines used, that we make, that we lease, or some of them that we sell. You would suppose from statements that have been made that if a man took any of those machines he had to take them all. That is absolutely untrue.'

"He pointed out the benefits conferred on manufacturers by the repair service furnished them by the United Co. He declared that nobody could possibly say that the company was selling things too dear or leasing things too dear 'when the cost in every branch of shoe manufacture has gone up from 33 to 50 per cent over every other department it has actually gone down in ours,' and he declared that the company was able to do this and still make a good profit 'because of the extraordinarily able management of this company and because of the fact that we are doing things wholesale.'

"He then declared that the company was entitled to commendation because 'it is the greatest promoter of competition that there is,' and there was not a manufacturing business in the United States in which there was the same freedom of competition that there was in the shoe-manufacturing business. He said:

"'That happy result is due largely to the method adopted by this shoe-machinery company, and the predecessor companies combined together to form this company * * *. I deem it to be the fundamental or most important fact existing in business that the smallest man who makes 50 or 100 pairs of shoes a day has just as great advantage as the man who makes 20,000 pairs of shoes a day.'

* * * * * * *

"I say that it is the best thing that can happen to the shoe manufacturer because he is able to get on in business. He is able to engage in it without sinking his capital. The little man gets the new improvements just as the big man gets them, and some of the men who are doing a large business thought it was very unfair, because they can buy their leather cheaper, because their credit was better, because they could buy a million dollars' worth at a time, and the only thing in the whole business they can not buy cheaper was their shoe machinery or shoe-machinery material.

"In the letter which Mr. Brandeis drafted to be sent to the shoe manufacturers there occurred the following statements:

"'This bill, which is aimed confessedly only against the United Shoe Machinery Co., attacks the policy hitherto pursued by this company and its predecessors in the leasing of machines, and seeks to prohibit more particularly the practice of this company in supplying to our lessees auxiliary and general department machines on exceptionally advantageous terms.

"'We believe that the methods pursued by our company in the past have been greatly to the interest of shoe manufacturers, and that if this bill is enacted and becomes operative it will compel changes in our methods of dealing with Massachusetts shoe manufacturers which would increase the cost to them of machinery and deny to them facilities enjoyed by their competitors in other States.

"'We believe that the Massachusetts shoe manufacturers would be far more seriously affected than our own company by the enactment of such a bill, and that effort to defeat it should be made by you rather than by us.'"

Mr. Winslow refers to the hearings before the Interstate Commerce Committee of the Senate to show that Mr. Brandeis decided in September, 1910, that he ought, if called upon, to lend his aid in any effort to attack the company. He had then severed his connection with the company and was acting as counsel for the Shoe Manufacturers' Alliance. But prior to that time he had given an opinion to Charles H. Jones, president of the Commonwealth Shoe & Leather Co., in which he said:

"First. The United Shoe Machinery Co. is a combination in restraint of trade, and all contracts made by it, as essential parts of the combination or to carry out the purpose of monopolizing and perpetuating its monopoly of the shoe-machinery trade, are unlawful. The leases used are such contracts and are unlawful.

"Second. The leases are in themselves, aside from the unlawful combinations embodied in the United Shoe Machinery Co., restraints on interstate trade within the Sherman Act.

"Third. The fact that the United Shoe Machinery Co. was formed to deal in patented articles does not prevent the illegality of the combination, nor does the fact that the leases are of patented machines render them legal, since the purpose of the combination and the provisions of the leases are designed to create a monopoly beyond that conferred by the patent laws.

"Fourth. The leases being invalid, you can not be held liable for failure to perform." (Hearings, p. 163.)

Of this opinion Mr. Winslow says:

"It is to be noted that Mr. Brandeis in this opinion not only attacks the form of leases which he had previously approved of, but also attacks the organization of the company, in which he participated, declaring the company to be a combination in restraint of trade.

"The above quoted portion of this opinion was printed presumably with Mr. Brandeis's consent as an advertisement on or about July 8, 1910, in the Boston newspapers, together with other opinions, as a part of Mr. Plant's campaign to force the United Co. to buy his patents.

"The Shoe Manufacturers' Alliance, which Mr. Brandeis represented from 1911 on, was an association of a few large shoe manufacturers, including Charles H. Jones, but most of whom were located in the West. Their platform, as quoted by Mr. Brandeis (see hearings before Committee on Interstate Commerce, United States Senate, 1912, p. 2618), declared:

"'We believe it to be essential that shoe machinery, whether it be leased or sold, be put on such terms as will leave the manufacturer free to take from the United Co. or from any other company one or more of the same or of different machines at a fixed unit price.'

"In other words, these manufacturers, according to their program as quoted by Mr. Brandeis, sought to compel the United Co. to give up the wholesale price which it granted where a series of different machines leased from it, all cooperating in the manufacture of a single pair of shoes, were used. The fact that we offered such a wholesale price instead of a unit price, Mr. Brandeis in 1906, before the joint judiciary committee of the Massachusetts Legislature, had spoken of as the reason why we could offer our machines at such reasonable rates and as of the greatest advantage to the shoe manufacturer.

"From this time on Mr. Brandeis has attacked our company in every way possible." (Hearings, p. 163.)

In addition to this, it is claimed by Mr. Winslow that Mr. Brandeis made many false and unwarranted statements against the company which are specifically pointed out by him in his testimony. (Hearings, 164–168.)

These facts, supported by quotations from Mr. Brandeis, stand undisputed. During the time he was attorney and director for the United Machinery Co., Mr. Brandeis was attorney for certain shoe manufacturing companies unknown to Mr. Winslow, but it does not appear that, up to the time he severed his connection with the United Machinery Co., there was any conflict of interest between them. The open conflict and attack on the machinery company came later.

Mr. Brandeis's statement and explanation of his apparently inconsistent positions in this matter will be found in a letter from him to Senator CLAPP, the chairman of the Interstate Commerce Committee. (Hearings, pp. 217–221.)

The letter is very long, but it is illuminating and should be read in full. I extract here some of its statements:

"First. It is entirely true that in April, 1906, I believed the policies and methods of the United Shoe Machinery Co. were legally and morally unobjectionable and that its activities were beneficial to the public, and as a director of the company I appeared before the Massachusetts Legislature to oppose a bill seeking to compel a change in these methods. I was then of the opinion that under some conditions monopoly in industry could operate beneficially to the public; or, in other words, that there was 'good trusts' as well as 'bad trusts.' I believed, not unnaturally, that this company which was managed by men in whose ability and judgment I then had confidence, and with which I was myself connected, was such a 'good trust.' The particular ground upon which I based my opinion that the shoe-machinery monopoly operated beneficially was that it appeared to help the small manufacturer and thus, while itself a monopoly, promoted competition in shoe manufacturing, as stated in my testimony before your committee on December 14, 1911, page 1160, as follows:

"The United Shoe Machinery Trust, with which Senator Crane is also familiar, presents another example. There is a business monopoly, which was started under conditions the most favorable to serving the public of probably any in the field of industry. In the first place the trust was managed by the men who had made the greatest success of any in the shoe-machinery business. It was practically an acquisition of the leading shoe-machinery businesses by the men who were the ablest, the hardest workers, and, in a certain sense, the furthest seeing of all those engaged in the business. They started out with certain perfectly admirable principles, which, I understand, have been adhered to. In the first place everybody, big and little, was to be treated alike; there were to be no discounts for quantity; so that the small manufacturer had the same chance as the large manufacturer, both in respect to service and to royalty. The company adopted a system of

leasing, which gave an opportunity to the small manufacturer with little capital to go into the business, and the company gave them as good service as the large manufacturer.

"Second. In May, 1906 (about a month after I had appeared before the committee of the Massachusetts Legislature), Mr. W. H. McElwain, president of the W. H. McElwain Co., and Charles H. Jones, president of the Commonwealth Shoe & Leather Co., both able and public-spirited shoe manufacturers, who agreed generally with my views as to the value of the United Shoe Machinery Co. to the community, called my attention to certain features in their leases—notably the so-called tying clauses—which seemed to them objectionable. I was not convinced that their objections were sound; but we were all of the opinion that the proper course to pursue was for the manufacturers to discuss any supposed objections with the officials of the company and not resort to the compulsory processes of legislation to correct defects, which should, if existing, be removed by amicable conference. And President Winslow expressed his readiness to give full consideration to such objections if the pending bill were defeated. Thereupon Mr. McElwain, Mr. Jones, and E. J. Bliss (treasurer of the Regal Shoe Co.), and other leading Massachusetts shoe manufacturers joined with the United Shoe Machinery Co. to secure a defeat of the then pending bill.

* * * * * * * * *

"Third. In consequence of the objections raised by these shoe manufacturers the subject was further investigated in the fall of 1906. I then ascertained facts in addition to those which had been previously furnished me by Mr. Winslow and other officials of the company, and to some extent inconsistent with statements made by them, and new considerations bearing upon the matter were brought to my attention. I was not yet, however, fully convinced that the shoe-machinery company's policy was unsound or its methods improper, but so serious a doubt had been raised in my mind of their methods that I was unwilling to assume responsibility for the company's action; and having reason to believe that Mr. Winslow was not likely to make any change in policy or methods, and having as one of the 19 directors no real control, I therefore concluded, without undertaking to decide definitely whether the criticisms made were sound or not, to quietly retire (without raising the question) from the board of directors, of which I had become a member to represent the large stock interests of the Henderson family in Chicago. I tendered my resignation on December 6, 1906, and it was immediately accepted.

"Fourth. Shortly afterwards, about the 1st of January, 1907, when it became apparent that a bill designed to compel the shoe machinery company to change its methods would be introduced at the coming session of the Massachusetts Legislature, Mr. Winslow resumed with Mr. McElwain and Mr. Jones the consideration of those features of the United Shoe Machinery Co.'s policy and leases deemed by them objectionable. At Mr. Winslow's request I participated as counsel in some of these conferences and discussed the whole subject fully also with him and other officials of the company. The facts then developed and the further consideration given the subject convinced me fully that while the policy and methods of the company had, on the whole, operated beneficially up to that time, they must if pursued eventually prove injurious both to the community and the company's interest, and I urged most strenuously upon Mr. Winslow and other officials who participated in the conferences with me that these methods be changed, that the policy of monopoly be abandoned, and particularly that the tying clauses be eliminated from the leases. Mr. Winslow and his associates gave patient consideration to the views which I expressed, but they were not convinced and refused to adopt my suggestion. Our conferences ended on January 7, 1907, and I then ceased to act as counsel of the company. (I had never been general counsel of the company, but had been requested to act frequentl, as for other clients.)

"Fifth. On June 1, 1907, the Massachusetts Legislature enacted a bill to regulate the sales and leases of machinery in form similar to that introduced in the session of 1906. I took no part whatever in opposing or advocating that legislation, and, indeed, did not express publicly my opinion on it. For three and a half years I took no part whatever in the questions relating to the policy and methods of the shoe machinery company, and specifically refused to act professionally for those who had adverse interests.

"Sixth. By the summer of 1910 the situation had entirely changed from what it was in 1906. In the first place the United Shoe Machinery Co. had shown a determined purpose to ignore or evade the act prohibiting tying clauses in leases passed in 1907 by the Legislature of Massachusetts and declared by its supreme court to be constitutional. In the second place, the Federal Government had shown its purpose of enforcing the Sherman antitrust law as evidenced by the Standard Oil and Tobacco cases, and the Supreme Court of the United States, in 1909, laid down in the Continental Wall Paper Co. case a rule applicable to the United Shoe Machinery Co. business. But the trust's methods remained unchanged. In the third place, and most important of all, Mr. Thomas G. Plant had developed a complete system of shoe machinery, in which the United Shoe Machinery Co. had previously enjoyed a monopoly. The Plant system was declared by Mr. Jones and other leading manufacturers to be equal to that of the Shoe Machinery Trust, and in some respects superior to it. Mr. Plant was purposing to put it on the market at a cost to the manufacturer far below that charged by the Shoe Machinery Trust. When this purpose was announced the United Shoe Machinery Co. declared that the shoe manufacturers would be precluded from using the Plant system by the provisions of their leases with the shoe machinery company. This attitude seemed to me particularly oppressive in view of the fact that the fundamental patents of the Goodyear welt system, from which the Shoe Machinery Trust secured its largest royalties, had recently expired, and the trust had made no reduction in those royalties. The question was raised whether the trust's business could be used to suppress the Plant system.

"It was my opinion that under the rule laid down in the then recent decision of the Supreme Court of the United States in Continental Wall Paper Co. *v.* Louis Voight & Sons Co. (212 U. S., 227, decided Feb. 1, 1909), the leases which had before been believed to be valid would be held invalid under the Sherman law, and I so advised Mr. Charles H. Jones."

It will be seen that Mr. Brandeis, as he says, had received new light since he defended the validity and fairness of the company's leases, and a new statute had been enacted that affected the validity of the company's business methods. It seems, however, that the company's method of doing business had not changed, but that Mr. Brandeis had changed his mind as to the law affecting the validity of those methods. Since then the business methods of the company have been tested by a suit on the part of the Government, which has been decided by three Federal judges in favor of the company, and the case is now pending in the Supreme Court on appeal. (See opinions in that case; hearings, p. 1177 and on.)

In discussing the general subject of trusts and monopolies before committees of Congress, it will be seen that Mr. Brandeis persistently used his former client as an example of the evils of which he complained.

Thus, at the hearing before the Committee on Interstate Commerce, he said:

"Now, take, in the second place, the trusts that have been markedly successful, like the Standard Oil Trust, the Shoe Machinery Trust, the Tobacco Trust. They have succeeded through their monopolistic position. They dominated the trade and were able to fix the prices at which articles should be sold. To this monopolistic power, in the main, and not to the efficiency in management, are their great profits to be ascribed (p. 1148). (Hearings, p. 1025.)"

This was in direct and marked opposition to the contentions he made before the Massachusetts legislative committee, as its attorney and director, in behalf of the shoe-machinery company, which he here denounces as a trust and monopoly.

And it appears from his own statement before the House Judiciary Committee, in dealing with the same subject, that he was not acting in the public interest in the attacks he was making upon his former client. He said on that occasion:

"I represent primarily myself, Mr. Chairman, but I have also acted for a certain number of gentlemen known as the Shoe Manufacturers' Alliance, who had specifically objected to the methods and policies of the shoe-machinery corporation, who are therefore interested in this bill, which undertakes to provide not specifically in regard to that corporation, but generally in regard to trusts and combinations, the present amendments to the law."

So it appears from his own statement that he was representing the Shoe Manufacturers' Alliance, an organization of shoe manufacturers, combined to make this very contest against his former client and against its former course of conduct that he, in the capacity of its attorney and director, had expressly approved and defended.

Attention should also be given to a statement of Mr. Brandeis of the meeting of Mr. Winslow, Mr. Brandeis, and others, in which Mr. Brandeis says he endeavored to induce Mr. Winslow to change the form of the leases, but without success. It is too long to quote here. (Hearings, pp. 221–224.)

This was in 1906, and soon after this Mr. Brandeis severed his connection with the company and took up the affairs of the Shoe Manufacturers' Association. Of this Mr. Brandeis says in this same statement made in 1911:

"On the 24th, I think it was, of May, the shoe manufacturers, a few of the men who came on at that time to see Mr. Winslow, telephoned whether I could see them. I had never seen or heard of them except in a general way—I think Mr. Endicott once introduced me to George Brown, of the Brown Shoe Co.—They came up and wanted to know whether I would advise with them, and I told them: 'Gentlemen, this wholly depends on what you want to do.' I said if this is a matter with you merely of a number of dollars for the next five or more years, this does not interest me at all. I think you are being charged a great deal more than a fair remuneration for the machines, but I don't think it makes any difference, because I think you pass it on to the consumer, and I think it always was and still is the policy of this company, and one of its great virtues, to treat all men alike; the big man has no rights over the little man, and as long as this is true—and it has been Mr. Winslow's policy as long as I have known anything of the company—and as long as you are treated alike in service as well as in rates it seems to me that for a number of years you will not suffer anything if this goes on, but it will be the community which will suffer and not yourselves. It seems to me that you have an obligation, and it seems to me to be particularly up to you as shoe manufacturers not to allow a condition of things to continue which, in my opinion, is not consistent with business freedom, and it is not, in my opinion, consistent with the advancement of the art in which you men are engaged, and I believe nothing can be clearer than the fact, which has now been demonstrated, that the ownership and control of the shoe machinery company by one body of men, even if they have all the virtue and all the ability that Mr. Winslow and the others possess, can not do otherwise than to stifle invention and prevent progress. (Hearings, p. 223.)"

By this it appears that Mr. Brandeis had reached a point where he was willing to attack the company he had served for doing business in a way approved by him as its director and attorney, not in the interests of the shoe manufacturers but in cooperation with them as a public duty. It may therefore have been assumed if he had not stated to the contrary at the hearing that the attacks made by him upon the company's methods and practices were made out of a sense of duty to the public, not in the interest of business adversaries or for mercenary reasons.

One of the most singular features of this whole transaction was the fact that Mr. Brandeis made no charge for the services rendered by him to the shoe-manufacturing people, but that he paid his firm $2,500 out of his own pocket for such services on the theory that he had no right to deprive his partners of a fee for services rendered because he chose to make no charge for what he did. (Hearings, pp. 741, 742.)

But if he could not, neither could his partners who had been with him attorneys for the machinery company.

What construction should be placed upon this course in justice to Mr. Brandeis? It was certainly an act of generosity toward his partners, who seemed not to share his scruples. Manifestly, his purpose was to appear as working disinterestedly for the public good and without pay. This would have been commendable if true, if it did not conflict with his duty as the former attorney of the machinery company. It might well be said that, working as he was in cooperation with the business adversaries of his former clients and in their interests, which led him inevitably to attack the business methods of the company which he had, as its director and attorney, approved and defended, this refusal to accept a fee for his services was evidence that in his own mind such an employment was wrong. That it was an employment as an attorney and not services rendered wholly in the public interest is convincingly proved by the payment by him of the fee to his partners and his own declaration that he was appearing for them. That being so, the fact that he was serving them for nothing would not help the matter.

I am driven to the conclusion that the course of Mr. Brandeis in the whole transaction is far from commendable and shows a lack of appreciation on his part of the duty of an attorney to his client and a due sense of the proprieties so necessary to be observed by members of the profession.

THE LENNOX CASE.

The charge in the Lennox case is that Mr. Brandeis was employed by Mr. Lennox and was by him advised to make an assignment for the

benefit of his creditors. That, at the time he was the attorney for one of the large creditors of Lennox, he also by arrangement with the attorney for another large creditor was engaged to protect the interests of that creditor. That he had his partner made the assignee under the assignment. That subsequently Mr. Brandeis denied that he had ever been employed by or to represent Lennox and claimed he was employed to serve and protect all persons concerned in the settlement of the insolvent estate called by him the "institution." That, later, Mr. Brandeis's firm acting for creditors forced Lennox into involuntary bankruptcy alleging in the petition as an act of bankruptcy the making of the assignment for the benefit of creditors that he had advised him to make. That Mr. Brandeis and his firm collected fees for services rendered the assignee, one of the firm, also for services rendered the petitioners in the bankruptcy proceedings and for services rendered the trustees in bankruptcy, and the fee of the member who served as assignee for the creditors was also turned in to the firm.

To my mind the evidence that Mr. Brandeis was regularly retained and employed by Mr. Lennox to represent his interest is conclusive. It is an admitted fact that his firm was at the time the attorneys for one of the large creditors, of which he had full knowledge. It is shown clearly also that he afterwards denied that he was so employed, and his firm took sides against Lennox and proceeded to force him into bankruptcy. The employment took place under most remarkable circumstances. Mr. Lennox and his firm, P. Lennox & Co., were in financial difficulty. Abe Stein & Co., of New York, was one of the largest creditors. Lennox applied to Stein for the advancement of money to tide him over. Stein and his attorney, Mr. Stroock, went to Boston to look into the condition of Lennox's business. On the way over, on the train, Stein and Stroock concluded to employ Mr. Brandeis to represent Stein's interests in the matter. (Hearings, p. 1108; Stein's testimony, hearings, p. 1105.)

And in pursuance of this determination Mr. Stroock visited the office of Mr. Brandeis to consult him in the interest of Stein. (Testimony of Stroock, p. 1074, and of Stein, p. 1105.)

Later, and during the same forenoon, Stein and Stroock saw Lennox and after ascertaining his financial condition advised him to secure counsel and suggested that he employ Mr. Brandeis, to which he assented not knowing that Stroock had already seen him and retained him to protect Stein's interests. Stroock agreed to make an appointment with Mr. Brandeis, which he did, and Lennox, Stein, Stroock, and two other gentlemen proceeded to Mr. Brandeis's office.

Mr. Stein testifies that he saw Mr. Brandeis first in company with his attorney, Stroock, while Lennox and the others waited in the other room. Of this Stein testified as follows:

"Senator WORKS. Mr. Lennox was not present at the time?

"Mr. STEIN. At that moment he was not. Mr. Brandeis then sent for his stenographer and took down every word and all the explanations and all my claims that I had against P. Lennox & Co., and every part and parcel thereof. The stenographer sat there, I guess, for an hour or an hour and a half. During that time, I think, in order to rectify some statements—or not to rectify it, but to verify it—I said, 'Mr. Lennox is outside, and Mr. Spalding. May they come in here?' I said, 'They may give me some enlightenment.'

"Senator WORKS. Now, let us know, Mr. Stein, at what stage of this conversation Mr Lennox came in.

"Mr. STEIN. I could not tell you.

"Senator WORKS. He was not there at the beginning?

"Mr. STEIN. No, sir; but he came in subsequently. I sent for him. I went out myself and told him to come in. Mr. Lennox was then present for the balance of the testimony which Mr. Brandeis took with the stenographer in the room.

"Senator WORKS. Do you mean to say that the conversation that occurred between you and Mr. Brandeis and your attorney was taken down, or did the stenographer commence when Mr. Lennox came in?

"Mr. STEIN. It was before Mr. Lennox came in. That was all through. Mr. Brandeis said afterwards, 'All right, I will take your case.' He never stated, for one moment, any conditions why he should not do it. He never mentioned it to me. I was a party at interest, and and he would have told me—if he had told me there would be a conflicting interest at the start I would not have given the case to him. I would not have it so that five minutes after I told a man something he could say, 'Get out of here. I know all you know.'

"Senator WORKS. I understand you were employing Mr. Brandeis at that time?

"Mr. STEIN. Yes, sir; and then subsequently to that Mr. Lennox gave his testimony, which was taken down by the stenographer." (Hearings, p. 1106.)

After the interview and alleged employment, Lennox, who knew nothing of this, was called in and with Stein and his attorney and Mr. Brandeis, whose firm represented another creditor, Mr. Lennox was examined and cross-examined as to his business and assets and property. But before that Stein had informed Mr. Brandeis that he claimed for himself some of the goods in the hands of Lennox & Co. by virtue of certain receipts which retained a lien on the property that entitled him to reclaim it as against other creditors, and Mr. Brandeis had dictated the form of a notice to be given by Stein, in his interest, to persons holding or claiming such goods. This had been done at the instance of Stroock for the protection of his client Stein. There is a disagreement as to the time when this notice was dictated. The stenographer in Mr. Brandeis's office says it was done when Stroock was there alone with Mr. Brandeis. (Hearings, pp. 1016, 1077.)

Stroock says it was in the presence of Lennox, Stein, and the other parties. (Hearings, pp. 1074, 1075, 1077, 1095.)

Stroock also testifies that he had an arrangement with Mr. Brandeis that he was to "protect Mr. Stein's interests so long as they did not conflict with some one else's interest" (Hearings, p. 1075.)

The interview that took place in Mr. Brandeis's office when Lennox and the others were present was taken down in shorthand and transcribed So that we have at least a fair recital of what took place at that time. (Hearings, pp. 774–796.)

It will be seen that Lennox was examined in detail. This was being done by two attorneys, each of whom represented creditors claiming half a million dollars against him and his firm. Mr. Brandeis had stated that his firm represented Well, Farrell & Co., who Lennox stated held claims against him amounting to $200,000, and Stein's claim was about $300,000. And Stein, whose special claims growing out of the receipts above mentioned, understood at that very time that Mr. Brandeis was representing him as his attorney, as I have pointed out. He testifies that afterward Stroock, his attorney, told him that Mr. Brandeis had concluded to represent Lennox. (Hearings, p. 1108.)

This is confirmed by the fact that Mr. Brandeis prepared for him the notice above mentioned, and on that day advised as to his right to retain a certain check for $25,000 or $30,000 he had received from Lennox. (Hearings, p. 1107.)

The interviews to which I have referred occurred September 4 and 5, 1907. On the 10th day of the same month Stein and Stroock had another interview, involving Stein's right under his trust receipts. (Hearings, p. 815.)

But at that time, while Stroock and Stein contended that Mr. Brandeis was, under their arrangement with him, to represent Stein specially. Mr. Brandeis then contended that he was representing all the creditors as attorney for the trustee. To that Stroock replied: "I understood that you were going to act for all, but with the understanding always that Mr. Stein's interests should be protected by you under all circumstances." (Hearings, p. 819.)

This was a very natural inference to draw, considering the peculiar circumstances under which Mr. Brandeis came into the case, as above detailed. On the other hand, Mr. Lennox understood that he had employed Mr. Brandeis to represent him. (Hearings, p. 1114.)

Part of the examination of Lennox shows quite clearly that a foundation was being laid for the protection of Stein under his trust receipts. I quote:

"Mr. B. Your indebtedness to Abe Stein is about $200,000?

"Mr. L. Yes, sir.

"Mr. B. And that is all for merchandise?

"Mr. L. And money.

"Mr. B. That is, a note came due, and he gave you a check to take it up?

"Mr. L. No; I sent him over a paper previous to it becoming due.

"Mr. B. How recent have been the most recent of your purchases from Mr. Stein?

"Mr. L. I have got a lot of skins down there now, and was wondering whether to send them back to Mr. Stein.

"Mr. B. Have they been delivered to you?

"Mr. L. They were not delivered yesterday. I think they were this morning.

"Mr. STROOCK. When they are received, where do you hold them?

"Mr. L. At Peabody.

"Mr. S. At your warehouse?

"Mr. L. Yes, sir.

"Mr. B. Well, if they have been delivered, nothing ought to be done with them in any way—don't open them up. Don't touch them. How large an invoice is it?

"Mr. L. About $15,000.

"Mr. B. What was the last one before that?

"Mr. L. The last one before that was within a month.

"Mr. B. How much was that?

"Mr. L. I should say $25,000.

"Mr. B. Did the goods go to Salem or Peabody?

"Mr. L. Both places.

"Mr. B. And what before that?

"Mr. L. $20,000, I should say.

"Mr. B. How long ago was that?

"Mr. L. Ninety days ago.

"Mr. B. Where did that go?

"Mr. L. Both places.

"Mr. B. Before that, what was the last lot?

"Mr. L. I remember quite a lot of chinas—$40,000 worth.

"Mr. B. How long ago?

"Mr. L. About four months

"Mr. B. Where did they go?

"Mr. L. To Salem; or, I think, they were split up—part to one factory and part to another.

"Mr. B. Do you recall the lot before the $40,000 china lot?

"Mr. L. I couldn't go back. I could remember four or five lots, but we would work in a good many skins in between—work in a few hundred dozen.

"Mr. B. What have you got in process now?

"Mr. L. I think a lot of sheepskins of Stein's.

"Mr. B. When were they put into the works?

"Mr. L. Five or six months ago.

"Mr. B. And how large a lot is that?

"Mr. L. I should say it was $10,000 or $12,000 worth.

"Q. What else is there besides the sheepskins?—A. There is a lot which I call 'chinas.'

"Q. Those are Stein's?—A. Yes, sir.

"Q. Are they the $40,000 lot?—A. No; they are $8,000 or $9,000.

"Q. Is that a separate lot?—A. Yes." (Hearings, p. 777.)

These questions certainly show that Stein's interests were being looked after. It may have been the foundation of the notice sent out for his protection dictated by Mr. Brandeis.

For Lennox's account under this examination of his indebtedness, see hearings, pages 1080 and 1081.

Another very significant conversation took place between Mr. Brandeis, Stroock, and Stein, in which Lennox was called in and again catechized in their presence. The conversation took place on September 11, 1907, and was taken down. (Hearings, p. 815.)

Stein and Stroock were still contending that Mr. Brandeis was employed to represent Stein's interests and Mr. Brandeis repudiated it and claimed that he was representing the trustee. But Stein's rights were fully discussed, Mr. Brandeis giving his opinion of them, and in that connection Lennox was called in and questioned at length about his transactions with Stein, and in the presence of Stein and Stroock was advised and directed what to do. (Hearings, pp. 815. 819.)

Amongst other things, Mr. Brandeis said to Mr. Lennox:

"I want to say to you, Mr. Lennox, in Mr. Stein's presence and in Mr. Stroock's, that you must under no circumstances do anything regarding any documents or take any action whatever in regard to merchandise or anything without my knowledge. If anything has been omitted to be done which ought to have been done in the past, it must rest just where it is at this moment. I mean that if you intended to pay a note and didn't pay it, or promised to deliver a deed and did not deliver it, you must not now in any way change the situation.

"(Mr. Stroock and Mr. Stein go out.)

"Mr. B. I said that to you, Mr. Lennox, in their presence; I told you in the first instance when you came in that I would not let you do anything which would prejudice your position.

"Mr. L. I understand that; I am very glad that you took occasion to remind me of it. What is their position?

"Mr. B. Well, they have certain papers; I want to ask you a little more about those trust receipts, etc. (Hearings, p. 821.)"

Then follows a thorough course of questioning Lennox about what he had done that would affect Stein's interests in which both Stein and Stroock participated.

That it was understood that Mr. Brandeis was to act for Mr. Lennox is made perfectly clear to my mind by the testimony. And he did act for and advised him as to the first important step to be taken by him. He advised him to make an assignment for the benefit of his creditors. This was of serious moment to him for two reasons. It put an end to his business; put his property and that of the firm and his father out of their hands, and gave it over to the creditors, and at the same time constituted an act of bankruptcy that Mr. Brandeis's firm and others afterwards used to force him into the bankruptcy court.

A few brief extracts from the testimony will verify what I have said.

Very naturally Mr. Stroock clung to the idea that Mr. Stein, his client, was to be protected. He said:

"Mr. STROOCK. The next suggestion is this: Mr. Lennox has agreed that if possible he wants Mr. Stein protected, and, of course, he will be protected. I think, so far as protection can go under these trust receipts, I think they are reasonably safe. Now, do you think that the interests of all would be better subserved by Mr. Brandeis appearing as attorney for trustee of the Lennox family or as attorney for the Stein Co., so that if need be some strong man will be in a position to assert that right, and then have some other person attorney for Lennox & Co.?"

To this Mr. Brandeis replied:

"I am inclined to think that if we all agree that what we want to do is to distribute this property according to the legal rights of creditors, I could be more useful to that end by acting for Mr. Lennox instead of for Mr. Stein; that is, your rights, whatever they are, are rights which would be developed by a proper investigation of the facts. So far as investigation leaves doubts, that is a matter for a just settlement; that is a compromise of doubts, so far as they exist. I should feel if I were acting for Mr. Lennox as trustee, that it was the duty of the trustee to see that everybody got his legal rights as nearly as we could make it, and if we could not determine actually the question of law and of fact, that ought to be determined by proper settlement, and I should feel that we ought to have a committee of the creditors with whom the trustee could confer, and if there are any questions of doubt in adjustment, that we get the advice of that commitee and through them make the proper settlement."

Then followed, immediately, a discussion between the two attorneys as to Stein's rights. (Hearings, pp. 793, 794.)

Then Mr. Brandeis said:

"Now if Mr. Stein is content to stand upon that, I should feel that probably the best interests of all concerned would be subserved by my acting for Mr. Lennox and carrying out the plan of action which I have stated, and I feel that instead of our relation with Weil, Farrell being a hindrance, it would be a special advantage, because they would at once say: 'Well, those people will see that creditors are properly protected.' Of course, in this matter we should not only act for Weil, Farrell & Co., but we should act as trustees for Lennox, and all we could do would be to say, 'Gentlemen, we are acting for this man, and our friends—people who would otherwise be our clients—are interested all around. We can not act for them here, but we can assure them a good, square deal. That is all, and I feel very clearly that so far as Mr. Lennox is concerned, taking his standpoint alone, the only thing for him to do is to give the squarest deal that he can to his creditors. These statements put him in a position where, aside from his desires, his interests coincide with his desires. Now, I want you and Mr. Lennox to decide what you want me to do.'"

He also explained to Mr. Lennox what would be the effect of making the assignment after he had expressed his desire to escape notoriety such as would result from making the assignment. (Hearings, p. 794.)

If Mr. Brandeis was not acting for Mr. Lennox and advising him in his interest then we have two lawyers representing his creditors persuading the debtor, who was without disinterested counsel, to make an assignment for the benefit of their clients.

Mr. Brandeis gave this advice:

"The course that I should pursue if it were decided that I should act for you would be to at once prepare and complete an assignment, so that it could be used at a moment's notice, getting your father's signature as well as your own, and having it here so that it could be recorded at a moment's notice; then I should send for Mr. Farrell and somebody from Lee-Higginson's, and tell them the situation, and perhaps get some one from the Lynn banks and tell them the situation, and say that we want to consider with them what we had better do. If you could get along without an assignment, that, of course, would be desirable; but if we can not, we could have the papers ready to go on record. It is not our wish, but it is the necessity. I haven't a doubt that if this is done, if an open act occurs, we will have quite a lot of failures right along the line." (Hearings, p. 794.)

Then this further colloquy took place:

"Mr. L. Well, what kind of a position does that leave my father and myself in in the meantime?

"Mr. B. The position you would be in would be this: You would have transferred your property; the trustee would be in a position where he could employ you to assist him and could make you a reasonable allowance.

"Mr. L. Would the business be continued?

"Mr. B. The trustee would have to consider with creditors how far it would be desirable to do that. That would have to be passed upon in his discretion; but the reason for doing this, if we made this trust, would be to prevent somebody else stepping in and doing it, keeping it as nearly as you could in the form in which you would get the better hold. My own feeling is that the best thing for you to do is not to be thinking too much of yourself, but thinking of the best interests of your creditors. If there is plenty there, you have got it safe; if there is not, you will be in the position of having a fair, open, and aboveboard compromise; but I feel that it is for your interests as it is in accordance with good morals that you and your father should be just as frank and fair in the present situation as it is possible to be, and not to do anything that would incite any of the people who have been misled by statements which have been made to take actions which might prove a very serious blow to you and would be a fearful blow to your father. That would be my feeling; Mr. Stroock, I don't know whether you agree with me.

"Mr. S. I do, absolutely; the situation is a very dangerous one to my way of thinking. This concern, as we appear to find it, had over a million dollars assets outside of their business and more than a half million dollars in their business.

"Mr. B. What I should say in regard to this situation would be to simply tell them how I came to be connected with it. I would say that I had never known Mr. Lennox—either of them—nor had anything to do with their business; they came to me with creditors, and we looked into the matter, and it seemed the only thing for all concerned to take this action. Whatever mistakes may have been made or sins committed are past, and the only thing to do now is to deal with absolute squareness and frankness, and we look to that as the best solution for all concerned.

"Mr. STROOCK. Mr. Lennox, we will sum this proposition up. The question is whether your best interests with everybody would be subserved, and I think that Mr. Brandeis's suggestion is the best.

"Mr. L. I think it is.

"Mr. S. Without in any way being a flatterer, I think Mr. Bandeis's reputation in the community would best work this out. We will start out substantially under Mr. Brandeis's reputation for giving a square deal, and in the second place he will virtually represent the large interest to start with.

"Mr. L. You are speaking now of Mr. Brandeis acting as my counsel?

"Mr. B. Not altogether as your counsel, but as a trustee of your property.

"Mr. L. I came to you, and I shall certainly do whatever you say—that is why I came to you. The only thing is, I should like to escape as much notoriety as possible."

Thus, Mr. Lennox put himself completely in Mr. Brandeis's hands and declared his intention to follow his advice. I think there can be no reasonable doubt of the fact that this constituted between the two the relation of attorney and client. Mr. Lennox says, at the hearings:

"I referred everything to Mr. Brandeis. I acted entirely on his—under his direction. Mr. Stein and Mr. Stroock, and what I had heard of Mr. Brandeis, gave me unlimited confidence in Mr. Brandeis, and I acted upon it. (Hearings, p. 1115.)"

It should be said in this connection that Mr. Brandeis made no charge against either Lennox or Stein for services rendered.

The advice given was followed and Mr. Lennox made an assignment to Mr. Nutter, Mr. Brandeis's partner, for the benefit of his creditors. Mr. Lennox employed no other attorney, but relied upon Mr. Brandeis for advice until the firm of Mr. Brandeis commenced bankruptcy proceedings against him, or near that time, when Mr. Nutter informed him that Mr. Brandeis was not his attorney and never had been. Of this, Mr. Lennox says:

"I supposed Mr. Brandeis was representing me up to the time I met Mr. Nutter in the Columbia Kid Co.'s office. I asked him or said something about, 'I had not heard anything from Mr. Brandeis,' and he said, 'Why should you hear from him?' I said, 'As my counsel, I suppose I ought to hear something from him.' He said, 'He is not your counsel and never was your counsel.' That was the first intimation I ever had that Mr. Brandeis was not looking after my interests. (Hearings, p. 1126.)"

This led him to employ Mr. Sherman L. Whipple, of Boston, to represent his interests. (Hearings, p. 285.)

When Mr. Whipple came into the matter, November 18, 1907, he was informed by Mr. Lennox and Mr. Stroock of the relations between Mr. Lennox and Mr. Brandeis. (Hearings, p. 285.)

Mr. Whipple then called upon Mr. Brandeis and recounted what Lennox and Stroock had told him, and then said to Mr. Brandeis:

"They say that you advised an assignment to your partner, Mr. Nutter, and took all of Mr. Lennox's property and that you now claim that you are not and never have been his counsel, and I thought, Mr. Brandeis, it would be better for me to come right to you and talk over a situation which seemed to me to be serious, because if you did agree with the Lennoxes that you would act as their counsel, and now are acting in a position hostile to them, through this assignment, you will agree with me that a rather serious situation is presented. (Hearings, pp. 286, 287.)"

After which this further was said between them:

"Of course, that would be a serious situation, but it is not the situation at all; I did not agree to act for Mr. Lennox when he came to me. When a man is bankrupt and can not pay his debts, Mr. Whipple, he is a trustee for his creditors; he has no individual interest; he finds himself with a trust, imposed upon him by law, to see that all his property is distributed honestly and fairly and equitably among all his creditors, and he has no further interest in the matter. Such was Mr. Lennox's situation when he came to me, and he consulted me merely as the trustee for his creditors as to how best to discharge that trust, and I advised him in that way. I did not intend to act personally for Mr. Lennox, nor did I agree to. 'Yes,' I said, 'but you advised him to make the assignment. For whom were you counsel when you advised him to do that, if not for the Lennoxes?' He said, 'I should say that I was counsel for the situation.' I said, 'Yes; but you advised an assignment of all his property, so that your firm became possessed of it, because Mr. Nutter was your partner.' He said, 'Yes; and I know no one better in the city of Boston than my partner, Mr. Nutter, to execute such a trust as that. He stands high; he has everybody's confidence, and that is why I advised it.' I said, 'I must say, Mr. Brandeis, it looks to me very much, according to your principles, as if when a man was bankrupt and went to a lawyer, and the lawyer advises him to make an assignment for the benefit of his creditors, he assigns his lawyer with it, very much in the way a covenant runs with land.' He said, 'Mr. Whipple, I think that is a very unkind and very ungenerous statement for you to make. It impugns my motives and I can only assure you that I had no such motive in doing it. I was merely occupying myself with seeing that this property which was brought into my office in this way, was equitably and fairly distributed among the creditors, and I was looking after the interests of everybody; I was looking after any interest that Mr. Lennox had, if any, if anything should be left after the settlement with his creditors, but, in the first place, looking after the interests of the creditors.'"

This discloses fully Mr. Brandeis's attitude in the premises.

Subsequently correspondence took place between Mr. Brandeis, Mr. Stroock, and Mr. Whipple, in which Stroock maintained that Mr. Brandeis was employed by Mr. Lennox, and Mr. Brandeis adhered to his position that he was never counsel for Lennox. In his letter Mr. Whipple said, among other things:

"While very likely it may promote no useful purpose further to refer to this unfortunate misunderstanding, yet in fairness I may properly add that both Mr. Coburn and Mr. Spaulding are in accord with Mr. Lennox in his memory of what was said. I am further informed that both Mr. Stroock and Mr. Stein also understood that you undertook to act for Mr. Lennox."

In his reply to this letter, Mr. Brandeis wrote:

"There should be no difficulty in removing the misapprehension from Mr. Lennox's mind. When I was originally consulted by Mr. Lennox,

Mr. Stroock, and Mr. Stein, it was with regard to some proposed dealings between the Abe Stein Co. and P. Lennox & Co. When, however, I looked into the situation it was plainly evident that the firm of P. Lennox & Co. was financially embarrassed, and that no such arrangement could take place between the Abe Stein & Co. and P. Lennox & Co., as was suggested. I told Mr. Lennox and Mr. Stroock that in my opinion the situation was one in which the interests and rights of all Lennox creditors would have to be consulted, and that if they and Mr. Stein so desired, we would undertake to act for all the parties in interest, and it was on that understanding that the assignment was made to Mr. Nutter. It was certainly not made for the benefit of Mr. Lennox, but the parties and their respective rights to be served by us were exactly those stated in the assignment. In accordance with this understanding, my firm has acted for Mr. Nutter and thus for those whom he represented, namely, both the creditors and the assignors in accordance with their respective interests. Consistently with this position, we did not accept any retainer from Mr. Lennox or make any charge to him or to anybody except the assignee. (Hearings, p. 289.)"

It is only necessary to refer to the conversation between the parties at the time of the employment, as taken down by the stenographer, to see that Mr. Brandeis was utterly mistaken as to what was said there and the effect of it, to say nothing of the fact that every other person present, five in number, disagreed with his understanding of it.

That what occurred there made Mr. Brandeis the attorney of Mr. Lennox I think there can be no doubt. But he maintained his position to the last, and acted against Lennox in the bankruptcy proceedings, which, if he was employed by the latter, was clearly in violation of his duty as an attorney. In the bankruptcy proceedings Mr. Whipple after being employed by Mr. Lennox found occasion to question the right of the attorney appearing for Mr. Brandeis's firm to appear against Lennox in the bankruptcy proceedings because of his employment by Mr. Lennox.

Again, Mr. Whipple wrote:

"Since receiving your letter of the 21st Mr. Stroock, in a personal interview with me, confirms Mr. Lennox in his recollection that you stated you would act as Mr. Lennox's counsel.

"In view of the clear and consistent memory of these four gentlemen, Mr. Lennox insists that your own memory must be at fault, and that there is no misapprehension in his own mind.

"He says (and I think you also told me so) that a stenographer was present during all the conversations that you had with the respective parties. We ought to be able to get light on this question from her notes. Will you be good enough to inform me whether they altogether confirm your own memory as to what was said on that occasion of the first two interviews? I will await information on this point before writing further. If you could give it to me some time during the afternoon, before 4 o'clock, it would oblige me, as I shall be absent from the city to-morrow." (Hearings, p. 292.)

The copy of the stenographer's notes was not furnished, although Mr. Brandeis had them. Instead he replied:

"I am quite sure that if Mr. Stroock will go over the matter with me there can be no difference of recollection as to what actually occurred. If you will arrange with Mr. Stroock, I should be glad to see you and him either Wednesday or Friday of this week, if that will be convenient to you." (Hearings, p. 292.)

Mr. Brandeis wrote Stroock asking for a conference and inclosing a copy of his letter to Whipple defining his position. (Hearings, p. 294.)

To this Mr. Stroock replied as follows:

"DEAR MR. BRANDEIS: I acknowledge yours of the 30th ultimo, with which you inclose copy of letter which was sent by you to Mr. Whipple on the 25th instant, and a copy of Mr. Whipple's reply thereto. When I am next in Boston, I shall endeavor to meet you with Mr. Whipple, as suggested in your letter. In the meantime, I may remind you that I have met Mr. Whipple and repeated to him my recollection of the conversation which took place between yourself and the writer and Mr. Lennox, which summarized, amount to that which I have heretofore stated and written to you; that you were retained by and accepted the retainer of the firm of P. Lennox & Co. and of James T. Lennox." (Hearings, p. 294.)

To which Mr. Brandeis replied:

"DEAR MR. STROOCK: I have yours of the 2d. When I have the opportunity of meeting you and Mr. Whipple, I think you will find that there is an error in your recollection that I was 'retained by and accepted the retainer of the firm of P. Lennox & Co. and of James T. Lennox' if that expression is used as meaning anything more than that at their instance I undertook to act in this matter, as I have acted, namely, as counsel for the trustee for creditors and debtor under the assignment.

"I think that you will find that my letter to Mr. Whipple of November 21, of which I inclose you a copy, states accurately the situation." (Hearings, p. 295.)

It is evident that Mr. Whipple was convinced of Mr. Brandeis's employment by Lennox, for he says:

"As the record shows, I afterwards made some pretty vigorous protests on the record as to Mr. Brandeis continuing to act for parties who were hostils to Mr. Lennox. (Hearings, pp. 295, 298.)"

See further on this subject some of the proceedings in the bankruptcy in which Mr. Studley, acting for Mr. Brandeis's firm, appeared against Mr. Lennox, and Mr. Whipple for him. (Hearings, pp. 1007, 1008, 1011.)

In this hearing this colloquy took place:

"Mr. WHIPPLE. If I thought you asked the question in good faith for the trustees, and not in bad faith as representing Weil, Farrell & Co. and the execution of their threat at criminal proceedings, I would withdraw the objection, and it is on the latter ground explicitly that I direct him not to answer.

"Mr. STUDLEY. I should like to have a hearing on that question.

"Mr. WHIPPLE. You will have a lot of them before we get through with it. I propose to summon witnesses to establish the fact. When we have a hearing on that we will have a hearing that will take more than a few minutes to dispose of, because we will examine witnesses, and you know who they will be.

"Mr. STUDLEY. I don't know what you are talking about. Perhaps you do.

"Mr. WHIPPLE. You had better know. When you want a hearing on that, you will have to give more notice than this.

"Mr. STUDLEY. I don't understand you place the objection on the ground the testimony is likely to incriminate him?

"Mr. WHIPPLE. You may infer from what I have said that is the ground, because I have said you are asking that question in order to get your client into jail as further violation of your duty to him as an attorney.

"Mr. STUDLEY. I should suppose you would put it on some ground which the witness had a right to set up.

"Mr. WHIPPLE. That is a right which he has set up, to decline to be cross-examined for the purpose of carrying out a purpose of getting him criminally complained of—you, unfortunately, so far as it appears now, still being his own counsel.

"Mr. STUDLEY. If we are still his counsel, it is a matter of which I am ignorant. I had supposed for more than two years you have acted as his counsel.

"Mr. WHIPPLE. Not discharging your firm from his proper retainer and agreement. Because of your recreancy of your duty, he had to get additional counsel.

"Q. This letter, which I show you, refers to certain morocco factories. Will you tell what you referred to by those?

"Mr. WHIPPLE. That I object to on the same ground. I object to any question.

"Mr. PROCTOR. Would you object if Mr. Hall should ask the question?

"Mr. WHIPPLE. I do not believe Mr. Hall would do it, because he has no retainer to abet any such purpose as disclosed before the referee. He will ask only those questions which he desires to ask in good faith to get information, and not for purposes of criminal prosecution. If there are any questions which Judge Hall wants to ask on the subject matter of that letter or any others, I should like to hear them.

"Mr. STUDLEY. I would like to ask on that one. That did not come from Weil Farrell or through Weil Farrell?

"Mr. WHIPPLE. Anything that is asked for real information, and not for sinister purposes"

It must be remembered, in reading this extract of the proceedings, that Weil Farrell & Co. was the firm for which the firm of Mr. Brandeis was attorney at the time Mr. Lennox claims he retained Mr. Brandeis as his attorney.

Of the activity of Mr. Brandeis's firm in the interest of Weil Farrell & Co., who were his clients when Lennox was advised to make the assignment, Mr. Whipple says:

"Senator WORKS. This same firm, which Mr. Brandeis was representing before the proceedings were commenced, was the active creditor that brought about these criminal proceedings?

"Mr. WHIPPLE. Yes; but let me say that while they were in close touch, as I found by correspondence, with Mr. Nutter, and the creditors whom Mr. Nutter controlled voted for Mr. Farrell for trustee, yet I do not understand that Mr. Brandeis's firm did any active work or took any active interest in connection with the criminal proceedings." (Hearings, p. 304.)

It only remains to inquire what profits accrued to Mr. Brandeis and his firm by his acting as attorney for the "situation" instead of Mr. Lennox. As I have said, he received no compensation from either Lennox or Stein.

The firm did receive the following fees for services in the matter of the Lennox assignment and bankruptcy, as testified to by Mr. McClennen, a member of the firm:

As counsel for the trustee in bankruptcy	$12,000.00
As counsel for the assignee for the benefit of creditors	9,500.00
Through Mr. Nutter, fees as assignee	14,500.00
As trustee	2,852.88
For services from time of commencing proceedings in bankruptcy to the adjudication	5,000.00
	43,852.88
To this was added for office expenses	4,105.00
Making a total of	47,957.88

There is no claim—at least there is no proof—that Mr. Brandeis acted corruptly in this matter. The claim is, and the evidence sustains it, that Mr. Brandeis was employed by Mr. Lennox to protect his interests and that he failed to do so, and finally acted directly against him and procured these large fees that came out of Mr. Lennox's property for such services. It is not shown that the advice given Mr. Lennox to make the assignment was not good advice. It is not questioned that his condition was such that either an assignment for the benefit of creditors or proceedings in bankruptcy was inevitable. It is quite evident that Mr. Brandeis's firm profited largely in fees by the making of the assignment and subsequent enforced bankruptcy. Their fees under the assignment before the bankruptcy proceedings, including the assignee's fees which went to the firm, amounted to $24,000. Such fees in prospect was a strong temptation to advise an assignment. Whether it influenced Mr. Brandeis to advise that course no one can tell.

Of the action of Mr. Brandeis having his partner appointed assignee Mr. Whipple says:

"That is a risk * * * that a lawyer always takes when he advises an assignment to one of his own partners or to himself. That has been a very fashionable and usual thing, but I think it is all wrong when he has clients to take his assignments to himself. If he has a client who wants to administer an estate that is a risk he assumes in having himself appointed as administrator. If there is some important thing to do, it is a risk for him to say, 'I will do it for you.' My idea is that the client or some competent friend of the client should be appointed to his responsible fiduciary position and the lawyer act as his counsel." (Hearings, p. 303.)

It should be said in this connection, in justice to Mr. Brandeis, that while Mr. Whipple was opposing counsel to Mr. Brandeis's firm in the bankruptcy case and in the Warren case, hereafter to be noticed, and declared Mr. Brandeis to have been in the wrong in both cases, he testifies that he believes there was no wrong motive on his part, but these wrongs resulted from mistakes and misunderstandings on the part of Mr. Brandeis. (Hearings, 284, 299.)

He sums up the Lennox case in this way:

"You see, my belief was, at the time, that there was a misunderstanding. My belief was at the time, and now is, that Mr. Brandeis was misunderstood. That is, I preferred then, and prefer now, not on account of any personal friendship or feeling, but my view was that there was a misunderstanding. I think Mr. Brandeis was so much absorbed in the question of caring for the situation, and so much interested in the development of his ideas as to how this estate should be administered, that he unconsciously overlooked the more human aspect of it, which would perhaps have appeared to another; but here was a man confronted with perplexities and charges and troubles, who wanted his personal and individual care and attention. But I think Mr. Brandeis looked upon it as a problem of distribution." (Hearings, p. 299.)

It should be said also in this connection that Mr. Whipple is a supporter of Mr. Brandeis and favors his confirmation. When his nomi-

nation was announced, Mr. Whipple gave out an interview in which he said:

"As a lawyer, Mr. Brandeis is able and learned. As a man, he is conscientious and high minded. The feature of his career which is the most striking and remarkable has been his unselfish and unswerving devotion to the social, moral, and industrial uplift of the lowly and less fortunate of our people. I believe that on the Supreme Bench of the United States he will exert a strong influence in establishing the ideals to which he has devoted his recent years." (Hearings, p. 282.)

The American Bar Association, of which, I believe, Mr. Brandeis is a member, promulgated certain canons of ethics, of which this is one:

ADVERSE INFLUENCES AND CONFLICTING INTERESTS.

"It is the duty of a lawyer at the time of retainer to disclose to the client all the circumstances of his relations to the parties, and any interest in or connection with the controversy, which might influence the client in the selection of counsel.

"It is unprofessional to represent conflicting interests, except by express consent of all concerned, given after a full disclosure of the facts. Within the meaning of this canon, a lawyer represents conflicting interests when, in behalf of one client, it is his duty to contend for that which duty to another client requires him to oppose.

"The obligation to represent the client with undivided fidelity and not to divulge his secrets or confidences forbids also the subsequent acceptance of retainers or employment from others in matters adversely affecting any interests of the client with respect to which confidence has been reposed."

It is a canon well worthy of consideration in this connection.

THE GLAVIS-BALLINGER CASE.

The charge in this instance is that Mr. Brandeis professed and held himself out as the attorney for Glavis and in effect acting in the public interest when he was the paid attorney of Collier's Weekly. This is claimed to have been such an impropriety as should prevent his confirmation.

There is but little dispute about the facts. Glavis, a clerk in the Interior Department, had made grave charges against his superior, Mr. Ballinger, the then Secretary of the Interior. Collier's Weekly published these charges. They were such as to subject the paper to a successful prosecution for libel, if not proved to be true. Collier's, in this emergency, employed Mr. Brandeis to represent it and paid him a fee of $25,000 for his services. Admittedly he was employed to protect Collier's from liability on a libel charge, and to this end to establish the truth of the Glavis charges. But Mr. Brandeis did not appear for Collier's, but for Glavis, although Robert Collier was invited by the committee to appear and make any showing he might desire. This is the appearance of Mr. Brandeis in the hearings as shown by the record:

"Mr. GLAVIS. Mr. Chairman, I was here yesterday ready to proceed. I have brought my attorneys here, and I think that if they will be allowed to examine me that the testimony will proceed more rapidly.

"The CHAIRMAN. Are you ready to proceed to testify?

"Mr. GLAVIS. Yes, sir.

"The CHAIRMAN. Very well. If the committee has no objection to that course, we will have your testimony taken and your attorney can examine you in chief.

"Mr. MCCALL. I understand that Mr. Louis D. Brandeis is your counsel.

"Mr. BRANDEIS. I am counsel for Mr. Glavis with J. P. Cotton, jr., of New York.

"The CHAIRMAN. Have you any statement that you desire to make before we proceed? (Hearings, p. 1072.)"

J. P. Cotton, jr., as counsel with Mr. Brandeis for Mr. Glavis, was also employed by Collier's and represented it.

Mr. Mark Sullivan, now editor of Collier's and then associate editor, gave the committee the facts as he remembered them. (Hearings, p. 325.)

He states the object of Mr. Brandeis's employment by Collier's as follows:

"Senator WORKS. Then you understood, Mr. Sullivan, that Mr. Brandeis was employed by Collier's Weekly to represent its interests and protect it?

"Mr. SULLIVAN. Certainly. If, when the investigation began, Glavis had been discredited, if the investigation had shown nothing serious, Collier's Weekly was in position to be very much discredited.

"Senator WORKS. Will you be good enough to answer the question?

"Mr. SULLIVAN. Yes; surely. I meant to.

"Senator WORKS. Read the question, Mr. Reporter.

"The REPORTER (reading). 'Then, you understand, Mr. Sullivan, that Mr. Brandeis was employed by Collier's Weekly to represent its interests and protect it?'

"Mr. SULLIVAN. Largely, I should say, though I ought to remind you again that the editor of the paper then was Mr. Hapgood. I was not even present.

"Senator WORKS. I was only asking for your understanding of it. That was your understanding?

"Mr. SULLIVAN. Largely to protect the paper's interests and largely for public service." (Hearings, p. 327.)

Mr. Sullivan testified that it was well known that Mr. Brandeis appeared for Collier's. As he put it, "Everybody knew it" at the time and qualified it by saying that he knew it and discussed it freely, that he shared the knowledge, and that the "knowledge he had was general at the time." But he was quite unable to sustain this view by pointing out anyone to whom he had communicated that knowledge. (Hearings, pp. 326, 335.)

Subsequently he returned to the stand and named two persons to whom he had imparted his knowledge. (Hearings, p. 372.)

Mr. Norman Hapgood, then editor of Collier's, also gave his views of this transaction. He gives very clearly what induced Collier's to employ Mr. Brandeis and for what he was being paid. On that subject he testified:

"Senator WORKS. In the discussion of the matter was the question raised at any time as to the probable liability of Collier's for the publication it had made?

"Mr. HAPGOOD. It certainly was. There was an enormous liability of every kind—moral and financial. When we undertook to show that the Government was concealing such important facts we were undertaking a good deal, but we did it with a very large sense of responsibility of every kind.

"Senator WORKS. You understood perfectly that Collier's had a personal interest in the matter in view of the fact that it might be held responsible in an action for libel for publishing a document of that kind?

"Mr. HAPGOOD. We certainly did understand that." (Hearings, p. 459.)

Mr. Hapgood, like Mr. Sullivan, maintained that it was well known that Collier's Weekly was acting in the matter, but there is nothing to show that anybody, except maybe Collier's and their friends, had any knowledge that Mr. Brandeis was acting as the attorney of Collier's Weekly to protect its interests. Mr. Hapgood says there was a discussion as to "how the appearance was to be made" between him and Mr. Brandeis. He says:

"It seemed perfectly clear to us that if this was going to be kept a conservation movement against such big forces we must not try to get into the foreground; that Mr. Glavis, who was a Government official, as well as our contributor, should be the one person kept in front in order not to cloud the issue." (Hearings, p. 458.)

This discloses a deliberate attempt to deceive the committee and the country by keeping Collier's in the background and Glavis in front in order to make it appear to be a "conservation movement" in the public interest and not a defense of Collier's against a threatened libel suit, which was beyond doubt what Collier's were paying for.

That this deception was deliberately intended and carried out is made clear by the testmony of Charles E. Kelley. Mr. Kelley was at the time the regular attorney of Collier's. (Hearings, p. 388.)

He acted with and assisted Mr. Brandeis in the Glavis matter on the outside. He recounts what occurred between him and Mr. Brandeis as follows:

"Mr. Fox. Were you thereafter in Washington with Mr. Brandeis while he was acting in the matter of the Ballinger-Pinchot-Glavis investigation?

"Mr. KELLEY. Yes, sir: I was.

"Mr. Fox. Did you have any conversation with him on the subject of your appearing with him in the matter before the committee?

"Mr. KELLEY. I did.

"Mr. Fox. Will you please state what Mr. Brandeis said in that regard—what you said to him and what he said to you—giving, of course, the substance?

"Mr. KELLEY. I would not undertake to state more than the general substance, because the conversations extended over many days. The substance of the conversations on Mr. Brandeis's part was that he did not care to have me appear with him before the committee, and he also stated in those conversations the reasons for that request.

"Mr. Fox. Will you give the reasons, please, and what he said?

"Mr. KELLEY. He stated in substance that he was going to appear or was appearing—because the conversations extended over some time—before the committee as attorney for Mr. Glavis.

* * * * * * *

"Senator CUMMINS. In your discussion with Mr. Brandeis with respect to appearance was it understood that the relation of Mr. Brandeis to Collier's could not be made known?

"Mr. KELLEY. Really, sir, I doubt my ability to testify as to what was understood. I might venture what the understanding was between Mr. Brandeis and myself, but I would not care to go further than that.

"Senator CUMMINS. That is precisely what I asked you.

"Mr. KELLEY. As between Mr. Brandeis and myself, I think I would have to say that was the understanding.

"Senator CUMMINS. What reason did Mr. Brandeis give, if any, for desiring that course to be pursued?

"Mr. KELLEY. That was a subject of conversation between Mr. Brandeis and myself on many occasions with a view of deciding what was the best policy in so far as the prosecution of the charges, if I may put it that way, was concerned. I do not think I could state at this date that there was any further reason than one of policy." (Hearings, pp. 389, 392, 398.)

This shows the intent and purpose of Mr. Brandeis to conceal the fact that while he appeared of record as the attorney for a public official in the cause of conservation he was in fact appearing for and being paid for appearing for and in the interest of private individuals to protect them from personal liability.

Mr. Kelley also testified to the fact that prior to the commencement of the hearings, Collier's were invited to appear and present evidence. (Hearings, p. 399.)

I have examined with some care the proceedings before the Glavis-Ballinger committee and Mr. Brandeis's course in that hearing, and the manner of his treatment of the committee and the witnesses tends to show the nature of his employment. It does not seem to me to have been the course of a public-spirited citizen seeking to forward the "conservation movement" in the public interest.

I think it is very generally regarded by the profession as an impropriety for an attorney to appear as the attorney for one person when he is employed and paid by another person not a party to the action or proceeding to represent his interests. This seems to me to be an aggravated case of that kind involving the intention and the effort to conceal the true character of the employment. It is made worse, in my estimation, by the fact that the great question of conservation and the conduct of a public official in dealing with that subject was of record and supposed to be in fact the matter under investigation and in the public interest. The element of private interest and the effort to protect a private individual from personal liability was a false issue which was purposely concealed.

Mr. Hapgood, like Mr. Sullivan, declared that it was well known that Collier's Weekly was interested in the investigation. But there is no evidence to show that anyone knew that Mr. Brandeis was employed and paid by Collier's to protect their private interests. Not only so but it is shown that Mr. Brandeis himself concealed or tried to conceal that important fact.

As to the course of Collier's Weekly, Mr. Hapgood testified:

"Senator WORKS. Did Collier's Weekly publish the facts respecting this investigation as it passed along?

"Mr. HAPGOOD. Yes, sir.

"Senator WORKS. Was anything said in Collier's about Mr. Brandeis appearing for Collier's or being paid by Collier's during that time?

"Mr. HAPGOOD. At one time a newspaper which was actively supporting the administration attacked us along various lines, including the statement that we were paying Glavis's lawyer. I wrote a short and rather satirical editorial, merely saying that we certainly were, and we would support any other contributor who got into trouble of that kind through us.

"Senator WORKS. Can you give us a reference to that editorial so that it can be reached?

"Mr. HAPGOOD. I can to-morrow or this afternoon.

"Senator WORKS. I did not expect you to do it now, but if you will furnish us with a copy of it I shall be very glad." (Hearings, p. 458.)

The letter was subsequently produced. (Hearings, p. 706.)

It does not disclose the fact that Mr. Brandeis was appearing for or being paid by Collier's. It assumes that it is legally protecting its contributor, when, in fact, as the evidence of both Mr. Sullivan and Mr. Hapgood shows, that Mr. Brandeis was employed and paid to protect Collier's Weekly and not Mr. Glavis. How it was legally protecting its contributor is not disclosed. But this letter is important as showing the intolerant, uncompromising, not to say bitter and malignant spirit that was being represented and served by Mr. Brandeis in a hearing where he was ostensibly appearing with the commendable purpose of arriving at the truth concerning a matter of public interest and concern. That he and his clients should attempt to conceal the fact is not to be wondered at. The letter accentuates and makes clearer, if possible, the grave impropriety of the whole proceeding.

It must be taken as true, therefore, that Collier's Weekly as well as Mr. Brandeis was concealing the fact that Mr. Brandeis was appearing for or representing it.

The testimony of Mr. Sullivan shows that for his services for Collier's Weekly he was paid by it the sum of $25,000. (Hearings, p. 386.)

Mr. Storey very well said in his testimony:

"If Mr. Brandeis had come before the committee and said he was there in the interests of an illustrated newspaper that was engaged in pushing this case all the way through, he would have occupied a very different position from that which he apparently occupied when he appeared for a man without means to conduct a great public inquiry." (Hearings, p. 269.)

I call attention in this connection to this further canon of the American Bar Association:

PROFESSIONAL ADVOCACY OTHER THAN BEFORE COURTS.

"A lawyer openly, and in his true character, may render professional services before legislative or other bodies regarding proposed legislation and in advocacy of claims before departments of government, upon the same principles of government, upon the same principle of ethics, which justify his appearance before the courts; but it is unprofessional for a lawyer so engaged to conceal his attorneyship, or to employ secret personal solicitations, or to use means other than those addressed to the reason and understanding to influence action."

THE WARREN CASE.

S. D. Warren died May 2, 1888, leaving property consisting mainly of book-paper manufacturing mills of the value of something like $2,000,000. He disposed of the property by will, five-fifteenths to his widow and two-fifteenths to each of his five children. He had a partner, Mortimer B. Mason, in the paper business, whose interest was limited. He was, under the partnership, allowed to draw out of the firm only $15,000 a year, and his interest was terminated at the death of Warren.

"The year Mr. Warren died the property yielded a profit of $460,000, and the business had yielded the year prior over $400,000, and had been up considerably above a quarter of a million, and all the time, I think, above $300,000 for eight years preceding." (Testimony of Youngman, hearings, p. 463.)

Mr. Warren left a widow, Susan C. Warren, and five children—S. D. Warren, jr., Fiske Warren, Edward P. Warren, Henry Warren, and Cornelia I. Warren. The oldest child, S. D. Warren, jr., was a lawyer and the partner of Mr. Brandeis. All of the heirs joined in a bill of sale of the personal property connected with the mills to S. D. Warren, M. B. Mason, and Fiske Warren—one-third to S. D. Warren, one-half to Mason, and one-sixth to Fiske Warren as partners. (Hearings, p. 548.)

Then by conveyance, through John E. Warren, they conveyed the mill property to Susan C Warren, S. D. Warren, and M. B. Mason in trust. The declaration of trust provides:

"Second. The trustees shall themselves manage and conduct the business of said mills and the other property at any time held in trust, with full powers to do all things needful or proper in the conduct thereof, or, in their discretion, they may lease said property or any part thereof; and they are hereby empowered to lease the same, or any part thereof, among others, to a partnership or organization in which they themselves, or some of them, are partners or members, or to some person or persons who shall sublease or assign the lease to such a partnership or organization, on such terms as may be proper for the interests of all the beneficiaries." (Hearings, pp. 549, 550.)

It was also provided that the trust should continue for 33 years, but that the trustees might terminate it at their sole discretion and put an end to the trust and reconvey the property. (Hearings, p. 551.)

No option to terminate the trust was given to the beneficiaries of the trust. So if the business under a lease that was undoubtedly then in contemplation should prove profitable the trust might continue to the end of the 33 years; if not, the property could be thrown back upon the heirs of the estate.

The declaration of trust was executed May 29, 1889, and was signed by the three trustees only.

On the following day the trustees executed a lease of the property to Louis D. Brandeis. (Hearings, p. 553.)

The lease provided:

"To have and to hold the said premises hereby leased unto the said Brandeis and his representatives at the will of the lessors, but subject to be determined by a one year's notice in writing, no shorter notice being allowed except for default of the said Brandeis on his covenants as hereinafter provided.

"Yielding and paying therefor (except only in case of fire and other casualties hereinafter mentioned) yearly as rent a sum equal to the interest at 6 per cent per annum on the value of the premises hereby leased, as they appear in the books of the said trustees at any time (the said part rental for any year or for any period to which the account is made up being the balance of the interest account kept with said properties hereby leased on the books of the trustees after all debits and credits are made), plus a sum equivalent to 50 per cent of the net profits made by the use of the property hereby leased, after allowing a reasonable per cent as commission and guaranty on sales (over and above the interest at 6 per cent hereinbefore provided for).

"It is hereby understood and agreed that the said Brandeis may assign this lease and the interest thereunder to a copartnership consisting of Samuel D. Warren, Mortimer B. Mason, and Fiske Warren, to conduct the business heretofore carried on under the name of S. D. Warren & Co. under the same name." (Hearings, p. 553.)

It is quite evident that these several instruments were executed in pursuance of a previous understanding that this lease should finally be made. Whether the exact terms of the trust and of the lease, neither of which was signed by the heirs of the estate, were understood and agreed upon, the evidence does not disclose.

In pursuance of the authority given in the lease to him, Mr. Brandeis assigned the same to S. D. Warren, M. B. Mason, and Fiske Warren, who took possession of the mills and operated them for many years under the lease.

Subsequently Edward P. Warren became dissatisfied with the transaction and the operation of the mills and brought his action December 19, 1909, against the lessees for an accounting. (Hearings, p. 894.)

The substance of the bill, so far as it affects the question before the committee, is that S. D. Warren and Mr. Brandeis, his partner, devised a scheme for placing the property in trust and for leasing the same to Mr. Warren and others; that Warren's interests under the lease, as he knew, would come in conflict with the other heirs; that in furtherance of the scheme Warren also procured from his brother Edward, plaintiff in the action, a general power of attorney to represent him; that the interests of the beneficiaries under the trust were not properly protected under the trust; that Warren violated his duty as such trustee and committed many breaches of trust, which are enumerated. Amongst other things, it is alleged:

"The plaintiff says that the said trustees, acting under the advice and direction of the said Samuel D. Warren, overlooked the fact that it was their duty to have the advice of an independent attorney owing no duty to any persons having interests adverse to those of the beneficiaries represented by the trustees and employ constantly the same attorney who was employed by the lessees, namely, the business associate and legal adviser of said Samuel D. Warren, Louis D. Brandeis, Esq., and the law firm of which he was the principal member. That said trustees have paid to the said Louis D. Brandeis and to his law firm during the period from 1889 down to the present time upward of $40,000 out of the assets of said trust, and during the said period the said lessees have paid a like amount for services rendered to the copartnership consisting of the same Samuel D. Warren and Mortimer B. Mason, trustees as aforesaid, the other copartner, Fiske Warren, having only a small interest."

And, again:

"In preparing said lease said trustees, under the guidance and direction of the defendant, Samuel D. Warren, having regard chiefly to the personal interests of the said Samuel D. Warren and his copartnership and disregarding the interests of the beneficiaries under said trust, provided that said copartnership should be entitled to receive out of the gross income of the business a commission which should be deducted before arriving at the net profits. Said commission and net profits received by the said Samuel D. Warren and the said Mortimer B. Mason as copartners as aforesaid during the first five years after the creation of the trust, to wit, from 1889 to 1894, amounted to upward of $900,000. The commission alone of said partnership during the period from 1889 down to the present time has amounted to upward of $1,200,000, being an amount entirely disproportionate to any services rendered by said copartnership, or by any member thereof in view of the other sums received by said copartnership and its members in the way of profits and otherwise from the gross income of the business." (Hearings, p. 896.)

And further:

"The plaintiff says that equity considers the substance of matters and not their form. That the scheme planned by the defendant, Samuel D. Warren, and adopted under his guidance, was in substance that the property should be managed and the business carried on by himself and in his cotrustee, Mortimer B. Mason, for the benefit of the widow and children of Samuel Dennis Warren. That under this arrangement it was not permissible that the said Samuel D. Warren and the said Mortimer B. Mason to take for their own services more than a reasonable compensation upward of $2,024,700, being $1,024,700 more than can be considered reasonable in any aspect of the case. That the taking of this excessive amount amounted to a very serious breach of trust. That the plaintiff is informed and believes that the said Samuel D. Warren, his copartner, Mortimer B. Mason, having been incapacitated by reason of his illness aforesaid, resulting in his death during the current year as aforesaid, has planned to take out of the business in the way of commissions and profits (in addition to his share as a beneficiary) upward of $100,000 for the year ending December 31, 1909, and will take said sum or a larger amount at the end of the year 1909 unless prevented from so doing by this court." (Hearings, p. 898.)

There were other allegations of breaches of the trust, but those set out will suffice to show what was the nature of the action.

The case went to trial but before the end of the trial it was compromised by the heirs of S. D. Warren, who had died in the meantime, and others, paying Edward P. Warren, the plaintiff, a large sum of money and taking over his interest in the property and the business.

During all the time after the death of S. D. Warren, sr., until Edward P. Warren brought his action or was preparing to bring it, Mr. Brandeis was the attorney for and representing all the interests concerned including the settlement of the Warren estate, the trustees under the trust, the lessors, and the lessees under the lease, and, as included in these, the interests of all the heirs of the estate and was paid for the services rendered by him for each and all of them and that his firm had received $40,000 for services to the trustees and a like amount from the lessees of said trustees as charged in the bill of complaint. It is not necessary to go into the details of the charges made in this respect. There is no evidence to show that there was any corrupt conspiracy between Mr. Brandeis and his partner, S. D. Warren, to defraud or take any undue advantage of the other heirs of the estate. It was agreed at the hearings, by all parties concerned, that Mr. Warren was a highly honorable and trustworthy man as well as an able lawyer. It does not seem reasonable that such a man would knowingly enter into any scheme to injure his brothers and sisters.

There is no doubt that the lease was very favorable to the lessees but it is only fair to presume, in the absence of evidence to the contrary, that both Mr. Warren and Mr. Brandeis, in good faith, believed the terms of the lease to be justifiable under the circumstances. This leaves the question of the right or the propriety of an attorney representing two wholly adverse and conflicting interests at the same time under retainer and pay of both.

This raises a question about which there may very reasonably be differences of opinion. Mr. Storey, who testified against Mr. Brandeis, did not think it was wrong, and said he might have done the same thing. (Hearings, p. 279.)

But when asked whether it was not the common practice for a lawyer who had the confidence of all the parties to undertake to represent all of them although, eventually, the interests may be disclosed to be in a sense conflicting, he said, "I think it is a common practice but I think a bad practice." (Hearings, p. 279.)

Afterwards Mr. Storey explained and limited this statement by letter.

Mr. Whipple took the position that Mr. Brandeis was "possibly careless in not making very, very clear to Mr. Edward Warren just the whole transaction and its possible effect upon his rights." (Hearings, p. 284.)

His full statement on the subject I have already given.

Mr. Bailey and Mr. Youngman, who represented Mr. Edward Warren in the litigation, both regarded the course taken by Mr. Brandeis as absolutely wrong. (Hearings, pp. 138, 141, 471, 474.)

And Mr. Youngman testified that Mr. Storey was not present except one day during the trial; was only nominally an attorney in the case for Fiske Warren, who was not actually contesting the case one way or the other.

All of these gentlemen are capable and honorable members of the profession. The one thing that appeals to me as the most serious question of not only propriety, but of legal right, is the fact that when a conflict did arise between the parties whom he had up to that time represented and a suit was brought by one of them against the other, Mr. Brandeis should accept employment for one of his former clients against the other. The detailed information that he must have acquired from his long connection with the whole matter from the beginning to the end gave him an immense advantage over opposing counsel. Besides this, his confidential relations with Edward Warren, evidenced by correspondence that had taken place between them as attorney and client, regarding the matters in litigation, should, it seems to me, have excluded him from any participation in the controversy. Up to the time of making the lease I see no serious ground of complaint of Mr. Brandeis's course. When the lease was made the interests of the parties became antagonistic, and they could not be properly and ligitimately served by the same attorney. It was complained that he neglected his duty to Edward Warren by not keeping him fully informed of what was going on and of his rights.

It is not unusual for attorneys to advise a whole family respecting their business affairs when there is no disagreement between them. I think, as Mr. Storey said, it is a bad practice, that may bring an attorney, however conscientious he may be, into an unfortunate and awkward situation and arouse criticism. That was just what happened in this instance, and when it happened the only true course to take was to decline, as soon as the difference arose between his clients, to represent either of them. The failure of Mr. Brandeis to take this course was the gravest mistake he made.

It appears from the testimony of Mr. McClennen, Mr. Brandeis's partner, that for 21 years their firm drew an annual salary from the trustees under the trust, and the lessees from them whose interests were, of course, in direct conflict. The salary was $5,000 a year for part of the time, and then $4,000, amounting in the aggregate to something like $90,000, and was divided between the two. (Hearings, p. 1258.)

This continued up to the time when Edward P. Warren brought his suit, when the firm took the side of one of the interests, by which it had been employed and paid, against one of the beneficiaries under the other, by which it had also been employed and paid.

The real controversy was between one of the beneficiaries under the trust and heir to the estate, also represented by the firm, against the lessees, but if it had been between the beneficiary and the trustees the appearance by Mr. Brandeis would have been equally objectionable.

I can not see how this course of conduct can be justified or excused.

THE ILLINOIS CENTRAL RAILROAD CASE.

A contest was on between Stuyvesant Fish and E. W. Harriman involving the election of a board of directors for the Illinois Central Railroad and the control of the road. They were each making strenuous efforts to secure enough proxies from stockholders to control the situation. Waddill Catchings, representing the Harriman interests, employed the firm of Mr. Brandeis to aid him in securing such proxies. It seems to have been understood that Mr. Nutter, of the firm, should have charge of the work. But Mr. Brandeis was consulted with in the beginning and approved of the employment of the firm for that purpose, was fully advised in the matter, and consented that the firm act in that capacity. (Catchings's testimony, hearings, pp. 396, 342.)

The nature of the employment and the work done is fully explained by Mr. Catchings. (Hearings, p. 342.)

He testified that the sole connection of Mr. Brandeis was to give his approval to the employment of the firm. (Hearings, p. 343.)

But this appears to be a mistake.

Mr. Francis Peabody testified that a young lawyer came to him to get his proxy; that he told him he had already given it to Mr. Fish, and that he did not approve of the effort to remove Mr. Fish and that he replied:

"'Well, Mr. Brandeis says that he is a personal friend of yours,' which was true, 'and he asked me to say to you that he would like to have you give a proxy,' which would have the effect of revoking my former proxy, in the Harriman interests, and that if you are unwilling to do so he personally will come over and see you.' I said, 'My mind is quite made up about it. He said, 'Mr. Brandeis told me to say to you that he would like to come over and see you about it; and may I use your telephone?' I said 'Yes; you can use my telephone, but it is perfectly useless; nothing i am quite certain, that Mr. Brandeis could tell me in the way of argument would induce me to change my proxy, as I have implicit faith in Mr. Fish.'" (Hearings, p. 750.)

So it seems that Mr. Brandeis was taking part actively in the hunt for Harriman votes.

In another matter that will be taken up later Mr. Joseph B. Warner accused Mr. Brandeis of having represented Mr. Harriman as his attorney. In the so-called Merger case Mr. Warner said:

"That was the situation when this report was made. Since that they have done a good deal more. They have acquired the Illinois Central Railroad, the control of it, he has, and I suppose nobody could tell us more definitely about that than the attorney who is managing the antimortgage cause, for I understand that it was he who solicited for Mr. Harriman the proxies which enabled him to get the control of the Illinois Central Railroad, so far as Massachusetts stockholders were concerned. So we have the interesting spectacle of the same gentleman declaiming against monopoly in the afternoon and evening, and declaring for it in the morning, in both cases, I assume, without pay, but in each case addressing the people of Massachusetts." (Hearings, p. 635.)

From the manner in which the subject was treated by both Mr. Warner and Mr. Brandeis it must have been regarded as discreditable to have accepted such employment. At all events Mr. Brandeis wrote a letter denying the imputation, in which he said:

"Mr. Warner said, in effect, that I was acting and had acted as counsel for Mr. Harriman. That statement is absolutely untrue in every respect. I have never acted, directly or indirectly, for Mr. Harriman or communicated directly or indirectly with him, or with anyone who represented him directly or indirectly; nor have I acted, so far as I know, directly or indirectly for any company with which Mr. Harriman has ever been connected. No one connected with my firm has ever acted directly or indirectly for Mr. Harriman or for any company with which Mr. Harriman was connected, except as follows:

"On November 22, 1907, a representative of the firm of Sullivan & Cromwell, of New York, for whom we have acted from time to time for nearly 15 years, requested my partner, Mr. Nutter, to aid him in connection with obtaining proxies for the annual meeting of the Illinois Central. Mr. Nutter, in the presence of Sullivan & Cromwell's representative, asked me on that day whether there was anything in my merger fight which should prevent his acting in that matter, and I told him none whatever; that so far as I knew Mr. Harriman had no interest of any kind in the merger question.

"Mr. Nutter did act for Messrs. Sullivan & Cromwell, and either he or persons employed by him solicited in the most open manner during the course of several months proxies, applying, among others, to many gentlemen who were known to be most actively in favor of the merger.

"If the judgment of Mr. Warner and his associates were not entirely obscured by prejudice so as to quite overcrowd their reason, they would have found, in the fact that Mr. Nutter did act most publicly in the matter of soliciting proxies for the Illinois Central meeting, the strongest evidence that in this merger matter I could by no possibility be representing Mr. Harriman, rather than the reverse." (Hearings, p. 352.)

Disconnected with other matters to be considered later, this is the case made in this instance. There might be some question of the propriety of a firm of lawyers accepting employment of that kind, but it seems to me to be rather a question of taste. The other issue is one of veracity.

WRECKING THE NEW ENGLAND ROAD.

The charge is made that the New Haven road undertook to destroy the New England road as a competitor, and finally succeeded. That Mr. Brandeis was instrumental in bringing about that result, and brought a number of suits in different States in the effort to carry out that purpose. Mr. Brandeis's part in it, if that was the object of the suits, is thus stated by Mr. Moorfield Storey, who was then the attorney for the New England road:

"Mr. Brandeis, acting apparently or ostensibly for one N. F. Goldsmith and his partner, Mr. Keith, and one, Mr. Lotham, brought a series of bills, 10 in number, in Boston, in Rhode Island, and in Connecticut, aimed to paralyze the financial operations of the New England Railroad. One suit was brought for the purpose of preventing the payment of the dividends of the preferred stock, another was brought to prevent the issue of mortgage bonds. The New England Railroad had bonds which were paying 5 or 6 per cent and 6 or 7 per cent, and they desired to refund, and one of their purposes was to issue more bonds. Another suit was brought to attack their leases of certain branch lines, and in all 10 suits were brought.

"In the spring of 1893 the Legislature of Massachusetts, first at the instance of certain dealers in produce, and afterwards giving the investigation a broader scope, appointed a committee to consider what the relations between these two railroads were, and I conducted the hearing. Mr. Brandeis testified that he was the main counsel; that the other counsel had acted under his direction. He testified that Messrs. Arling, Webb, and Moorehouse, Connecticut lawyers, were acting under his direction, and that the bills they brought were drawn in his office, and that he was the counsel in charge. He said that scarcely a day passed for six months that he had not had something to do with those suits. The result of it was that the credit of the New England Railroad was destroyed; its financial operations were impaired, and its sources of revenue were cut off, except so far as they came from earnings; and, in the fall of 1893, the corporation went into the hands of a receiver, from which it emerged as a part of the New Haven Railroad. At the investigation I undertook to find out for whom Mr. Brandeis was acting, and he finally said that his client was Goldsmith. I asked who paid the bills, whereupon he declined to answer, saying that was a privileged question. I suggested that it perhaps was not and he cited some authorities and stated he would consider it. That occurred on one day and the next day he was away from Massachusetts, as he testified—I think in New York—and the third day he came back and told us. He began by saying that 'While I am perfectly willing to give this information to the committee, I want it to be agreed by Mr. Storey that it shall not be given out in any other investigation.' Here was his statement:

"'We are willing to give the information to the public so far as the public needs it, or the legislature needs it, but we are not willing to be compelled before this tribunal to give testimony which will prejudice our case in court.'

"He wanted me to sign a written agreement that the testimony he gave there should not be used in these cases. But after I pointed out that I could not very well see how any legitimate statement as to his clients would prejudice his case he decided on the whole that he would not insist upon it. Thereupon it turned out that Mr. Goldsmith was the owner of about 60 shares of stock, worth at that time about $3,000, and by no means in a position to incur the expense of six months' employment of counsel in Massachusetts, in Connecticut, and in Rhode Island in the briging of 10 suits. The bills which were brought forward were bills brought in the name of Goldsmith and such other stockholders as should see fit to join. They stood before the court and were pressing their suits brought by the stockholders in their own interests to prevent transactions which were pending and threatening to injure the value of their stock. It was perfectly apparent. It turned out on examination that a man named Judge Kelly, from New York, had come on there and consulted Mr. Carling (?), who was president of the Magee Finance Co., and they had employed Brandeis. The question arose as to whose name the suit should be brought in, and Mr. Carling ran over the list of stockholders, and they finally applied to somebody, whose name was not disclosed, who refused to allow his name to be used. Then it was that Mr. Goldsmith, a liquor dealer of Boston, was applied to, and apparently they promised him a considerable sum of money for the use of his name. His name was accordingly used. When I asked Mr. Brandeis who was his client, he gave the name of Goldsmith and also gave the name Coburn. When I asked if he ever made any charge to those people on his books, he said no. I asked him to whom he did make his charges and he said he made them to Kelly, or they were paid through Kelly.

"Senator CHILTON. Who was Kelly?

"Mr. STOREY. The lawyer who came on from New York representing somebody.

"Mr. ANDERSON. Now one of the supreme court judges of New York.

"Mr. STOREY. Yes; at that time acting as counsel.

"Senator WALSH. Representing whom?

"Mr. STOREY. His name was William J. Kelly, I think.

"In the fall of 1892 apparently, as the correspondence which I have seen shows, Mr. Kelly seemed to lose his interest in the suit, and Messrs. Arling, Webb & Moorhouse, after writing to him, applied directly to the New Haven road for instructions, and from that time on the litigation was carried on by them. In the course of that litigation it became necessary that a bond should be given to indemnify the defendants where an injunction was to be issued to prevent the registration of certain bonds. The bond was in the sum of $25,000. The New Haven road furnished security, and Mr. Coburn gave the bond, and the security was signed by Messrs. Tuttle—afterwards president—Charles P. Clark, president, and Mr. J. Pierpont Morgan, and Mr. William Rockefeller. From that time on the suits were carried on, not resulting in any hearings, because the company went into the hands of a receiver before the cases came on for hearing." (Hearings, p. 264.)

He says further on this subject:

"It is apparent to me that it was clear to Mr. Brandeis that these ostensible parties were not his clients. He never regarded them as such. He never made any charge to them. He took his directions entirely from somebody representing an outside person. That outside person may have been Coburn or may have been the New Haven Railroad. In any event, it was not the somebody who was the ostensible party he was representing. That somebody was either interested in the New England road or he was not. If he was interested in the New England Railroad, there was no earthly reason why his name should not be used in those suits. If he was not interested in the New England Railroad, then it was clear that some outside influence, some outside person, for a reason unwilling to disclose himself or itself, was working to injure the New England Railroad and working effectively, industriously, persistently." (Hearings, p. 266.)

And again:

"It appeared afterwards and appeared at the trial of the New Haven directors that this agreement, of which I have spoken as made, and I have seen this week that the New Haven Railroad paid Moore, Webb & Arling something like $27,000 for services and expenses in the suit, and that after Mr. Corbin's death and Mr. Goldsmith's death the administrators of the Goldsmith estate brought suit against the Corbin estate, alleging that he had been promised a large and liberal compensation for the use of his name, and the New Haven Railroad settled that case by the payment of $10,000."

It was further shown that in the actions lately brought by the Government against the directors of the New Haven road one of the charges made was that the Goldsmith suits were brought in the interest of the New Haven road for the purpose of destroying its competitor, the New England Railroad. (Hearings, p. 267.)

Mr. Storey summed up his views on the subject as follows:

"In the New England case you have the facts that the suits were calculated to wreck the New England, that they had that effect, that they were paid for by the New Haven; that the ostensible parties were not the real parties, and that Mr. Brandeis was unwilling to disclose who the real parties were." (Hearings, p. 270.)

Extracts from the petition and other proceedings in the United States *v.* New Haven & Hartford Railroad Co. and the criminal action against William Rockefeller et al. were introduced in evidence at the hearings.

They show the prominence that was given to the charges above referred to, including the bringing of the Goldsmith suits as means of wrecking the New England road. (Hearings, pp. 415, 420.)

In the Rockefeller case Mr. Batts, one of the counsel, thus characterized the efforts of the New Haven to destroy its competitor:

"There is also no question that while that competitive condition existed, and by methods that are so very wrong, so entirely without the range of decency and legality, that under the improved morals brought about by the several acts passed by the Congress of the United States, they would not even be thought of at the present time by men engaged even in the railroad business. There is this, at least, to be said about the New England: If these methods had not been pursued, and the New England Railroad had been permitted to do the financing with these suits that Mr. Rockefeller and Mr. Morgan helped to maintain, and by that word 'maintain' I am now using it in a sense which indicates an illegal maintenance—if, I say, the New England road had not been subjected to these illegal, immoral influences, there is at least the possibility at this time that there would have been two active competitors, two efficient roads, serving the people of New York and the people of Boston in matters of passenger service and everything else."

Mr. Brandeis's testimony before the committee of the Massachusetts Legislature regarding this transaction will also be found in the record. (Hearings, p. 421 and on.)

The testimony is very long and can not be inserted here. It deserves the careful attention of the committee as giving fully Mr. Brandeis's account of his connection with the Goldsmith suits. That the New Haven finally took over these suits and became liable for all expenses in connection with them and gave a required bond of $25,000 is clearly shown. The suits, while brought in the name of Goldsmith and others, were in fact instigated and carried on at the expense of one Austin C. Corbin, who obligated himself to pay all of the expenses of the litigation, as I shall presently show. Who Corbin acted for in the beginning is not shown, but that the New Haven finally took his place and made itself responsible for the further prosecutions and management of the cases can not be doubted.

The following correspondence used as exhibits in the Government suits discloses this:

NEW YORK, *January 23, 1893.*

To AUSTIN C. CORBIN,
New York:

We are informed that there is a proceeding or suit in Connecticut, wherein one H. L. Knowlton and N. F. Goldsmith & Co. are plaintiffs, in which it is sought to enjoin the comptroller from registering $2,000,000 of bonds of the New York & New England Railroad Co., and the court will enjoin the registry until the case is decided, on condition that a bond for $25,000 is given to cover any costs or damages that may be awarded to the defendants by reason of the granting of such injunction. We desire to have such bond given, and if you will procure it to be furnished, we agree to pay any costs or damages that may be awarded and will indemnify and save you harmless from all loss by reason of such litigation, we being consulted as to its management.

LUCIUS TUTTLE.
WILLIAM ROCKEFELLER.
J. PIERPONT MORGAN.
CHAS. P. CLARK.

(1630, 1631.)

APRIL 12, 1898.

J. PIERPONT MORGAN, Esq.,
Post-Office Box 3036, New York.

MY DEAR MR. MORGAN: Acknowledging your favor of the 11th instant, I beg to assure you that you need pay no attention to the Corbin suit, as we will assume all care and responsibility in that matter, and it is now in the hands of our counsel, who will give it all the attention the case demands. I am very glad to know of your safe return and good health.

Yours, sincerely,

JOHN M. HALL, *Vice President.*

—

JULY 8, 1898.

Hon. LYNDE HARRISON,
New Haven, Conn.

MY DEAR JUDGE: Referring to your favor of the 5th instant, I beg leave to say that I will endeavor to obtain from Mr. Kochersperger a statement of the dates and the amounts paid by our company on account of the Goldsmith matter, etc., very soon. * * *

JOHN M. HALL, *Vice President.*

—

NOVEMBER 29, 1898.

Hon. LYNDE HARRISON,
New Haven, Conn.

DEAR JUDGE: Answering yours 19th, regarding expenses in the Goldsmith litigation, I would say that Mr. Kochersperger has finally picked them out and the aggregate is $7,074.73.

Yours, truly,

JOHN M. HALL, *Vice President.*

—

AUGUST 4, 1898.

Mr. WILLIAM ROCKEFELLER,
26 Broadway, New York.

MY DEAR MR. ROCKEFELLER: Your statement of purchases and sales of N. H. & N. E. stock was duly received. Please find check herewith to balance that account, and also accept the thanks of the company for the financial assistance rendered by you in bringing this important matter to a successful conclusion.

Time alone can determine the financial benefit accruing to our company by the acquisition of the New England road, which we all agree never should have been built. I am confident any benefits to be derived from its possession will be chiefly the prevention of competition rather than from its operation.

I am clear, however, that the greatest possible economies ought to be exercised in the management of that property in connection with our own and that such a policy will alone prevent the New England Railroad becoming a very serious burden to us. * * *

Yours, very truly,

JOHN M. HALL, *Vice President.*

(1633–1640.)

—

WILLIAM ROCKEFELLER, Esq.,
26 Broadway, New York.

DEAR SIR: * * * There is no reason whatever why Harrison should have troubled you with this matter, and if you will kindly refer him direct to me, I will endeavor to see that this matter is properly disposed of, when it can be done on a fair basis. The claim of these parties is simply a blackmailing scheme, got up after Mr. Corbin's death, to secure money from Mr. Corbin's estate, and incidentally from us, to such extent as we guaranteed Mr. Corbin for disbursements and services in the old suit of Goldsmith against the New England Railroad Co., which was proceeded with to stop the issuance of additional funds of the New England Railroad Co., and which resulted in preventing the New England Railroad Co. from issuing the large number of bonds which we, as purchasers of the New England Railroad Co., would have had to assume if they had succeeded in issuing them. Whatever we pay in settling this suit, even if it amounts to the whole demand, would be justified on account of the benefits secured by the suit in question. * * *

Yours, very truly,

JOHN M. HALL.

(1650–1653.)

(Hearings, pp. 449–452.)

The blackmailing scheme referred to by Mr. Hall evidently refers to an action brought by the estate of Goldsmith against the estate of Corbin to recover advances made by the former to carry on the suits, which will be further noticed presently.

We have then the testimony of Hon. William J. Kelly, then a practicing lawyer, now a judge of the Superior Court of New York. (Hearings, p. 403.)

Judge Kelly was employed by Corbin. For some reason Corbin did not want to bring the suits in his own name. So he, assisted by Judge Kelly, secured Goldsmith and others to bring them, Corbin obligating himself to pay all expenses and protect Goldsmith from liability. Corbin had been a member of the board of directors and president of the New England road. Judge Kelly says, after reciting the difficulties and dissensions between Corbin and other members of the board of directors:

"Mr. Corbin was a very positive man in his ways; he was very much provoked and annoyed; and when he got out of the New England Railroad he said there was only one thing he should do, in view of the condition of the road and in view of the fact that the directors in the road had used their position, and were using it, for the purpose of benefiting themselves at the expense of the road; that there was only one thing to do, and that was to bring proceedings to put the road into the hands of a receiver for the protection of the stockholders and the second-mortgage bondholders. That is when he came to me about these litigations. That is when I saw Mr. Brandeis first. I went to Boston and I saw Mr. Brandeis, and employed him to assist me in the matter. Bills of complaint were drawn in Massachusetts and Connecticut and New York to put this road in the hands of a receiver, in which the charges to which I refer were set forth in detail; the fact that the road was insolvent; that its operating expenses exceeded its earnings long before these suits were started." (Hearings, p. 405.)

So the avowed purpose for which Mr. Brandeis was employed was to put the road in the hands of a receiver, which, under the circumstances, was to wreck it. This being so, it was not surprising that Corbin, who was a man of wealth and influence, should want to conceal his part in it and hide behind a small stockholder.

Their first step was to prevent the company from paying dividends or issuing bonds. The litigation was kept on foot until, in 1894, a

mortgage was foreclosed, when, as Judge Kelly says, "the Goldsmith litigations and all these various Corbin litigations ceased." (Hearings, p. 405.)

Evidently they had served their purpose. Corbin had turned the cases over to the New Haven road, that road guaranteeing the payment of all expenses.

When asked whether, at the time, there was any scheme on foot on the part of the New Haven to wreck the New York & New England, Judge Kelly said:

"I do not know anything about it, sir. I had nothing to do with the New Haven Railroad at all at the time of the beginning of these litigations; absolutely nothing to do with it. Mr. Corbin's position was antagonistic to them at that time. He had expected to carry on the New England Railroad, sir. It was long after that that the New Haven road had anything to do with these litigations. The end of 1893 or 1894 was the first time they had any connection with these litigations, and that was when the foreclosure suit was pending or imminent, when these litigations were of no service to anybody." (Hearings, p. 406.)

He also says that Mr. Brandeis was not employed to wreck the New England Railroad and that "the reason he was employed was to show that the New England Railroad was wrecked at that time and to prevent the further distribution of the corporate assets among certain of the directors," which would amount to practically the same thing in the interest of the New Haven road and accomplished the desired result as above set out. The New England road was wrecked, and it was taken over by the New Haven. The preliminary proceedings involving temporary injunctions tying up the activities of the road were successful, and when this was accomplished the litigation was no longer pushed but waited until the mortgage was foreclosed against which the New England, tied up as it was by the pending litigation, was helpless to protect itself. Whether, if let alone, it could have survived there is no proof nor can anyone tell. But it is certain that it could not with this obstructing litigation pending. It became an easy victim of the New Haven road. And that this was just what was intended is evident from the events as they followed each other, culminating at last in the New Haven taking over the litigation of Corbin's dummy. (Hearings, p. 407.)

Judge Kelly also testifies that Goldsmith's estate sued the Corbin estate for his expenses, and those expenses were paid by the New Haven road. (Hearings, p. 408.)

The suits brought and the nature of them are also explained by him. (Hearings, p. 409.)

It is clearly shown that as soon as the road was reduced to a state of helplessness, Corbin lost interest in it and did not want to put any more money into the litigation. This is quite evident from Judge Kelly's testimony. (Hearings, p. 411.)

Corbin first indemnified Goldsmith to induce him to commence the litigation, and then the New Haven road guaranteed payment of all expenses to induce Corbin to keep it going, and the attorneys were serving them throughout. They were all playing into the hands of the New Haven road and wrecking the New England for the benefit of the New Haven.

That this was the intention of Corbin from the beginning I have no doubt. Everything points in that direction. Judge Kelly says he did not know it. It is only fair to say that Mr. Brandeis did not. But the effect of such litigation was so transparently for the purpose of wrecking the New England road that it should have made a prudent and careful attorney suspicious that his services were being used for an improper purpose. He should have been doubly cautious and on his guard when he knew that the nominal plaintiff was not his client, but that some one else, whose identity was concealed, had employed and was paying him for appearing.

It has been altogether too common, I am afraid, to bring suits in this way. It is a practice that should be condemned. It is a deception on the court and one means of encouraging and promoting litigation. If Mr. Corbin had been compelled to bring the suits in his own name, they probably would not have been brought at all. It would have been a commendable and highly proper thing for his attorney to have said to him, "I will bring these suits in your own name, if you desire it, but I will not accept a retainer from you to prosecute them in the name of another man who is only your dummy and would not prosecute them at his own expense."

THE EQUITABLE LIFE ASSURANCE SOCIETY CASE.

This case presents a remarkable state of affairs. Mr. Fox, one of the attorneys before the committee, thus stated the case:

"Mr. Fox. The situation is this: It develops the utterances by Mr. Brandeis in the speech before a certain organization in Boston, at the time he was acting as and published as being made by 'counsel' to a certain protective association, composed of persons who were policyholders in the Equitable Society, were incorporated in this court paper which he filed, in effect. Among these apparently was Mr. McSweeney, and we find Brandeis, Dunbar & Nutter paid by Mr. McSweeney, one of the policyholders, for services in connection with his policy, a certain amount. We shall, we suppose, through Mr. McClennen, with the aid of Mr. Anderson, prove a little more precisely the organization of this protective association. We then find later that the utterances or the acts which Mr. Brandeis charged in his speech as an individual as being iniquitous, he defends as counsel for the Equitable, taking a position at one time precisely contrary to the position taken later, not only as regards the legality, but the morality." (Hearings, p. 680).

Some of the stockholders of the company, being dissatisfied with the management, organized amongst themselves a protective association, so called. Mr. Brandeis espoused the cause of these complaining stockholders and acted as secretary and adviser of the association without compensation. (Testimony of Whitman, p. 972.)

Mr. Whitman says the action of the stockholders was friendly and for the benefit of the company. As evidence of the state of comity existing and the friendly nature of the movement I quote from a speech delivered by Mr. Brandeis before the Commercial Club of Boston, October 26, 1905:

"Mr. President and gentlemen, eight months ago dissension among guilty officers of the Equitable Life Assurance Society first directed public attention to the conduct of the life insurance business. Since then the disclosures of financial depravity have aroused widespread indignation; but even then the importance of the subject is not generally realized. * * *

"Such is the power which the American people have intrusted to the managers of these large companies. How has it been exercised? Substantially as all irresponsible power since the beginning of the world—selfishly, dishonestly, and in the long run, inefficiently. The breaches of trust committed or permitted by men of high financial reputation, the disclosure of the payment of exorbitant salaries and commissions, the illegal participation in syndicate profits, the persistent perversion of sacred trust funds to political purposes, the cooperation of the large New York companies to control the legislatures of the country—these disclosures are indeed distressing; but the practice of deliberate and persistent deception of the public which the testimony discloses, though less dramatic, is even more serious. * * *

"In the case of common criminals flight is accepted as confession of guilt. With financiers and business men falsification of books has hitherto been considered the strongest evidence of guilt. Yet the falsification of the books of these companies has been a persistent practice. Secret ledgers have been opened in which were entered questionable investments and more questionable expenditures. Hundreds of thousands spent "for legislative purposes" were charged up in real estate account. So elaborate has been the system of fraudulent entries that after months of investigation the particular form of rascality embodied in the Equitable's $685,000 Mercantile Trust Co. so-called "yellow dog" account has not yet been detected.

"The degree of guilt involved in such transactions will be appreciated only when one remembers that the life insurance business beyond all others in the world rests upon confidence—confidence that in the remote, indefinite future the present sacrifice of the policyholder will bring protection to widow and children." (Hearings, p. 668.)

This must have been regarded as a friendly and playful reference to the methods of the company, for Mr. Brandeis was at that time and has been ever since the attorney of the company.

Mr. McClennen, one of the firm, testifies that no complaint whatever was made by the company of Mr. Brandeis's attack upon it. (Hearings, p. 684.)

He testifies also to the continued relation of attorney and client between the company and the firm and names a number of cases in which they appeared for the company all through this trouble and down to this time. (Hearings, pp. 684, 685.)

In one of the cases, namely, Peters *v.* The Equitable Life Assurance Society, the complaint charged some of the very things against the company that Mr. Brandeis so dramatically denounced in his commercial club speech. (See the bill in equity in that case, hearings, p. 670.)

In that case Brandeis, Dunbar & Nutter appeared for the defendant corporation and filed an answer denying all the charges made against it in the bill. (Hearings, p. 676.)

The position of Mr. Brandeis in his public utterances strongly condemning the company and his appearance for the company and his defense of it against like charges seem so inconsistent as to need explanation. Mr. McClennen, a member of the firm, has given his version of it, which is nothing more than a history of the proceedings in the matter without any explanation of their apparently inconsistent positions. (Hearings, pp. 697, 698.)

It appears from his testimony that the case first came to the notice of their firm August 25, 1906, about 10 months after the commercial club speech. It was probably one of the results of that agitation against the company and by rights might well have been prosecuted by Mr. Brandeis to vindicate his charges against the company.

GILLETTE SAFETY RAZOR CO. CASE.

Mr. Brandeis was charged with unprofessional conduct in certain cases concerning the stock of the Gillette Safety Razor Co., and evidence was offered to sustain the charge. I have been unable to see any reasonable ground of complaint of Mr. Brandeis's course in that case, taken as a whole. It was another struggle to get control of a corporation of which so many seemed to fall to the lot of Mr. Brandeis. They generally engender much ill feeling and charges and countercharges of misconduct, as they did in this case.

THE OLD DOMINION COPPER MINING & SMELTING CO. CASE.

This is another case in which Mr. Brandeis incurred the violent displeasure of some of the parties concerned. It began by his employment to oust Mr. Bigelow and his friends from the management of the company on the ground that Bigelow had wrongfully converted to his own use a large and valuable block of the stock of the company. Mr. Brandeis represented the complaining stockholders and his clients were successful in getting control of the company. Mr. Brandeis was then made the general counsel of the reorganized company and Charles Sumner Smith, one of his stockholder clients, became its president. A consolidation or combination of the stock and operations of the Old Colony and the United Globe mines, owned by Phelps Dodge & Co., was proposed and the value of the stock of each of the companies became important. The directors of the Old Colony Co. caused an investigation of the properties of the two companies to be made by an engineer, and received a report from him showing that the stock of the Old Colony Co. was greatly more valuable than the other company. It was claimed that in the effort to induce the stockholders of the Old Dominion Co. to deposit and post their stock with that of the United Globe mines as of equal value this report was concealed for a time from them by the directors, and that this was done with the connivance and under the advice of Mr. Brandeis. There is no evidence to sustain this charge. It appears that Mr. Brandeis had nothing to do with the suppression of the report, and that if he had there was sufficient reason for not making it public at that time, which was done a little later. (See testimony of William F. Fitzgerald and Charles Sumner Smith, hearings, pp. 1227, 1269.)

But another peculiar condition was disclosed in this transaction. After Bigelow was ousted there remained a claim against him for the stock alleged to have been converted by him. In the bringing together of the two companies this claim was not included, but was left to be prosecuted by the Old Colony Copper Mining & Smelting Co. In making the deal a new Old Colony Co. was formed as a holding company with which the stock of the two companies was deposited. Some of the stockholders of the Old Colony Copper Mining & Smelting Co. refused to go into the deal and did not deposit their stock with the holding company. It was left to Mr. Brandeis to work out a scheme that would take care of all parties concerned. In doing so he provided for trustees to handle and pay over to the stockholders the money that might be collected from Bigelow. The president of the Old Colony Copper Mining & Smelting Co., who had been one of Mr. Brandeis's clients in the fight for control of the company, was made one of the two trustees. In the trust agreement it was provided that the trustees should receive for their services 5 per cent of the amount collected on the Bigelow claim. In turn the board of directors agreed with Mr. Brandeis to pay him 10 per cent of any amount collected for his services. The effort to collect from Bigelow was successful, and Mr. Brandeis, with his 10 per cent and some other fees paid him for services in the matter, had received $225,000 for his services and the trustees $45,000 each. Thus the company has paid out for the collection and distribution of this fund to the stockholders $315,000, besides large fees paid to other attorneys employed in New York. (Hearings, p. 1275.)

The trustees had nothing to do with the collection of the money. The suits were brought and prosecuted by the Old Dominion Copper Mining & Smelting Co. All the trustees did was to receive the money and pay it out to the stockholders. The fee received by Mr. Brandeis would seem large, at first blush, but I do not think it was an unreasonable charge. The amount recovered was something over $2,000,000, and the litigation involved the bringing of suits in different State and Federal courts and covered several years reaching the Supreme Court of the United States. But the amount paid the trustees was unconscionable. They had practically nothing to do that could not have been done by any competent clerk or accountant at an expense of a few hundred dollars.

The only reflection that can justly be cast upon Mr. Brandeis in the whole transaction, as I see it, is that he devised this scheme, including the creation of this trust, and himself fixed the compensation of the trustees that has proved to be exorbitant. (Hearings, p. 1274.)

But there is nothing to show and no claim that Mr. Brandeis profited in any way by reason of this fact. He received his own fee, that was, in my judgment, well earned and nothing more.

There is nothing in this charge worthy of serious consideration.

THE MERGER CASE.

The Merger case, so called, was an attempt on the part of the New Haven road to take over and absorb the Boston & Maine. One Mr. Lawrence was a very large stockholder in the Boston & Maine and was opposing the proposed merger and solicited Mr. Brandeis's assistance to prevent it. Mr. Brandeis's position in the matter is thus stated by his partner, Mr. McClennen:

"The desire of the Lawrence interests was to prevent this, I will say, merger, as a short term, to express it. Mr. Brandeis was entirely in sympathy with that, but states that it appeared to him that it was a question of public policy of New England that deeply affected generally New England interests, the interests of the community of New England; that it would involve his taking public positions on the matter, and that he should prefer not to be hampered by being in the state of contemplation. (Hearings, p. 991.)"

So Mr. Brandeis undertook the work as a public duty, but, at the same time, paid the other members of his firm $25,000 out of his own pocket as their fee for the services rendered by him. (Hearings, pp. 992, 995.)

In other words, Mr. Brandeis, by paying his partners a fee, recognized this as services rendered a private individual, but for himself personally he preferred to treat it as a public service that should be rendered without compensation. In this he took precisely the opposite course pursued by him in the Glavis case and one was quite as likely to create suspicion and criticism of his motives as the other. The fact that he was taking this course was concealed as his taking a fee in the Glavis case was concealed. (Hearings, p. 993.)

Naturally, as Mr. Anderson, who acted as Mr. Brandeis's counsel on the hearing though asked to act by the committee, says there "were insinuations in this record that he was appearing in the public interests and also privately." (Hearings, p. 992.)

That was precisely what he was doing. He took up the matter at the instance of Mr. Lawrence, represented his interests, and paid his partners for the services. So far as his appearance for Mr. Lawrence was concerned the situation would not have been in the least different as a matter of principle if Mr. Lawrence had paid the fee to all of the firm instead of his paying it to his partners. The only effect of this course, instead of the unequivocal one of taking compensation from Mr. Lawrence, was that Mr. Lawrence escaped the payment of a fee that was justly due from him and Mr. Brandeis was placed in an equivocal and questionable situation. The natural result was that ostensibly he appeared in the public interests only, and was suspected of bad faith, in that he was believed to be appearing in that way and being paid by private interests. It was just that suspicion that brought the transaction before the committee. On the other hand, if the truth had been made known, as Mr. McClennon now discloses it, the public would have suspected that the money he paid his partners was made up to him in some other way.

It was a position that no attorney should allow himself to occupy, and one that, any way one can look at it, was bound to bring him under suspicion of his motives. Whether such a suspicion was justified or not, it put him in a false situation.

EMPLOYMENT BY LIQUOR DEALERS.

The governor of Massachusetts recommended to the legislature an amendment to the liquor law making it more certain as a means of promoting temperance in that State. Mr. Brandeis "was registered under the law as a" legislative counsel for the Protective Liquor Dealers' Association and the New England Brewers' Association to oppose the legislation. (Hearings, p. 1056.)

This was a long time ago, February, 1891. Public sentiment and individual opinions have greatly changed since then and one can not justly be judged by the present standards in dealing with the sentiments expressed. But the question was not one of prohibition but regulation of the liquor traffic.

Mr. Brandeis offered two drafts of bills favorable to the liquor dealers. (Hearings, pp. 1057, 1058.)

He also delivered a somewhat extended address in favor of his clients. He conceded the great evils flowing from the liquor traffic and that it should be regulated, but contended against the kind of regulation urged by the friends of temperance. (Hearings, p. 1058.)

He said:

"The use of liquor is not a wrong. It is the abuse and not the use which is wrong, and, consequently you must not allow yourself to be carried away by your emotions; you must not be misled by your indignation at the misery which liquor has produced."

He insisted that liquor must and would be sold and drunk, and the only question was, "How can the traffic be conducted with least injury to the inhabitants?" (Hearings, p. 1059.)

And the remedy he insisted upon was, "Make the liquor business respectable."

He said further:

"If you will but recognize facts instead of closing your eyes to them, as these gentlemen of the Law and Order League have done; if you will accept the fact that liquor is desired by a large majority of the voters of the Commonwealth, and consequently that people will sell it; if you will recognize that and will make laws which do not necessarily harrass those engaged in the business; if you will let them conduct it respectably—as a majority of these people desire to conduct their business—if you will permit them to earn, not merely money, but what is more important, the esteem of their fellow men, the whole race of liquor-dealer politicians will soon pass away. The liquor dealers will become as inconspicuous in public life as the butchers and bakers. They will devote their leisure and their means to such enjoyments as others do, instead of seeking to control officials and elections by fair means or by foul. You made the liquor dealers politicians as you made them criminals when you passed laws which were unreasonable and clashed against the habits of the great mass of the people when you made their business precarious; when you selected that class of the community for invidious distinction and persecution. Repeal the obnoxious laws, and, when once you have removed the real cause of this evil—the unhealthy conditions—nature will lend its ever-ready aid, and the body politic will recover." (Hearings, p. 1064.)

The views expressed in this address differ very materially from my own, but I have no doubt they were shared by a very large proportion of the community at that time.

Besides, a man should not be condemned for expressing his views sincerely entertained. The vice of it is that these were not the views of Mr. Brandeis, the citizen, expressed in the public interest. They were the paid-for sentiments of a lawyer advocating a change of the laws of his State in the interests of a business acknowledged by all thinking people to be injurious to the public welfare. It was a great moral question, up for legislation, and upon such no man should appear as the paid attorney of private interests.

PROTESTS.

Many protests against the confirmation of Mr. Brandeis have been received by the committee and recorded in the hearings. First was a list of 61. (Hearings, p. 319.)

Then came 16 others, on separate protests, stating their reasons for objecting to the confirmation. (Hearings, pp. 622, 623.)

They affirm a lack of judicial temperament and that "his reputation among a large number of the members of his own profession and of the people in general is such that he has not their confidence."

Another protest, signed by William H. Taft, Simeon E. Baldwin, Francis Rawle, Joseph H. Choate, Elihu Root, and Moorfield Storey, all of whom have been presidents of the American Bar Association, is in the following language:

"To the SENATE COMMITTEE ON THE JUDICIARY:

"The undersigned feel under the painful duty to say to you that, in their opinion, taking into view the reputation, character, and professional career of Mr. Louis D. Brandeis, he is not a fit person to be a member of the Supreme Court of the United States." (Hearings, p. 1226.)

These protests, coming from men of high standing, many of them lawyers of high rank, should receive consideration in determining our course.

REPUTATION.

The protests to which I have referred placed their opposition in part upon the fact that Mr. Brandeis's reputation among a large part of the members of his own bar and others is not good.

The subcommittee permitted evidence to be adduced bearing upon the question of reputation, but limited the number of witnesses to five on each side. As might be expected, the witnesses differ widely as to this, but all agree that amongst some of the members of the bar and others his reputation is not good. The witnesses for Mr. Brandeis claim that the reputation thus admitted is not general and not well founded. What they say on this subject—all of them admittedly men of standing and integrity, is worthy of attention.

Mr. Bailey gives it as:

"First. That he is a very able lawyer; that he is a man of keen intellect; that he is an able advocate; that he is not entirely trustworthy.' (Hearings, p. 153.)

Mr. Storey:

"I think his reputation is that of a man who is an able lawyer, very energetic, ruthless in the attainment of his objects, not scrupulous in the methods he adopts, and not to be trusted." (Hearings, p. 271.)

Mr. Storey gives the names of a large number of lawyers and others who have expressed themselves unfavorably as to his reputation. (Hearings, p. 273.)

Mr. Whipple, in speaking of the Lennox case, said:

"He was sincere about it, and it illustrates, to my mind, why you have heard about Mr. Brandeis from the Boston bar some things that you have heard. I think they have misunderstood him. That is my personal opinion, and I think if Mr. Brandeis had been a different sort of man, not so aloof, not so isolated, with more of the comradery of the bar; gave his confidence to more men, and took their confidence; said to them, when he was charged with anything that was doubtful, 'Boys, what do you think about it?' and talked it over with them—you would not have heard the things you have heard in regard to him.

"But Mr. Brandeis is aloof; he is intensely centered in carrying out his own ideas and his own ideals, which I believe are pure, which I believe are high-minded; and he does not, so far as I know, consult with anybody or take them into his confidence, and he will do things of a startling character. Nothing could illustrate it better than this Lennox matter." (Hearings, p. 300.)

And, again:

"I think I have stated with sufficient clearness my belief that the opinion which has been expressed with regard to Mr. Brandeis in your hearings is founded upon a misconstruction of Mr. Brandeis's motives, because the thing that colors a man's acts usually is his motive." (Hearings, p. 305.)

And, in speaking of the men who have questioned Mr. Brandeis's reputation, he says:

"As I remember that list, I do not think the motives of one of them could be impugned. I think they misunderstand Mr. Brandeis. I do not think that they are very much in sympathy with a great deal that he does. But I can not think of anyone in the list that I have seen who does not conscientiously believe just the statement which he signed. They are, all of them, very high-minded men. I do not think they are all of them very liberal or progressive men. I think they are conservative, and I think that anything that threatens or menaces the traditions which they revere they think is worse than an iconoclast."

* * * * * * *

"I do not think one of them would sign that paper without the most deliberate and prayerful thought as to whether they were doing Mr. Brandeis an injustice, or whether by so doing they were discharging a public duty, and that they were required to do it. They are all of a class in that respect. Men that would not for the world do a wrong or a harm to anybody else consciously; but, on the other hand, they have their conception of a duty, and that is if anyone is propagating mischievous propaganda that upsets the traditions in the community

that we all revere it is a public duty to abate it." (Hearings, pp. 308–309.)

Mr. Pillsbury:

"His reputation as it has come to me is that of a very active, adroit, and successful business lawyer; a man of unbounded audacity; a man if you wish to go into questions touching integrity—a man, I should say, of duplicity; double-dealing; a man who works under cover so that nobody ever knows where he really is or what he is really about. I have not ever heard him accused of cheating in money transactions." (Hearings, p. 654.)

Mr. Hutchins:

"His general reputation at the bar is that he is a lawyer of great ability, but not straightforward." (Hearings, p. 611.)

Mr. Hall. Mr. Hall's estimate of Mr. Brandeis is in the form of a letter. He says:

"First, then, so far as ability goes, there can be no question as to Mr. Brandeis's professional standing. He is universally acknowledged to be one of the ablest men at our bar, both in point of legal learning and of effectiveness, and if the question was of intellectual ability alone, his appointment would be generally approved.

"There is, however, equally little question that he is not generally popular with the bar, and that among a considerable proportion of the lawyers here he has the reputation of not being a man with whom it is pleasant to deal in business matters and one who is unscrupulous in regard to his professional conduct. Just how far there is any solid foundation for such a reputation it is extremely difficult to say. So far as specific charges go, all of any consequence of which I have ever heard have been or will be brought to the attention of the committee at Washington, and of those it is unnecessary that I should speak, especially as I can add nothing of my personal knowledge.

"The general reputation remains, and it is certainly one which is worthy of consideration in estimating the fitness of an appointment to the bench. Indeed, I think in the existing state of the feeling here that no one can be fairly criticized for opposing the appointment." (Hearings, pp. 619, 620.)

Mr. Hall explains how this reputation has grown up out of his idealism and the constant attacks that have been made upon him, and then says further:

"Undoubtedly, he is a merciless antagonist, fighting his cases up to the limit and with great technicality and taking every advantage which the law allows him without, perhaps, always a keen regard for fair play. So far as I am aware, nothing more than this could be fairly considered as proved against him. On the other hand, there is, except among a comparatively small number of people, a general recognition that Mr. Brandeis has rendered public service to the community of extraordinary value, and that in doing so he has been actuated by disinterested motives. He lives with great simplicity, and has throughout his career devoted to unpaid public work a very large proportion of his time and energy. With the opportunities that have been open to him he could, by following more conservative courses, have been a much richer man than he is to-day. I do not think it can fairly be doubted that he deliberately chose to serve the public rather than to devote himself entirely to making money, nor do I think it can be fairly questioned that in doing this he was actuated by high motives." (Hearings, p. 620.)

He recites the work that Mr. Brandeis has done in the public interest, and especially for the poor, and then says:

"Of his fundamental honesty of purpose and his deep moral enthusiasm I feel absolutely sure. His qualifications for the position of Supreme Court judge far outweigh, in my judgment, anything that can fairly be urged against him. For these reasons I sincerely hope his nomination will be confirmed."

This gives, I think, a fair understanding not only of his idea of Mr. Brandeis's reputation but what Mr. Hall himself thinks about him and his qualifications.

Mr. Gregory. Mr. Gregory lives in Chicago, and knows Mr. Brandeis in a general way and nothing of his reputation among the lawyers of Boston. He was for one year president of the American Bar Association. (Hearings, p. 710.)

He says of his reputation:

"I think it is excellent as a lawyer of ability and character." (Hearings, p. 711.)

Mr. Walker. After reciting at considerable length the "fights" Mr. Brandeis had been in with the financial interests of Boston, he says:

"I have never heard Mr. Brandeis criticized before these various matters that I have just referred to. His firm in Massachusetts certainly stood very high. I know Mr. Brandeis and know the members of his firm." (Hearings, p. 811.)

Mr. Adams had this to say:

"I think there is quite unanimous assent that Mr. Brandeis is a very able lawyer of profound learning, but that upon the question whether he is and has been wholly straightforward in his practice there is a divided opinion. If I may analyze it as I observe it, there is a group of men of high standing—like Gen. Peabody, in the community who are in the network of State Street, which is our financial street—who state and think that Mr. Brandeis is not straightforward in his practice. I think those opinions, when traced, run into some one of these pockets of more or less publicity, namely, the Lennox case, the United Shoe Machinery case, the wrecking of the New England—those allegations. That is a fair statement as to that group. On the other hand, there is a large body of the bar who, coinciding with what I have said as to his being a very able lawyer, a man of profound learning, also believe that he is actuated by lofty purposes, is honest and trustworthy. That is all I have to say." (Hearings, p. 766.)

Mr. Peabody:

"I think his reputation for ability is good. I think he is considered as a conspicuously able man; but, on the other hand, his reputation is that he is not always truthful, and that he is untrustworthy, and that he sails under false colors." (Hearings, p. 750.)

Mr. French:

"Among the rank and file of the Boston bar and the Massachusetts bar, so far as I know them, Mr. Brandeis has, in my experience, the reputation of being a man of integrity, a man of honor, a man who is conscientiously striving for what he believes to be right. There are, of course, differences of opinion as to his beliefs in that respect. But that, in general, has been my experience with reference to the Suffolk bar, of which I am a member, and the Massachusetts bar, regarding his professional reputation. He has made enemies, of course. A man can not be combative as he is, or aggressive as he is, fighting as he has been on the firing line during all his professional career, without making many enemies. (Hearings, p. 770.)"

Mr. Boynton:

"That reputation, so far as I know it, is good. Down to the time this appointment was made I think the only thing that had ever come to my attention in any way reflecting upon Mr. Brandeis was certain printed matter circulated by the United Shoe Machinery Co. With that exception, I do not think I ever heard anything reflecting in any way upon his character as a man or as a lawyer.

"I think I might say that the men of my acquaintance—two or three men who are my personal friends who have been very close to Mr. Brandeis—have spoken most warmly in his favor, and by that I mean before this investigation began. They would speak so now, I know." (Hearings, p. 771.)

I have tried to give as accurately as I can, from brief extracts, what was said by all the witnesses who testified on this subject. I hope none of them have been overlooked.

But this analysis of the evidence of what Mr. Brandeis's reputation is would not be complete without reference to what was said by some of the men who have worked with him in the effort to better social and economic conditions and help the poor.

Edmund A. Whittier testifies to his generous work, without compensation, for the American Fair Trade League, which is a business organization seeking legislation. (Hearings, p. 812.)

Newton D. Baker, since made Secretary of War, spoke very highly of his work for the poor and laboring classes and particularly the National Consumers' League, and submitted a memorial numerously signed in his behalf. (Hearings, pp. 759, 760.)

Henry Moskowitz spoke very earnestly in commendation of Mr. Brandeis's work for the board of arbitration of the garment-working industries of New York, of which Mr. Brandeis was chairman. (Hearings, p. 763.)

It is evident that while Mr. Brandeis has many enemies among business men and lawyers who do not believe in him, he has many friends among the poor and lowly and those who are working to better their condition.

CONCLUSIONS.

I have endeavored to make a fair and full statement and analysis of the evidence. I have done so largely to aid me to comprehend and apply it and thereby reach a just conclusion. It has led me irrisistibly to conclude that the nomination should be rejected. For many reasons I should be glad to find otherwise. I am greatly in sympathy with much of the work that Mr. Brandeis has been doing to better economic, industrial, and social conditions. Much of this I am convinced he has done generously, unselfishly, and for the common good. Much of it he has done in ways and by means that do not appeal to me at all. He has in many instances been intolerant and offensive in his methods, as the evidence shows. He has resorted to concealments and deception when a frank and open course would have been much better and have saved him and his profession from suspicion and criticism. He has defied the plain ethics of the profession and in some instances has violated the rights of his clients and abused their confidence. There is nothing in the evidence that leads me to think he has done these things corruptly or with the hope of reward. His course may have been the result of a desire to make large fees, but even this is not clear. He seems to like to do startling things and to work under cover. He has disregarded or defied the proprieties. It has been such courses as he has pursued that have given him the reputation that has been testified to, and it is not undeserved. It is just such a reputation as his course of dealing and conduct would establish in the minds of men. This reputation must stand as a strong barrier against his confirmation.

If it were Mr. Brandeis alone that is to be concerned, and it should be believed that this reputation is undeserved and unjust, it should have no weight; but the effect of such an appointment on the court is of much greater importance. To place a man on the Supreme Court Bench who rests under a cloud would be a grievous mistake. As I said in the beginning, a man to be appointed to the exalted and responsible position of Justice of the Supreme Court should be free from suspicion and above reproach. Whether suspicion rests upon him unjustly or not his confirmation would be a mistake. It is argued against him that he is not possessed of the judicial temperament. There is just ground for this objection. As some of his friends said, he is radical, and for that reason he has offended the conservatives. That may be no cause of reproach; but the temperament that has made him many enemies and brought him under condemnation in the minds of so many people would detract from his usefulness as a judge. He is of the material that makes good advocates, reformers, and crusaders, but not good or safe judges.

Taking all these things into consideration, I submit that the nomination should be rejected, and so report.

JOHN D. WORKS.

APRIL 3, 1916.

Mr. STONE. I move that the Senate adjourn until 11 o'clock to-morrow.

The motion was agreed to, and (at 5 o'clock and 20 minutes p. m. Thursday, June 1, 1916) the Senate adjourned until to-morrow, Friday, June 2, 1916, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate June 1 (legislative day of May 31), 1916.

PROMOTIONS IN THE ARMY.

MEDICAL CORPS.

Lieut. Col. William P. Kendall, Medical Corps, to be colonel from May 26, 1916, vice Col. Louis Brechemin, retired from active service May 25, 1916.

Maj. Deane C. Howard, Medical Corps, to be lieutenant colonel from May 26, 1916, vice Lieut. Col. William P. Kendall, promoted.

APPOINTMENTS IN THE ARMY.

MEDICAL RESERVE CORPS.

To be first lieutenants with rank from May 27, 1916.

Frederic Hagler, of Missouri.

Ingvald Martinius Josephson Hotvedt, of Michigan.

Hugo Francis Mehl, of Wisconsin.

Roy Herndon Cox, of Illinois.
Lawrence Howard Robles, of Illinois.
Magnus Jacob Myers, of New York.
Edward Percy Eglee, of New York.
Charles Mallory Williams, of New York.
Archie Ewing Gordin, of New York.
Arthur Ward Cutler, of New York.
Abram Schuyler Clark, of New York.
Charles H. Merrill, of Michigan.
James Edwin Dewey, of Missouri.
John Wesley Long, of North Carolina.
George Irvine McKelway, of Delaware.
Albert Sparr Rider, of South Dakota.
William Launcelot Brown, of Texas.
John Francis Ranken, of New York.
Clarence McClellan, of Illinois.
Perry C. Traver, of Indiana.
Austin Charles Wright, of Arizona.
Frank Farrow Simpson, of Pennsylvania.
Clarence Oscar Christian Max, of Missouri.
Charles Hubart Lovewell, of Illinois.
George James Haslam, of Nebraska.
Emil Sebastian Geist, of Minnesota.
George Clymer, of Massachusetts.
Joel Ernest Goldthwait, of Massachusetts.
John Morris Dodd, of Wisconsin.
James Le Roy Campbell, of Georgia.
Edward Bates Block, of Georgia.
Edward Campbell Davis, of Georgia.
William Lee Wilkinson, of Georgia.
Kendall Emerson, of Massachusetts.
Dennis Francis O'Connor, of Massachusetts.
Somers Fraser, of Massachusetts.
John Lewis Bremer, of Massachusetts.
George Cheever Shattuck, of Massachusetts.
Francis William Anderson, of Washington.
Edwin Bruce Rhea, of Washingon.
Willard Samuel Howard, of Oregon.
Barzilla Milton Hutchinson, of Indiana.
Curtis Alban Evans, of Wisconsin.
Albert Martin Farrell, of Wisconsin.
Alford Edward Budde, of Illinois.
Charles Henry Lawrence, of Massachusetts.
George Sherwin Clarke Badger, of Massachusetts.
Walter Asbury Newman, of Virginia.
Lee Walton Verdery, of South Carolina.
Arthur Morris Zinkhan, of the District of Columbia.
Orville Titus Manley, of Ohio.
Augustus Ravogli, of Ohio.

REGISTERS OF THE LAND OFFICE.

Joseph Oker, of Helena, Mont., to be register of the land office at Helena, Mont., vice Joseph Binnard, resigned to take effect June 30, 1916.

Henry Alexander Porter, of Everett, Wash., to be register of the land office at Vancouver, Wash., vice Glenn N. Ranck, term expired.

APPRAISER OF MERCHANDISE.

James Houlahen, of Pittsburgh, Pa., to be appraiser of merchandise in customs collection district No. 12, with headquarters at Pittsburgh, Pa., in place of Bernard B. McGinnis, resigned.

POSTMASTER.

Edward F. Lonergan to be postmaster at Milburn, N. J., in place of George C. Kessler. Incumbent's commission expired January 11, 1916.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 1 (legislative day of May 31), 1916.

ASSOCIATE JUSTICE OF THE SUPREME COURT.

Louis D. Brandeis to be an Associate Justice of the Supreme Court of the United States.

APPRAISER OF MERCHANDISE.

James Houlahen to be appraiser of merchandise in customs collection district No. 12, with headquarters at Pittsburgh, Pa.

PROMOTIONS IN THE ARMY.

MEDICAL CORPS.

Lieut. Col. Henry S. T. Harris to be colonel.
Maj. James M. Kennedy to be lieutenant colonel.
Capt. William H. Moncrief to be major.

MEDICAL RESERVE CORPS.

First lieutenants.

William Frederick Rice.
Edward Allen Noyes.
Charles Woodward Riley.
Charles George Sinclair.
Charles George Hutter.
Frederick Hensel Petters.
Clarence Searle Ketcham.
Robert Parvin Williams.
Edwin Brooks Maynard.
Harvard Clayton Moore.
Arden Freer.
Paul Adolph Schule.
John Stuart Gaul.

CAVALRY ARM.

First Lieut. George A. F. Trumbo to be captain.
Second Lieut. George S. Patton, jr., to be first lieutenant.

COAST ARTILLERY CORPS.

First Lieut. Henry T. Burgin to be captain.
First Lieut. Nathan Horowitz to be captain.
Second Lieut. George W. Easterday to be first lieutenant.
Second Lieut. George B. Gorham to be first lieutenant.

INFANTRY ARM.

First Lieut. Robert G. Peck to be captain.
Second Lieut. Robert Coker to be first lieutenant.
Second Lieut. William F. Hoey, jr., to be first lieutenant.
Second Lieut. John H. Stutesman to be first lieutenant.

APPOINTMENTS AND PROMOTIONS IN THE NAVY.

Hubert A. Royster to be an assistant surgeon in the Medical Reserve Corps.

Boatswain Gregory Cullen to be a chief boatswain.
Machinist Charles F. Beecher to be a chief machinist.
Pay Clerk Andrew J. McMullen to be a chief pay clerk.
Pay Clerk Alvah B. Canham to be a chief pay clerk.
Pay Clerk Noble R. Wade to be a chief pay clerk.
Pay Clerk Ross B. Deming to be a chief pay clerk.
Pay Clerk Effinger E. Hartline to be a chief pay clerk.

Chaplain James D. MacNair, with rank of lieutenant (junior grade), to be a chaplain with rank of lieutenant.

POSTMASTERS.

ALABAMA.

John M. Graham, Stevenson.

INDIANA.

Walter J. Rierden, Montezuma.
George W. Roy, Wolcottville.
Edward H. Taylor, Knox.

IOWA.

Charles V. Dautremont, Riverside.
Charles E. Dawson, Rockford.
E. F. Main, Hopkinton.
Mary E. O'Connor, Rockwell.

LOUISIANA.

J. A. Melton, Coushatta.

MICHIGAN.

Joseph M. Dodge, Cass City.
C. C. Hopkins, Breckenridge.
William B. Howlett, Jonesville.
Sidney Reynolds, Howard City.

MISSISSIPPI.

George C. Gunn, Agricultural College.

NEW YORK.

Archie Goodfellow, Jamesville.
L. G. Quackenbush, Oneida.

PENNSYLVANIA.

E. R. Criss, New Kensington.
William H. Denlinger, Patton.
Daniel A. McGough, Ebensburg.
Patrick J. Mash, Nanty Glo.
Otis S. Quinby, Springboro.

WITHDRAWAL.

Executive nomination withdrawn June 1 (legislative day of May 31), 1916.

James Houlihan, of Pittsburgh, Pa., to be appraiser of merchandise in customs collection district No. 12, with headquarters at Pittsburgh, Pa.

HOUSE OF REPRESENTATIVES.

THURSDAY, *June 1, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We seek Thee, our Father in heaven, for that inspiration which shall disclose to us the real values of life, that we may put our souls into our work and make every thought, every act count for the best interests of mankind, that we may be strengthened to bear the burdens of life and guided to a happy solution of all its difficult problems, and so honor ourselves by honoring Thee in the best use of the gifts Thou hast bestowed upon us; in His name. Amen.

The Journal of the proceedings of yesterday was read and approved.

LEAVE TO PRINT.

Mr. ADAMSON. Mr. Speaker, I ask unanimous consent to print in the RECORD an abstract of some remarks made by the Secretary of the Treasury last night at Raleigh, N. C.

The SPEAKER. The gentleman from Georgia asks unanimous consent to extend his remarks in the RECORD by printing an abstract of remarks made by the Secretary of the Treasury at Raleigh, N. C., last night. Is there objection?

Mr. MOORE of Pennsylvania. Mr. Speaker, reserving the right to object, does this address print a full résumé of the performances of the Democratic Party during the last few years?

Mr. ADAMSON. No, sir; that could not be done in a short space.

Mr. MANN. They could not get in all the foolish things that the Democratic Party has done. I will ask the gentleman from Georgia is this abstract furnished by the Secretary, so that it is correct?

Mr. ADAMSON. Yes. It is correct. The leading thoughts are Wisdom and Prosperity.

The SPEAKER. Is there objection?

There was no objection.

QUESTION OF PERSONAL PRIVILEGE.

Mr. GARDNER. Mr. Speaker, I rise to a question of personal privilege.

The SPEAKER. The gentleman will state it.

Mr. GARDNER. In its issue of yesterday, May 31, 1916, The Fatherland, a newspaper published in New York, in commenting on my course in Congress, uses the following expression:

> The Hon. AUGUSTUS GARDNER, in other words, is interested in war contracts, and his loud-mouthed patriotism has a string to it.

On those words I base my question of personal privilege.

The article to which I refer is a somewhat long one, but I shall insert it in full in the RECORD. It relates entirely to certain former holdings of mine in the General Electric Co., a corporation which has received ammunition orders from the allies. The article charges that I was forced to admit at a certain hearing before the Committee on Rules that I owned stock in a munition company. It then misquotes the hearing, which took place on January 19, and, furthermore, it states that I did not sell the stock which I used to hold in the General Electric Co. until January 22, three days after the hearing.

The article in full is as follows:

> The Hon. AUGUSTUS P. GARDNER, Member of the House from Massachusetts and son-in-law of Senator LODGE, has strangely subsided since his memorable attack on the German-Americans and his frequent outbursts of righteous indignation at the policy of the Germans during the war. And the reason is not far to seek. GARDNER has been convicted out of his own mouth of being a patriot of the Col. Sellers stripe, who always shouted "for the old flag and a small appropriation." The Hon. AUGUSTUS GARDNER, in other words, is interested in war contracts, and his loud-mouthed patriotism has a string to it.
>
> The unpalatable truth came out in a committee hearing, the proceedings of which have since been printed, but in such small quantities that it is difficult to secure a copy. The revelations came out in the hearing of the Committee on Rules, charged with the consideration of House resolution No. 7, "to inquire into the organization, membership, expenditures, receipts, and sources thereof of the Navy League, Labor's National Peace Council, the National Security League, and the American Defense Society."
>
> The hearing took place on January 19. Representative TAVENNER, of Illinois, who has made two important speeches exposing the workings of the Navy League and other similar organizations, was one of the witnesses examined. Present also was Representative GARDNER, who was examined and made to admit that he owned stock in a munition company, and that his near relatives continue to be interested in the sale of munitions. On page 12 of the committee proceedings, known as "The Peace Propaganda Investigation," the facts are printed, as follows:
>
> "Mr. TAVENNER. I believe that an investigation would reveal that the Navy League originated at 23 Wall Street, in the office of J. P. Morgan & Co.
>
> "The CHAIRMAN. You mean to say that in your resolution you will charge that Members of Congress and Senators own stock in munition-trafficking concerns?
>
> "Mr. TAVENNER. There was an investigation in 1914–15 by a committee of the United States Senate into lobbies, and two Members of the Senate testified under oath that they owned stock in such concerns; others that their relatives owned stock.
>
> "The CHAIRMAN. You want to broaden this resolution?
>
> "Mr. TAVENNER. Yes, sir. I want to broaden this resolution to take in everything, because I realize that nothing would be gained by the puolic if we investigated only the unimportant part.
>
> "Mr. CHIPERFIELD. Are those Senators present Members of the Senate?
>
> "Mr. TAVENNER. Yes, sir; they are Senators now.
>
> "Mr. GARDNER. Did you ask what the stock was they owned?
>
> "Mr. TAVENNER. Yes, sir; the stock was that of the General Electric Co. and the United States Steel Corporation. The General Electric Co. had drawn down $2,500,000 worth of contracts from the Navy Department, receiving orders every year, and it is reported in the Standard Corporation Service Reports as having profited largely from the European war, and it is so reported in the Wall Street Journal and in Financial America. They all have it down as a war trader. I think the orders from the United States Government were received during the time Senators held stock. If not, let us ascertain when they bought the stock, how long they held it, and all about it.
>
> "Mr. GARDNER. But the other orders?
>
> "Mr. TAVENNER. From these various countries?
>
> "Mr. GARDNER. Yes.
>
> "Mr. TAVENNER. I would not be surprised if there had been some withdrawals since the European war.
>
> "Mr. GARDNER. The General Electric Co. is in my county. I sold out my stock. [Note—Jan. 22, 1916—I am a trustee of certain trusts containing General Electric shares. My wife is a small beneficiary and my married daughter is a substantial beneficiary.]
>
> "Mr. TAVENNER. Did you sell out your stock before the General Electric received contracts from the Navy Department?
>
> "Mr. GARDNER. I never heard until this minute of any contracts with the Navy Department. That is the trouble; a man makes investments and he can not get into everything, but I got rid of my General Electric Co. stock when I found out that they had contracts to make munitions.
>
> "Mr. TAVENNER. I would like to ask you what relation George Peabody Gardner is to you?
>
> "Mr. GARDNER. He is a first cousin.
>
> "Mr. TAVENNER. He is a director in the General Electric Co., which is a J. P. Morgan concern; is not that correct?
>
> "Mr. GARDNER. Yes.
>
> "Mr. TAVENNER. You have called these matters to the attention of the Committees on Naval Affairs and Military Affairs and asked them to make an inquiry?
>
> "Mr. GARDNER. No; because I thought the proper way to do this would be by a special joint committee of Congress."
>
> One interesting feature of the hearing is the insertion, evidently by GARDNER himself, of the statement that he disposed of his General Electric stock on January 22. The hearing was held on January 19, and his statements, taken in connection with the inserted line, indicate a strange state of mental confusion on the part of the witness. It is furthermore interesting to record that the General Electric Co. has a $69,000,000 contract for war munitions, in which Mr. GARDNER'S wife and his married daughter are "beneficiaries," the latter "substantially." Also that he holds an unnamed quantity of this stock "in trust"—for whom?
>
> It is understood, and openly stated here, that Mr. GARDNER'S father-in-law, Senator LODGE, is also a stockholder in General Electric, and that this can be substantiated by his own testimony in the lobby investigation.
>
> These facts are regarded as throwing a glaring light on the causes operating in determining the Senator from Massachusetts and his son-in-law to become the most belligerent Members of either House in denouncing Germany and advocating measures to have the United States enter the war on the side of the allies.
>
> Early in the winter Mr. GARDNER made his famous speech on this subject which at the time created a sensation and brought Representative COOPER to his feet. It caused him to hurl back the retort that the only fitting place for such a speech was the British House of Commons, and caused Mr. STAFFORD, of Wisconsin, to make a sharp retort, in which he said that no man with a drop of German blood in his veins could sit still without answering him in kind—which he proceeded to do in masterly fashion.
>
> There has been comparatively little comment on the committee hearing. There is such a thing as congressional ethics, which estops Members from repeating committee-room secrets; but the cat is out, and the American people now may know what significance to attach to the patriotic outbursts of certain Members of Congress.

Now, the exact facts with regard to my investments are as follows: To the best of my recollection and belief, ever since the General Electric Co. was organized, until August 30, 1915, I have been either a stockholder or a bondholder in the concern. Its second largest plant is situated in the county in which I reside. Last summer I saw in the papers that the General Electric had received orders to make munitions of war for the allies, and on August 22 I was given definite information that war orders amounting to $30,000,000 had been received. Even before the receipt of this definite information I had begun to dispose of my shares of General Electric in view of the fact that I had made up my mind to fight against the propaganda in favor of prohibiting the export of munitions of war. Directly after my daughter's marriage I put in trust as part of her marriage portion 325 shares of General Electric. The balance of my holdings, amounting to 300 shares, was sold through a stockbroker, the last of my interest in the General Electric Co. being disposed of on August 30, 1915. This statement accounts for the entire amount of my interest, direct or indirect, in the General Electric Co., except for 10 shares which, as a cotrustee, I held for the benefit of my wife, among a collection of miscellaneous securities. My wife's trust arose under an instrument executed by my wife's grandmother many years ago.

The existence of these 10 shares of General Electric Co. had escaped my memory until January 20, 1916, when, in response to my telegraphic inquiry, the day of the hearing, I was informed of the facts. I promptly secured consent from my cotrustee, and these 10 shares were sold. I have sent for my agent's accounts and have examined them carefully, and I find to the best of my knowledge and belief that none of the concerns in which I am interested financially are or have been engaged in the manufacture of munitions of war except as described above in the case of the General Electric.

Now, a word as to the origin of this libel. On January 19 the Committee on Rules held a hearing at which Mr. TAVENNER of Illinois, Mr. HENSLEY of Missouri, and I were each of us heard in behalf of our own resolutions for the investigation of the activity of certain organizations and individuals interested for and against the preparedness propaganda.

Without being questioned at all I voluntarily stated that the General Electric Co. was situated in my county, but that I had sold out the stock which I formerly held. In answer to a question by Mr. TAVENNER, I stated the fact that one of the directors of the General Electric Co. is my first cousin, Mr. George Peabody Gardner. Furthermore, Mr. TAVENNER asserted that the General Electric Co. had received over two and one-half million dollars' worth of contracts from the Navy Department, a circumstance which was entirely new to me. I could not help fearing that the imputation was to the effect that I was secretly a beneficiary of these contracts.

The matter having taken the turn which I have described, it occurred to me after the hearing that I had not mentioned the fact that I was a trustee of General Electric for the benefit of my married daughter. It also occurred to me that it was possible that my wife had an interest in the same corporation, either outright or as a beneficiary of some trust. I telegraphed to Boston and found that my wife was interested to the extent of 10 shares, as I have described. Thereupon, on January 22, when I corrected the official report of the hearing, I inserted a statement to the effect that I was trustee for some shares of General Electric of which my wife and my married daughter were beneficiaries. So that there could be no misunderstanding I wrote to Mr. TAVENNER, calling attention to my insertion.

Since that time I have been pestered with misrepresentations of the whole transaction. Evidently the story was told to Mr. William Jennings Bryan in a distorted form, for he telegraphed to me about it. Furthermore, I remember noticing an allusion to the matter in a Bridgeport, Conn., newspaper. I have also heard some rumor that student debaters were prepared to make the accusation that I was interested in munition contracts. Now comes the Fatherland article. I am forced to the conclusion that some one has been systematically misrepresenting me with malicious intent.

As to these General Electric contracts with the Navy Department, after hearing Mr. TAVENNER's statement I wrote to the Secretary of the Navy, and I found that in a period of eight years the Navy Department had paid out two and a half millions of dollars to the General Electric Co. for electrical apparatus, wiring, and so forth, on competitive bids in the ordinary course of business. Furthermore, about a half million dollars more is due, or about to become due, to the General Electric Co., of which some $400,000 is on the contract for the electric wiring apparatus, and so forth, of the battleship *California*.

The letter of Secretary Daniels is as follows:

NAVY DEPARTMENT,
Washington, January 29, 1916.

MY DEAR MR. GARDNER: Replying to your inquiry of January 24, 1916, relative to the total amount of money spent with the General Electric Co. by the Navy Department, payments have been made to that company during each of the fiscal years beginning with the fiscal year ending June 30, 1908, down to this date, as follows:

1908	$263,676.79
1909	421,218.58
1910	434,380.26
1911	452,107.44
1912	347,669.26
1913	165,912.41
1914	158,884.38
1915	182,008.23
1916 to date	85,946.48
	2,511,803.83

The above amount represents machinery, material, and supplies in the electric line manufactured by the General Electric Co. and purchased for the Naval Service. In each case covered by this statement the article called for was duly advertised according to law and the award was made to this company as the lowest satisfactory bidder under the specifications. The statement includes all purchases under formal contract paid for through the Navy disbursing office. It does not include material purchased and paid for through Navy pay offices, but such amounts are comparatively small.

The above amounts represent material already paid for. There are outstanding contracts and contract balances with the General Electric Co. amounting to $513,019.60 for which payment has not been made. Of this amount $409,450 is covered by the contract for the electrical apparatus for battleship *No. 40* the *California*.

Respectfully,

JOSEPHUS DANIELS,
Secretary of the Navy.

Hon. A. P. GARDNER, M. C.,
House of Representatives, Washington, D. C.

H. SNOWDEN MARSHALL.

Mr. MOON. Mr. Speaker, by direction of the select committee appointed to investigate the charge of an alleged breach of the privileges of the House by the district attorney for the southern district of New York, Mr. H. Snowden Marshall, I ask unanimous consent that the report of that matter be taken up for consideration after the reading of the Journal on June 20, and that the debate shall proceed during not exceeding four hours, one half of the time to be given to the chairman of the committee and the other half to the gentleman from Illinois [Mr. STERLING].

The SPEAKER. The gentleman from Tennessee asks unanimous consent that the H. Snowden Marshall contempt case be taken up on June 20 immediately after the reading of the Journal and the disposition of necessary business on the Speaker's table, and that the debate be confined to four hours, one half to be controlled by himself and the other half by the gentleman from Illinois [Mr. STERLING]. Is there objection?

Mr. MANN. Reserving the right to object, I do not see my colleague [Mr. STERLING] on the floor at this time. Has the gentleman from Tennessee conferred with him in reference to this?

Mr. MOON. Yes. The committee met this morning. The gentleman from Illinois [Mr. STERLING] was present, and that was the agreement we came to. All of the members of the committee were present except the gentleman from Wisconsin [Mr. LENROOT], who I am sure will have no objection.

The SPEAKER. Is there objection?

Mr. BUCHANAN of Illinois. Reserving the right to object, Mr. Speaker, I would like to ask the chairman of the special committee why this delay about considering the report?

Mr. MOON. Well, there are two or three reasons for it. To be candid with the gentleman from Illinois, the committee have delayed up to this time because they thought it probably best that the Committee on the Judiciary, which had another matter affecting the same party, should report; but that has not been done, and we have not desired to delay any longer than was absolutely necessary. Gentlemen are going to the Republican convention and to the Democratic convention, and we would like to have the membership of the House present. We take it that until those two conventions are over we can not do very much business anyway, and we thought it best to fix this date.

Mr. PARKER of New Jersey. Reserving the right to object, I should like to ask the gentleman from Tennessee if he would be satisfied not to put a limitation of time on this matter? I do not think that we know yet what the issues are in that case, or what will be done. They will probably be quite simple, and can be disposed of briefly; but I really do not like a limit of time assigned on so important a matter.

Mr. GARNER. The gentleman understands that under the rules and practice of the House the committee could call it up to-day, and take an hour, and go on to a vote on the matter.

Mr. PARKER of New Jersey. I suppose you could; but I know you would do the fair thing, and I am only asking whether it would not be better to leave it as to time until the matter develops.

Mr. MOON. The report has been on file since April 14. Probably the matter ought to have been disposed of before; but for the reason stated it has been delayed. We think that four hours is ample time for the discussion.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. MOON. Yes.

Mr. MANN. My recollection is that the report of the committee is a unanimous report.

Mr. MOON. A unanimous report.

Mr. MANN. Some gentlemen, I think, desire to be heard in opposition to the report.

Mr. MOON. I am sure that the gentleman from Illinois, as well as myself, will be glad to divide the time with anybody who wants to be heard in opposition.

Mr. MANN. I assume that anyone who wishes to be heard in opposition to the report, the gentleman from New Jersey or anyone else, would be entitled to a part of that time.

Mr. MOON. Surely. I think we can give you all you want.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. MOON. Yes.

Mr. MOORE of Pennsylvania. June 20 is the day fixed in the gentleman's request for unanimous consent?

Mr. MOON. Yes.

Mr. MOORE of Pennsylvania. That is not one of the days on which the Democratic convention will be in session at St. Louis?

Mr. MOON. I think not.

Mr. MOORE of Pennsylvania. I am asking because some of us have been talking over the question of those days when the conventions are in session, the Senate having resolved to adjourn for three days at a time, and it having been suggested that the House may remain in session notwithstanding.

Mr. MOON. I understand it is regarded as certain that both conventions will be over by that date.

Mr. MANN. If the gentleman will permit me, it is but fair to say publicly, especially to this side of the House, that the gentleman from North Carolina [Mr. KITCHIN] and myself have reached an agreement, as far as we are concerned, which I think will be observed by the House, that during next week, the week of the Republican convention, business may proceed in the House, but practically by unanimous consent. What will be done during the week of the Democratic convention I can not say. There has been no agreement reached about that yet. Of course we will do whatever the other side of the House wants to do.

Mr. KITCHIN. That is correct. The gentleman from Illinois has made a correct statement about that.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. MANN. Yes.

Mr. MOORE of Pennsylvania. I think it is fair to say that some Members on this side who may not have spoken to the gentleman from Illinois have been suggesting the propriety of having a quorum present here during the period of the conventions if the House is to remain in session, the Senate having agreed to adjourn every three days.

Mr. MANN. I hope that no gentleman on this side will ask for that. Of course if gentlemen want to be obstreperous, I know of no way to prevent it.

Mr. MOORE of Pennsylvania. It is not necessarily a matter of being obstreperous, it is a question of individual right. The Chairman of the Committee of the Whole the other day refused to entertain a motion on the ground that he was a Member of the House and had a right to object.

Mr. MANN. Here is the situation. There probably will be a quorum in town next week, but it will be mostly on the Democratic side of the House.

Mr. MOORE of Pennsylvania. But that will be reversed during the Democratic convention.

Mr. MANN. This side of the House, in order that Republican Members may attend the convention who wish to go, wish to have some kind of an understanding. No one can prevent a Member over here from asking for a quorum, but probably it would prevent a good many Republicans going to the convention, as they desire, and would probably make it very unpleasant for those who did go. It is a concession from the other side of the House, and I think it is to our advantage to observe it.

Mr. MOORE of Pennsylvania. There has been no unanimous-consent request that the House shall remain in session?

Mr. MANN. There can be no unanimous request made as to that.

Mr. MOORE of Pennsylvania. Very well; I have made the statement as to what some Members on this side think.

Mr. BUCHANAN of Illinois. Mr. Speaker, in explanation of my reserving the right to object, and also my inquiry of the chairman of the committee, I will say that I do not understand that this has anything to do with the proceedings before the Judiciary Committee of which the gentleman from Tennessee speaks. I have been studying the rights and authority of investigating committees of the House of Representatives in impeachment cases, and I find that they are clothed with the same powers and prerogatives as a trial court; in fact, in such cases, where these powers were at all questioned, the House very authoritatively and properly upheld and maintained them. I do not believe a trial court would delay action where a contempt of its orders had been committed until after the termination of the proceedings in which it was sitting; on the other hand, I claim that it is the custom of our courts to immediately take steps against those guilty of contempt. Neither would any court, in my opinion, permit the Bar Association of New York, or other pernicious influences, to delay or obstruct its action against the party guilty of that contempt, as has been done in this case. I have read the proceedings before the special committee and the statement of the party held in contempt, and the whole statement on his part was an attack on the subcommittee and myself. There was nothing said as to why he was not in contempt in the House. In fact, he reiterated a statement which was a malicious, libelous, unjustifiable statement against the subcommittee. Therefore it seems a question whether the House wants to protect itself and its dignity and standing of Members, especially those authorized unanimously by the House to act as investigators, as Members of old did, or whether they are going to dillydally along with a crooked Federal official who has only reiterated his charges against it, that are libelous and contemptible. For my part, I have no patience with delay in matters of that sort. Of course, we know the power that is behind this fellow. I know that the administration is behind him and encourages him in it.

Mr. BORLAND. Mr. Speaker, the gentleman is not reserving his right to object. This is debate. I ask for the regular order.

Mr. BUCHANAN of Illinois. Well, Mr. Speaker, I shall object to the proposition of the gentleman from Tennessee, and will state to the House now that I expect to call up this matter myself in another way.

Mr. MOON. Mr. Speaker, I want to make a suggestion to the gentleman. The gentleman from Illinois is correct that courts sometimes take up contempt proceedings and dispose of them before the trial is over, but in the best-regulated courts that is not done, because they do not want it to affect the trial. This has nothing to do with the gentleman's impeachment matter. He may be guilty or not guilty, it does not affect the guilt of Mr. Marshall in this proceeding.

Mr. BUCHANAN of Illinois. That is exactly my position.

Mr. MOON. I will say that this delay has not been caused except for the reasons I have stated. Under the order made in the House the matter will come up on the motion of the chairman of the committee. I simply made the request to bring it up at the hour designated and divide the time. If the gentleman from Illinois objects, this being a question of the highest privilege, I will call it up on the 20th, and at the end of an hour I will move the previous question unless I want to withhold it for somebody to speak. I see no advantage to the gentleman in his objection.

Mr. BUCHANAN of Illinois. Mr. Speaker, I will withdraw my objection.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee? [After a pause.] The Chair hears none, and it is so ordered, and the order is that on the 20th of June, immediately after the reading of the Journal and the disposition of matters on the Speaker's table, the contempt case against H. Snowden Marshall will be taken up and debated for not more than four hours, one half of the time to be controlled by the gentleman from Tennessee [Mr. MOON] and the other half by the gentleman from Illinois [Mr. STERLING].

NAVAL APPROPRIATION BILL.

The SPEAKER. The House automatically resolves itself into Committee of the Whole House on the state of the Union for the further consideration of House bill 15947, the naval appropriation bill, with Mr. FITZGERALD in the chair.

Mr. PADGETT. Mr. Chairman, I offer the following amendments to correct the amounts of the appropriations incident to the amendments that were agreed to yesterday, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 6, line 19, strike out "$862,000" and insert "$882,940."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 8, line 24, strike out "$174,600" and insert "$184,477."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 36, line 22, after the comma after the word "men" insert the following: "And enlisted men of the Hospital Corps, $857,405.75."

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. BUTLER. Mr. Chairman, that figure is changed by reason of the action of the committee yesterday?

Mr. PADGETT. Yes.

Mr. MANN. Let us have the amendment again reported.

The Clerk again reported the amendment.

Mr. MANN. That should be "pay for enlisted men," should it not?

Mr. PADGETT. Yes; insert the words "and pay of" before the words "enlisted men." The word "pay" is in the preceding part, but it would be better to insert it there.

The CHAIRMAN. Without objection, the amendment will be so modified.

There was no objection.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 36, line 23, strike out "$27,563,988.50" and insert in lieu thereof "$28,421,394.25."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 67, line 9, strike out "$8,848,933.85" and insert "$9,087,823.85."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 100, line 4, strike out "$30,707,000" and insert "$33,896,060."

Mr. PADGETT. Mr. Chairman, just at this point I wish to explain that that is on account of the increase of the 30 submarines in armor and armament. Yesterday we inserted for the hull and machinery, but overlooked the armor and armament.

Mr. ROBERTS of Massachusetts. I would like to ask the chairman how he arrived at that figure?

Mr. PADGETT. It is $106,000 for each submarine.

Mr. ROBERTS of Massachusetts. I had in mind other figures given by the clerk of the committee, which included the armor and armament of other vessels besides submarines.

Mr. PADGETT. Yes. This is the amount given by the department.

Mr. ROBERTS of Massachusetts. Submarines alone?

Mr. PADGETT. Yes.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Page 100, line 9, strike out "$104,073,378" and insert "$107,262,438."

Mr. PADGETT. Mr. Chairman, yesterday morning the printed figures "$98,859,378" were changed to one hundred and four million and odd dollars, but on account of this addition of three million and odd dollars by the preceding amendment it is necessary to change that figure.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, on page 98 of the printed bill, authorizing 20 submarines, there is a provision that 8 of the submarines shall be constructed on the Pacific coast. The Committee of the Whole House increased the total number of submarines to 50. Should that stand, I think it would be equitable to increase the number for the Pacific coast; and I move, in line 23, on page 98, to strike out the word "eight" and to substitute the word "fifteen."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, on page 98, in line 23, by striking out the word "eight" and inserting the word "fifteen."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

At the bottom of page 8 add the following:

"*Provided*, That any person who may hereafter enlist in the Navy for the first time shall, if he so elects, receive discharge therefrom without cost to himself during the month of June or December, respectively, following the completion of one year's service at sea. An honorable discharge may be granted under this provision; but when so granted, shall not entitle the holder, in case of reenlistment, to the benefits of an honorable discharge granted upon completion of an enlistment."

Mr. PADGETT. Mr. Chairman, the gentleman from Connecticut [Mr. HILL] desired to offer an amendment, and I will yield to him to offer that amendment at this point, and let the amendment I have just offered be considered pending.

Mr. HILL. Mr. Chairman, I will offer it as an amendment to the amendment. I think that would be entirely proper, and do so.

The CHAIRMAN. The Clerk will report the amendment to the amendment.

The Clerk read as follows:

Amend the amendment by adding the following:

"And in addition thereto, and as an inducement to the prompt recruiting of men heretofore authorized by law and of such additional force as may be authorized by this act, the sum of $3,476,200, to be at the disposal of the Bureau of Navigation during the continuance of the war in Europe for use as bounties for enlistment at the rate of not to exceed $100 for each man enlisted during such period."

Mr. PADGETT. Mr. Chairman, on that I reserve the point of order.

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

Mr. HILL. Mr. Chairman, I ask unanimous consent that I may be allowed to address the committee for 10 minutes.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent to address the committee for 10 minutes. Is there objection?

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman can not take another Member from the floor by a parliamentary inquiry.

Mr. MOORE of Pennsylvania. Mr. Chairman, I respectfully submit that I addressed the Chair and the Chair recognized me before he did the gentleman from Connecticut.

Mr. SHERLEY. Mr. Chairman, the gentleman has no right to recognition.

Mr. MOORE of Pennsylvania. To make a parliamentary inquiry?

Mr. SHERLEY. No. The gentleman from Pennsylvania can not take the gentleman from Connecticut off the floor by a parliamentary inquiry.

Mr. MOORE of Pennsylvania. Mr. Chairman, I submit I addressed the Chair and the Chair recognized me.

The CHAIRMAN. The Chair did not recognize the gentleman. Is there objection to the request of the gentleman from Connecticut that he may address the committee for 10 minutes? [After a pause.] The Chair hears none.

Mr. HILL. Mr. Chairman, I have full confidence in the ability of the Chair, with his parliamentary knowledge, to rule this amendment in order.

The CHAIRMAN. That is to be determined later.

Mr. HILL. I have full confidence, too, in the chairman of this committee—in his wisdom, in his knowledge, and his conservatism—and I shall vote for every good feature of this bill. I have an equal confidence in the ranking member of the minority, and I shall vote for every proposition that he submits; and, gentlemen, I shall vote, if I have the opportunity, for every increase to this bill as it comes from the Senate. I am in favor of the largest Navy in the world. I think the chairman of the committee was mistaken in the statement that he made a day or two ago that he was making this bill for peace. I think that there is an emergency which requires consideration at this time. I have a very distinct recollection of a few years ago when I went to a meeting of the insurgents over here in the rooms which were formerly occupied by the Congressional Library, and I carried a telegram from Marcellus Hartley, of Schuyler, Hartley & Graham, which he asked me to read in the insurgent meeting.

The insurgents consisted of a majority of the Democratic side and a minority of the Republican side, and they controlled the House of Representatives and were determined to force war with Spain. I went into that meeting and read that telegram stating that there was not one pound of smokeless powder in the United States, and that it was necessary to have it in order to load small-arms cartridges, and that there was a consignment of 25 tons on the ocean which should arrive in the port of New York within three days and asking that meeting of insurgents to defer their demand upon President McKinley for intervention until that powder could be landed safely in New York Harbor and escape Spanish cruisers. I am keeping that telegram now among my papers at home as an evidence of unpreparedness in the United States.

Now, a few days ago the gentleman from Illinois [Mr. CANNON] struck the weak spot of this bill, and that was the personnel. What is it—what are the present conditions? A few weeks ago I came from a bed of sickness to Washington to vote to sustain the President of the United States in his ultimatum to Germany, and when I got here I began to inquire about our condition and whether we were ready to back up the President of the United States by something more than votes. I found that of a boasted Navy of 250 or more ships that 70 of them were either on paper or on the stocks in process of construction. I found that in addition to that nearly 70 more were unmanned and unequipped, including craft of all kinds and character. I asked what was necessary in order to equip them and put them in commission ready for business if the President of the United States called upon us to do business, and I found that instead of 10,000 additional men being required to do it, 28,000 were necessary to put the ships that we have now, tied up to the docks, or anchored in midstream, back into working order ready for business.

And I made up my mind that when the time came I would try to do something to get this country prepared immediately, not three or four or five years from now, but to use what facilities we now have to maintain the honor and dignity of my country.

Now, what have we done? We passed an Army bill providing for an army of 175,000 men. We had a most eloquent speech from one gentleman opposing a Regular Army of 250,000 men, for which I voted, on the ground that it was buncombe, that the men could not be procured and that we were deceiving the American people. Well, I have been inquiring about that, gentlemen. Last winter we passed an authorization for 20,000 men to bring the Army up to the standard already provided by law and I found that the recruiting that we have had since has brought an increased army strength of 1,000 men, about, so that on the basis on which we are now recruiting it will take three years and four months to get the Army brought up to the old standard before one man is counted in the new Army bill, and if this new Army bill provides for a minimum of 200,000 men, on the basis of present recruiting it would take 41 years to get them. That is not preparation; that is criminal negligence. [Applause on the Republican side.]

Now, let me apply that thing to the Navy. According to the best authority I can get we are somewhere from 25,000 to 34,000 short of the men necessary to put our existing Navy in commission. You have a choice of leaving it where it is, wholly unprepared, or when the emergency arises of having 34,000 men, one-half of your force, wholly unprepared, undrilled, untrained.

Mr. CALLAWAY. Will the gentleman yield?

Mr. HILL. I will if you give me some time. I can not yield unless I have more time.

It will take, on the same basis of recruiting which is now occurring in the Army, four years and four months to recruit those men whom the chairman of the committee says are necessary for present purposes in time of peace; and when he says that he refers to the manning not of the Navy as such but only to the ships in actual active service.

Now, why should we not offer additional inducements? An amendment passed this House yesterday providing for a 20 per cent bonus to build ships within a record time. That applies to $180,000,000 worth of construction for the expediting of completion of the ships, guns, and so forth, authorized by this bill. That means $36,000,000 under the terms of this bill, possible as a bonus for building ships and making guns and equipping them. I want to give a bonus to the man behind the gun, for he is the man whom we rely on to protect this Nation. [Applause.]

Now, the expenditure under this amendment is not compulsory. I am willing to trust the administration to use it wisely and discreetly. I believe they are just as patriotic as I am or any other Member of either side of this House. I want to authorize this bonus so that the Government, should any necessity arise at any time during the continuance of this war, can get the men and put them upon the ships and drill and train them and keep those ships cruising.

"Oh," but says somebody, "we do not need it." We do. I will tell you what I would do, gentlemen. I would immediately establish a battleship mail-delivery line if I had my way. I am tired, everlastingly tired, of picking up the morning paper and finding that the letters of business men in the United States, sent from a neutral port to a neutral port, are taken into a belligerent port and held up for three, four, and five months. [Applause.] And I would put those battleships into that service, either as mail carriers or convoys to neutral ships carrying our mails under contract with our Government. Why, we took six out of commission week before last in order to get men enough to supply crews for two newer and larger ones. I would man them and start them carrying letters from New York to Norway, Sweden, Denmark, and Holland, and if any belligerent demanded a different delivery of that mail from what we saw fit to give, and attempted to enforce that demand, I would deliver those letters out of the mouth of a 12-inch gun. I do not believe it is consistent or dignified for this great Government of ours to deliberately sit down here and say we have no power in the matter. If, as I believe, absolutely uncontested, acknowledged, international law is being violated every day, it is high time for this Nation not only to assert its rights but to maintain them at any cost.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. HILL. Mr. Chairman, I am sorry. I would be glad to make a few further appropriate comments on the article of Lord Cromer in the press of yesterday from which I quote as follows:

It is well that President Wilson should fully realize the fact that the meaningless and misleading phrase invented in Berlin about freedom of seas is generally regarded in this country as the destruction of naval supremacy of Great Britain.

If we emerge victoriously from the present contest, the victory will be mainly due to the British Navy. It is inconceivable that any responsible British Government would listen to or the nation be prepared to accept any proposals having for their object the diminution of the relative naval strength of this country.

The CHAIRMAN. The gentleman from Connecticut asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. HILL. Mr. Chairman, I would like to be heard just a moment on the point of order.

My understanding of the amendment of the chairman of the committee is that it adds certain discretionary provisions to the last paragraph on page 8. That paragraph reads:

Expenses of recruiting for the naval service: Rent of rendezvous and expenses of maintaining the same; advertising for obtaining men and apprentice seamen; actual and necessary expenses in lieu of mileage to officers on duty with traveling recruiting parties, $174,670.

My proposition is, Mr. Chairman, to increase the amount of that appropriation for the specific purposes named herein; in other words, instead of $174,670 with which to obtain seamen, to add a provision providing that it shall be discretionary with the Bureau of Navigation to pay a bonus for enlistments while the war continues. It seems to me that it is strictly in accord with the purpose, the intent, and the provisions of the bill, and that it is wise legislation at this time.

Mr. PADGETT. Mr. Chairman, I insist upon my point of order.

Mr. MANN. Mr. Chairman, may I ask the gentleman what the point of order is?

Mr. PADGETT. The point of order is that it is not germane to the provisions to offer a bounty. I do not think it is legislation germane to the bill.

Mr. MANN. It is germane to the bill; there is no question about that part of it. It may be subject to the point of order that it is not germane to the amendment. I would like to make this suggestion to the gentleman from Tennessee. There are a great many provisions in this bill which are subject to a point of order under the ordinary rules of the House. The majority has brought in a rule making all of those provisions in order. In reasonable fairness the gentleman ought to be willing to let some one on the minority side offer a proposition fully germane to the bill, even if it be subject to a point of order.

Having put so many provisions in, and made them in order under a special rule, the majority ought to be fair, notwithstanding that on a thing of this sort I do not know whether the House wants it or not. I think it ought to be submitted to a vote of the committee.

Mr. PADGETT. I do not want to take any technical advantage. I have been very liberal, I think, in dealing with these matters, but the question of offering a bounty would entirely destroy our enlistments, because no man would enlist after that unless you gave him the bounty. If in time of peace you provide for a bounty, immediately it will go abroad throughout the country that there is a bounty to be had if they will hold out, and nobody would ever enlist at all, and we are having good enlistments, and I see no occasion for it. And the point of order would——

Mr. MANN. The gentleman himself has just offered an amendment subject to a point, to which no point of order was made, but it is not to increase enlistments.

Mr. PADGETT. As we have been dealing liberally, I will withdraw the point of order and let the House determine the matter.

Mr. HILL. Will the gentleman pardon me for just a moment? I want to call the attention of the House to a mathematical proposition. After a careful calculation I think the proposition which the gentleman submits in shortening the enlistment from four years to three will cost the country more than if my amendment were adopted.

Mr. PADGETT. You will notice that this amendment does not give the $100 man the benefit.

Mr. HILL. I understand the ultimate effect of it would be to cost a good deal more.

Mr. PADGETT. It does not cost anything at all.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Connecticut [Mr. HILL].

Mr. PADGETT. I want to say, Mr. Chairman, that this bill has authorized something like a little over 10,000 men. The Navy to-day is fully enlisted and has a waiting list. It has not had any trouble to get enlistments so far.

Mr. HILL. Mr. Chairman, pardon me, does he not recognize the fact that the war conditions, where men are getting war wages, stops enlistments, and will during the continuance of the war in Europe?

Mr. PADGETT. It has not so far, and we find that for a year or more the enlistments have continued. We have a full

enlistment. In fact, day before yesterday the Secretary said to me that he was full up, and would have to stop the enlistments for a while unless this bill became a law, so that he would have an outlet for the enlistments.

And the proposition is plain that if we put on here a provision to give a bonus of $100 for enlistments, not another man will enlist unless he gets that $100. It would be a bad policy. It would destroy our enlistments, and all over the land the word would go, "Just wait and you will get $100 for your enlistment." I hope the amendment will be voted down.

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Connecticut [Mr. HILL] to the amendment of the gentleman from Tennessee [Mr. PADGETT].

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Tennessee [Mr. PADGETT].

Mr. ROBERTS of Massachusetts. Mr. Chairman, I desire to be heard for a moment on the amendment offered by the gentleman from Tennessee [Mr. PADGETT].

I do not know that I am opposed to it, but I would like to ask the chairman of the committee where this amendment came from? It has never been brought up in committee, and, so far as I know, it has never been heard of in committee. What is its real purpose?

Mr. PADGETT. I will say to the gentleman that several days ago the gentleman from Connecticut [Mr. HILL] talked to me about the amendment which he has just offered and which has been voted down. We discussed the matter of attempting to give some stimulus to enlistments. I told him that I would think over the matter very carefully and earnestly, with a view to trying to reach what I thought would be a correct solution of the matter.

The more I thought of it the more I was convinced that it would be improper to offer a bounty; and then I went up and talked with Admiral Blue and with the Secretary of the Navy. We three discussed the amendment submitted by the gentleman from Connecticut, and all of us agreed that it would in effect destroy our enlistments, and out of that suggestion Admiral Blue prepared the amendment which I have offered, giving a one-year enlistment and allowing the privilege to a man at the end of one year to be discharged honorably, but without any charge against him, and without getting any benefit. If he remains longer than a year, why he continues for the full period.

Mr. ROBERTS of Massachusetts. Mr. Chairman, will the gentleman yield? I desire information only on the proposition.

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. If a man enlists, he enlists for the full period of four years; but under this provision, if it becomes a law, the man who has enlisted for the first time, after one year's service may, in the following June or December—not between those periods, but in those specific months—be discharged on his own application without paying anything?

Mr. PADGETT. He may ask for a discharge at the expiration of one year from the time of his enlistment, to be discharged the following June or December. Those two months were selected for the reason that at that time it would cause less inconvenience. The fleets in those months are less active than in any other months in the year, and it would cause less inconvenience for the changes to take place in those two months.

Mr. ROBERTS of Massachusetts. Now, this is not intended in any way to take the place of the departmental regulation governing discharge by purchase?

Mr. PADGETT. No, sir; it is not; nor the furlough provision that we have included in this bill.

Mr. ROBERTS of Massachusetts. And under this provision the man enlisting for the first time will be given an outfit costing $60, and 12 months after he receives that outfit he can leave the service without reimbursing the Government a penny?

Mr. PADGETT. That is it.

Mr. ROBERTS of Massachusetts. Does he get transportation like other men who are discharged from the service?

Mr. PADGETT. No, sir; I understand not.

Mr. ROBERTS of Massachusetts. Why should he not? There is nothing here to prevent it, as I read the amendment of the gentleman. I think, Mr. Chairman, under the terms of this amendment, if he enlisted at Boston and lived in the eastern part of the country and was discharged at San Francisco, he would have the transportation back to the point of enlistment.

Mr. PADGETT. I suppose he would receive transportation. I do not see anything that would prevent his receiving his transportation back to the point of enlistment. The advantage of the amendment would be that he would get the benefit, but instead of tying himself for four years the young man would have the inducement of knowing that he would get out at the end of a year in an honorable way without any penalties; and then the department believes that if they enlist and get into the service and serve for one year, and become accustomed to it, a very large number of them will continue in the service, and that benefit is given to them in lieu of the proposal for the bounty.

Mr. ROBERTS of Massachusetts. Really, under the working of this amendment, if it becomes a law, would it not be possible for some men to be held 17 months before they can get their discharge under the terms of this act?

Mr. PADGETT. It would run from 1 year to 18 months.

Mr. ROBERTS of Massachusetts. That would depend, of course, upon the time a man enlisted?

Mr. PADGETT. Absolutely so.

Mr. ROBERTS of Massachusetts. So that if a man enlisted in June or the latter part of May, a year from that time he could ask to be discharged in the following month of June, and he would be in only 13 months, and the man who enlisted in January would have to serve practically 18 months before he could get out?

Mr. PADGETT. That would be the way.

Mr. ROBERTS of Massachusetts. That does not seem to me to be fair.

Mr. PADGETT. The law determines the time of his discharge, but not the time at which he shall enlist.

Mr. ROBERTS of Massachusetts. How are you to help your enlistments if you give him the notice that they may wait a certain number of months and get a more favorable time to enlist?

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent that the gentleman's time be increased five minutes. We should have an understanding of this radical legislative proposition.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. ROBERTS of Massachusetts. I will say that if there should be a change of law covering enlistments in the departmental regulation, I would be in favor of it.

Mr. PADGETT. Under this provision they can get out without buying their way out.

Mr. ROBERTS of Massachusetts. I understand.

Mr. PADGETT. Then there is another provision in the bill, going along with it, that allows a man to be furloughed and go out of active service into the reserve, and subject to be furloughed without pay in the reserve.

Mr. STAFFORD. Where is that in the bill? I remember reading it, but I can not find it at this minute.

Mr. ROBERTS of Massachusetts. I do not know that I will object to or oppose this provision, but I have grave misgivings about its results.

Mr. McKENZIE. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. McKENZIE. I simply desire to ask the chairman whether, under his amendment, a man would pass out into the reserve at the end of the year?

Mr. PADGETT. Not under this amendment. He would under another provision in the bill. If he did not choose to go out under this provision at the end of the year, later under the other provision he could go out into the reserve.

Mr. McKENZIE. Under your amendment we would lose the man's services.

Mr. PADGETT. At the end of 1 year, or 18 months; whatever that period was.

Mr. McKENZIE. One other question. Is it possible for a man to become an efficient seaman in one year's service?

Mr. PADGETT. For many, even most of the ratings, yes; for some of the higher ratings, no.

Mr. McKENZIE. Is it not possible that by the adoption of your amendment we will demoralize the personnel of the Navy rather than improve it?

Mr. PADGETT. I think not. I think if a young man, when he has been in the service a year, is dissatisfied with the service to the extent that he wants to get out of it, the service is not hurt by letting him get out. Many of them when they get in there and get accustomed to it and get into the drill will go right along and continue the four years, and reenlist later.

Mr. BUTLER. Mr. Chairman, the gentleman from Michigan [Mr. CRAMTON] called my attention to a feature of this amendment that had not at first impressed me. It is only intended for the man who enlists for one year. That is, at the completion of

one year he may, at the following June or the following December, resign.

Mr. PADGETT. No; that is not an accurate statement of it. At the end of the year he can ask for his discharge, and the discharge will take place in the following June or December after the completion of his year. But at the end of the year he must make known his desire to take advantage of the relief.

Mr. BUTLER. Does the gentleman think the amendment is broad enough to cover his view or interpretation of it?

Mr. PADGETT. Yes.

Mr. BUTLER. Suppose a sailor man serves two years. He can not take advantage of it then?

Mr. PADGETT. No. Then he comes under the other law.

Mr. BUTLER. I understand. Then, after he serves one year, he may, if this amendment is adopted, elect to retire from the service, but he will not receive his discharge——

Mr. PADGETT. He would get his discharge in the following June or the following December.

Mr. BUTLER. Very well. But then he will not have to serve 18 months.

Mr. PADGETT. It will depend on when he enlisted.

Mr. BUTLER. Very well. Now, there is where I am confused. If a sailor should enlist in the month of January, 1917, his term would expire in January, 1918.

Mr. PADGETT. At that time he would make known his wish to retire under this provision and would retire in the following June.

Mr. BUTLER. Yes; but he still would continue his service in the Navy?

Mr. PADGETT. Yes; until the following June.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. PADGETT. I ask for five minutes more.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that his time be extended five minutes. Is there objection? [After a pause.] The Chair hears none. The gentleman from Tennessee [Mr. PADGETT] is recognized for five minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object——

The CHAIRMAN. It is too late.

Mr. MOORE of Pennsylvania. Reserving the right to object——

The CHAIRMAN. The gentleman from Tennessee has been recognized.

Mr. MOORE of Pennsylvania. The Chair stated the question, and the Chair did not hear me.

The CHAIRMAN. That may be the Chair's misfortune.

Mr. MOORE of Pennsylvania. I reserved the right to object to the request.

The CHAIRMAN. The gentleman is recognized for five minutes.

Mr. MOORE of Pennsylvania. Will the gentleman from Tennessee yield to me?

Mr. PADGETT. When I have yielded to my colleague on the committee [Mr. BUTLER].

Mr. MOORE of Pennsylvania. The committee is occupying the time. I would like to know when the committee does get through.

Mr. BUTLER. I will forego the privilege.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] has the floor.

Mr. BUTLER. My colleague [Mr. MOORE of Pennsylvania] may have the opportunity of asking the question. I only want information, and I do not want to be criticized for it.

The CHAIRMAN. The gentleman from Tennessee has the floor, not the gentleman from Pennsylvania.

Mr. PADGETT. I have offered to yield to the gentleman from Pennsylvania in every way that I could.

Mr. BUTLER. I am not criticizing the gentleman from Tennessee. I was endeavoring to get some information that I thought would be useful to me in voting upon this, but the question is raised whether the Naval Affairs Committee propose to occupy all the time; therefore I will forego my privilege.

Mr. HILL. Mr. Chairman——

Mr. PADGETT. I yield to the gentleman from Connecticut.

Mr. HILL. I would like to understand this amendment If I understand it correctly it cuts out the bounty for the second enlistment, from these men who retire——

Mr. PADGETT. What we call continuous-service pay.

Mr. HILL. The three months' bonus that is given if a man reenlists?

Mr. PADGETT. That is correct.

Mr. HILL. I think the exigencies would require that the man be paid the bonus to begin with. Now, what I want to know is this: Does it cut out also the extra pay for the second enlistment?

Mr. PADGETT. He would not get that unless he served the four years.

Mr. HILL. Is there anything in the amendment that prevents his drawing $5 a month extra if he reenlists?

Mr. PADGETT. Yes; because he would not be counted as having enlisted for a full period. He does not get it. It says here—

> But when so granted shall not entitle the holder in case of reenlistment to the benefit of an honorable discharge granted upon completion of enlistment.

Mr. HILL. Does that specifically cover anything more than the three months' extra pay for reenlistment?

Mr. PADGETT. Yes; it covers all the benefits of reenlistment.

Mr. STAFFORD. Mr. Chairman, this amendment is a departure from the policy persistently followed by the Military Affairs Committee in their method of enlistment for the Army. I wish to inquire whether the Secretary of the Navy and the Chief of the Bureau of Navigation and the gentleman from Tennessee considered the advisability of having these men who elect to be relieved of service within one year continue as reserves for the balance of their enlistment?

Mr. PADGETT. We have a provision in this bill taking care of that.

Mr. STAFFORD. That does not take care of this identical condition. That provision is found on page 40; that only secures a man's release at the option and discretion of the Secretary of the Navy. I can conceive of many men wishing to enlist in the Navy who will be guaranteed their release under a term of one year and be willing to be a member of the reserve force during the remaining three years. Why should we, under the provision that the gentleman submits, allow a man to be mandatorially discharged after service of one year, with full training, full equipment, transportation paid to his home, without having the Government control his activities in case of an emergency during the remainder of his original enlisted period?

Mr. PADGETT. This provision and the one in the bill takes care of both situations. This provision authorizes enlistment, and at the end of the first year of his first enlistment he may be discharged, and he is completely separated from the service if he does not want to remain in the service. Under the other provision he may during the first year, or after the first year, retire and go into the reserve and remain in the service, so that both situations are cared for.

Mr. STAFFORD. They are not cared for; why should not the Government have control of his activities after he has served one year?

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. STAFFORD. I ask unanimous consent that the time of the gentleman from Tennessee be extended three minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that the time of the gentleman from Tennessee be extended three minutes. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, I would like to ask the gentleman from Tennessee if this request is granted, how many more amendments the committee has to offer, five days having been used for the committee and only one day remaining for the rest of the Members of the House?

Mr. PADGETT. I have only two or three amendments to offer, and that is all. I do not know whether other members of the committee may have any.

Mr. MOORE of Pennsylvania. Still reserving the right to object, I would like to know how many amendments the minority of the committee has, since only the committee has offered any amendments?

Mr. ROBERTS of Massachusetts. The minority has no more amendments to offer.

Mr. MOORE of Pennsylvania. Reserving the right to object, I would like to ask the chairman of the committee, the gentleman from Tennessee, whether the other 425 Members of the House, under the rule and the agreement and the peculiar conditions prevailing, will have an opportunity to present amendments at all?

Mr. PADGETT. Yes; I think so. I hope to get through in a very short time.

The CHAIRMAN. The Chair will state that hereafter gentlemen can not indulge in debate under the guise of reserving the right to object to unanimous-consent requests. The Chair will enforce the rule.

Mr. STAFFORD. Does the gentleman believe that it would be a deterrent to enlistment if the amendment proposed by him

had the further provision that he should become a portion of the reserve force in case he elect to be discharged?

Mr. PADGETT. I think it would destroy the purpose of the amendment. This is to afford an opportunity for a man to get out after one year. We have a provision that if he wants to stay in, or if he wants to go into the reserve, he can go in during the first year or after the first year. This is to take care of a man who does not want to go into the reserve. It is to get trained men, believing that after they are once familiar with the service they will continue during the full period.

Mr. STAFFORD. Are not discharges and going into the reserve under the furlough feature contingent on the exercise of the discretion of the Secretary of the Navy?

Mr. PADGETT. Certainly; and it ought to be. You would not want, if the emergency should arise, to have every one of them to say, "I want to go into the reserve."

Mr. STAFFORD. I think this should have a contingent provision that they should go into the reserves.

Mr. PADGETT. I think not.

Mr. ROBERTS of Massachusetts. Will the gentleman from Tennessee permit a question?

Mr. PADGETT. Certainly.

Mr. ROBERTS of Massachusetts. If I understand the purport of the gentleman's amendment, after one year a man can leave the Navy absolutely on the following June or December, irrespective of whether we are in a state of peace or war. Is that correct?

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. As I read the amendment, he has an absolute right by giving notice to be released from the Navy with an honorable discharge in June or December following his year of service?

Mr. PADGETT. Yes.

Mr. ROBERTS of Massachusetts. He can be discharged whether we are at peace or at war?

Mr. PADGETT. I am going to modify my amendment by putting in "in time of peace."

Mr. ROBERTS of Massachusetts. That will correct it.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent to modify my amendment, in the second line of the amendment, after the word "shall," and before the words "if he so elects," to insert the words "in time of peace," so that it will read:

Provided, That any person who shall hereafter enlist in the Navy for the first time shall, in time of peace, if he so elects—

And so forth.

The CHAIRMAN. Is there objection to the modification as stated by the gentleman from Tennessee?

There was no objection.

Mr. CRAMTON. Will the gentleman from Tennessee yield?

Mr. PADGETT. Yes.

Mr. CRAMTON. As I understand it, if this amendment goes into law, a man who enlists for a four-year period can, at the end of the first year, make application for his discharge on the following June or December and get it without expense.

Mr. PADGETT. Yes.

Mr. CRAMTON. If he served his country two years or three years, he can not at the end of that two or three years get his discharge except by paying for it.

Mr. PADGETT. He can do that and go into the reserve.

Mr. CRAMTON. He will be penalized for his additional service.

Mr. PADGETT. Oh, no; it is not a penalty, but there must be some time fixed, and this is to give the young man that goes in without experience a period of a year to adjust and adapt himself to the service and if he does not like it to retire.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Tennessee, as modified.

The question was taken, and the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 100, following the amendment inserted after line 9, insert the following:

"In the event the Secretary of the Navy is unable to secure from the shipbuilders contracts for the expeditious construction of the ships herein authorized at a fair and reasonable price, the sum of $6,000,000, or so much thereof as may be necessary, is hereby appropriated to enable the Secretary of the Navy to equip the navy yards at Puget Sound, Philadelphia, Norfolk, Boston, Portsmouth, Charleston, and New Orleans with suitable and necessary machinery, implements, buildings ways, and equipment for the construction of such of the ships herein authorized as may be assigned to such yard for construction."

Mr. PADGETT. Mr. Chairman, I wish to state to the committee that I have offered that amendment because I think it is proper, in view of the amendment which I offered yesterday morning and which was adopted by the Committee of the Whole. It will be recalled that yesterday morning the committee adopted an amendment providing that the Secretary should have authority to pay bonuses not exceeding 20 per cent of the limit of cost of the ships for expeditious construction and for expeditious delivery of material. It occurred to me in reflecting over that that the shipbuilders, with the enormous program that we are authorizing this year, already providing for more than $182,000,000 worth of new construction—yes, $190,000,000 of new construction——

Mr. CALDWELL. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Not just now; I will in a moment—that it would be proper that we should put in the hands of the Secretary the opportunity and the means of preventing a combination among the shipbuilders. For instance, we are authorizing five battle cruisers. If the shipyards that are prepared to build battle cruisers should say, "We will take one apiece and we will make our bids for a long-time period of construction at a price and then ask a bonus to come down to the ordinary period of construction," the Government might be helpless; but if we have in the hands of the Government power to say to these gentlemen, "If you do not submit to us contracts for a proper time and charge reasonable and fair prices we will equip these yards and be ourselves able and ready and prepared to build these ships," we will have a balanced proposition in the bill. You have offered the bounty for the expeditious proceeding of the private yards if they will properly avail themselves of it. If they seek to hold up the Government, the Government will have the opportunity and the power to equip itself to relieve itself from that situation.

I want to state that I did not include the Mare Island Navy Yard and the New York yard for the reason that heretofore we have made an appropriation at a former day in this session equipping the navy yard at Mare Island and also putting in the amount that was necessary to add the additional machinery at the navy yard in New York. They have already been cared for by previous appropriations and those two yards were not included.

Mr. CALDWELL. Why not put them in anyway, for fear there is not enough?

Mr. PADGETT. Oh, they have enough.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. HUMPHREY of Washington. I want to ask the gentleman this question: Suppose that the situation should so develop that on the Atlantic coast the Secretary could find private yards for the construction of these vessels, but that on the Pacific coast he could not. Would he be authorized then to equip a yard on the Pacific coast, or would he have to equip all of them if he equipped one?

Mr. PADGETT. I suppose that under this amendment, under a fair and proper interpretation of it, if the private builders in the country submitted bids for expeditious delivery at a fair and reasonable price, he would be justified in accepting those bids and not exercising this discretionary power.

Mr. HUMPHREY of Washington. Will the gentleman yield further? I do not think that the gentleman quite understood the import of my question. What I want to know is whether or not the Secretary could equip one or more or all of the yards if he thought it necessary? Would he have to equip all of them or could he equip as many as he thought necessary?

Mr. PADGETT. If he did not get proper bids and he had ships enough to assign to all of the yards he would equip all of the yards under the provisions of this amendment. It is stated that he shall equip a yard with machinery, implements, building ways and equipment to construct the ships assigned to that yard for construction.

Mr. CALDWELL. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. CALDWELL. Does the gentleman not think it would be advisable to include the New York yard for the reason that it may develop from an efficiency standpoint that the department may desire to expend a part of that money for the development of that yard. The gentleman must understand that the Brooklyn Navy Yard is one where they are doing some very very important work at this time.

Mr. PADGETT. Some very very important work, and we have spent some very very large sums to equip that yard, and it is equipped, and they are building and have been building large ships there, and last January we at their request passed an emergency measure taking care of the navy yard at New York. I do not think it is necessary to include it now.

Mr. CALDWELL. For the immediate necessities now.

Mr. PADGETT. Oh, for all that is needed.

Mr. CALDWELL. As I understand it, the purpose of the $6,000,000 appropriation proposed is to take care of something that may happen in the future.

Mr. PADGETT. To equip the yards that are not yet equipped. I think the gentleman ought not to try to gobble up what we are providing for these other yards.

Mr. CALDWELL. We do not want to gobble anything, but we want a square deal.

Mr. PADGETT. You have already had your deal, and these others have been waiting. You have been building ships in New York for years and years.

Mr. CALDWELL. We are trying to square out the points.

Mr. PADGETT. You are trying to take up something that these others get.

Mr. NOLAN. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. NOLAN. Considering the fact that we are now entering upon the largest program that this country ever undertook, does the gentleman not think it advisable to give the opportunity to the two yards already equipped to build dreadnaughts, to build the largest ships that the Navy needs, and, therefore, to give them additional facilities in the way of additional ways, providing the Secretary is confronted with a situation which deprives him from getting satisfactory bids from private contractors, even though these other yards are equipped. I am thoroughly in sympathy with that idea, but does the gentleman not think we ought to give the Secretary of the Navy the right to further equip both the Brooklyn and the Mare Island Navy Yards?

Mr. PADGETT. Well, the Mare Island yard has a ship on the ways at the present time and has another one assigned there that will take it, when this one gets off the ways, a year before they could get that one off.

Mr. NOLAN. That is just what I want to bring out. What we want is to expedite the building program. The committee is considering the offering of a bonus to expedite the building program. We have at the Mare Island Navy Yard and at the New York Navy Yard a certain amount of facilities to build these large, first-class ships. Now, as you want to get this building program through, does not the gentleman think it would be in the interest of efficiency and economy if they should have the authorization to further equip those yards?

Mr. PADGETT. If the House sees fit to put in the New York and Mare Island yards with the idea of putting additional ways to carry on the building of two ships at each yard, if those names are inserted, there ought to be $1,000,000 added, and it ought to be $7,000,000 instead of $6,000,000.

Mr. NOLAN. I would like to see all the yards that have been enumerated here taken care of first——

Mr. GORDON. Especially San Francisco.

Mr. NOLAN. Let them be taken care of first, and in the event the Secretary, after equipping all of those yards, finds he needs additional facilities, then he ought to have the opportunity to enlarge the facilities at both the New York and Mare Island yards.

Mr. PADGETT. I think if that condition arises those two yards could be taken care of at the next Congress.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. Mr. Chairman, I would ask for five additional minutes.

Mr. BUTLER. How about fixing the time?

Mr. PADGETT. Mr. Chairman, I withdraw that and submit another request that debate on this continue——

Mr. BUTLER. Mr. Chairman, there are nine gentlemen here who have made requests for time on this amendment. How about an hour on each side?

Mr. PADGETT. That is entirely too much, is it not?

Mr. BUTLER. It would be too much for me if I had to make the speech.

Mr. PADGETT. I do not think we need that much. Say an hour, all told; the gentleman to have half an hour and I to have a half an hour.

Mr. BENNET. We will require at least 45 minutes on this side.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that debate upon this matter may be limited to an hour and a half, 45 minutes to be controlled by the gentleman from Pennsylvania——

Mr. BUTLER. No; I will not control the time. I suggest the gentleman from Massachusetts [Mr. ROBERTS] control it. I have not been successful in dividing time and will not divide any more.

The CHAIRMAN. What is the request of the gentleman from Tennessee?

Mr. PADGETT. I am trying to secure——

Mr. ROBERTS of Massachusetts. Mr. Chairman, if the minority leader does not wish to control the time, I have no objection.

Mr. PADGETT. Mr. Chairman, I ask that one-half of the time be controlled by the gentleman from Massachusetts [Mr. ROBERTS] and one-half by myself.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate upon this amendment and all amendments thereto shall close in 1 hour and 30 minutes, one-half to be controlled by himself and one-half by the gentleman from Massachusetts [Mr. ROBERTS]. Is there objection?

Mr. BENNET. Mr. Chairman, reserving the right to object, what opportunity will be given for offering amendments to the amendment? Does this simply apply to this amendment?

The CHAIRMAN. To the amendment and all amendments thereto.

Mr. BENNET. Any gentleman who obtains the floor can offer an amendment?

The CHAIRMAN. With the understanding that any gentleman who has the floor may offer amendments.

Mr. PADGETT. Amendments to this amendment; yes, sir; to be voted upon at the expiration of that time.

The CHAIRMAN. Is there objection?

Mr. PADGETT. My request embraces the amendment and all amendments thereto. Amendments can be offered now or at the expiration of that time.

Mr. BUCHANAN of Illinois. I just desire to ask the gentleman from Tennessee one question. I want to ask the gentleman if he will not agree, instead of the words "a reasonable price," to substitute the words "at a price not to exceed the cost at Government navy yards"?

Mr. PADGETT. We could not tell what that was, and the bidder could not tell what it was when he submitted bids.

Mr. BUCHANAN of Illinois. They submit bids in the navy yards——

Mr. PADGETT. "Fair and reasonable" covers it.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee? [After a pause.] The Chair hears none, and it is so ordered. The gentleman from Tennessee [Mr. PADGETT] is entitled to 45 minutes and the gentleman from Massachusetts [Mr. ROBERTS] is entitled to 45 minutes.

Mr. PADGETT. I will ask the gentleman from Massachusetts if he will not use a part of his time now?

Mr. ROBERTS of Massachusetts. Mr. Chairman, I yield 10 minutes to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, I had ready to offer an amendment to equip the Bremerton yard for battleship construction, but this morning the chairman of the committee [Mr. PADGETT] informed me that he would offer an amendment that he believed would care for that yard. I am certainly much obliged to the chairman for taking this attitude. The amendment that he has offered, I believe, will assure the equipment of the yard at Bremerton for battleship construction. I know the conditions on the Pacific. I know the desires of the Secretary of the Navy, and I have no doubt whatever that if the amendment that has been offered is adopted the Bremerton yard will be equipped for battleship construction. This will accomplish practically all that the amendment that I had proposed to offer would accomplish. For this reason I shall certainly support the amendment.

I appeared before the Naval Committee and urged an amendment for an appropriation sufficient to equip the Bremerton yard. At that hearing I was much surprised to find that, notwithstanding the recommendation of the Secretary of the Navy, practically all of my Democratic friends on the committee were opposed to such an amendment, and several of my Republican friends were also against it. In view of the attitude at that time, I am more than pleased at the change that has taken place, and that the chairman of the committee now offers an amendment that will give what I was asking for when I was before the committee.

For almost 14 years it has been my duty and my pleasure to work for the upbuilding of the Bremerton yard. I believe—in fact, I know—that, all things considered, it is the best yard in the country. Every session of Congress I have been before the committee asking for appropriations for the yard. It is true that the committee has given what they have always believed to be were liberal appropriations and against the action of the committee I have no complaint. But certainly their appropriations were never more than the yard merited. Outside of the legislation giving us the two dry docks, I believe that this amendment, if passed, as it certainly will be, is of greater benefit to the yard than anything that Congress has yet done for it.

Now, I want to call the attention of the committee to the condition as it exists upon the Pacific coast. It is not a question in this particular case of whether you are going to have Government construction or whether you are going to have private construction. It is a question of whether or not you are going to have any construction at all under the condition upon the Pacific coast, and it is largely the condition upon the Atlantic coast.

As I am informed, to-day upon the Pacific coast there is not a single shipyard but what has contracts for at least two years ahead. If the Government was ready at this hour to let a contract for the construction of a battleship there is not a private yard upon the Pacific coast that could commence its construction inside of two years.

What is the use of making appropriations for building battleships unless we are going to have some place to build them? If there is any necessity for a great Navy at all, it is necessary that we proceed to construct it at once, and we can not do that, at least so far as the Pacific Coast is concerned—I have not given so much attention to the situation upon the Atlantic—unless we equip the Government yards for that purpose. The Bremerton yard can be equipped to build battleships in a few months.

Now, another matter in regard to that yard upon the Pacific, the one at Mare Island has already been cared for. The one at Bremerton, as is known by everyone, is the one yard—to use the statement made by experts—is the one yard in the country that has deep water that can be approached and used at all times and under all conditions.

As to the character of the yard, I will take the time to read a few short statements from experts in regard to it.

Admiral Stanford says that the Bremerton yard is absolutely reliable and can be approached at all times and under all conditions by our largest ships without dredging or work on the channel.

The following are quotations from some of those who ought to know:

Admiral Stanford: "We have only one thoroughly reliable and excellent deep-water station, and that is Puget Sound."

Admiral Blue: "It is an ideal yard, and should be fully developed. Our largest dry dock is located there, and all buildings are new and modern."

Admiral Strauss: "An ideal yard and well protected."

Admiral Taylor: "It is a very satisfactory yard, well located, and should be developed to its fullest capacity."

Admiral Badger: "A very fine yard, and is the only yard that vessels can go into at any time of the day, excepting, of course, a dense fog."

Admiral Winslow: "If you are going to equip any of the yards for construction, this one should be so equipped. A large force of well-trained workmen there would be a great advantage in case of trouble in the Pacific. At this time it is the only place on the Pacific that our largest and deepest draft vessels could be taken into."

Surely it needs no further evidence to satisfy the Members of this House that if any yard is equipped for the construction of battleships it should be the Bremerton yard.

In addition to the authorities above quoted, as I have already stated, Secretary Daniels and Secretary Roosevelt have both said that the yard should be equipped. I feel certain, in the light of all the facts, that the Bremerton yard will be one of the first that the Secretary will proceed to equip.

Now, it does seem to me that the one yard that has every facility, the only yard upon the Pacific coast that has a dry dock that can take one of the modern vessels, ought to be equipped for construction if the Secretary of the Navy thinks it is necessary. And the Secretary, when I first came down to Washington, told me he was in doubt whether he would recommend that the Bremerton yard be equipped for battleship construction. Later on he told me that after making an examination, owing to the condition of the private yard, he thought it was necessary that the Bremerton yard be equipped at once.

And I want to take occasion now to extend to the chairman of the committee [Mr. PADGETT] my appreciation for the action he has taken in this matter. By so doing he has helped to relieve a situation that is really serious upon the Pacific, and I certainly appreciate that help.

I only want to say this much in conclusion: We hear gentlemen continually making arguments on this side and on that side about the cost. Well, I submit, that is one of the arguments that does not appeal to me very strongly when used against preparation for national defense. When it comes to this question of preparedness, I do not believe the people of this country are so much concerned as to the cost as they are to know whether or not it is for the protection of the Nation.

We have heard a great deal said about the tremendous sum of money that has been spent by England for her great navy. I wonder if there is any patriotic citizen in all that great Empire to-day who regrets the tremendous sum of money that England has expended to construct her navy. If it had not been for that great expense, the great British Empire to-day would be crumbling. We talk about the great cost of our Navy. We spend more money in this country by millions of dollars every year for automobile tires than we do for our Navy. Talk about the great cost of the construction of a navy. Why, the cost of a single modern battle would be more than the cost of a great battleship squadron. The cost of a single year of war would keep us prepared for a century. The cost of a single modern war would be greater than to be prepared for a thousand years. When you talk about the question of cost, I want to ask you who is going to stop and ask about the cost in the day of battle? Who is going to measure in money the value of the dead and the dying? Who is going to place a value in money upon the sufferings of the widow and the orphan? What is human blood worth, anyway, measured in money? What patriotic citizen is going to weigh the dollar against the safety of the Nation? It is not a question of cost in the construction of a navy, but the sole question is, Does a great navy tend to produce peace and to protect the country? It is an insult to the patriotism and the intelligence of the American people to prate about the question of cost when the safety of the Republic is being weighed in the balance. [Applause.]

Mr. PADGETT. Mr. Chairman, I want to submit an amendment to this amendment and incorporate it and let it be considered at the time. At the end of the line add:

The navy yards at Puget Sound, Philadelphia, Norfolk, and Boston to be fitted to be equipped for the construction of capital ships.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] asks unanimous consent to modify his amendment in the manner indicated. Is there objection?

Mr. ROBERTS of Massachusetts. That will be satisfactory, Mr. Chairman.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. ROBERTS of Massachusetts. I think, Mr. Chairman, with that amendment in we can obviate this debate. [Cries of "Vote!" "Vote!"]

Mr. SULLOWAY. May I be recognized to ask a question of the gentleman, the chairman of the committee?

The CHAIRMAN. Does the gentleman yield?

Mr. PADGETT. I do.

Mr. SULLOWAY. Why is the Portsmouth yard kept from that amendment? Has not the harbor the deepest water that there is?

Mr. PADGETT. Simply because the yard at Portsmouth is not equipped for battleship construction, but it would be equipped for the smaller ships, the cruisers, the torpedo boats, the submarines, and boats of that kind. The yard is not of that character. The ones that we take up are equipped for battleship construction. The conditions are such that this appropriation would make them so.

Mr. SLAYDEN. Mr. Chairman, I want to ask the gentleman a question.

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Texas?

Mr. PADGETT. Yes.

Mr. SLAYDEN. I wanted to ask the gentleman if this readiness to surrender the debate that we were so eager for a while ago is not due to an eagerness to take care of certain shipyards and not others? I should think that was so from the inquiry made by the gentleman from New Hampshire [Mr. SULLOWAY] as to the Portsmouth yard.

Mr. PADGETT. This is to equip yards in such a situation that they are suited and adapted for the construction of capital ships.

Mr. SLAYDEN. And also suited to the gentleman——

Mr. PADGETT. That may be true, but that has nothing to do with the question of the yards. Other yards can not be equipped for the construction of capital ships and for that reason they are not put in there.

Mr. WHALEY. I would like to ask the gentleman a question. Under this amendment would the other yards be permitted to build ships of smaller construction?

Mr. PADGETT. Certainly. That is what I stated. They could build the scout cruisers, the torpedo boats, and the auxiliary ships, and submarines. They can take care of those.

Mr. WHALEY. And the only two classes that would be taken out of them would be the battleships and the battle cruisers?

Mr. PADGETT. Yes, sir.

Mr. SLAYDEN. Mr. Chairman——

The CHAIRMAN. The gentleman from Tennessee has control of the floor.

Mr. SLAYDEN. The gentleman yielded and sat down. I wanted to ask the gentleman if I might not have four or five minutes.

Mr. PADGETT. I yield to the gentleman five minutes.

Mr. SLAYDEN. Mr. Chairman, what has happened here in the last few minutes indicates the happy conclusion of a deal. I do not mean to say that it is a deal that is going to be of any particular personal profit to the gentlemen engaged in it. I would not insinuate that, and would not believe it of the gentlemen concerned. But it shows their zeal for the interests of their respective communities, and when they united in one of these combinations and trusts, I will say to my colleague over there, they reached a conclusion that induced them to abandon an opportunity for debate which they were so eager for a few minutes ago. Then comes the gentleman from Washington [Mr. HUMPHREY], with characteristic zeal, hurling his contempt at economy when it comes to the construction of ships of war in his district. He is frank, open, and unashamed in his disregard of economy if his district is to benefit by the extravagance. Always alert and diligent in the effort to line the pockets of his constituents, the gentleman is now smilingly content.

There is one man that is forgotten in all this thing. In the anxiety to build up a shipyard at Brooklyn, or at Mare Island, or at Portsmouth, or on Puget Sound, or some other place, the man who pays for it all has been forgotten, and, I submit, there ought to be some little consideration given to him. He digs in the ground and in the mine; he develops and creates the wealth that we have in this country, and it is his contributions to the Government that support and pay for the extravagant program that we are entering upon; and I say, sir, that in his interest this disgraceful contest between the Pacific coast and the Atlantic, between Mare Island and the eastern shipyards each year, ought to stop, and one line of conduct, and only one, should be adopted and followed, and that is to build these ships for the people who pay for them, at the least possible cost, with due regard to efficiency, and for the purposes for which they were designed. And I think, Mr. Chairman, that so far as the taxpayers are concerned they may well exclaim, and be entirely justified in it, "A plague on both your Houses." You care nothing for the man who supports the whole project. [Applause.]

I never have been able to understand the audacity of Members who year after year stand up here and ask that ships of the Navy be built at greater cost than is necessary to procure them.

If they can be built at less cost and with equal skill on the Pacific than on the Atlantic, why, in heaven's name, build them there and send them to the Atlantic when finished. If they can be built more cheaply on the Atlantic, ordinary common sense and business judgment command their construction there. Then, sir, fairness and justice to the taxpayer demand it. But why talk about justice for the taxpayer when it does not exist in this Hall built for their Representatives.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Illinois [Mr. BUCHANAN].

Mr. BUCHANAN of Illinois. Mr. Chairman, I desire to offer an amendment to the amendment of the gentleman from Tennessee, the chairman of the committee.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. BUCHANAN of Illinois: "After the word 'a' in line 3 of the Padgett amendment, strike out the words 'fair and reasonable price' and insert 'not to exceed cost of construction in Government navy yards.'"

The CHAIRMAN. How much time does the gentleman from Illinois desire?

Mr. PADGETT. I yield to the gentleman five minutes.

Mr. BUCHANAN of Illinois. Mr. Chairman, I believe the committee will understand the purpose of that amendment. The Navy Department has had some experience recently in regard to prices in the construction of battleships and the inability to secure the construction of them in private plants at a reasonable price, because the Government navy yards in their bids have bid sufficiently low to justify the Secretary of the Navy in recommending and this Congress in granting the privilege to spend $600,000, I believe it was, for the equipment of Mare Island Navy Yard, because a ship could be constructed cheaper in the Government yard than it could be in the private yard; and instead of putting in there "a fair and reasonable price," it seems to me like this has the same effect.

No one ought to object to this, because the private shipbuilders have been claiming all the time that they build cheaper than they do in the Government yards. Therefore those who are in favor of giving the private yards an opportunity to build should not object to a provision of this kind in the amendment.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. BUCHANAN of Illinois. Yes.

Mr. MOORE of Pennsylvania. Would not the effect of the gentleman's amendment be to put private shipyards out of business, since four of the navy yards will now be equipped to build capital ships? Would there be any competition at all?

Mr. BUCHANAN of Illinois. There would be competition between private yards and Government yards, and the representatives of private yards before our committee have stated that they can build cheaper than the Government yards.

Mr. MOORE of Pennsylvania. Would not the effect be to say to the private yards, "Build the ship at our price, or not at all"?

Mr. BUCHANAN of Illinois. Build the ship at a not greater price, or a price not to exceed the cost of construction in a Government navy yard, which it is claimed is greater than that in the private yards.

Mr. MOORE of Pennsylvania. But there would be no competition in the private shipyards if this amendment passed.

Mr. BUCHANAN of Illinois. It makes competition between the Government and the private yards.

Mr. MOORE of Pennsylvania. I think the passage of the gentleman's amendment would mean that the ship should be built in a Government yard or nowhere.

Mr. BUCHANAN of Illinois. It would mean the ships would all be built in a Government yard. There would still be competition between Government yards, as you see in this House the efforts of Members of Congress to get work done in their yards in preference to the yards in another part of the country. That has also been proven beyond any doubt in the construction of the Panama Canal, where one part of the organization engaged in the work on that canal has endeavored to exceed the other part of the organization engaged in the work of construction of that canal; so that by having more than one yard for the construction of these capital ships, that in itself makes competition, and in any event we would have competition. But this amendment that I am offering makes competition between the Government navy yards and the private yards as well as competition between the different Government navy yards.

Mr. PADGETT. Mr. Chairman, I simply wanted to say about this amendment——

The CHAIRMAN. The amendment can be disposed of at the end of the debate.

Mr. PADGETT. All I wanted to say was that the amendment offered by the gentleman from Illinois [Mr. BUCHANAN] is wholly impracticable, to provide that a private yard should not have a contract for building a ship at a price greater than a navy yard would build it. That would make it impossible. We do not know at what figure a navy yard might build it.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. BUCHANAN of Illinois. I wanted to ask the gentleman if it is not a fact that the Secretary of the Navy, in recommending the equipment of the yard, did know what it would cost to build a ship in the yard, or he would not have recommended it?

Mr. PADGETT. He knew what they submitted estimates for, or what they thought they would build it for. They would get a contract for a certain amount and would be penalized if they did not do it for that. The other navy yard simply submits an estimate, and if it costs more, the Government pays more.

Mr. BUCHANAN of Illinois. Has not that been the usual practice in the Government navy yards? I ask the gentleman whether or not the cost has not been greater than estimated by the representatives of that navy yard?

Mr. PADGETT. In a great many cases it has been more.

Mr. BUCHANAN of Illinois. Can the gentleman name one?

Mr. PADGETT. Yes; in the case of the *Louisiana*.

Mr. BUCHANAN of Illinois. How much more, or about how much?

Mr. PADGETT. In the case of the *Florida* it was a million and a half more.

Mr. BUTLER. Yes; about a million and a half more.

Mr. BUCHANAN of Illinois. Was there any case where it was less?

Mr. PADGETT. Yes. There was a case at Mare Island where they built a smaller boat at something under the estimates—about $100,000 less.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes.

Mr. MOORE of Pennsylvania. Would not the private shipyards start in handicapped by overhead charges and things of that kind, in excess of charges that would be borne by the Government?

Mr. PADGETT. They could not tell at what figure the Government would build on an estimate of so much. If it did not do it and it took $200,000 or $500,000 additional, it would simply mean that private yards could not do it at all.

Mr. MOORE of Pennsylvania. It is an unfair and impracticable condition.

Mr. PADGETT. That is all I have to say about this amendment.

Mr. BUCHANAN of Illinois. If the gentleman will yield, then if his position is correct, the Secretary of the Navy knew nothing about the facts when he represented to us that he could build these ships more cheaply in navy yards than he could by private construction.

Mr. PADGETT. He submitted to us the fact that the yards had represented to him that they could, but there was no guaranty——

Mr. BUCHANAN of Illinois. And, of course, they did not know anything about it.

Mr. PADGETT. There was no obligation to do it, except that they would try to meet their estimate.

Mr. BUCHANAN of Illinois. If the gentleman's position is correct, it means that after all these years of experience they know nothing about what they can do in Government navy yards in the way of the cost of construction.

Mr. PADGETT. It does not mean that at all.

Mr. BUCHANAN of Illinois. It does mean that the Government navy yards, after years of experience constructing ships, can estimate quite accurately what it will cost to construct a ship, and from information at hand the estimated cost of a Government navy yard would be a reasonable and fair price for the Government to pay a private corporation or firm.

Mr. NOLAN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from California offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment by Mr. NOLAN: Amend the amendment by incorporating the following proviso:

"*Provided*, That the Secretary of the Navy is authorized to provide additional facilities as provided for in the event it is found necessary at the New York and Mare Island Navy Yards."

Mr. NOLAN. Mr. Chairman, I do not represent the congressional district in which the Mare Island Navy Yard is located. It is not in my district and is a considerable distance away from it; but I recognize the fact that this naval bill carries appropriations running into hundreds of millions of dollars—the largest program the Government of the United States ever adopted—a great building program. I do not want to see the navy yards that have been enumerated here deprived of the opportunity to become shipbuilding plants. I think they ought to be taken care of first, before the New York and Mare Island Navy Yards get any additional facilities; but I do not think the Secretary of the Navy should be deprived of the opportunity of putting increased facilities into both Mare Island and New York if he finds it necessary. Now, it may be that before he gets very far he will find that it will take a considerable length of time to equip these four navy yards enumerated in the Padgett amendment, whereas he could for a slight expense in comparison to the other yards provide additional ways at Mare Island and New York, and put on those ways capital ships.

Mr. ROBERTS of Massachusetts. Will the gentleman yield for a question?

Mr. NOLAN. I will.

Mr. ROBERTS of Massachusetts. Does the gentleman think they can provide new ways quicker than they can extend existing ways? And does he not know that there are existing ways in Philadelphia and Boston that can be extended very readily?

Mr. NOLAN. I do know this, that if you want to provide the right kind of ways for the building of a dreadnaught you can not do it by extending the Philadelphia or Boston ways.

Mr. VARE. Oh, yes; you can.

Mr. NOLAN. Because they are not built strong enough to carry dreadnaughts or other capital ships.

Mr. VARE. The gentleman is mistaken.

Mr. NOLAN. I do not want to deprive Boston or Philadelphia of the opportunity of becoming first-class yards, but I want to give the authority to the Secretary of the Navy to extend the facilities at New York and Mare Island; and if you adopt the Padgett amendment as written, the Navy Department will be handicapped.

Mr. PADGETT. Mr. Chairman, I can simplify the matter, so far as I am concerned. I am willing to accept this proviso here, and add some more money to take care of it, if it is necessary to do it, and leave it in the discretion of the Secretary.

Mr. NOLAN. I do not want to deprive New York and Mare Island of any opportunities.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I would like to see that amendment. I want to see how it is worded.

Mr. PADGETT. It provides that the Secretary of the Navy is authorized to provide additional facilities, as provided for, in the event that it is found necessary, at the New York and Mare Island Navy Yards.

Mr. ROBERTS of Massachusetts. If the amendment gives that authority after he has provided for the other yards named, I will accept it.

Mr. PADGETT. Just put that in.

Mr. NOLAN. I do not want to deprive him of the opportunity.

Mr. PADGETT. It leaves it with the Secretary. He is going to take care of the other yards. You need not have any anxiety about that.

Mr. ROBERTS of Massachusetts. I am not sure.

Mr. VARE. For the benefit of the gentleman from California, I should like to say that the plans for the existing shipways at the California navy yard were drawn by the department with the express purpose that they could be enlarged for the purpose of building capital ships.

Mr. ROBERTS of Massachusetts. We have the best of authority for that statement.

Mr. NOLAN. I would like to see your yard equipped immediately, and every yard that is capable of building first-class ships. I do not want to deprive you of that opportunity for the benefit of Mare Island or New York.

Mr. VARE. I want you to know that the existing ways are already planned for that purpose.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PADGETT. I ask unanimous consent that the time be extended five minutes.

There was no objection.

Mr. PADGETT. I yield to the gentleman from Massachusetts [Mr. TAGUE].

Mr. TAGUE. Mr. Chairman, I can not see in the amendment by Mr. PADGETT where any of the yards provided for are going to get any expenditure unless the private shipyards of the country do not come up to the specifications required by the Secretary of the Navy. That is one thing that I, for one, representing the district wherein lies the Boston Navy Yard, have insisted upon—that we do become equipped under this appropriation in order that we may begin the building of battleships in the navy yard. That is what the navy yard was intended for. That is what the navy yards were built for. There is not a country in the world to-day that has so many of its navy yards lying idle and going to rot as this country. Mr. Chairman, under this amendment there is no benefit to be derived by any of the Government yards unless all of the private shipbuilding companies of the country fail to come up to the specifications. I contend that it does not use the people in the different parts of the country fairly. In the district that I represent we have just completed on the ways, appropriated for two years ago, a small supply ship. On the building of this ship alone we have saved the Government over $250,000. The building of the ways cost the Government less than $140,000, and we have saved the Government over $250,000 on one ship.

All we ask is that the ways in the Boston Navy Yard be extended so that we can do the work that ought to be done in large cities. Just think of it: Great cities like Boston and Philadelphia you are asking to build little boats, while in the shipyards not equipped as well as we are they are building big battleships. Our navy yards are lying practically idle. It is a shame and a disgrace to this country to see mechanics walking the streets wanting employment and being deprived of employment in the cities where the navy yards are because the yards are not properly equipped.

Mr. Chairman, I think the time has come while we are making appropriations when these yards should be equipped to build, as far as they are able, the ships of the Navy. We can build them more economically than can private enterprise. We have proven this in our yard and we want an opportunity to prove it further on larger ships. There is at least $20,000,000 in Government property at Boston Navy Yard practically worthless to the Government unless we can utilize it. That is the condition that prevails there. We have built nothing since 1840 until last year, when we took the contract for the building of a supply ship, and this supply ship is now in the water three months ahead of the specified time called for in the contract. [Applause.]

The supply ship is within 50 per cent of completion and we have spent less than half the money appropriated in the original bill. I contend that we are entitled under this appropriation to have our yard equipped, and we will then be in a position where, when the Government needs us to build a battleship or a cruiser or whatever they desire, it can be done.

Mr. Chairman, I have presented this amendment, asking that at least one of the battle cruisers now authorized in this bill shall be built at the navy yard in Boston, Mass.

In a great appropriation bill of the size of this one I feel that I am not asking too much for the people of my district when I ask that one of these ships be built in a navy yard which for more than a century has been recognized as one of the best yards we have. I believe, in fairness to my people, that we are entitled to this consideration.

This institution, the Boston Navy Yard, has for years been neglected in the matter of building ships, without any reason being advanced by those who have been responsible for this condition.

The time has come when it must be decided to what extent our country is to use its navy yards. No other country of the world has ever been known to neglect these institutions in the manner in which the yards of this country have been neglected, and no country to-day in the world would for a moment permit a navy yard situated as this one is to remain in its present condition.

A few months ago I presented a resolution, which was referred to the Committee on Naval Affairs, asking that an appropriation be made in this bill for the equipping of the Boston Navy Yard for the building of battleships. The Secretary of the Navy, for some reason which I can not understand, has written to that committee asking that this appropriation be not included; and I, as a representative of the people of Boston, object, with all the force that I can control, to my district being neglected now, as it has been in the past, in the improvements to which this yard and my State are entitled in the many appropriations that have been made to improve the other sections of the country and in which we have not been permitted to share our equal part.

The question that comes from the people of my district is why Boston shall be overlooked in this great appropriation for the upbuilding of the Navy of our country. All navy yards of the country were established for the building and repairing of ships of the Navy. That is what they were intended for, and it is only because they have been neglected and have not been kept up to the high standard for which they were intended that to-day we find ourselves at the mercy of and competing with private interests, who are telling us what we shall pay for the building of our ships and when they shall be built.

What other country of the world can you point to that is in the same position? In the past the only work that has been done at our yard has been the minor repairs upon the ships of the Navy. This, to my mind, has been more of a detriment to the workingmen of my district than it is of value, for they are deprived of the opportunity of steady employment, and it is a customary thing among them to expect at any time the message of a furlough, which comes when work has been completed.

We are told that we are unable to build our ships as cheaply as can private enterprises, and with this I take issue. In the small amount of work that we have had to do at our yard, namely, the building of a supply ship, which was launched a few days ago, we have proven that we are able, when permitted to do the work, to do our work in a manner that is not only satisfactory to our Government, but is economical to the highest degree.

This supply ship which we are now completing is being built at a figure 25 per cent less than the amounts bid by private shipbuilders, and she is now within 40 per cent of completion. She has been launched in less time than the contract required, and the splendid organization of officers and mechanics who have established such an efficient working force and have worked so earnestly and faithfully have nothing further to do, and the mechanics will be paid for their faithful service by a discharge.

Every yard in this country should be building ships at the present time, and with the building of new ships can be carried on the work of repairs, keeping intact an efficient force which will be able to do all our Government work in an economical and efficient manner.

We are entitled to this consideration and we ask it as a matter of fairness from this Congress that we be given an opportunity to develop the yard at Boston in the manner in which other yards of the country are being advanced. There can be no objection to our request, and to any objection we answer, "Give the mechanics of Boston an opportunity to show what they can do in the matter of shipbuilding, and this country will be able to boast that they have established another branch of their many great institutions that are a credit to the Nation." I contend that there is no better way for us to prepare the men of our country in the handling of the ships of our Navy than by giving them an opportunity to work upon them.

This appropriation is the largest appropriation for the upbuilding of our Navy that has ever been made, and I am proud to be one of those who will vote for it; and gladly would I vote for a larger sum if necessary and give to us a Navy that we can be proud of. We are asking but for a small portion of it, less than $300,000, of this great amount of $240,000,000 to do our share in this great upbuilding. We are told that the control of prices is a most important consideration. We are also told that we are making an appropriation in the interest of the great Steel Trusts. I am not one of those who believe this to be so, and I believe that no better answer to this statement can be given them than that we intend, as far as we are able, to build ships of our own Navy in our own navy yards.

In the last Congress they wisely appropriated the sum of $148,000 for the equipment of the Boston Navy Yard for small shipbuilding. How profitable this has been to our Government is shown when we realize that in the building of one ship it has saved the Government more money than it cost the Government to build these small ways. In the building of modern ships these ways are too small and should be enlarged, and if by the building of one small ship we can save for our Government almost 100 per cent more than the cost of the building of these ways, I believe I am safe in stating that in the extension of these ways the Government will be in a position to build their ships far more economically than ever before.

Mr. Chairman, the people of Massachusetts have always been liberal in their efforts to support improvements in any part of the country that would be for the welfare of the whole country. They have been unwilling to stint any appropriation, but have always been willing that all parts of the country should be developed. In the building up of our own section of the country they have always displayed this same liberality.

We have in Boston one of the best harbors in the country, made so by the liberal expenditure of the money of the people of the State of Massachusetts. From 1825 to 1915, a period of 90 years, the United States has expended $12,668,000, or a total of $143,000 per year, on the harbor of the State of Massachusetts, and in one-half of the time, from 1870 to 1915, 45 years, has expended the sum of $15,000,000. Receipts from the customs of the port of Boston are over $10,000,000 a year, and there was collected in the State of Massachusetts from corporation income taxes $1,853,157.41, and from individual income taxes $2,683,084.53, making up a total paid by the citizens of the State of Massachusetts of $4,536,141.94 last year.

In the past few years we have expended $9,000,000 in building docks, and to-day we are building the largest dry dock in this country. This dock will be built at an expense to the State of Massachusetts of over $3,000,000, and the State has already agreed with the National Government that they will have the privilege of the use of the dock as against any private or commercial business.

We have built, at a great expense out of our treasury, the largest pier on the Atlantic coast, large enough to accommodate six of the largest ships afloat, and at each of these docks they have deepened the water to 40 feet to enable them to accommodate any ships that are now being constructed.

I am quoting these figures to show that Massachusetts is ever ready to do her share in protecting the commercial interests of the Nation by the building up of her harbor, and I believe that every part of the country benefits by these improvements.

The foreign commerce with the port of Boston for the year 1915 was $290,516,803. New England manufactures one-seventh of the entire manufactured products of the Nation and the greater part of this goes out from this port to foreign countries.

I believe that the navy yard, which has not for a long time received any great improvements, should be improved in keeping with the rest of the harbor and it is the duty of the Government to do so. The Charlestown Navy Yard has been a repair yard rather than a yard for construction work, and the great amount of work that has been done in the yard has been repairs on ships sent there.

The property of the Government here is worth in the vicinity of $20.000,000, and the location of the yard is right at the head of Boston Harbor at a point where the Mystic and Charles Rivers meet and close in a water front of almost one-half mile in the most desirable place in the harbor, which for commercial and shipping use would be invaluable.

If we are to depend on repair work entirely, it is only a question of how soon this yard will have to be closed, because any

business man can verify my statement when I say that no enterprise of this kind can exist upon repair work alone and can only be as an investment where construction work will go hand in hand with repair work. If the yard is to be continued, and it is the sentiment of the business interests of my State that it shall be, it should be equipped immediately for shipbuilding, and with this large expenditure now being made, without an additional appropriation or without any further expense to the Government, this could easily be done.

Mr. Chairman, from the earliest days of American history the men of Massachusetts have always been interested in shipping and shipbuilding, and from that day unto this it has been one of the leading ports of the Nation.

Previous to the establishment of the Charlestown Navy Yard a number of vessels had been built in the vicinity of Boston, several of which subsequently became well known. In the very earliest days of the settlement the importance of ships was recognized, and as early as 1629 we find records of six shipwrights having been sent out from London. Gov. Winthrop, who reached Boston Bay in 1630, records in 1631 the launching of the *Blessing of the Bay*, the first ship of the infant colony, and on August 9 of that year states:

> The governor's bark, being of 30 tons, went to sea.

This small vessel was later converted into a cruiser against pirates and may, therefore, lay claim to the honor of having been the first American vessel of war.

The *Massachusetts* was built at Germantown, a promontory in the town of Quincy, in 1789. The frigate *Constitution*, launched in 1797, was built at Hartt's shipyard on the site now known as Constitution Wharf, and the frigate *Boston*—the second of that name—was launched from the same yard in 1799.

It was undoubtedly the work already accomplished in shipbuilding, as well as the importance of the settlement and the facilities offered by the harbor, that suggested Charlestown as a desirable location for a navy yard.

On January 25, 1797, a resolution was reported from the Naval Committee of the House recommending the establishment of a Government dockyard. There seems to have been no direct authority from Congress to purchase a site or build a dockyard; but, on February 25, 1799, an act was passed authorizing the building of six ships of war of not less than 74 guns each, and appropriating $1,000,000 for this purpose. Hon. Benjamin Stoddard, then Secretary of the Navy, recommended the purchase of the site, which was approved by the President. The earliest record of the transaction was a letter from the Secretary of the Navy, dated June 2, 1800, to Dr. Aaron Putnam, of Charlestown—who appears to be the agent selected for negotiating the purchase—stating:

> It is desirable, for the purpose of establishing a navy yard for building ships or vessels of war at or in the vicinity of Boston, to purchase, on account of the United States, from 10 to 50 acres of land, if it can be obtained on reasonable terms.

And inclosing a list of the property referred to amounting to about 47½ acres. A later letter from the Secretary to Dr. Putnam, dated August 13, 1800, states:

> The President having determined that the 37½ acres of ground at Charlestown described in the plat herewith sent should be purchased for a ship and dock yard, I have the honor to request, upon satisfying yourself of the goodness of the titles, you will make the purchase, taking deeds to the United States for same, which, after having recorded, you will be pleased to send to me. * * * I have already remitted you $10,000 on this account, and will remit the residue when I am informed you want it.

In accordance with the above letter the first site of the Charlestown Yard was purchased, the original purchase amounting to about 34½ acres and the purchase price being about $37,356. Further purchases were made, as follows: In 1817, from Isaac Hull, 5,186 square feet, for $3,889.50; in 1862, from Oakman & Eldridge, 115,210⅝ square feet, for $123,100; and in 1867, from A. Hull, 2¾ perches for $7,000. The amount purchased, with the filling in of the marshes and flats, made, in 1880, 87¼ acres, and with the extension of harbor line and further filling in since that time makes the present area of the yard proper about 111 acres, of which 80 acres are land and 31 acres water.

The first commandment of the yard was Capt. (afterwards Commodore) Samuel Nicholson, who remained in office until his death, December 29, 1811. The records show but very few improvements in the yard up to this time. The commandant's house, afterwards the old museum, was built prior to 1808, the exact date not being recorded. There were also erected a brick store, marine barracks, a hospital, a powder magazine, a wharf, and a few temporary sheds.

Commodore Bainbridge was the next commandant, and he took a very active interest in the affairs of the yard and vicinity, surveying the harbor and recommending improvements, but the appropriations were very meager, the expenditures for accommodations and improvements at the yard in 1811 and 1812 amounting to but $5,742.43, although during the year 1812 13 vessels received repairs amounting to $245,225.13. The first vessel launched at the yard was the sloop of war *Frolic*, on September 11, 1813, and the next was the *Independence*, on September 22, 1814, and from that time up to the commencement of the Civil War 21 vessels in all were launched at the yard.

Among these were several of historic fame—the *Cumberland*, which was sunk by the Confederate ironclad *Virginia—Merrimac*—in Hampton Roads in March, 1862; the *Merrimac*, the first steam frigate launched for our Navy was built at the yard in 1854–55. The history of this vessel need hardly be told to any American—how she was left at the navy yard, Norfolk, in 1861, and converted by the Confederates into an ironclad and created such havoc with our vessels until she was defeated by the little *Monitor* in 1862 and was afterwards destroyed by the Confederates.

On January 1, 1858, the keel of the historic ship *Hartford*, the flagship of Admiral Farragut, was laid, and she was launched in November of that year.

The cost of improvements at the yard up to 1859, including the cost of site and Dry Dock No. 1, which was built in 1827–1833, amounted to $3,671,521.

During the Civil War there was great activity at the yard, and between 1861 and 1866, 39 vessels of war were built and 43 purchased vessels were equipped; the number of vessels repaired, provisioned, and so forth, is up in the hundreds. At times there were as many as 5,000 men employed. The *Monadnock*, a double-turreted monitor, launched in 1864, was the first vessel of the kind to go from the Atlantic to the Pacific Ocean, arriving at Mare Island in 1866, and being afterwards rebuilt and converted into the vessel now of the same name.

In 1874 the iron torpedo boat *Intrepid* was launched at the yard, and was the first vessel of that kind added to our Navy.

From 1832 to 1880, inclusive, $10,618,716 was expended for general maintenance of the yard. This does not include the expenditures on ships built or repaired or pay of workmen employed on them. Only one vessel, a small training ship, the *Cumberland*, has been built at the yard since that time.

From 1880 until about 1900 very little was done to improve the buildings in the yard, but from 1900 on until the present time remodeling and building has been continuous.

The estimated value of the property is close to $20,000,000. This includes only the property, building, and plant in the yard proper, and not the value of the hospital and other outlying branches of the station.

During the Civil War as high as 5,000 men were employed, although the facilities were not half what they are to-day. We find at the present time that a force of about 2,000 men is employed, not half utilizing the increased industrial facilities. The effect of this variation in the working force is bad in every way—for the employees in having irregular employment, breeding dissatisfaction and frequently causing distress to honest, hard-working men; for the Government, loss of efficiency, due to deterioration of plant and force, owing to lack of work and the dissatisfaction of employees. The history of this yard calls for some consideration for its employees. One of the means of maintaining a steady working force is by having new construction work—shipbuilding—done at the yard, and it would be to the interest of the Government to place such work at the yard instead of doing it by outside contract, even if the price was higher. But when bids were opened in December, 1913, for a supply ship, the bid of the Charlestown Navy Yard was found to be below all others—navy yards or private establishments.

To build this vessel at the yard it will be necessary to extend the present ways.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. BENNET].

Mr. BENNET. Mr. Chairman, I hope the amendment offered by the gentleman from California, Mr. NOLAN, will prevail. I want to say that the members from New York I am quite sure join with me in the spirit of his remarks. There is no reason why any of us should desire to keep another part of the country from being equipped. When I was in Congress before it gave me great personal pleasure to assist in equipping the immigrant stations at Charleston, New Orleans, and Galveston.

Mr. WHALEY. The immigrant station at Charleston has never yet been equipped.

Mr. BENNET. That was not our fault, we voted it and did our best. Now, I want to call the attention of the committee to what this amendment of the gentleman from Tennessee does, as I understand it, and what the amendment of the gentleman

from California proposes, which the gentleman from Tennessee says he is willing to accept.

As I understand it, this simply provides that if the Government is faced with the position that it can not do all of the building it desires in private yards it can go ahead and equip with additional facilities all of these yards. The gentleman from Tennessee says he will provide in the amendment an additional sum to take care of New York and Mare Island if it is necessary to equip the two yards.

This amendment, as I understand it, is not to benefit any particular yard—Mare Island, Philadelphia, Boston, New Orleans, or any other yard—but it is to serve the best purposes of the Government. Am I right?

Mr. PADGETT. I tried to state that as fully and as clearly as I could.

Mr. BENNET. I thought so, but there appeared to be a misapprehension that this was a contest between cities.

Mr. PADGETT. The situation is this: We put a provision in the bill yesterday authorizing the Secretary to make contracts and provide bonuses not to exceed 20 per cent for the expeditious delivery of material and construction. With the enormous program we are authorizing in this bill it would be possible, if it was so desired, for shipbuilders to conspire and apportion among themselves the work and submit their own terms. We did not want the Government to depend on them, and so, in the event that they do not submit bids for the expeditious delivery at a fair and reasonable price, this amount of money is appropriated to equip the yards for the Government to build ships themselves wherever there is this situation.

Mr. BENNET. It seems very clear that we over here, who have been voting for even larger naval programs than most on the other side, should join with those on the other side and vote for this amendment. Otherwise we would be in an inconsistent position. We would be voting for an increase in the Navy, but when the chairman offered additional facilities we would be in a position of voting against it. Therefore, I hope the amendment offered by the gentleman from Tennessee, with the amendment offered by the gentleman from California, will prevail.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I yield to the gentleman from Kentucky [Mr. POWERS].

Mr. POWERS. Mr. Chairman, ours is not only a representative Government but its business is conducted through the agency of political parties.

Four years ago the Democratic Party of the Nation went before the people of this great country upon a platform pledging it to the carrying out of certain principles in the event of election. On account of the unfortunate dissension in our own ranks, the Democrats won; and for more than three years now they have had complete control of all the departments of the National Government. There has been nothing to prevent the Democratic Party from putting into operation Democratic policies and theories of government. They claim to have done so, and are now asking a return to power because they say they have "kept the faith" and have painstakingly carried out all of their promises and pledges to the people, and that the people have been abundantly benefited and greatly blessed thereby. That is their claim. They are asking an indorsement of their record. They say they have accomplished much for which we should indeed be thankful, and that they can and will accomplish more if given a new lease of life. They say that they have given the world a shining example of economy and efficiency in government. I concede that if these claims be true they ought to be returned to power. Let us calmly and dispassionately look into the facts. Democratic, not Republican, performances are on trial.

In order to find out just what pledges the Democratic Party of the Nation has made to the people, we must turn to authoritative sources of information, to wit, the Democratic national platforms. Their acts alone speak as to their performances. The last platform adopted by the Democratic Party was at Baltimore, Md., on July 2, 1912. That is the one upon which President Wilson and the present Democratic régime were elected. Let us turn to some of its planks. Let us see what they are and see whether or not they have been faithfully kept or shamefully broken. The people are entitled to know the truth.

One plank of the labor section of the Democratic platform adopted at Baltimore July 2, 1912, declares that the "organization of industry makes it essential that there should be no abridgment of the right of wage earners and producers to organize for the protection of wages and the improvement of labor conditions" and that such organizations "should not be regarded as illegal combinations in restraint of trade."

In his speech of acceptance, the presidential nominee of the Democratic Party, the Hon. Woodrow Wilson, took occasion to say regarding the working people of America:

> No law that safeguards their life; that improves the physical and moral conditions under which they live; that makes their hours of labor rational and tolerable; that gives them freedom to act in their own interest; and that protects them where they can not protect themselves, can properly be regarded as class legislation.

Believing in the assurances of the Democratic Party and its nominee for President, and accepting them at their spoken and written word, the labor leaders and labor organizations and laboring people generally throughout the country, including the American Federation of Labor, some 2,000,000 in number, went pell-mell into the Democratic camp and became among the most loyal and enthusiastic supporters of the candidacy of Mr. Wilson. They helped to elect him. But for them he would not have been elected. After his election and after the overwhelmingly Democratic House and Senate had settled down to business and undertaken the work, supposedly, at least, of carrying out the Democratic pledges to the country, labor expected the fruition of its dreams in the fulfillment of the Democratic pledges and promises to it. But it had a shock in June, 1913.

The sundry civil appropriation bill which passed both the House and Senate contained a provision setting apart and appropriating the sum of $300,000 for the enforcement of antitrust laws but provided that no part of it should—

> be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the conditions of labor, or for any act done in furtherance thereof, not in itself unlawful: *Provided further*, That no part of this appropriation shall be expended for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products.

Note the similarity in the language of this provision and President Wilson's speech accepting the Democratic nomination for President. Everybody believed that the President and the Democratic Party was irrevocably committed to the provisions of the bill to which I have just referred. But when the bill was presented to President Wilson for his signature that change of mind, for which the President has since become so widely noted, had come over him and he expressed, in no uncertain terms, his emphatic disapproval of the promised labor and farmer exemptions contained in the bill. He threatened to veto the entire bill on their account and would have done so had the exemptions in any way interfered with the Department of Justice prosecuting either laborers or farmers for attempting to secure, under the provisions of the bill, what they deemed to be their rights, and what was perfectly legal for them to do individually but not collectively.

> I would have vetoed that item—

Said the President—

> because it places upon the expenditure a limitation which is, in my opinion, unjustifiable in character and principle. * * * I can assure the country that this item will neither limit nor in any way embarrass the actions of the Department of Justice—

In dealing with these farmers and labor fellows.

It will be remembered that the Supreme Court of the United States had held in the Danbury Hatters case, reported in Two hundred and eighth United States Reports, page 274, that the Sherman antitrust law did not exempt labor organizations from its operations; that such organizations were combinations in restraint of trade, and therefore unlawful and liable to triple punitive damages.

Both the farmers and the laborers wanted their organizations exempted from the operation of the Sherman law, on the ground that they were not a capitalistic trust organized for predatory profits; but the President said that such exemptions were "unjustifiable both in character and principle," although he had promised in his speech accepting the Democratic nomination for President that—

> no law that safeguards their life (the working people), that improves the * * * conditions under which they live, or that gives them freedom to act in their own interest * * * can properly be regarded as class legislation.

Wonderful how the President changed his mind, and the planks of the Democratic platform were broken.

THE PRESIDENT HAS CHANGED HIS MIND, TOO, ON THE SUBJECT OF IMMIGRATION AND CAUSED THE IMMIGRATION PLANK OF THE DEMOCRATIC PLATFORM TO BE BROKEN.

For a decade immigration to our shores has reached the rate of about 1,000,000 a year. A tremendous influx! There has not been so many since the European war began, but it is on the increase and will doubtless, with the return of peace, far exceed the previous number. The official statistics just given out by the Department of Labor show that in March 11 per cent more

came than in February and 48 per cent more than came one year ago in March. Immigrants of the right sort have always been welcomed among us. For years an attempt has been made to curtail the number, at least, of the undesirable elements that land upon our shores and come into ruinous competition with our own workmen and producers. As a private citizen, as a presidential candidate, as an author and writer of books, it seems that President Wilson was strongly in favor of rigid restriction. In his History of the American People, volume 5, page 212, in speaking of the character of immigrants that come to this country, he said:

They come in numbers which increased from year to year, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population, the men whose standards of life and of work were such as American workingmen had never dreamed of hitherto.

He said that even the unwelcomed, and in some quarters the loathed and hated, Chinamen were more desirable citizens than this "coarse crew" (of immigrants) that come crowding in every year at our eastern ports.

Not only as an author, but as a candidate for the Presidency, on September 4, 1912, in New York City, when he addressed the Association of Foreign Language Newspaper Editors, so called, President Wilson said, among other things:

If we can hit upon a standard which admits every voluntary immigrant and excludes those who have not come of their own motion, with their own purpose of making a home and a career here for themselves, but have been induced by steamship companies or others in order to pay the passage money, then we will have what we will all agree upon as Americans. I am speaking to you as also Americans with myself, and just as much American as myself, and if we all take the American point of view, namely, that we want American life kept to its standards, and that only the standards of American life shall be standards of restriction, then we are all upon a common ground, not of those who criticize immigration, but those who declare themselves Americans. I am not saying that I am wise enough out of hand to frame the legislation that will meet this idea. I am only saying that it is the ideal, and that is what we ought to hold ourselves to. * * * Of course, if the immigrants are allowed to come in uninstructed hosts and to stop at the ports where they enter and there to compete in an oversupplied labor market, there is going to be unhappiness, there is going to be deterioration, there is going to be everything that will be detrimental to the immigrant.

But notwithstanding his writings, notwithstanding his position as a presidential candidate, Mr. Wilson abandoned his position as a restrictionist when called upon to sign and vetoed the immigration bill.

It will be remembered that some few years ago Congress created an Immigration Commission to investigate the whole subject of immigration, particularly the feasibility of the literacy test as a restrictive method.

This commission of nine distinguished members was composed of both Democrats and Republicans, Members of this House and the Senate. It made an extensive investigation both in this country and in Europe. After investigating for a period of four years and spending $1,000,000 it made a voluminous report of 42 volumes and, among other things, said:

A majority of the commission (eight out of the nine) favored the reading and writing test as the most feasible single method of restricting undesirable immigration.

The commission unanimously agreed and reported that there was "an oversupply of unskilled labor in the basic industries of this country."

On April 19, 1912, an immigration bill containing a literacy-test provision passed the Senate of the United States. A bill containing the same provisions was reported to the House by the House Committee on Immigration on June 7, 1912, and the Democratic leaders announced that the bill would be put through when Congress reconvened in December, a special rule having been agreed upon for that purpose.

Woodrow Wilson was nominated for President on July 2, 1912. The Senate immigration bill, with the literacy test therein, was pending before the House during the campaign and became an issue thereof. The Democratic leaders of the House had promised to pass that bill early in December. The Baltimore convention that nominated Mr. Wilson for the Presidency pointed in its platform with pride "to the record of accomplishment of the Democratic House of Representatives in the Sixty-second Congress." "We indorse its action," they said. The House had indorsed the literacy-test provision and the immigration bill. The Democratic platform, upon which President Wilson was elected, indorsed the literacy test as applied to immigrants in approving the House action. But after he was elected the President changed his mind and vetoed the immigration bill, in spite of his writings and his campaign speeches and the platform pledges of his party, although beseeched to sign it by labor leaders, farmers' organizations, and the public generally. The Boston Transcript in an editorial, speaking of the change of front of our President, said:

The somersault of Mr. Woodrow Wilson on the immigration plank should surprise no one. It is only the latest illustration of the politician reversing the position of the historian. For 20 years, as teacher and writer of history, he wrote against the "alien invasion," and brought to bear the heaviest guns of his rhetoric against this "menace." But the President has changed his mind. He has reversed his own position and repudiated the platform upon which he was elected.

Whether the President has changed his position, if not his mind, because of the immense foreign vote in the United States, or for other reasons, I know not. The Democratic Party in its national platform, as far back as 1896, said:

We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

That declaration of principle by the Democratic Party, and since reiterated, has at no time been recalled or reversed; but it does not take President Wilson long to recall and reverse "things" when he changes his mind and decides to break the solemn platform pledges of his party.

MORE BROKEN PLATFORM PLEDGES.

The Democratic platform upon which President Wilson was nominated and elected said:

We favor national aid to State and local authorities in the construction and maintenance of post roads.

It has now been nearly four years since the making of that platform pledge, and still no national-aid road law has been enacted looking to its fulfillment. The prospects, however, seem good for a road law to pass, but the outlook is that when passed it will not go into practical effect for several years, and will benefit but slightly, if at all, people living in the rural districts, where roads are mostly needed, because many of them can be traveled with difficulty, while others can not be traveled at all. I voted for the Federal-aid road bill that passed the House in the hope that when the Republicans came into power it would be so amended as to make it workable and beneficial. For the House bill the Democratic Senate substituted an entirely different proposition. The Democrats are at sea on roads legislation. They feel, however, that they are compelled to pass some sort of a road law before Congress adjourns; otherwise they could not well face an outraged constituency. The road law passed at this late date in the Democratic administration and on the eve of a presidential election can not be tried out before November. The people generally when they vote this fall will not know whether they have been handed a gold brick or not. They will be asked to take the road law "on faith." The passage of some sort of a road law, however, is regarded as a political necessity, and will no doubt be done. The fact remains, however, that the same Democratic Congress, at the instance of the same Democratic President, passed a law two years ago whereby the United States Government is spending $40,000,000 building a railroad in Alaska.

The President tried to put through, and would have put through but for Republican opposition, another bill appropriating $50,000,000 with which to build ships and put the United States in the shipping business for the importers and exporters. It looks like they are going to put that bill through this Congress. They have money for these things, although the pledges of neither of them were contained in the Democratic platform, but so far they have failed to put one dollar into the construction and maintenance of post roads, pledged by the platform upon which the President was elected and which platform the President accepted in toto, saying the pledges were those of "honest men" and "intended to be kept when in office."

PANAMA CANAL TOLLS.

The President and the Democratic Party again broke their solemn promise to the American people on the question of Panama Canal tolls. They said in their Baltimore platform:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

This is what Democracy declared for in its platform of 1912, and is what the President indorsed, stood for, and argued for in his campaign before he was elected President. President Wilson specifically indorsed this plank in that celebrated speech he made to 2,500 farmers at Washington Park, N. J., on August 15, 1912, in which he said:

Now, at present there are no ships to do that; and one of the bills pending—passed, I believe, yesterday by the Senate, as it has already passed the House—provides for free toll for American ships through that canal.

But after the President was elected, for some unknown reason that the country has never understood, for some mysterious reason that the President has never explained, he came, hat in hand, up on Capitol Hill one day when the House and Senate was in session and practically said: "Boys, we've got to take her back. We've got to break our platform pledges to the country and the people that elected us. Acting under your oaths as legislators, you said that American ships engaged in coastwise trade passing through the Panama Canal should not pay

any toll; that such exemption would tend to keep down railroad rates [which he has since helped get increased]. The Democratic platform upon which I was nominated and elected declared for free tolls. I declared for the same thing in my speeches before election. I have not forgotten what I said to those New Jersey farmers and the country when I was seeking votes, but we have got to take it all back. I can not tell you why this is so, but I have reversed myself on the question of tolls of American ships passing through the canal, and you must reverse yourselves. You made speeches on the floor of the House and on the floor of the Senate until you were red in the face expounding the benefit to the American people, especially the American farmer, to be derived from such a course, and you embodied and passed a bill through both House and Senate declaring for free tolls, a thing specifically promised by our 1912 platform, but you must repeal that law, introduce a new bill charging tolls to American ships engaged in coastwise trade passing through the canal, and make some more speeches, requdiating what you have already said and done and repudiating your and my solemn platform pledges to the American people."

This was done. The repeal law was passed. So it has happened to free sugar and the promised cheapening of the "poor man's" breakfast table. The "crow" was eaten, but few, if any, of the legislators have ever known why it was necessary. The country knows nothing about it on account of the silence and secrecy of the President, although he declared when he came into office that his administration should be one of "pitiless publicity," and the White House doors would swing open to all "forward-looking" men. All the President has permitted the world to know is that he changed his mind and that another solemn contract in the Democratic platform with the people was broken.

RURAL CREDITS.

What I have said tells but a small part of the sad story. The Democratic platform upon which President Wilson was elected declared:

Of equal importance with the question of currency reform is the question of rural credits, or agricultural finance. We favor legislation permitting national banks to loan a reasonable portion of their funds on real estate security.

A rural-credits or farm-loan bill has been passed, or will be before Congress adjourns. I love the country. I was reared on a farm. I have always been interested in legislation looking to the farmers' good. I voted for the rural-credits or farm-loan bill when it was before the House, although I am confident it will prove to be of little benefit to the farmers, especially those in moderate circumstances—those that need help most. The law is a very defective one. It contains no genuine Federal aid. It is passed on the eve of an election, and the Democrats hope the passage of it will help them politically.

The gentleman from Pennsylvania, Representative MCFADDEN, who knows as much about this measure as any Member of the House, said in a speech here concerning it:

It will only benefit well-to-do farmers, but furnish no help for the worthy farmer who has no capital and desires to follow farming as an occupation. * * * This bill is an experiment and has no foundation. * * * The operation of the system as proposed might develop into a political machine.

Representative HENRY, of Texas, one of the Democratic leaders of the House, gave out the following statement when the bill was reported by the joint congressional committee:

In many respects the bill is admirable and has some very strong features.

However, direct Government aid is ignored and excluded. The measure does not provide for the Government guaranteeing or purchasing the farm-loan bonds based on farm mortgages. Without this aid the bill would be worthless to the farmers.

There is no use in mincing words. The fight is on. The real friends of Government aid must rally their forces and prepare for the contest in the House.

It is generally understood here that President Wilson has all along been opposed to putting the Government back of and making available the farmer's credit to the same extent that the Federal reserve act puts the Government back of the business man's and the bankers' credit. This bill as framed and passed by this House on the approval of the President is sufficient proof of that.

It is certain that this bill will not help the man without means. It merely authorizes the farmers to loan money to themselves.

It is not at all certain that the farmers with means will enter into and help form local farm-loan associations, in order to enable them to borrow money under this act, especially in view of the fact that they will be compelled to take stock in the Federal land bank in a sum equal to 5 per cent of their loan and then become liable for 5 per cent more to liquidate the debts of the farm-loan association.

It will be a makeshift law, to say the least of it; but the Democratic Party felt impelled to pass some sort of rural-credits legislation in order to appease the wrath and satisfy the demand of the 12,000,000 farmers in this country. The law can not be tried out before the November election. Its nonworkability can not be demonstrated before that time. Its futility to be of benefit to the farmer who needs it can not before then be made known to many. In the meantime the Democratic spellbinders can boast of the "wonderful blessings" of their rural-credits law.

TRANSPORTATION RATES.

The Democrats also said this in their Baltimore platform:

We favor legislation which will assure such reductions in transportation rates as conditions will permit.

At the time the Democrats made this platform declaration there was a Republican President in the White House and the country was enjoying the fruits of unbounded prosperity. The railroads were making lots of money. The Democratic Party had not been in office long until the country started to the "demnition bowwows." Receivers were appointed for one railroad system after another throughout the country, and the railroads applied to the Interstate Commerce Commission to have rates raised, business was so poor. All sorts of pressure was brought to bear upon the commission to grant increases in rates. Of course, the higher the rates the more the merchant and the farmer has to pay for shipping freight and traveling over the railroads. It is interesting to note whether the President was upon the side of the railroads or upon the side of the people. Just a while before the Interstate Commerce Commission was expected to hand down its decision in regard to this proposed raise of freight rates the President called a number of newspaper reporters about him and authorized the following interview, which was printed by the press of the country on the 1st day of June, 1915:

President Wilson indicated to-day that he would not be dissatisfied if the Interstate Commerce Commission allowed the railroads the 5 per cent freight-rate increase they are seeking. Mr. Wilson left no doubt in the minds of those who talked to him that he was in favor of the increase.

The Interstate Commerce Commission decided in accordance with the President's wishes and granted the increase. He soon reappointed the commissioner who cast the deciding vote. Apparently the habit of the President and the Democratic Party in breaking their platform pledges to the American people has become chronic.

REDUCTION OF OFFICES PLEDGE BROKEN.

The Democrats said in their Baltimore platform—

We demand a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Yet in the face of that pledge the Democrats have created, in less than four years, 30,000 new offices and places at an annual cost of over $36,000,000.

They have increased the annual salaries of the old offices over $4,000,000 every year.

ANOTHER BROKEN PLANK.

I quote the following from the Democratic platform adopted at Baltimore:

The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property.

That platform pledge has been shamefully ignored and superseded by "watchful waiting." This administration has not had the merit to go to war nor the courage to stay out of it. Its hatred for Germany and partisanship for England and her allies belies its loud professions of neutrality.

The Democrats declared in their platform that—

American citizens residing or having property in any foreign country are entitled to and must be given the full protection of the United States Government.

Yet in the face of this solemn platform pledge the President of the United States, the Commander in Chief of the Army and Navy, has "watchfully waited," has backed and filled, has hesitated and halted, while Mexico and Mexicans have spat upon our flag, trampled it in the dust, and flung this truthful taunt in the face of red-blooded Americans: "We have outraged your women; we have murdered your children; we have burned your property; we have insulted the flag of your country. Tell us, is there anything we can do to you that will make you stand up and fight like men."

The President's policy in Mexico has not only broken the platform pledge of his party, but has brought a blush of shame and humiliation to every true American, be he native or foreign born.

THE CIVIL-SERVICE PLANK, TOO, HAS BEEN BROKEN.

The Democratic platform adopted at Baltimore, made famous by the number of its broken promises, contained this plank:

The law pertaining to the civil service should be honestly and rightly enforced, to the end that merit and ability shall be the standard of appointment and promotion rather than service rendered to a political party.

Notwithstanding that party declaration and platform pledge, civil service, under this administration, has been utterly debauched in order to find places for "deserving Democrats." The civil-service laws were set aside in the passage of the Underwood Tariff Act, and there were exempted from the civil-service regulations more than 600 agents, deputy collectors, and other income-tax employees. Appointees under new laws like the proposed rural credits are not to be taken from civil service.

One thousand one hundred and forty-five deputy collectors of internal revenue and 176 deputy United States marshals were authorized to be appointed and removed without reference to the civil-service act in the very first general deficiency bill passed by the Wilson administration.

The civil-service laws were violated by the Democrats in the acts of December 17, 1914; December 26, 1914; July 16, 1914; January 28, 1915; March 4, 1913; August 1, 1915. Also in the Federal reserve banking law, the rural-credits law, and other laws passed by this administration.

The 45,000 fourth-class postmasters in this country have virtually been put under the spoils system. Thirty thousand new offices have been created for the faithful. The President by Executive order has waived the civil-service rules 253 times since he has been in office. The spoils system has run riot. Civil-service laws and their pledges to uphold them have been tossed to the winds by the Democrats.

DEMOCRATIC ECONOMY.

But there were two planks in the Democratic platform of 1912 that stood out preeminently above all the others in importance—the ones on which the Democrats most relied for success. One of these reads as follows:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations by recent Republican Congresses.

They said that the Republicans were just taxing the people to death; that they had run the annual appropriations up to a billion dollars; and that when they, the Democrats, were placed in power they proposed to have an economical administration, and one of retrenchment and reform. They said that the Republican appropriations were wastefully extravagant. They demanded economy, simplicity, retrenchment, and reform. They said they would abolish all the useless offices that were a drain upon the people's substance and would cut down the salaries of Government officials. They have, as I have said, created 30,000 new offices and have increased the salaries of offices by the millions of dollars. They said that merit and ability should be the standard of appointment to office; that the merit system should be impartially and rigidly upheld, but I have just shown how that pledge was violated. They said they would not spend as much money if they had charge of the Government's affairs as the Republicans had been spending. The first time, however, they got control of the affairs of the country they spent in one year $63,000,000 more of the people's money than had ever been expended by any Republican Congress that has ever been convened in the city of Washington or elsewhere. We turned over to them a total balance of $149,335,710 in the general fund of the Treasury on the 3d of March, 1913. They have spent that. They have spent every cent of money they could rake and scrape from every source of taxation. Notwithstanding this there was a deficiency of $17,575,216.85 on the 29th day of April, 1916. They have invented new ways of taxing the people.

They invented the income-tax system. They figured out that they would collect from the people about $80,000,000 annually from that source. They are now collecting many millions more than that. Then they turned around and invented some more new methods of wringing money from the people, whom they pledged themselves to save and to serve. They saddled on us a war tax, calculated to bring into the Treasury of the United States about $100,000,000 a year. They tax us at the telephone booth and the telegraph office. There never has been such a stamp-licking time in the history of the country. They figured out that there would be a good many notes and a good many mortgages and but very little money passing around under their administration, so they put a stamp tax on notes and mortgages, but did not put any on checks. They knew there would not be very many of them. And so, with all these various forms of taxations, new ones must still be invented. They are puzzling their brains over that now. The Democrats have broken their pledge of economy. This is admitted by all men, denied by nobody.

But the one plank in the Democratic platform of three years ago concerning which the Democrats had most to say was their tariff plank. While the Democrats lambasted the Republicans for the reckless expenditure of the people's money, and while they said many mean things along that line, the most of the abuse that they heaped upon us was concerning the tariff question. They told the people that they were being robbed through the instrumentality of a tariff law that the Republicans had put upon the statute books. They said that the poor man, the laboring man, was staggering under the weight of it and the burden of it. They said that poor men and women all over this land and country were being robbed of the fruits of their labor through the "robber tariff"; that they were pouring their money into the coffers of the rich, especially into the coffers of the rich "tariff barons." They said that the high cost of living was all due to this "robber tariff"; that the Republicans were wedded to and had foisted it upon the many for the benefit of the few. They said that the Republican Party was in bed with the great monopolies of this land and country and was in league with the flesh and the devil.

They said to the laboring man, "Look at this 25 cents you have to pay for a pound of bacon. It was all brought about by the robber protective tariff." They said, "Look at the high cost of the hat on your head and the shoes on your feet, due to this robber protective tariff, fostered and nurtured by the Republican Party." They said, "If you will just put us in power we will put an end to all this. We will revise these tariff laws. We will give you free trade or a tariff for revenue only. We will annihilate the trust and the monopoly. We will reduce the cost of living. We will put the poor man and the laboring man in possession of his rights. We will see to it that as long as we are in power he shall have plenty of work to do at big wages. He shall not have to pay half as much for the necessaries of life as he has been forced to pay under the Republican protective-tariff administration. We are not only going to revise these tariff laws but we are going to do it in such a way as will not injure any 'legitimate industry.' Prosperity will be increased, the trusts destroyed, the high cost of living removed from the backs of labor. The 'crown of thorns' shall be for the laboring man no more." That is what you Democrats said to us, gentlemen; and you now know that not a single one of your promises have been complied with. You said you would revise the tariff down to a revenue or free-trade basis without doing hurt or harm to any "legitimate industry." You did revise the tariff, but not without doing irreparable harm and injury to the legitimate industries of this land and country. You did revise the tariff, but instead of increasing the prosperity of the country, prosperity fled our realms, and is only now returning because of the war in Europe coupled with the immediate prospect of another Republican administration. You did revise the tariff, but instead of reducing the high cost of living it has been getting higher all the time. The average price of the necessaries of life are now 17 per cent more than when you took charge of the affairs of this Government. You enacted your Democratic tariff law in October, 1913. You did away with Republican protection. You were going to enact a tariff law, you said, for revenue only. You said that it was neither your purpose nor your desire to protect any American industry or any American workingman. You said that you had only one idea in view and that was to raise revenue, and a sufficient amount of it to run this Government when its affairs were economically administered; so you passed the Underwood tariff law with that avowed purpose, but it did not raise the needed revenue.

You said the consumer pays the tariff tax. You said take this tariff off of imported goods and they can and will be sold a good deal cheaper than we are getting them in this country. You have preached for years, for example, that free hides means cheaper shoes; free wool, cheaper clothes and cheaper hats. That looks pretty well in theory, but it fails to work out in practice. You said during the 1912 campaign that shoes were entirely too high, and they have been mighty high. You said, "We are going to put hides on the free list and reduce the cost of shoes to the consumer." So you put hides on the free list and the price of shoes have gone up from that day to this. We have lost the revenue. The importer of shoes has kept the price of his shoes at or near the price of shoes produced in this country.

The price of shoes has not been lowered to the consumer. The importer has pocketed the cash while we have lost the revenue.

You said the Republicans had placed a big tariff on sugar and that the tariff on it kept the price of sugar unreasonably high. You said that the poor man who sweetened his coffee with sugar had to pay a double price for the privilege on account of the Republican tariff laws. You said you would put it on the free list and that everybody would get cheap sugar. So in the Underwood law you reduced the tariff on sugar 25 per cent in October, 1913, when the Underwood law became effective and scheduled it to go altogether on the free list in May, 1916. But instead of bringing cheap sugar to the consumer the price of the sweet thing has been soaring toward heaven from that day down to this, or rather to the day when sugar was again put back on the dutiable list. You reversed yourselves and put it back on the dutiable list where the Republicans had placed it. While sugar was on the free list the consumer paid more for it than he had ever done before. The importer pocketed the money. We lost the revenue. We got $50,000,000 a year in revenue by reason of the tariff duty the Republicans laid on sugar. That $50,000,000 annually was used in helping to defray the expenses of the Government. When the Democrats put sugar on the free list we lost the $50,000,000 annually in revenue. It had to be supplied in some other way. It was supplied through the passage of an income-tax law and a war-tax law when this country was at peace with all the world. In the first 10 months of the operation of the Underwood tariff law and before the war in Europe began, 5,000,000 laboring men had been thrown out of employment by reason of it. The railroads alone laid off 120,000 men and cut down expenses $138,000,000 from July 1, 1914, to July 1, 1915. Uninterfered with by the European war, it had brought the country to the verge of ruin and to the homes of many want and starvation.

The Democrats say that the Underwood law is all right, and would be producing ample revenues to run the Government but for the European war. The value of importations coming monthly to our shores—the greatest in the history of the country—and the little revenue collected thereon, however, refutes this charge. We sold during the first year of the war $404,000,000 worth more of our products abroad than we sold the year before the war began. We bought $219,000,000 worth less. The Democrats propose to leave the Underwood tariff law on the statute books, which now admits free of duty about 70 per cent of the goods of foreign countries; and around the tariff issue this fall will be waged one of the fiercest political battles that this country has witnessed in many a day. The Republicans know or feel that they know that when the war in Europe is over and the men now engaged in it return to useful occupations and avenues of productiveness, anxious to retrieve their lost fortunes, this country will be flooded with such an immense quantity of cheaply produced goods as will close down our mines, mills, and factories, and turn millions of our laboring men out of employment, unless the Republicans come back into power and place upon the statute books an adequate protective-tariff law. The Democrats will, no doubt, make many fair promises to the American people; but how can they be trusted in face of the fact that they have violated all of the pledges contained in their last national platform? What will future pledges from such a party be worth? I can not see how fair-minded men can indorse the doings of the Democratic Party or put any faith in any promise its leaders may make.

I am through with my argument, but in order to show conclusively that the President has turned down the chief legislative demand of the 2,000,000 members of the American Federation of Labor, which so enthusiastically supported him four years ago under the apparently mistaken notion that he was their friend and sympathized with them in their efforts to better their conditions, I am appending clippings from recent issues of the official weekly publication of the American Federation of Labor, 100,000 of which go throughout the length and breadth of this land to its local officials and members.

In this as well as other demands of the workingmen, the working people, organized and unorganized, will have to look to the Republican Party for a realization of their expectations and just demands. The Republican Party has always stood for protection, while the Democratic Party has advocated through its present leaders the "open door" and free trade. The Republican Party is for protection against foreign invasion. It stands for true preparedness. It is for protection against foreign pauper-made goods and for protection against the foreign pauper cheap labor itself. It has so declared and will so stand.

The following articles are clipped from the American Federation of Labor Weekly News Letter, printed Saturday, April 8, 1916:

HOUSE PASSES BURNETT IMMIGRATION RESTRICTION BILL—307 TO 87.

WASHINGTON, *April 8.*

By a vote of 307 to 87 the House passed the Burnett immigration bill, with the literacy test, on Thursday, March 30. Prior to this vote, Congressman SABATH moved to recommit the bill "with instructions" to strike out the literacy test. This was defeated on a roll call vote, 284 to 107.

Opponents of the measure presented no new arguments, while the position of its advocates was strengthened by conditions in Europe because of the war. Congressman MANN, the minority leader—who voted for the Sabath amendment, but later voted for the bill—indorsed this position. He said: "And unless those countries (European) by their own legislation can prevent their citizens coming here, we are liable to have a flood of immigration such as no country in the world ever experienced before. I am not willing to take the chances on it."

Advocates of restriction referred to the increasing sentiment in favor of greater effectiveness in every field of activity. They insisted that democracy can not be developed to its highest possible point while we encourage the admission of illiterates who destroy living standards of American labor and who refuse to become a part of our national life.

The literacy test provides that immigrants over 16 years of age must read at least 30 words in some language or dialect, including Hebrew or Yiddish, chosen by the immigrant. Exceptions to this test are made in the case of an immigrant's father or grandfather over 55 years of age; his wife, his mother, his grandmother, or his unmarried or widowed daughter.

Exception to the literacy test is also made where an immigrant flees from religious or political persecution. The latter exception includes "persons convicted, or who admit the commission, or who teach and advocate the commission, of an offense purely political." Under this provision the old-world revolutionist who advocates force to overthrow his government, or who admits the use of force for that purpose, will be admitted to this country regardless of educational qualifications.

The question of immigration restriction by a literacy test has been favorably voted on by almost every Congress since 1896. On three occasions the proposal has been vetoed—by Presidents Cleveland, Taft, and Wilson. In 1897 the House passed the bill over President Cleveland's veto, 193 to 37. This was 37 votes more than the necessary two-thirds vote. The Senate failed to act, owing to a rush of business and Congress adjourning a few hours after the House vote.

In 1913 the Senate passed the bill over President Taft's veto, 72 to 18, but the veto was sustained in the House by a few votes. On February 4, 1915, the House sustained President Wilson's veto, 261 to 136. If any 4 of the 136 that voted to sustain the President had voted with the majority a two-thirds vote would have been secured and the bill passed.

The last vote in favor of immigration restriction—307 to 87, recorded March 30 last—indicates the increasing demand by the people for this legislation.

The bill is now in the Senate. Its passage by that body is conceded if its advocates can overcome the small minority that will take advantage of the rules of the Senate to keep the bill from being voted on.

Trade-unionists and other friends of this legislation are urged to write their two United States Senators and insist that the Burnett immigration bill be voted on at this session of Congress.

—

VOTE ON RESTRICTION IN HOUSE ANALYZED.

WASHINGTON, *April 8.*

An analysis of the House vote on immigration restriction, March 30, indicates an increasing demand for this legislation.

Out of a possible 434 votes in the House, only 87 were cast against the bill, 36 were recorded "not voting," and 3 "present." Of these 39 only 13 were paired against the passage of the bill. There was not a single vote against the bill from the following 26 States: Alabama, Arizona, Arkansas, Colorado, Delaware, Florida, Georgia, Idaho, Kansas, Minnesota, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Carolina, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Vermont, Virginia, Washington, West Virginia, and Wyoming.

Eighteen States were divided in their vote, but in none of these was a majority of the Congressmen against the bill.

In only four States—Connecticut, Michigan, New York, and Rhode Island—did a majority of the delegations vote against the bill on final passage. In these cases the vote was: Connecticut, 4 out of 5 against or were paired against; Michigan, 7 out of 13; New York, 27 out of 43; Rhode Island 3 out of 3.

Rhode Island was the only State whose entire delegation either voted or was paired against the bill, 2 voting "nay" and 1 being paired to vote "nay."

But one-fifth of the total membership of the House voted against the bill, which passed by nearly a 4 to 1 vote by Congressmen fresh from the people, just a year and two months after the President's veto of the same bill, January 28, 1915, when the Chief Executive stated that he doubted whether there was a popular demand for this legislation.

—

HOUSE ROLL CALL VOTE ON BURNETT IMMIGRATION RESTRICTION BILL.

THE VOTE EXPLAINED.

Prior to the final vote on the immigration restriction bill Congressman SABATH moved to strike out the literacy test. This was defeated on a roll-call vote, 284 to 107.

The bill was then passed by the vote printed herein.

The names in the "aye" columns, with a star (*) at their left, indicate that these Members first voted to strike out the literacy test, and when the motion to strike out was defeated these Members voted for the bill on its final passage.

ALABAMA.

Aye: Abercrombie, Almon, Blackmon, Burnett, Gray, Heflin, Huddleston, Oliver, and Steagall.

Not voting: Dent.

ARIZONA.

Aye: Hayden.

ARKANSAS.

Aye: Caraway, Goodwin, Jacoway, Taylor, and Tillman.

Not voting: Oldfield and Wingo.

Wingo was paired in favor of the passage of the immigration bill with Cary, of Wisconsin, against.

CALIFORNIA.

Aye: Church, Curry, Elston, Hayes, Kent, Kettner, Nolan, Raker, Randall, and Stephens.

Nay: Kahn.

COLORADO.

Aye: *Keating, Taylor, and Timberlake.

Not voting: Hilliard.

Hilliard was paired in favor of the passage of the immigration bill with Loud, of Michigan, against.

CONNECTICUT.

Aye: Hill.
Nay: Freeman, Glynn, and Oakey.
Not voting: Tilson.
Tilson was paired against the passage of the immigration bill with Edwards, of Georgia, in favor of the passage of the immigration bill.

DELAWARE.

Aye: Miller.

FLORIDA.

Aye: Clark, Sears, Sparkman, and Wilson.

GEORGIA.

Aye: Adamson, Bell, Crisp, Howard, Hughes, Lee, Park, Tribble, Vinson, and Wise.
Not voting: Edwards and Walker.
Edwards was paired in favor of the passage of the immigration bill with Tilson, of Connecticut, against.

IDAHO.

Aye: McCracken and Smith.

ILLINOIS.

Aye: Buchanan, Chiperfield, Copley, Denison, Foss, Foster, Fuller, King, McKenzie, McKinley, *Mann, Rainey, *Rodenberg, Sterling, Tavenner, Wheeler, Williams, T. S., and Wilson.
Nay: Britten, Cannon, Gallagher, McAndrews, McDermott, Madden, Sabath, and Stolc.
Not voting: Williams, W. E.

INDIANA.

Aye: Adair, Cline, Cox, *Cullop, Dixon, *Gray, Moores, Moss, *Rauch, and *Wood.
Nay: Barnhart and Lieb.
Not voting: Morrison.

IOWA.

Aye: Dowell, Good, Green, Haugen, Hull, Kennedy, Ramseyer, Steele, and Sweet.
Nay: Towner and Woods.

KANSAS.

Aye: Anthony, Ayres, Campbell, Connelly, Doolittle, Helvering, Shouse, and *Taggart.

KENTUCKY.

Aye: Barkley, Cantrill, Fields, Helm, Johnson, Kincheloe, Langley, Powers, Rouse, and Thomas.
Nay: Sherley.

LOUISIANA.

Aye: Aswell, Lazaro, Morgan, and Wilson.
Nay: Dupré, Estopinal, and Martin.
Not voting: Watkins.

MAINE.

Aye: Hinds and Peters.
Not voting: Guernsey and McGillicuddy.
McGillicuddy was paired against the passage of the immigration bill with Guernsey in favor.

MARYLAND.

Aye: Linthicum, *Mudd, Price, and Talbott.
Nay: Coady.
Not voting: Lewis.
Lewis was paired in favor of the passage of the immigration bill with Doremus, of Michigan, against.

MASSACHUSETTS.

Aye: Gardner, Gillett, Olney, *Rogers, and *Treadway.
Nay: Carter, Dallinger, Gallivan, Greene, Paige, Phelan, Roberts, Tague, Tinkham, Walsh, and Winslow.

MICHIGAN.

Aye: Hamilton, Kelley, McLaughlin, Mapes, Scott, and Smith.
Nay: Beakes, Cramton, Fordney, James, and Nichols.
Not voting: Doremus and Loud
Doremus was paired against the passage of the immigration bill with Lewis, of Maryland, in favor.
Loud was paired against the passage of the immigration bill with Hilliard, of Colorado, in favor.

MINNESOTA.

Aye: Anderson, Davis, Ellsworth, Lindbergh, Miller, Schall, *Smith, Steenerson, Van Dyke, and Volstead.

MISSISSIPPI.

Aye: Candler, Collier, Harrison, Humphreys, Quin, Sisson, Stephens, and Venable.

MISSOURI.

Aye: Alexander, *Borland, Decker, Dickinson, Hamlin, Hensley, Lloyd, Rubey, Rucker, and Russell.
Not voting: Booher, Dyer, Igoe, Meeker, and Shackleford.
Booher answered "present."
Igoe answered "present."
Dyer was paired in favor of the passage of the immigration bill with Igoe against.
Meeker was paired in favor of the passage of the immigration bill with Booher against.
Champ Clark—Speaker—not recorded.

MONTANA.

Aye: Evans.
Not voting: Stout.

NEBRASKA.

Aye: Kinkaid, Reavis, Shallenberger, *Sloan, and Stephens.
Nay: Lobeck.

NEVADA.

Aye: Roberts.

NEW HAMPSHIRE.

Aye: Sulloway and Wason.

NEW JERSEY.

Aye: Browning, Capstick, Drukker, Gray, Hutchinson, Lehlbach, and Parker.
Nay: Bacharach and Eagan.
Not voting: Hamill, Hart, and Scully.

Hamill was paired against the passage of the immigration bill with Young of Texas in favor.
Hart was paired in favor of the passage of the immigration bill with Graham, of Pennsylvania, against.
Scully was paired against the passage of the immigration bill with Rowland, of Pennsylvania, in favor.

NEW MEXICO.

Aye: Hernandez.

NEW YORK.

Aye: Charles, Danforth, Dempsey, Dunn, Hamilton, Hicks, Husted, Magee, Mott, Parker, Pratt, Snell, Snyder, and Ward.
Nay: Bennet, Bruckner, Caldwell, Carew, Chandler, Conry, Dale, Dooling, Driscoll, Farley, Fitzgerald, Flynn, Gould, Griffin, Haskell, Hulbert, Loft, London, Maher, Oglesby, Patten, Riordan, Rowe, Sanford, Siegel, Smith, and Swift.
Not voting: Fairchild and Platt.

NORTH CAROLINA.

Aye: Britt, Doughton, Godwin, Hood, Kitchin, Page, Pou, Small, Stedman, and Webb.

NORTH DAKOTA.

Aye: Helgesen and Young.
Nay: Norton.

OHIO.

Aye: Allen, Ashbrook, Brumbaugh, Cooper, Emerson, Fess, Gard, Hollingsworth, Kearns, Key, Longworth, McCulloch, Matthews, Mooney, Overmeyer, Ricketts, Russell, Switzer, and Williams.
Nay: Crosser, Gordon, and Sherwood.

OKLAHOMA.

Aye: Carter, Davenport, Ferris, Hastings, McClintic, Morgan, Murray, and Thompson.

OREGON.

Aye: Hawley, McArthur, and Sinnott.

PENNSYLVANIA.

Aye: *Bailey, Beales, Butler, Coleman, Costello, Crago, Farr, Focht, Garland, Heaton, Hopwood, Keister, Kless, Kreider, Lafean, Lesher, Miller, North, Porter, Scott, Steele, Temple, and Watson.
Nay: Barchfeld, Casey, Liebel, Moore, Morin, and Vare.
Not voting: Darrow, Dewalt, Edmonds, Graham, Griest, McFadden, and Rowland.
Graham was paired against the passage of the immigration bill with Hart, of New Jersey, in favor.
Griest was paired in favor of the passage of the immigration bill with Edmonds against.
Rowland was paired in favor of the passage of the immigration bill with Scully, of New Jersey, against.

RHODE ISLAND.

Nay: Kennedy and O'Shaunessy.
Not voting: Stiness.
Stiness was paired against the passage of the immigation bill with Henry, of Texas, in favor.

SOUTH CAROLINA.

Aye: Aiken, Byrnes, Finley, Lever, Nicholls, Ragsdale, and Whaley.

SOUTH DAKOTA.

Aye: Dillon, Gandy, and Johnson.

TENNESSEE.

Aye: Austin, Byrns, Houston, Hull, McKellar, Moon, Padgett, Sells, and Sims.
Not voting: Garrett.

TEXAS.

Aye: Black, Callaway, Davis, Dies, Eagle, Garner, Gregg, McLemore, Rayburn, Slayden, Smith, Stephens, and Sumners.
Nay: Burgess, Buchanan, and Hardy.
Not voting: Henry and Young.
Henry was paired in favor of the passage of the immigration bill with Stiness, of Rhode Island, against.
Young was paired in favor of the passage of the immigration bill with Hamill, of New Jersey, against.

UTAH.

Aye: Mays.
Nay: Howell.

VERMONT.

Aye: Dale and Greene.

VIRGINIA.

Aye: Carlin, Flood, Glass, Hay, Holland, Jones, Montague, Slemp, and Watson.
Not voting: Saunders.

WASHINGTON.

Aye: Dill, Hadley, Humphrey, Johnson, and La Follette.

WEST VIRGINIA.

Cooper, Littlepage, Moss, Neely, and *Sutherland.

WISCONSIN.

Aye: Browne, *Cooper, *Esch, Frear, Lenroot, and Nelson.
Nay: Burke, Konop, Reilly, and Stafford.
Not voting: Cary.
Cary was paired against the passage of the immigration bill with Wingo, of Arkansas, in favor.

WYOMING.

Aye: Mondell.

POLITICAL AND RELIGIOUS REFUGEES ARE NOT BARRED.

The Burnett immigration-restriction bill makes clear provision for the continued admission of political and religious refugees to this country.

Opponents of the bill evade discussing the main purpose of this legislation—to maintain American living standards of workers by debarring illiterates.

As it is unwise to combat this principle, the trusts and other cheap-labor advocates insist that the act would change America's traditions and policy toward those who are forced to leave the Old World because of political or religious beliefs.

The following sections of the bill, however, completely refute these claims:

"That the following classes of persons shall be exempt from the operation of the illiteracy test, to wit: All aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States to avoid religious persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or by governmental regulations that discriminate against the alien or the race to which he belongs because of his religious faith.

"Nothing in this act shall exclude, if otherwise admissible, persons convicted, or who admit the commission, or who teach or advocate the commission, of an offense purely political."

Congressman BURNETT, author of the bill, and chairman of the House Committee on Immigration, has repeatedly stated that the friends of immigration restriction would not support legislation that would debar these refugees.

Other advocates of restriction have taken a similar position, which is in line with the innumerable humanitarian declarations of the American Federation of Labor, and which was pointed out by Congressman MEEKER, of Missouri, who made this answer to the claim of anti-restrictionists:

"You speak of the political refugee. If the language is not distinct and plain on that one issue, then I can not understand how it is to be written. The revolutionist, your Kosciuszko, and all those men to whom reference has been made, could enter this country under this provision. This country will always remain the home of the religious and the political refugee, but we would just as well begin now to face that other problem of imported ignorance."

INSIST THAT THE IMMIGRATION BILL BE PASSED AT THIS SESSION—URGE YOUR TWO SENATORS AT WASHINGTON TO FAVOR IMMEDIATE ACTION ON THIS MEASURE—RESTRICTION WILL PROTECT AMERICAN WORKERS' LIVING STANDARDS—INSIST THAT THIS BILL BE PASSED BEFORE CONGRESS ADJOURNS—OPPONENTS OF IMMIGRATION BILL DID NOT DIVIDE ON PARTY LINES.

Opposition to the Burnett immigration bill, which passed the House March 30 by a vote of 307 to 87, was of a nonpartisan character.

On the Democratic side Congressmen SABATH, of Illinois, and GALLIVAN, of Massachusetts, were leaders in defending the cause of cheap-labor advocates. In one of Mr. GALLIVAN'S fervent pleas he declared that "a literacy test will bar from our land its most vital necessity—strong, vigorous, simple, God-fearing peasants."

Mr. SABATH insisted that "reports which have been circulated declaring there is an imperative need for immigration legislation are unfounded and unjustifiable."

Congressman LONDON, Socialist, opposed the bill. Over one-half of the Friday, March 24, speech of this attorney was devoted to an arraignment of the trade-union movement. In a tone that sounded like a spokesman for the National Association of Manufacturers, he declared that:

"The trouble with the average representative of organized labor is that he is incapable of that broader vision which sees above and beyond the narrow needs of the moment. That is the misfortune of the trade-union movement. What lack of intelligence! The politician is afraid to tell them that they are stupid."

In answer to a question Mr. LONDON said he assumed employees in Youngstown steel mills were unorganized, and then made this reference to the trade-union movement:

"But if they were not organized, it was the fault of the narrowness of the trade-union movement that does not know how to reach the masses."

Mr. LONDON is evidently unacquainted with the spy systems of large corporations, with the constant agitation by the American Federation of Labor to organize the unskilled, and with the number of unionists who have been slugged by corporation thugs to prevent organization. He said:

"The union should greet the immigrant as a brother. The union man should teach him unionism. Instead of that, the labor leader looks upon every immigrant as an enemy."

Despite this attorney's claim that he represents the workers, he made it clear that he would be the sole judge of what was best fitted for them. In his second reference to the alleged stupidity of workers, he said:

"I have no faith in the friend of labor who encourages every stupid demand of the worker, checking at the same time every real aspiration of the working class for a greater share in life's joys."

On the Republican side, Congressmen JOSEPH CANNON of Illinois, BENNET of New York, and MOORE of Pennsylvania were among the leading opponents of restriction.

In referring to the literacy test, Mr. MOORE said:

"It casts down utterly the toiler who struggles patiently and laboriously under the burdens imposed upon him by the strong and the heartless."

Mr. CANNON is president of the National Liberal Immigration League, which was exposed last year by President Gompers, who showed that this league was financed by steamship companies, steel, mine, and coal companies, and other large employers of cheap labor. The documents made public by President Gompers proved that this alleged philanthropic organization was the vehicle by which cheap-labor advocates opposed immigration restriction. It was also shown that the league financed delegations of various nationalities to Washington, and that the delegates were not selected by the organizations they alleged to represent.

Congressman W. S. BENNET, another active exponent of restriction, is vice president of the National Liberal Immigration League. In the CONGRESSIONAL RECORD of February and March, this year, Mr. BENNET acknowledged he was attorney for steamship companies; that he defended contract labor violators; and that he opposed increasing, from $50,000 to $100,000, the appropriation for Secretary of Labor Wilson to enforce the contract labor law.

In the CONGRESSIONAL RECORD of February 25, 1916, Mr. BENNET is quoted:

"While I was out of the House, amongst my clients were some steamship companies, and I studied it (immigration restriction) some more."

Mr. BENNET was a member of the United States immigration commission that investigated this question for nearly four years. He was the only member of the commission that dissented from a literacy test and other restrictions favored by his colleagues on the commission.

As an attorney he is most versatile, acting not only as pleader for the steamship companies but for contract-labor-law violators. In the March 25 CONGRESSIONAL RECORD he is quoted:

"The Department of Justice collects thousands of dollars from violators of the contract-labor law. While I was out of Congress on a temporary vacation, I represented a gentleman who had to walk up to the captain's office and pay $6,000 in one of these cases."

TRUSTS ARE PROTECTED FROM FOREIGN PRODUCTS, BUT DEMAND AN UNLIMITED FLOW OF CHEAP LABOR, WHICH DESTROYS AMERICAN WAGES AND IDEALS.

[By Frank Morrison, Secretary of the American Federation of Labor.]

"A high tariff against European cheap-labor products is insisted upon by American trusts, but these trusts are the chief opponents of immigration restriction intended to protect American workers," said Frank Morrison, secretary of the American Federation of Labor, at a recent hearing on this legislation before the House Committee on Immigration. The American Federation of Labor official declared that American manhood can not compete with the living standards of eastern Europe and Asia, and that it "is unwise to expect them to resist the tidal waves of Slavs and oriental onslaught." He further said:

"The proposition to prohibit immigration to the United States of able-bodied men and women because they can not read has a sympathetic viewpoint, where individuals are considered; but, notwithstanding such a viewpoint, the American Federation of Labor, which represents the organized workers of the country, and which is the only method or organization or agency which can with any justification or reason represent the unorganized workers, has repeatedly declared by resolutions in conventions 'that the literacy test is the most practical means of restricting the present immigration of cheap labor whose competition is so ruinous to the workers already here, whether native or foreign.'

"A great deal has been said and published in an endeavor to create the impression that it is necessary to induce immigration to come to this country for the purpose of securing agricultural workers. There is no question in my mind but that such agitation has for its purpose the enticing of immigrants to our country to supply the United States Steel Corporation, the great manufacturing concerns, coal companies, packing houses, and railroads with men willing to work at a cheaper wage than those who are born here.

"The opponents to this test make the argument that common laborers would belong to the class that could not pass the literacy test, and that this country is very much in need of that particular kind of labor.

"The great industrial companies of this country have more men to-day than they can employ, but they want two men for every job. They know that unemployed men must work to live and their necessities will force them to accept any wage set by the companies. Hence the workers' wages are literally held below a living wage by the hunger, misery, and distress of the unemployed.

"The organized wageworkers have declared in favor of restriction of immigration to maintain unlowered the American standard of life. Those who oppose restriction are representatives of companies and associations composed of employers of labor whose dominant interest is the dollar, and associations that depend for their existence upon contributions from the employing class.

"They feel that a reduction of immigration will result in a higher wage for their workers which will disturb the profits and dividends from products manufactured by them, or perhaps they have been informed that if the steamship companies do not receive $60,000,000 a year for transporting aliens they will raise their freight rates.

"This reason will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men and the attorneys of business men. Restrictions may interfere with their profits.

"We oppose any attempt to lower the standards of American life. We want to raise them, and we are opposed to the exploitation of millions of aliens with its attending evils to swell the profits of the steamship companies, even if it adds to the resources of those companies $60,000,000 a year, even if it enables the United States Steel Trust to pay dividends and interest on $400,000,000 of stocks and bonds, which never cost that company 1 cent.

"I wish to call your attention to the fact that industry is protected by a tariff, but labor is not; that the products of labor are protected, but we have a free flow of labor coming to our shores all the time; that manufacturers have protection against products manufactured by cheap labor in foreign countries, but labor has not protection against the importation of cheap labor.

The opponents of this measure say that if the products of labor are protected, then labor itself must be benefited, because the manufacturer can sell the products at a much higher price than can be obtained in other countries and will be in a position to pay higher wages to his employees. The protected manufacturer does receive a higher price than the products can be sold for in other countries; and the second contention—that they are thus made able to pay higher wages to their employees—is also true, but the fact is they do not pay higher wages. They pay lower wages.

We find that the most highly protected industries, particularly the industries that are now controlled by trusts, such as the Steel Trust, Rubber Trust, Sugar Trust, packing houses, and textile industry, pay to their employees the lowest wage in the country, and some of them less than a living wage for a family. A high tariff has nothing to do with the wages in these industries.

We hold that limitation of immigration to our country will compel social and industrial reform in the countries from which the immigrants flow. The fact that these countries have an outlet for a great number of their people means that there is an outlet from the oppressive conditions in these countries. For that reason those countries delay social and industrial reforms. As a consequence industrial and social misery is perpetual in those countries, because their citizens are induced to come to this country.

The wage earners believe in an effective regulation of immigration, because they desire to retain the American standard of living. The standard of wages for both skilled and unskilled labor in this country is the result of many years' effort by organized labor. When an immigrant accepts work at less than the standard wage, he not only takes the place of a man working at a higher rate, but he assists in forcing downward the prevailing rate of wages in that industry, which result carries with it a corresponding reduction in the physical, moral, and intellectual standard of American life.

In support of my statement that the American worker can not compete with this induced immigration and support a family on the wages paid, I refer you to the investigation of the Bethlehem Steel Works made by a committee of the Federal Council of the Churches of Christ, representing over 16,000,000 people, and the investigation made by Commissioner Neill, of the Department of Labor, as to wages and conditions in the steel industry.

The committee of the Federal Council of the Churches of Christ, commenting on the wage scale at Bethlehem, said:

"This is a wage scale that leaves no option to the common laborers but the boarding-house method of living with many men to the room. When a man has a family with him, they take in lodgers, or often the

woman goes to work. It is reported that immigrant parents send their children back to the old country to be reared while the mother goes to work. On such a wage basis American standards are impossible."

The literacy test is an expedient which should be adopted now, and time and experience will demonstrate what further legislation will be necessary in the interest and for the safety of the American people, for the improvement of American citizenship and homes, and for the perpetuation of the American Republic.

The American Federation of Labor, at its convention held last November in San Francisco, by unanimous action reiterated the decisions of previous conventions urging the speedy enactment into law of the immigration bill containing the literacy test.

No other single proposed addition to our immigration laws has received the indorsement accorded to the literacy test.

—

WHY THE TRADE-UNION MOVEMENT URGES IMMIGRATION RESTRICTION.

[By President Gompers in American Federationist.]

As a people we have barely begun to appreciate the value of those qualities which make for real progress, the necessity to insist and persist in formulating sound policies to redound to the interests of the people of our Nation Indeed for years we have delayed in even formulating a national policy that would protect us against such elements and conditions which act as a barrier to the development of American character and national unity. We have excused this delay on the ground that we were a young Nation; that we had vast public lands and national resources that must be developed, and that we could afford to open our doors to a practically unrestricted immigration in order to increase our population.

But conditions have changed. We are no longer a young Nation. We have wasted much of our national heritage and the frontier has practically disappeared. Recent events that have tested national institutions and men's faith to the uttermost, proved conclusively that we can not hope to be the ideal which America represents, we can not maintain a place of influence in the affairs of the world if we do not plan to carry out those purposes. Haphazard development may do well enough for the ordinary activities from day to day, but will not endure the tests of a great crisis or the slower test of time.

To achieve the best that is possible for our Nation and for our citizens generally, we can not escape the duty devolving upon us of thinking out a national policy that will develop out of the many peoples within our boundaries a homogeneous Nation bound together by common ideals, common customs, common language, and a common culture.

America has not yet become a nation. It is still a conglomerated mass of various and diverse ethnic groups. Hordes of immigrants have crowded into our ports, and have, for the most part, settled in the nearest industrial center. In some cases they have in masses moved farther inland to industrial centers where the nature of the work required comparatively little skill. In many of these cases the coming of the immigrants was due to the activities of managers of industries, who arranged to secure the financial advantages by employing foreign workers who still retained the standards and prejudices of other countries. So we find in many industrial centers sections that are known as "Little Hungary," "Little Italy," etc. The inhabitants of these little nations transplant to American soil the institutions and the standards of their fatherlands. They gain nothing by coming. These communities speak a foreign language, read foreign papers, dress in accord with foreign customs, and bring up their families in accord with foreign standards. There is practically no sustained effort on the part of society or the Nation to assimilate these foreign groups and to make of them Americans. Nor is this condition confined only to the poorer immigrants. There are foreign communities in the resident districts of the large cities. These remain even more exclusively foreign because their wealth enables them to have foreign schools and foreign instruction for their children. Thus the foreign group and alien influence become rooted in the life of the community.

The workers of America have felt most keenly the pernicious results of the establishment of foreign standards of work, wages, and conduct in American industries and commerce. Foreign standards of wages do not permit American standards of life. Foreign labor has driven American workers out of many trades, callings, and communities, and the influence of these lower standards has permeated widely.

For years the organized-labor movement has called attention to these vicious tendencies which affect not only the workers but the whole Nation, for national unity is weakened when the Nation is honeycombed with "foreign groups" living a foreign life.

The labor movement has urged the adoption of a national policy that would enable us to select as future citizens of our country those who can be assimilated and made truly American. The American Federation of Labor has urged a literacy test, which shall be applied to all immigrants. Our Nation has accepted as a fundamental principle that education enables the girl and boy to attain better development and to have better control over their own personal ability and powers. It has been our national purpose to eliminate from our country all illiteracy. It is therefore in accord with this general plan that we should establish the same requirements for foreign-born persons who desire to come and live in our country. It has been urged that this is not a perfect standard. Of course, no standard is perfect, but the literacy test is the most effective and practical. It has been claimed that our greatest criminals are often educated persons. These are, however, only conspicuous failures of education to achieve its desired ideal. Educated criminality is not the fault of education, but is the inherent fault or defect in the nature or the physical make-up of the individual. If it is urged that education tends to criminality it would seem the wisest course to remain in ignorance, a fallacy so patent that its mere statement carries with it its own repudiation. Education can not remedy all the inherent faults of human nature, but it is the greatest instrumentality for human development and betterment.

It has been urged against the literacy test that this standard would make many suffer because they had been denied opportunities. That may be true, but it is equally true that our Nation can not work out all of the problems of all other nations. We can not undertake to educate all of those to whom other countries deny educational opportunities. Each nation must undertake and solve its own educational problems. The adoption of the literacy test by our own country would have a tendency to force nations to establish more general educational opportunities for all of their people. It is only a half truth to say that the literacy test would close the gates of opportunity to illiterate foreigners. As a matter of fact there is very little opportunity for these people in our industrial centers. Usually they have been brought over here either by steamship and railroad companies and other greedy corporations, by employers, or as a result of collusion between these groups. They have been brought over here for the purpose of exploitation, and until they develop powers of resistance and determination to secure things for themselves they have little opportunity here. These same qualities would secure for them within their own countries many of the advantages that later come to them here.

The section of the Burnett immigration bill which establishes the literacy test provides for no unfair requirements. It says:

"All aliens over 16 years of age physically capable of reading who can not read the English language or some other language or dialect, including Hebrew or Yiddish: *Provided*, That any admissible alien, or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in some one of the various languages or dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect."

An attempt has been made to create the impression that the literacy test will close America as a haven of refuge to political refugees and those persecuted because of religious faith. That this is wholly unwarranted in fact is evident from the following portion of the proposed act:

"That the following classes of persons shall be exempt from the operation of the illiteracy test, to wit: All aliens who shall prove to the satisfaction of the proper immigration officer or to the Secretary of Labor that they are seeking admission to the United States to avoid religious persecution in the country of their last permanent residence, whether such persecution be evidenced by overt acts or by laws or by governmental regulations that discriminate against the alien or the race to which he belongs because of his religious faith: *Provided*, That nothing in this act shall exclude, if otherwise admissible, persons convicted or who admit the commission or who teach and advocate the commission of an offense purely political."

The proposed legislation does not represent a radical change in the policy of our Nation. It is an extention of our educational policy, and is in harmony with the conviction that has been growing recently that we, as a nation, must leave our haphazard methods of development behind and inaugurate a definite sustained national policy that shall promote our best development and shall coordinate and organize all of the resources of our country and plan for their best utilization.

Opposition to the literacy test and to any proposition to restrict immigration has come from steamship companies, steel corporations, coal operators, and other employers whose financial interests were associated with the maintenance of large numbers of workers forced by their helplessness to work for low wages. The activities of these interests have been given a cloak of respectability by many who, for sentimental reasons, were unwilling to indorse any form of restriction of immigration. But selfish interest or sentiment that is contrary to the fundamental principles of national welfare can not frustrate efforts to promote the best interests of our Nation.

The meaning of America lies in the ideal she represents. That ideal is liberty and opportunity. But beautiful as any ideal may be, it becomes of practical value when it has effectiveness in the daily lives of men and women.

Real liberty and opportunity mean a certain mental attitude toward life, certain standards of life and work, and possession of that which secures the enjoyment of opportunities.

America the ideal—the land of the free—exists only when her people are Americans in all things.

Ours has been a most perilous task—to weld together those from other lands who have sought our shores and to make of them homogeneous people—a Nation with common ideals, common standards of living, a national language, and an ideal national patriotism.

The building of a nation is not a thing of chance; it is the result of statesmanship, knowledge of tendencies, a discernment of cause and effect, ability to distinguish the good from the evil.

Too long our national policies have been determined by sentimental emotions, business profits, and political expediency. But there must come a change. These months of terrible warfare have compelled a testing of things that have passed over. "The world is afire"; and we must put our own house in order lest we, too, be caught unawares. We must search out each weakness and strengthen every danger point.

The workers of America make the demand that there shall be restriction of immigration to such as can be readily identified and assimilated with Americans and can become truly American.

—

RAILROAD EMPLOYEES AND FARMERS FAVOR IMMIGRATION RESTRICTION.

Railroad train service employees and the millions of organized farmers have repeatedly declared for immigration restriction, and their representatives are cooperating with the American Federation of Labor to secure the enactment into law of the Burnett immigration bill.

Last January, when the House Committee on Immigration held public hearings on this measure, the American Federation of Labor was represented by Secretary Frank Morrison; the railroad men by Val Fitzpatrick, vice president and national legislative representative of the Brotherhood of Railroad Trainmen, and the organized farmers by J. H. Kimble, national legislative representative of the Farmers' National Congress.

Val Fitzpatrick also spoke on behalf of these legislative colleagues: H. E. Wills, assistant grand chief engineer, Brotherhood of Locomotive Engineers; P. J. McNamara, vice president Brotherhood of Locomotive Firemen and Enginemen; W. M. Clark, Order of Railway Conductors.

The railway employees' spokesman referred to a resolution passed on November 20, 1915, at a meeting of the chief executives of the four railway brotherhoods, when it was "unanimously agreed that we indorse the bill on this subject (immigration restriction) approved by the American Federation of Labor." Mr. Fitzpatrick told the committee that "our members have no guaranty that they are going to remain as engineers, firemen, and brakemen," and that the railroads actually dismiss between 30,000 and 40,000 train service men, and these workers are forced to enter other industries, where wages are often reduced because of the large number of illiterates. The speaker read numerous resolutions passed by the various railroad brotherhoods in favor of immigration restriction and the literacy test.

Speaking for the organized farmers, J. H. Kimble denied that agriculturalists favor unlimited immigration. He said:

"The farmers' organizations—and I am an actual farmer and live on a farm and make a living out of a farm—are opposed to any attempt to distribute the present immigration until the laws are stiffened up. * * * There is no demand among the farmers of the country for aliens unable to speak our language or to read their own. A glance at the last annual report of the Bureau of Immigration, which, by the way, gives many reasons for adopting the Burnett bill, shows that very few 'farmers' are coming to this country. Out of a total immigration last year of 434,244 aliens only 9,215 were 'farmers,' and only 29,247 could be classed as 'farm laborers.' Very few 'farmers' or 'farm laborers' come to this country. That is one important reason why distribution of immigrants is a failure. Another reason is that the farmers do not want and can not use the bulk of the kind that comes."

—

"UN-AMERICAN" IS FAMILIAR PLEA OF REFORM LEGISLATION OPPONENTS.

[Editorial in the Unpopular Review, January, 1916.]

The assertion that the literacy test is un-American is one which has been urged against many measures of social progress, and which can be employed against any proposition which involves departing from traditional methods or policies—in other words, which recognizes that the world moves and conditions change. When policemen were first introduced into the cities of the United States, the innovation was bitterly opposed on the ground that it was un-American and interfered with the natural rights of the individual. The "penalty clause" by which the cooperative farmers' elevators of the Middle West maintain themselves has been attacked as un-American by those whom it affects unfavorably.

It would seem hardly necessary to consider arguments of this type were they not propounded with so much frequency and earnestness and accepted with so much sobriety. Especially it seems extraordinary that a measure which asks that the foreigner should have the same training for citizenship or residence that we require of our own children should be called un-American. When we spend over half a billion dollars annually on our public schools, and then compel children born in this country to take advantage of them, is it illogical—not to say un-American—to say to the adult foreigner that he should have so much of an education as is indicated by the ability to read?

But it is asserted that an educational test would be un-American, because it would exclude aliens on the basis of opportunity, not of character. Illiteracy, it is maintained, is not a test of ability but of early opportunity. But a test based on opportunity is not un-American. For our immigration law already contains a number of tests which rest, in part at least, on opportunity. Such are the tests excluding paupers, those likely to become public charges, persons with contagious diseases, etc. In fact, when the individual immigrant appears before the inspector little can be gained by trying to separate those of his characteristics which are due to native ability from those which are traceable to environment. The man must be judged as he is on the grounds of his fitness.

In pursuance of the "un-American" argument, however, it is further pointed out that illiteracy can not reasonably be considered a test of fitness for American life, because this Nation was founded by illiterates, and that it has nevertheless done pretty well. The trouble with this argument is that it is not true, and that if it were, it proves too much. It might be said with equal cogency that this Nation was founded by men who made their living by slave labor in the South and the slave and rum trade in the North, and that therefore these good old institutions should have been preserved. All such arguments ignore the fact that the world has progressed during the past three centuries and that illiteracy stands for very different things now from what it did in the days of the Pilgrim fathers or of the Revolutionary heroes.

Another argument which proves too much is that produced so triumphantly and with so great effect in some such words as these: "This measure would keep out a great many people who would be very useful citizens. If it had been in force in earlier years, it would have kept out the mother of Abraham Lincoln, who signed her name with a cross." Certainly the literacy test would keep out some who would be useful. So do many, if not most, of the tests now in force. The futility of such arguments may be illustrated by another reductio ad absurdum. "Booker T. Washington was one of the most useful citizens of the United States. His ancestors on one side were brought over as negro slaves. Therefore it was a mistake to abolish the slave trade."

Such are the arguments of the opponents of the literacy test. Aside from these, their efforts are devoted to countering the claims of the opposite side, which, as has been shown, can be done successfully only with respect to the strictly and temporarily economic aspects—the building up of quick fortunes by questionable and probably dangerous means. There are those who do not regard this as an argument against the literacy test, but for it.

The matter can be rightly understood only by taking the broadest possible view of the relations, not of this generation alone but of the generations to come. The natural destiny of the United States is to be the leader of the nations into the fullest development of the common people. Our duty is to set standards, not to distribute the natural advantages we possess. We can not render our highest service to mankind by hastily and inconsiderately yielding to the demands of a specious humanitarianism and dissipating to-day what should be the heritage of future generations.

—

ONLY PRACTICAL TEST OFFERED.

The Toledo Blade, in these few words sums up the agitation for and against the Burnett immigration-restriction bill:

"The literacy test for immigrants has never been advertised as perfect. In operation, it would turn back many aliens who might become worthy citizens. But no other test that promises to restrict immigration in a practical way has been suggested.

"The advocates of this measure are trying only to slow down the stream of foreigners who for so many years poured through our gates. The opponents of the test do not offer a substitute. And for a very good reason. They are not really troubled, as they profess to be, lest an occasional healthy and intelligent, though illiterate, alien be refused admittance. Their concern is lest the supply of cheap labor be restricted."

—

CHICAGO TRIBUNE STATES CASE.

The Chicago Tribune is one of the very few large newspapers in this country that is fearless enough to state the forces for and against the Burnett immigration bill. In an editorial, March 30, 1916, this paper said:

"The literacy test has just one purpose; that is, to reduce immigration into this country.

"Opposition to the literacy test has just one purpose—to prevent any limitation of immigration into this country.

"Proponents of the literacy test believe that the time has come when we must slow up the inrush of foreign blood in order to allow the Nation to assimilate the multitude of strange races now within its borders and in order to limit the competition of pauper labor, which is more and more bearing upon American-born workingmen.

"Opponents of the literacy test desire a broader labor market or they desire to open the benefits of America to foreigners, let the consequences to Americans be what they may.

"People favoring the literacy test wish to reduce immigration into America. People opposing it wish an unrestricted flow of foreigners, literate or illiterate."

—

In its issue of March 27, 1916, the Chicago Daily Tribune had the following as its first and leading editorial:

CLOSE THE GATES.

Peace may not bring a new influx of aliens to America. Emigration from Europe may be checked by laws of the countries in need of workers or by the employment of workers at home at high wages.

But even if this prove to be true and war taxes or bitter experience do not drive men and women from the Old World to our shores, the tide may set in from other regions, and these are precisely the sources from which the least assimilable elements are drawn.

The part of common sense and common caution for us is to close our gates for a time. All thinking Americans have become conscious in recent years that the process of Americanization is much slower and more superficial than we have flattered ourselves it was. The amount of foreign nationalism, of unassimilated immigration, is disquietingly if not alarmingly large. It is time to prevent our national composition from being further diluted. It is time to concentrate on an undisturbed process of American nationalism.

There are no signs that the civilized world is entering a period of internationalism. The probabilities are rather that we are to find in the form of new and perhaps larger alliances an intensive nationalism and a more formidable international competition. If this be true we can not afford to be full of domestic divisions and internal distractions, the only clay pot in the stream. We shall need a robust nationalism, a strong unity against the world.

And there is another reason for closing the gates. If we are to enter a period of prosperity, the fruit of our own energy, restraint, and pacific temper, we want that prosperity to be distributed among our own people, among those who have cast their lot with us and contributed to our welfare.

On the other hand, if we are to meet, as many believe, a serious reaction, we do not want to divide our means with millions of aliens. We want what we have for our own people.

The Tribune believes the absolute restriction of immigration would check the consequences of a reaction after the war and insure a widespread prosperity. It would protect our own wage earners from the competition of cheap labor, insure good wages and the American standard of living, and thereby stimulate the home market and bring about the broadest prosperity. If in addition to this measure of patriotism we enact a wise system of commercial laws and provide an adequate naval and military defense, the United States will be virtually invulnerable.

[American Federation of Labor Weekly News Letter, Washington, D. C., Apr. 15, 1916.]

CLERIC-ECONOMIST FAVORS IMMIGRATION BILL—SAYS OPPONENTS ARE SELFISH AND SENTIMENTAL.

WASHINGTON, *April 15.*

Rev. John A. Ryan, D. D., formerly of Minnesota, but now professor of economics, Catholic University, this city, has declared in favor of the Burnett immigration bill. If this legislation is adopted by Congress, he says, "We shall have sufficient legislation to improve the quality, provide for assimilation, and protect the standard of life that is required for decent living."

Rev. Ryan's statement, which includes a history of immigration legislation, has been published by the weekly press service of the social service commission, American Federation of Catholic Societies, and is in part as follows:

"The lowered standard of living is the main justification for restriction, and it is probably the reason behind the greater part of the agitation. Between two-thirds and four-fifths of the adult males of the country receive less than $750 a year, and real wages have declined from 10 to 15 per cent since 1890. The great majority of the new immigrants go into the unskilled industries, thereby overstocking the market for that kind of labor and bringing down wages. They do not become farmers, as so considerably occurred with the old immigration. The supply of unskilled labor should be reduced. The immigration commission was unanimous on this point.

"Among methods of restriction suggested are: The requirement of a contract enabling the immigrant to command living wages, the restriction of the arrivals from any country to a certain per cent of the average emigration from that country during the preceding period of 10 years, the division of the immigration countries in groups and the granting of the privilege of sending immigrants to only one group in one year, and the literacy test. The first three are difficult of administration, while the last was recommended by eight of the nine members of the Immigration Commission as the best single method of restriction. It would exclude about one-third.

"The opposition to restriction is sentimental or superficial or selfish. The sentimentalists want America to be kept a haven for the oppressed; but charity begins at home, and we want to keep it a genuine haven, instead of developing a proletariat, and we want to keep it an example of genuine democracy and of a better distribution of wealth than exists in Europe. Thus we can serve humanity better than by enabling a comparatively small proportion of the oppressed of Europe to better their condition very slightly.
